EDITOR'S PREFACE.

WITH diffidence the Editor presents to the people of New Haven this history of the genesis and growth of their city. It is the joint product of many contributors, some of whom have sent valuable communications, which either appear anonymously or have been wrought into the work, while others have authorized the publication of their names and thus become personally responsible for what they have written.

It was hoped that the chapter on the Productive Arts would be compiled under the supervision of the Hon. James E. English, than whom no one is better acquainted with the various industries of New Haven. But while the gentlemen who were engaged in gathering the materials for that chapter were occupied with their tasks, Mr. English was engaged in more pleasant activities, from which it could not be expected that he should turn aside. Since the completion of the chapter it has been submitted to his perusal, and such corrections have been made in it as were suggested by him.

The Editor returns thanks to his associates in the work for the patience with which they have received suggestions restraining excursiveness and preventing repetition. His thanks are also due to his life-long friend, Mr. Horace Day, who has not only contributed items of history from the storehouse of his memory, but has by careful proof-reading eliminated errors of the compositor.

It is due to those who furnish the portraits with which the volume is adorned, to say that without the generous subsidy of these patrons it could not have been published. To them, all who value the volume are indebted both for the possibility of its production and for the increase of its value by reason of these costly engravings.

A word of commendation is due to the publishers for the courage with which they have invested a large sum of money in what seemed to some an impracticable undertaking, and for the energy with which they have wrought out their plan. The success which is now assured, is well deserved.

Edward E. Atwater

HISTORY

OF THE

CITY OF NEW HAVEN

TO THE PRESENT TIME.

BY AN ASSOCIATION OF WRITERS.

CHAPTER I.

THE COLONY OF NEW HAVEN TO ITS ABSORPTION INTO CONNECTICUT.

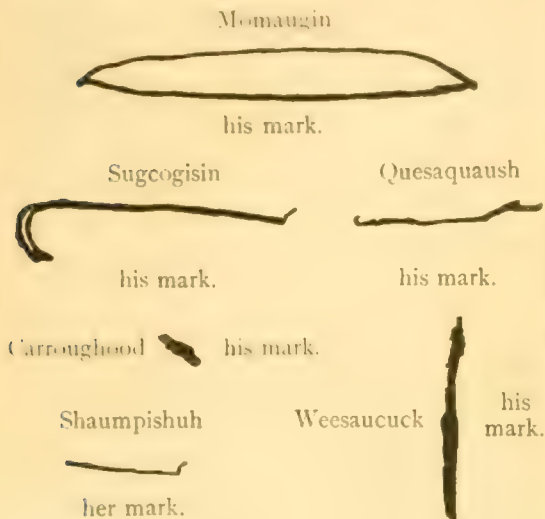

THE Indian name of the place now covered by the City of New Haven—the City of Elms—“the cathedral city, whose streets are aisles”—was Quinnipiac. It is said that in the language of the aboriginal inhabitants, Quin is equivalent to *long*; Nippe, to *water*; and Ohke, to *place*. Quinnipiac was, therefore, in their conception, the long-water-place. To one who stands on the summit of East Rock Park, and follows with his eye the silver thread which seems to lie on the flat meadows of the Quinnipiac Valley, and widens itself out into the spacious harbor and more spacious Sound, the propriety of the aboriginal name is apparent. From the little village of Montowese in the north to the mouth of the harbor in the south, is a long water-place. It was this peculiarity of the landscape—offering easy transportation from one neighborhood to another, and abundant forage with no other labor than to cut and stack the hay spontaneously growing on the meadows—which attracted to the place its first European settlers. These were a company of English Puritans, led by John Davenport and Theophilus Eaton. Davenport had been the vicar of St. Stephen's Church, Coleman street, London, and Eaton had been a parishioner in the same parish. Their friendship had probably been of earlier date than their residence in London, as they were both born in Coventry and there was no great difference in their ages. The company sailed from London in the Hector “and another vessel” whose name has not been preserved, and arrived in Boston, June 26, 1637. The country between Saybrook and Fairfield having become known to the English that summer by means of the Pequot war, an exploring party, led by Theophilus Eaton, left Boston August 31, and came by water to Quinnipiac. The explorers were so well satisfied with what they found, that they left seven of their number to spend the winter, preparing for the permanent occupation of the place. In the ensuing April, the whole

company arrived from Boston. It now included not only those who had come from London with Davenport and Eaton; but a company from Hereford and other western counties of England, which, sailing from Bristol, in the James, under the leadership of Peter Prudden, a nonconforming minister of the Church of England, had united itself in Boston to the London company; and in addition not a few residents of Massachusetts who were disposed to join the new enterprise. On the Sunday following their arrival at Quinnipiac, the company assembled twice for public worship; Mr. Davenport preaching in the morning and Mr. Prudden in the afternoon. The service was held under a spreading oak near the northeast angle made by George and College streets. Public worship was ever after maintained in the town, and about a year after the arrival of the settlers, or planters as they styled themselves, the erection of a House of Worship was commenced.

In October the planters of Quinnipiac welcomed an accession to their number. Ezekiel Rogers, a much respected nonconforming minister in Yorkshire, having embarked at Hull, on the Humber, with a company who personally knew him and desired to enjoy his ministry, arrived in Boston late in the summer. Such representations were made to him by Davenport and Eaton, or their agents, that he engaged to come with his followers to Quinnipiac; and within eight weeks after his arrival in Massachusetts, a portion of his people came by water to the new settlement. The remainder of the company were expected to follow; but Rogers changed his mind and commenced a new settlement at Rowley, in Massachusetts. He sent a pinnace to bring back those of his people who had preceded him in his intended voyage; but some of them, refusing to return, became permanent residents at Quinnipiac.

In November, a formal purchase of land was made; the Indians reserving a small portion for

themselves and acknowledging in the deed of sale that the protection from hostile tribes, which the English promised to afford them, was one of the considerations which induced them to alienate the land. The marks with which the sachems attested the deed of sale are as follows:

On the 11th of December, Montowese, sachem of another tribe, in presence and with allowance and consent of Sawseunck, an Indian who came in company with him, sold to the English a tract of land lying north of that sold by Momaugin, and described as extending about ten miles in length from north to south, eight miles easterly from the river of Quinnipiac toward the river of Connecticut; and five miles westerly toward Hudson's river. The attesting marks of Montowese and Sawseunck are as follows:

Contemporaneously with the excitement among the Yorkshire people about returning to Massachusetts, there was conference among those who had come with Prudden from Hereford, tending toward a removal from Quinnipiac to a separate plantation, where they might enjoy his ministry. Before February 12, 1639, Prudden's friends had determined to commence a settlement at Milford, and on that day received a formal deed of land from Ansantaway, the Sachem of the Wepowaugs, as the aborigines of Milford called themselves.

More than a year elapsed before the planters at Quinnipiac were ready for any formal establish-

ment of civil or ecclesiastical authority. A town plat was immediately laid out, and house lots were assigned to each planter, varying in size according to the number of persons in his family and the amount of estate on which he was able and willing to pay rates from year to year. Probably there was some temporary provision for the protection of life and property, but there is no record of it extant. Certainly there was no church organized; and though there was public worship on every Lord's day, there was no administration of sacraments.

On the 4th day of June, 1639, a meeting of all the proprietors, or free planters as they were called, was held in the barn of Mr. Robert Newman, "to consult about settling civil government according to God, and about the nomination of persons that might be found, by consent of all, fittest in all respects for the foundation work of a church." At this meeting it was voted that, in the civil government to be established, the right of suffrage should be conferred on church members only; and twelve men were chosen and instructed "to choose out of themselves seven, that shall be most approved of the major part, to begin the church." In due time the twelve thus appointed and empowered, chose seven men, who on the 22d of August, 1639, instituted the church by a solemn and formal covenant one with another.

On the 25th of October, civil government was instituted; the seven men appointed by the twelve chosen in a full meeting of free planters, conferring the right of suffrage upon "all those that have been received into the fellowship of this church since the gathering of it, or who being members of other approved churches, offered themselves." Of the little commonwealth thus established, Theophilus Eaton was chosen "Magistrate for the term of one whole year; and Robert Newman, Matthew Gilbert, Nathaniel Turner, and Thomas Fugill, Deputies to assist the Magistrate in all Courts called by him for the occasions of the plantation, for the same term of one whole year." Thomas Fugill was chosen Clerk; and Robert Seeley, Marshal.

Prudden, and his friends who had accompanied him across the ocean, did not join with Davenport and his followers in the institution of a church and the establishment of civil authority in Quinnipiac. At first, so far as appears, they expected to remain at Quinnipiac, and house-lots were assigned to them as to other planters. But, during the summer of 1638, Prudden being invited to preach for a time in Wethersfield, found several families so dissatisfied with the state of the church there, that they were willing to remove to a new plantation and place themselves permanently under his ministry. The Herefordshire people at Quinnipiac, taking encouragement from this accession to their strength, determined therefore to remove to Milford, as has been already mentioned.

In August, 1639, their removal was not yet completed. But on the day after the Quinnipiac people had formally instituted their church, seven men selected by those who expected to remove from Quinnipiac to Milford, also entered into a covenant to be a Church of Christ; the mode of

institution being the same in both cases. The removal from Quinnipiac was not fully consummated till the autumn of 1639.

It had been from the beginning the intention of the people of Quinnipiac that, in addition to the house-lots assigned in the spring of 1638, the land outside of the town plat should, as soon as practicable, be divided among the free planters. Accordingly arrangements were made in January, 1640, for the division of a tract extending in every direction about a mile from the center, and of the salt meadows bordering on the rivers east and west of the plantation. Some months after the first division of outlands, and apparently before it was fully consummated, the free planters assembled in general court, ordered a division of lands outside of the two-miles square. This second division disposed of the greater part of the land available for tillage by dwellers in the town, though there were in subsequent years several other acts of division, of which the third division so called, made in 1680, was by far the most important. After the second division had been made, the rate of taxation was fixed; all the upland in the first division, with all the meadows in the plantation, yielding to the public treasury fourpence an acre yearly, and all the land in the second division twopence an acre yearly.

While the division of lands was in progress, the name of the plantation was changed, by order of a General Court held on the first day of September, 1640, from Quinnipiac to New Haven. The record does not allege any reason for the adoption of the new name, but as the first English ship which arrived in the harbor of Quinnipiac brought emigrants from Kent, Surrey, and Sussex, it is a reasonable conjecture that she sailed from the port of New-haven, on the coast of Sussex, and that the visit of a vessel from that port determined the choice of the English name. The captain of this ship had been so much pleased with the harbor that he at first sight called it the "The Fair Haven." Probably the planters had some reference to expected immigration when they voted to disuse a name uncouth to English ears, and adopted in its stead a name familiar to the people of Sussex and the adjoining counties.

Mention has already been made of the arrival of an English ship in the harbor of Quinnipiac in the summer of 1639. This, and another vessel which followed at no long interval, brought emigrants from the southern counties of England. They came expecting to commence a separate plantation in the neighborhood of Quinnipiac, of which English settlement they had evidently heard before leaving their native land. While on ship-board those who came in the vessel which first arrived signed the following covenant:

WE, whose names are hereunder written, intending by God's gracious permission to plant ourselves in New England, and if it may be, in the southerly part about Quinnipiac: We do faithfully promise each to each, for ourselves and families and those that belong to us, that we will, the Lord assisting us, sit down and join ourselves together in one entire plantation; and to be helpful each to the other in every common work, according to every man's ability and

as need shall require; and we promise not to desert or leave each other or the plantation, but with the consent of the rest or the greater part of the company who have entered into this engagement.

As for our gathering together in a church way and the choice of officers and members to be joined together in that way, we do refer ourselves until such time as it shall please God to settle us in our plantation. In witness whereof we subscribe our hands the first day of June, 1639.

One of the signers of this agreement was Henry Whitfield, a clergyman of inherited wealth, which he was willing to use freely for the benefit of the plantation he and his associates intended to establish.

Mr. Whitfield and his company very soon after their arrival at Quinnipiac, visited Guilford, and being pleased with the resemblance of the place to the coast land in the south of England, purchased of the aboriginal inhabitants a territory, to which they afterward added another tract by successive purchases from two different sachems, both of whom claimed an exclusive title. The first of these deeds bears the date of September 29, 1639. From the commencement of the plantation till the gathering of a church in 1643, the undivided lands were held in trust by six of the planters; four of whom were designated as a provisional committee in whom all civil power was vested.

The same summer which witnessed the arrival in the harbor of Quinnipiac of the planters of Guilford, saw also the arrival of another company, with their minister, who purchased land on Long Island, allowing the deed to be given to the magistrates of New Haven, and thus putting themselves under the same civil authority with New Haven. But as Southold, the place in which they settled, has passed out of the jurisdiction, not only of New Haven, but of Connecticut, we need not follow their history further.

Stamford, in Fairfield County, was also purchased and settled by planters, who acknowledged allegiance to New Haven; and that colony claimed it as a part of its territory till the colony itself was absorbed into Connecticut.

In 1643, Guilford and Milford, which hitherto had been entirely separate and independent plantations, united with New Haven, Southold and Stamford in the establishment of a colonial government, and thereby qualified this combination of towns to unite with the other colonies of New England, viz., Massachusetts, Plymouth and Connecticut, in a confederation for offense and defense, mutual advice and succor. Milford being the only one of the plantations intending to unite in the colony of New Haven, which had deviated from the rule that only church members should be free burgesses, was obliged, before she was admitted, to stipulate that "the present six free burgesses, who are not church members, shall not at any time hereafter be chosen either deputies or into any public trust for the combination. Secondly, that they shall neither personally, nor by proxy, vote at any time in the election of magistrates; and thirdly, that none shall be admitted freemen or free burgesses hereafter at Milford but church members, according to the practice at New Haven."

Milford having made these concessions to the less liberal views of the other plantations, the latter so far yielded as to grant

First, that the said six freemen, being already admitted by them, may continue to act in all proper particular town business wherein the combination is not interested; and, secondly, that they may vote in the election of deputies to be sent to the general courts for the combination or jurisdiction; which deputies, so to be chosen and sent, shall always be church members.

The union of these plantations in a colonial government, and the confederation of the colony with Massachusetts, Plymouth and Connecticut, were auxiliary to the establishment of security and peace. A stronger front was presented toward their Dutch neighbors and toward the aborigines than when each plantation stood alone.

This confederation of four colonies much resembled both the confederation of thirteen colonies, which afterward prosecuted the War of the Revolution, and the present Constitution of the United States. Its articles declare that the four colonies agree to be, and to be called The United Colonies of New England. Reserving to each colony its sovereignty, they provide for a congress of commissioners, to meet yearly, clothed with power to make war and peace, and to frame and establish such orders as may preserve friendship between the members of the union. In case of war, offensive or defensive, involving the interests of the whole, or of any one of the confederates, the expense was to be assessed according to the number of male inhabitants in each colony between the ages of sixteen and sixty years. When any colony was invaded by an enemy, its confederates must aid it in the proportion of one hundred men for Massachusetts, and forty-five for each of the other colonies. The Commissioners are required to frame and establish rules for the free and speedy passage of justice in each jurisdiction to all the confederates equally as to their own, and for the surrender of fugitive servants and fugitive criminals.

In the spring of 1644, Totoket or Branford, "a place fit for a small plantation, betwixt New Haven and Guilford," was sold to Mr. Swain and others of Wethersfield, upon condition that they should join in one jurisdiction with New Haven and the other plantations, upon "the fundamental agreements settled in 1643, which they, duly considering, readily accepted." From this time to its dissolution in 1665, the New Haven colony consisted of the six plantations of New Haven, Southold, Stamford (including Greenwich), Guilford, Milford, and Branford.

In two important particulars, New Haven differed from the other colonies. It was part of "its fundamental law," as we have already seen, that only church members should be free burgesses. By "fundamental" was meant unchangeable. In our day it is generally allowed that a people have the right to change the constitution of their government; and most written constitutions recognize their own mutability by indicating the method in which a change may be wrought. But the fundamental law established by the planters of Quinn-

piac on the "fourth day of the fourth month, called June, 1639," and afterwards assented to by the other plantations constituting the jurisdiction of New Haven, was designed to be unalterable. It was understood to be a compact or agreement from which those who had assented to it could not recede. In the words of the colonial constitution, "It was agreed and concluded as a fundamental order, not to be disputed or questioned hereafter, that none shall be admitted to be free burgesses in any of the plantations within this jurisdiction for the future, but such planters as are members of some or other of the approved churches in New England." In Massachusetts only church members could be made freemen till the law was changed by command of King Charles the Second; but the requirement of church membership was not a "fundamental law," as it was in New Haven.

The second particular in which New Haven differed from the other colonies was in not using juries. In the plantation courts and in the courts of the jurisdiction, the judges determined all questions of fact as well as of law, and of discretionary punishment. It has been thought by some, that Governor Eaton's observations while resident in the Baltic countries suggested this departure from English law. But if suggested by anything he had seen in other lands, it was doubtless commended to him, and those who acted with him in establishing a new government, by its conformity to the institutions of Moses.

The records give no evidence that the disuse of juries occasioned any trouble; but Hubbard, a contemporary historian, thus criticises this peculiarity of New Haven:

Those who were employed in laying the foundation of New Haven colony, though famed for much wisdom, experience, and judgment, yet did not foresee all the inconvenience that might arise from such a frame of government, so differing from the other colonies in the constitution thereof, manifest in their declining that prudent and equal temperament of all interests in their administration of justice, with them managed by the sole authority of the rulers without the concurrence of a jury, the benefit of which had been so long confirmed by the experience of some ages in our own nation; for where the whole determining, as well both matter of fact as matter of law, with the sentence and execution thereof, depends on the sole authority of the judges, what can be more done for the establishing of an arbitrary power?

Hubbard also testifies concerning the limitation of the right of suffrage: "There had been an appearance of unquietness in the minds of sundry, upon the account of enfranchisement and sundry civil privileges thence following, which they thought too shortly tethered up in the foundation of the government." His testimony on this subject is confirmed by that of the records.

For ten years after its establishment the colonial government experienced no great trials. But in 1653, England and Holland being at war, the Dutch at Manhattan were believed by their neighbors in New Haven and Connecticut to be instigating a general conspiracy among the Indians against the English. It was rumored that a Dutch fleet would arrive, and that the Dutch and Indians would make a combined attack upon the English plantations. Connecticut and New Haven were

naturally much alarmed and became clamorous for war. The Commissioners of the United Colonies, after investigation, declared war by a vote of seven to one. Mr. Bradstreet, of Massachusetts, voted against the declaration, and the General Court of that province being then in session, certified the Commissioners that they did not understand that they were called to make a present war against the Dutch. This action of the General Court expressed the general sentiment of its constituency. Less irritated against the Dutch on account of previous injuries, and less exposed to present danger, the people of Massachusetts were not so ready to believe that war was imperatively necessary and unquestionably just.

The contention between Massachusetts and the other colonies became so sharp as to threaten the immediate dissolution of the confederation. The Commissioners determined to adjourn *sine die*, and would have done so but for a vote of the General Court of Massachusetts, declaring "that by the Articles of Confederation, so far as the determinations of the Commissioners are just and according to God, the several colonies are bound before God and man to act accordingly, and that they sin and break covenant if they do not; but otherwise we judge we are not bound, neither before God nor man."

In view of this communication, the Commissioners were so far pacified that they proceeded to business, "referring all further questions to the addresses the Massachusetts shall please to make to the other General Courts." But the very first matter presented for their consideration renewed the old dispute. It was a complaint that Sachem Ninigret had made a hostile raid upon the Indians of Long Island, tributaries and friends of the English, in which two Sachems and about thirty other Indians were slain, and divers women taken captive. The Commissioners immediately dispatched messengers to bring Ninigret's answer to this complaint. Upon return of the messengers, bringing an insolent reply from Ninigret, and reporting that he had allowed his men to insult and threaten them, the Commissioners declared war against him.

Massachusetts refusing in this case to furnish her contingent of 166 soldiers, the Commissioners protested that "the Massachusetts have broken their covenant," and adjourned.

When the time for the next Congress of the Commissioners drew near, the question was raised in the General Court of New Haven, whether Commissioners should be chosen. The result of the debate is thus recorded:

The Court having found such ill fruit from the Massachusetts of the two former meetings, are discouraged to send; yet, that they might show themselves followers of peace, and that they earnestly desire to continue their confederation upon the terms it first began, and for sundry years hath been carried on, did agree and choose the Governor and Francis Newman Commissioners for the year ensuing, and particularly for the next meeting at Hartford, if it hold; and Mr. Leete and Mr. Goodyear are chosen to supply, if the providence of God order it so that one or both of the others should be hindered; but with this direction from the Court, that if the mind of the Massachusetts remain as they have formerly declared, which hath made the other three colonies look

upon the confederation as broken by the Massachusetts, they conceive there can be no fruit of their meeting, but only to consider the eleventh article, and require such satisfaction from the delinquent colony as they shall judge meet.

No sooner had the Congress assembled than "they fell upon a debate of the late differences betwixt the Massachusetts and the other colonies * * * and after some agitations and writing about the same, the Commissioners for the Massachusetts presented the ensuing writing:"

To the intent all former differences and offences may be issued, determined and forgotten betwixt the Massachusetts and the rest of the confederate colonies, we do hereby profess it to be our judgment, and do believe it to be the judgment of our General Court, that the Commissioners, or six of them, have power, according to the articles, to determine the justice of all wars, etc.; that our General Court hath, and doth recall that interpretation of the articles which they sent to the Commissioners at Boston, dated the 2d of June, 1653, * * * and do acknowledge themselves bound to execute the determinations of the Commissioners, according to the literal sense and true meaning of the Articles of Confederation, so far as the said determinations are in themselves just and according to God.

With this retraction, the open quarrel between Massachusetts and the other colonies ended. But when the Commissioners, proceeding to make war upon Ninigret, gave the appointment of the commander-in-chief to Massachusetts, the appointee, Major Willard, carried out the policy of his colony almost as closely as if no army had been sent. The Commissioners censured him for inactivity, but he doubtless felt assured that in his own colony his conduct was approved.

News of peace between England and Holland having arrived before Massachusetts retracted her offensive interpretation of the articles, the subject of hostilities against the Dutch was no more agitated, and gradually New Haven, as well as the other colonies, settled into tranquillity.

In 1655, Governor Eaton presented to the General Court a digest of the laws of the colony, which he had been requested to prepare. The Court approved of what he had done, but desired him "to send for one of the new books of laws in the Massachusetts colony, and to view over a small book of laws newly come from England, which is said to be Mr. Cotton's, and to add to what is already done as he shall think fit, and then the Court will meet again to confirm them, but in the meantime (when they are finished) they desire the elders of the jurisdiction may have the sight of them for their approbation also." A few months later "the laws which at the Court's desire have been drawn up by the Governor, viewed and considered by the elders of the jurisdiction, were now read and seriously weighed by this Court, and by vote concluded and ordered to be sent to England to be printed, with such oaths, forms, and precedents as the governor may think meet to put in; and the governor is desired to write to Mr. Hopkins; and Mr. Newman to his brother, to do the best they can to get five hundred of them printed." Ten months after this order for printing was made, "the Governor informed the Court that there is sent over now in Mr. Garrett's ship, five hundred law books, which Mr. Hopkins hath gotten printed, and six paper books for records for the jurisdiction; with a seal

for the colony, which he desired them to accept as a token of his love."

Governor Eaton died suddenly in January, 1658:

Having worshiped God after his usual manner, and upon some occasion with much solemnity charged all the family to carry it well unto their mistress, who was now confined by sickness, he supped and then took a turn or two abroad for his meditations. After that he came in to bid his wife good-night, before he left her with her watchers; which when he did, she said, "methinks you look sad." Whereto he replied, "The differences risen in the church of Hartford make me so." She then added: "Let us even go back to our native country again." To which he answered: "You may, but I shall die here." This was the last word that ever she heard him speak, for now retiring unto his lodging in another chamber he was overheard about midnight fetching a groan; and unto one sent in presently to inquire how he did, he answered the inquiry with only saying, "Very ill," and without saying any more, he fell asleep in Jesus.

"This man," says Hubbard, "had in him great gifts, and as many excellences as are usually found in any one man. He had an excellent princely face and port, commanding respect from all others. He was a good scholar, a traveler, a great reader; of an exceeding steady and even spirit; not easily moved to passion; and standing unshaken in his principles when once fixed upon. Of a profound judgment; full of majesty and authority in his judicatures, so that it was a vain thing to offer to brave him out."

As Eaton had been elected to the chief magistracy annually, from the institution of the colonial government, so Stephen Goodyear had been for several years chosen Deputy-Governor. Naturally he would have succeeded to the place vacated by the death of Eaton; but his absence on a visit to England obliged the freemen to look elsewhere for a chief magistrate. At the Court of Election in the following May, Francis Newman, who had for some years been Secretary of the Jurisdiction, was chosen Governor, and William Leete, Deputy-Governor.

Mr. Goodyear was so generally regarded as second only to Governor Eaton in all qualifications requisite for the chief magistracy, that if he had lived to return, he would probably have been called, as soon as an election occurred, to the high position for which his only disqualification in May, 1658, was absence from the colony.

His death occurred in London not long afterward, them elancholy tidings of it having been received before October 20th, at which date proceedings were commenced for the settlement of his estate.

Mr. Newman and Mr. Leete were re-elected in 1659 and in 1660. On October 17th of the latter year a Court of Magistrates was held, at which the following record was made, the Governor being absent:

By reason of the afflicting hand of God on New Haven by much sickness, the Court could not pitch upon a day for public thanksgiving through the colony, for the mercies of the year past; and did therefore leave it to the elders of the church at New Haven, as God may be pleased to remove his hand from the Governor and others, to give notice to the rest of the plantations what day they judge fit for that duty, that we may give thanks and rejoice before the Lord together.

Governor Newman died November 18, 1660. Mr. Davenport, in a letter to his friend, the younger Winthrop, thus communicates the particulars of his decease:

We hoped he was in a good way of recovery from his former sickness, and were comforted with his presence in the assembly two Lord's days and at one meeting of the church on a week day, without sensible inconvenience. And on the morning of the day of public thanksgiving, he found himself encouraged to come to the public assembly. But after the morning sermon he told me that he found himself exceedingly cold from head to toe; yet, having dined, he was refreshed and came to the meeting again in the afternoon, the day continuing very cold. That night he was very ill, yet he did not complain of any relapse into his former disease, but of inward cold, which he and we hoped might be removed by his keeping warm and using other suitable means. I believe he did not think that the time of his departure was so near, or that he should die of this distemper, though he was always prepared for his great change. The last day of the week he desired my son to come to him the next morning to write a bill for him to be prayed for, according to his direction. My son went to him after the beating of the first drum; but, finding himself not fit to speak much, he prayed him to write for him what he thought fit. When the second drum beat, I was sent for to him. But before I came, though I made haste, his precious immortal soul was departed from its house of clay unto the souls of just men made perfect.

In 1661, William Leete was chosen Governor, and Matthew Gilbert, Deputy-Governor, and they were both re-elected in 1662 and 1663. In 1664, Mr. William Jones was chosen Deputy-Governor in place of Mr. Gilbert, the latter being elected a magistrate to fill the place vacated by Mr. Jones' promotion.

About four months previous to the death of Governor Newman, tidings came that the Stuart family had been restored to the throne of England in the person of Charles II. These tidings were not joyfully received. The change from a kingdom to a commonwealth, twenty years before, had injured New England in its material interests by checking the emigration which was pouring into it population and wealth. But this disadvantage had been outweighed, in the judgment of the Puritan colonists, by the elevation of men in sympathy with themselves to supreme power and authority in what they called the State of England. They were more earnest to secure "the ends for which they had come hither," than to obtain a larger price for their corn and cattle, and they were confident that these ends would not be frustrated by any action of the home government so long as Puritans were in power in England. What effect upon the colonies the restoration of the Stuarts might produce, it was impossible clearly to foresee; but the Puritan colonists naturally feared that it would be evil.

When the time arrived for the next election in the colony of New Haven, it was difficult to find suitable persons willing to accept office. John Wakeman and William Gibbard were nominated for the magistracy in the Plantation Court of New Haven, notwithstanding their protest; Mr. Wakeman, who had some thought of removing to Hartford, saying, when questioned if he intended to remain at New Haven, that he was not resolved whether to go or stay, but rather than he would accept the place, he would remove. In the Court

of Election for the Jurisdiction they were both elected magistrates, but neither of them took the oath. Mr. Benjamin Fenn, of Milford, being elected magistrate, took the oath, with this explanation before the oath was administered, that he would take the oath to act in his place, according to the laws of this jurisdiction; but in case any business from without present, he conceived he should give no offence if he did not attend to it, who desired that it might be so understood. It does not appear that the Governor or Deputy-Governor hesitated to take the oath, but from the whole history of this, the first election after the restoration of the Stuarts, it appears that it was generally apprehended that trouble might result from it to the colony of New Haven.

In truth, trouble was already brewing; for two members of the High Court which had condemned to death the father of the reigning monarch, had been, for more than a month before the election, concealed in New Haven and search warrants had been issued for "the finding and apprehending of Colonel Whalley and Colonel Goffe, who stand charged with crimes as by his Majesty's letter appears." On the day of election, Whalley and Goffe were at the Judges' Cave on West Rock, where they could see the turret of the building where the election was held and hear the rattle of the drum by which the freemen were convened. But probably only two or three persons knew that they were in the neighborhood. All who were in office were under the necessity of assisting to apprehend them, and other persons might be disposed to do so, either from loyalty to the King or from the hope of reward. Their places of concealment were therefore known to only a few persons; though, with scarcely an exception, the people of the colony were at heart friendly to them. But in a few months, difference of opinion was developed; Governor Leete and others beginning to fear evil results to the colony and to the magistrates from their neglect to apprehend the fugitives. This difference of opinion seems to have occasioned some sharpness of feeling. Mr. Hooke, formerly teacher of the church at New Haven and a brother-in-law of Colonel Whalley, writes from England, where he was now residing, to Mr. Davenport, "I understand by your letter what you have lately met with from Mr. Leete," etc., and proceeds to explain that a certain letter was not designed to caution New Haven people against befriending the regicides, but only against doing it openly.

The man was in the country when he wrote it, who sent it up to the city to be sent by what hand he knew not, nor yet knoweth who carried it; and such were the times that he durst not express matters as he would, but he foresaw what fell out among you and was willing you should be secured as well as his other friends, and therefore he wrote that they might not be found among you, but provided for by you in some secret places. * * * I hope yet all will be well, though now I hear as I am writing of another order to be sent over, yet still I believe God will suffer no man to touch you. I am almost amazed sometimes to see what cross capers some of you do make. I should break my shins should I do the like.

Governor Leete had apparently understood the cautionary letter as advising an entire withholding

of entertainment from the regicides, and had changed his position by a cross caper such as Mr. Hooke thought himself incapable of executing.

Another intimation that Leete had changed his ground is contained in a letter to Deputy-Governor Gilbert from Robert Newnan, formerly ruling elder in the church at New Haven, but now residing in England, who writes:

I am sorry to see that you should be so much surprised with fears of what men can or may do unto you. The fear of an evil is oftentimes more than the evil feared. I hear of no danger, nor do I think any will attend you, for that matter. Had not W. L. written such a pitiful letter over, the business, I think, would have died. What it may do to him, I know not: they have greater matters than that to exercise their thoughts.

The fears which Leete now entertained that evil consequences might result to the colony and to himself personally from the neglect to apprehend the regicides, led him to negotiate privately with Governor Winthrop, of Connecticut, who, in August, 1661, sailed for Europe charged with a commission from the General Assembly of Connecticut to procure from his Majesty a charter for that colony. Leete desired Winthrop to include the territory of New Haven with Connecticut in the application. In a letter to Winthrop, dated August 6, 1661, he says:

I wish that you and we could procure one patent to reach beyond Delaware, where we have expended a thousand pounds to procure Indian title, view, and begin to possess. If war should arise between Holland and England, it might suit the King's interest; a little assistance might reduce all to England. But our chief aim is to *purchase our own peace*.

With this understanding between him and Leete, Winthrop included in his application for a charter all the territory between Massachusetts on the north and Long Island Sound on the south, and between Rhode Island on the east and New York on the west. The charter which was granted him not only included all the territory for which he asked, but it was with regard to powers of government (as Bancroft says) still more extraordinary.

It conferred on the colonists unqualified power to govern themselves. They were allowed to elect all their own officers, to enact their own laws, to administer justice without appeals to England, to inflict punishments, to confer pardons and, in a word, to exercise every power, deliberative and active. The King, far from reserving a negative on the acts of the colony, did not even require that the laws should be transmitted for his inspection; and no provision was made for the interference of the English government, in any event whatever. Connecticut was independent, except in name.

Winthrop was aided in his mission by a combination of favorable influences. Lord Say and Seal, a Puritan nobleman, who had once intended to remove to America, still retained his friendly feeling toward New England, and was now in a position where his influence with the King was very powerful. Although he had opposed the tyranny of Charles the First, he was and continued to be a Royalist in principle. During the Commonwealth he lived in retirement, and was among the first to move, when opportunity offered, for the restoration of the ancient constitution. As a reward for his services Charles the Second had made him Lord Privy Seal. The Earl of Manchester was also a

Puritan. He likewise was high in office and high in favor with the King. Forced to resign his commission as Commander-in-Chief of one of the grand divisions of the Parliamentary Army by the intrigues of men who wished to eliminate both royalty and aristocracy from the constitution, he too had lived in retirement, waiting for an opportunity to assist in restoring the ancient form of government. He was now Lord Chamberlain and more active in public affairs than his aged friend, Say and Seal.

Both of these noblemen lent to the Puritan colony their influence with the King. Winthrop himself was singularly well qualified for the negotiation in which he was engaged. A university scholar, he had made the tour of the Continent as far as to Constantinople before he emigrated to New England. Gifted by nature, and polished with the best European culture, he was qualified to converse on those subjects which were everywhere discussed in society, and by his experience in America was able to discourse of a country full of marvels to Englishmen, whether they had traveled on the Continent or journeyed only within their native land. Mather relates that Winthrop had a ring which his grandfather had received from Charles the First; and that the acceptance by his Majesty of this souvenir of his father, effectually pledged him to favor the suppliant who offered it.

The charter bore the date April 23, 1662. For some time after it came into his possession, Winthrop expected to return home that summer and be himself the bearer of the document; but changing his plans and deciding to spend a second winter abroad, he sent it by another hand. At the General Assembly or Court of Election held at Hartford October 9, 1662, "the PATENT or CHARTER was this day publicly read in audience of the freemen, and declared to belong to them and their successors."

There had been an understanding and an agreement between Winthrop and Leete, that the freemen of New Haven should not be brought under the authority established by the charter unless with their own consent.

They both believed that it would be better for New Haven to unite with Connecticut than to attempt to maintain itself as a separate sovereignty; but they were equally agreed in the expectation that the freemen of New Haven would not be compelled to submit to Connecticut. But no sooner had the charter been read and accepted at Hartford than the General Court began to receive as freemen of Connecticut disaffected inhabitants of Southold, Guilford, Stamford, and Greenwich.

Winthrop, when he heard of it, wrote to Major John Mason, the Deputy-Governor, that he hoped it had been done "from misunderstanding and not in design of prejudice to that colony, for whom I gave assurance to their friends that their rights and interests should not be disquieted or prejudiced by the patent." He recommends that "if any injury hath been done by admitting of freemen or appointing of officers, or any other unjust intermeddling with New Haven colony in one kind or other

without the approbation of the government, that it be forthwith recalled."

Probably Winthrop's letter to Mason miscarried, for there was no recall of proceedings such as he advised. Connecticut insisted upon the submission of New Haven, and a long controversy ensued. The freemen of New Haven were divided on the question of uniting with Connecticut; some desiring to avail themselves of the security afforded by a royal charter, and others setting more value on the ancient constitution of the colony with its fundamental law limiting suffrage to church members, than on a royal charter. But however divided in opinion concerning the expediency of coming under the charter, New Haven was unanimous in refusing to treat concerning a union till she was reintegrated and acknowledged as a distinct colony. If Connecticut had fully believed that by retracting she could set in motion measures which would result in the absorption of New Haven, she might have sacrificed to the pride of her sister colony, the required punctilio. But fearing that the party, whose professed desire was "that we may for the future live in love and peace together as distinct neighbor colonies, as we did above twenty years together before you received and misunderstood and so abused your patent," might become masters of the situation, she would not retract what she had done, lest she should in so doing admit the independence of New Haven. The negotiation between the two colonies was at a dead-lock when Royal Commissioners arrived from England, instructed to require the colonies to assist a fleet which had been sent to reduce under English authority, all the territory occupied by the Dutch; the King claiming it as of right belonging to the English, and bestowing it on his brother, the Duke of York. As the territory thus granted was to be bounded on the east by the Connecticut River, New Haven experienced a sudden change of heart toward Connecticut, preferring to submit to her jurisdiction rather than be subjected to the rule of a man who was a Royalist, a Romanist, and a Stuart.

In less than three weeks after the arrival of the Royal Commissioners, Governor Leete convened the General Court at New Haven, and having explained the new aspect of affairs, and related some conference he had had with a committee recently sent from Connecticut in which he had signified to that committee that "if Connecticut would come and assert their claim to us in the King's authority, and would secure what at any time they had propounded to us, and would engage to stand to uphold the liberties of the patent, we would call the General Court together, that they may consider of it and be ready to give them an answer; and said for our parts we did not know but we might bow before it, if they assert it and make it good." After much debate the Court voted as follows: "If Connecticut do come down and assert their right to us by virtue of their charter, and require us in his Majesty's name to submit to their government, that then it be declared to them that we do submit."

If anything was now wanting to the settlement of the question whether New Haven belonged to Connecticut, it was a formal determination by the Royal Commissioners of the boundary between Connecticut and New York. The royal grant to the Duke of York made the Connecticut River his eastern boundary; but the Winthrop charter gave Connecticut one hundred and twenty miles westward from the Narragansett River. By one instrument New Haven was in New York, and by the other it was in Connecticut. There was no place for it as an independent colony. They had no title whatever from the English crown, and their territory was claimed by two different parties.

The diplomacy of Winthrop was equal to the occasion. Having been appointed by the General Assembly of Connecticut to go with others to New York to congratulate his Majesty's Honorable Commissioners, he and his associates were empowered "if an opportunity offer itself, that they can issue the bounds between the Duke's patent and ours, so as in their judgment may be to the satisfaction of the Court to attend to the same." Winthrop had already rendered important aid to the Commissioners some months before, in negotiating the surrender to them of New Amsterdam; but still further to prepare the way for an issue that would be to the satisfaction of the Court, an order had been passed "that Colonel Nicolls and the rest of the Commissioners be presented with four hundred bushels of corn as a present from this colony."

The Commissioners after assigning Long Island, which Connecticut claimed as one of the adjacent islands mentioned in her charter, to his Royal Highness the Duke of York, proceeded to declare :

That the creek or river called Mamoronock, which is reputed to be about twelve miles to the east of Westchester, and a line drawn from the east point or side, where the fresh water falls into the salt at highwater mark, north-north-west to the line of the Massachusetts, be the western bounds of the said colony of Connecticut; and all plantations lying westward of that creek and line so drawn to be under his Royal Highness's government, and all plantations lying eastward of that creek and line to be under the government of Connecticut.

The submission of New Haven was an unequalled triumph for Connecticut. There had been a time when she would have modified the qualifications for suffrage, and made them as nearly conformable to those in New Haven as the home government would allow. The qualifications she had proposed to New Haven in the preceding year are almost exactly what Massachusetts adopted when the Royal Commissioners demanded in the King's name that church-membership should not be insisted on. At that time she seemed willing to permit New Haven to have a court in which magistrates might, without a jury, try and determine causes. But New Haven, instead of securing concessions by capitulating when they were offered, had obstinately refused, and now submitted without any definite treaty. The last General Court of the colony was held December 13, 1664, and voted,

1.—That by this act or vote we be not understood to justify Connecticut's former actings, nor anything disorderly done by our own people upon such accounts.

2.—That by it we be not apprehended to have any hand in breaking or dissolving the confederation.

Yet, in testimony of our loyalty to the King's Majesty, when an authentic copy of the determination of his Commissioners is published, to be recorded with us, if thereby it shall appear to our committee that we are by his Majesty's authority now put under Connecticut Patent, we shall submit; as from a necessity brought upon us by their means of Connecticut aforesaid, but with a *salvo jure* of our former right and claim, as a people who have not yet been heard in point of plea.

Relying on the following assurance, given on the 19th day of the preceding November, by the Committee from Connecticut, who demanded their submission:

We do further declare that it is intended by the General Court of Connecticut that the freemen of New Haven, upon the presentment of their names with testimony, be accepted as freemen of Connecticut.

About twenty of the New Haven freemen went to Hartford at the next election, which was in May, 1665, but "were sent home as repudiated, after they had suffered the difficulties and hazards of an uncomfortable and unsafe journey in that wet season."*

Naturally, those who had made the journey to Hartford expecting to be received as freemen of Connecticut on proof that they were freemen of New Haven, were irritated by the treatment they received; and the record of a town meeting, held on the 8th day of May, 1666, shows that the disappointment and consequent irritation was general.

Mr. Jones acquainted the town that Mr. Sherman was now in town, in pursuance of the General Assembly's order of last year, to tender the freemen's oath to our present freemen, and to as many others of the town as should orderly present themselves and be found fit. But there was only Mr. Henry Rutherford, Henry Glover, Mr. Thomas Yale, John Winston, Mr. James Russell, Ralph Lines, Francis Brown, Jeremiah Osborne and Henry Bristow took the oath, and that according to the terms of our submission.

So far as appears, these nine, with one in addition (David Atwater), who had been sworn in at Hartford when the others had refused to take the oath, were the only freemen of Connecticut in the town of New Haven in May, 1666; the magistrates and other civil and military officers being allowed to continue in their respective places without taking the oath required of its freemen by Connecticut. But a beginning having been made, reconciliation made progress till in 1669, the constables of New Haven reported to the General Assembly the names of ninety persons in that town who were freemen of Connecticut. Probably by that time nearly all in the town who had been freemen of the New Haven colony had transferred their allegiance. The name of Nicholas Street, the reverend teacher of the church, is not in the list of 1669, though his death did not occur till 1674.

The name of John Davenport is, of course, not found among the freemen of 1669, for he had then become a resident of Boston; but there is no reason to believe that if he had remained in New

* Davenport's Letter to Winthrop, declining to preach the Election Sermon in 1666.

Haven he would so soon have become reconciled to Connecticut.

Abraham Pierson, pastor of the church in Branford, had, many years before, removed with several families of his flock out of the jurisdiction of Connecticut into that of New Haven, because they so much preferred its fundamental law. They were naturally disappointed and grieved when Connecticut followed them with its latitudinarianism in the admission of freemen. Their disappointment was so great that some of them, including the pastor, removed to Newark, New Jersey, and commenced a new settlement.*

To none was the disappointment so severe as to Davenport, who, on the other side of the sea, had devised, in co-operation with his now deceased friend, Eaton, the peculiar constitution of New Haven—who had seen the establishment of one plantation after another according to the pattern he had set, and the combination of them under a colonial government, which he fondly thought would

* In my History of the Colony of New Haven, I followed the statement of Trumbull, that Mr. Pierson and almost his whole church and congregation removed to Newark, and carried off the records of the church and town. I have since been informed by the Rev. E. C. Baldwin, formerly of Branford, that the records of the town were not carried away, and that Trumbull's statement respecting the number of emigrants is too strong. Mr. Baldwin says that there was no intermission in the maintenance of public worship in Branford consequent upon the emigration to Newark.

remain till the coming of the Lord. He speaks in a letter to a friend in Massachusetts of "Christ's interest in New Haven colony as miserably lost." In this state of mind he received an invitation to the pastorate of the First Church in Boston, there to champion the cause of orthodoxy against the half-way covenant, and, contrary to the wishes of his church and congregation, accepted the invitation. Mr. John Hull, of Boston, writes in his diary, under date of May 2, 1668: "At three or four in the afternoon came Mr. John Davenport to town, with his wife, son, and son's family, and were met by many of the town. A great shower of extraordinary drops of rain fell as they entered the town; but Mr. Davenport and his wife were sheltered in a coach of Mr. Searl, who went to meet them."

Mr. Davenport's ministry in Boston was of short duration. He died in less than two years after his removal thither. His departure from New Haven doubtless helped to obliterate the bitter feelings produced by the controversy between Connecticut and New Haven. The union of the two colonies was in itself so desirable, that resentment against what was wrong in the means of accomplishing it, yielded to the stronger feeling of satisfaction with the result. After two centuries, New Haven scarcely remembers that she was once a distinct colony.

CHAPTER II.

THE TOWN OF NEW HAVEN BEFORE THE WAR OF THE REVOLUTION.

NEW HAVEN from the first aspired to be a colony as well as a plantation. But there was only a theoretical difference between colonial and plantation authority previous to the combination of Guilford and Milford with New Haven.

The Plantation Court at New Haven had made and issued "orders" concerning Southold and Stamford when no representative of either of those plantations was present. But after the combination with Guilford and Milford, the plantation of New Haven held its general Courts distinct from those of the colony. Gradually the word *plantation* fell into disuse, and the word *town* took its place.

It will not be inappropriate now, when we have seen the colonial government come to an end, to take a look at the plantation as it was during the lifetime of its first planters.

There is in the first volume of the Colonial Records—little discrimination having been made between the acts of the town and those of the colony—a schedule exhibiting the names of the proprietors of the plantation of New Haven in 1641; the number of persons each had in his family; the amount of his estate; the number of acres he was entitled to have of upland near the town, of meadow, of land in the neck between Mill and Quinnipiac Rivers, and of upland remote from the town; and the amount of his annual tax. Omitting the tax column for want of room, we transcribe this schedule that the reader may become acquainted

with those who commenced the settlement of the town.

Of these proprietors several were non-resident, having never come over from England; others soon removed to Milford. They all had their house-lots on the half-mile square bounded by George and Grove, State and York streets, or on one of the two irregularly-shaped blocks which they called suburbs; except the last four on the catalogue, who lived in East Water street. The half mile square was divided into nine squares, of which that one now called the Green, they called the Market Place.

In the center of the Market Place was the Meeting-house. It was of wood, was fifty feet square, had a roof shaped like a truncated pyramid, and was surmounted by a tower and turret. There were also "banisters and rails on the meeting-house top," which probably inclosed that higher and flatter portion of the roof from which the tower ascended. It was built in accordance with an order of the General Court passed November 25, 1639, and continued in use till 1670, when its successor was ready for occupancy.

The frame of the first meeting-house being insufficient to support the weight of the tower and turret, it became necessary to shore up the posts.

In time it was found that the shores were impaired by decay, and fears were expressed that the house would fall. In January, 1660, there was a discussion at a General Court concerning the Meeting-house. Some were for removing the turret and allowing the tower to remain. Some thought that both tower and turret might be retained, if the shores were renewed and the frame was strengthened within the house. In conclusion it was "determined that besides the renewing of the shores, both turret and tower shall be taken down."

Probably the order to take down the tower and turret was not executed, for a committee on the meeting-house reported August 11, 1662, that "they thought it good that the upper turret be taken down. The thing being debated, it was put to vote and concluded to be done, and left to the townsmen to see to get it done."

The internal arrangement of the meeting-house is shown in the accompanying plan. Behind the pulpit was the seat of the teaching elders; immediately in front of it was the seat of the ruling elder; and before the seat of the ruling elder was the seat of the deacons, having a shelf in front of it which ordinarily hung suspended from hinges so as to present its broad surface to the congregation, but when needed for a communion-table was elevated to a horizontal position. The officers of the church thus sat facing the congregation. The sexes were seated apart, the men on one side and the women on the other side of "the middle alley." "The soldiers' seats," however, were an exception to the rule; one-half of them being on the women's side of the house. The "forms" between the "alleys" were long enough to accommodate seven persons; but only two or three persons were assigned to the forms near the pulpit, the space allowed to each having some proportion to his dignity.

Exterior of Meeting-House.

There were two pillars in the meeting-house, one on the side where the men were seated, and one on the women's side. Apparently they were designed to aid in supporting the weight of the tower and turret. On the accompanying ground-plan they are represented as placed in the side "alleys," half way from front to rear.

The first seating which is recorded placed only proprietors and their wives. The second was more liberal, including apparently all heads of families, but, with the exception of Mr. Good-year's daughters, no unmarried women. This more liberal policy in the assignment of seats rendered it necessary to place benches in the "alleys," before every front seat and before each of the pillars. In January, 1647, "it was ordered that the particular court with the two deacons, taking in the advice of the ruling elder, should place people in the meeting-house, and it was ordered that the governor may be spared therein." The governor was probably "spared" because his wife having been excommunicated, no seat could, according to English custom, be assigned to her. But there was plenty of room for her in the seat with "old Mrs. Eaton." Nine years later, the governor's mother being now dead, the seat was assigned to his wife under the adroit circumlocution: "The first as it was." But the committee's faculty of circumlocution failed when they came to the bench in front of that seat and they wrote: "Before Mrs. Eaton's

seat." There had doubtless been "a seating" earlier than that of 1647, but it escaped being recorded. At a general court held March 10, 1647, the committee appointed in January having meanwhile performed their duty, "the names of people as they were seated in the meeting-house were read in court, and it was ordered they should be recorded." In 1656, nine years later, another record was made; and in 1662 there was a third record of the names of people as they were seated in the meeting-house. We have transcribed the earliest of these lists of names, so as to place it before the eye of the reader. The other two may be found in the "History of the Colony of New Haven to its Absorption into Connecticut," by the editor of this volume.

SEATING THE MEETING-HOUSE IN 1647.

FIRST, FOR THE MEN'S SEATS, VIZ.:

The middle seats have to sit in them:

1st seat, the governor and deputy-governor.

2d seat, Mr. Malbon, magistrate.

3d seat, Mr. Evance, Mr. Bracey, Mr. Francis Newman, Mr. Gibbard.

4th seat, Goodman Wigglesworth, Bro. Atwater, Bro. Seeley, Bro. Miles.

5th seat, Bro. Crane, Bro. Gibbs, Mr. Caffinch, Mr. Ling, Bro. Andrews.

6th seat, Bro. Davis, Goodman Osborne, Anthony Thompson, Mr. Browning, Mr. Rutherford, Mr. Higginson.

7th seat, Bro. Canfield, Mr. James, Bro. Benham, W^m. Thompson, Bro. Lindon, Bro. Martin.

8th seat, Jno. Meigs, Jno. Cooper, Peter Brown, W^m. Peck, John Gregory, Nicholas Elsey.

9th seat, Edw. Bannister, Jno. Harriman, Benj. Wilmot, Jarvis Boykin, Arthur Halbidge.

Interior of Meeting-House.

In the cross seats at the end.

- 1st seat, Mr. Pell, Mr. Tuttle, Bro. Fowler.
 2d seat, Thom. Nash, Mr. Allerton, Bro. Perry.
 3d seat, Jno. Nash, David Atwater, Thomas Yale.
 4th seat, Robert Johnson, Thom. Jeffrey, John Punderson.
 5th seat, Thom. Munson, Jno. Livermore, Roger Alling, Joseph Nash, Sam. Whitehead, Thomas James.
 In the other little seat, John Clark, Mark Pearce.

In the seats on the side, for men.

- 1st, Jeremy Whitnell, Wm. Preston, Thom. Kimberley, Thom. Powell.
 2d, Daniel Paul, Richard Beckley, Richard Mansfield, James Russell.
 3d, Wm. Potter, Thom. Lamson, Christopher Todd, William Ives.
 4th, Hen. Glover, Wm. Thorp, Matthias Hitchcock, Andrew Low.

On the other side of the door.

- 1st, John Moss, Luke Atkinson, Jno. Thomas, Abraham Bell.
 2d, George Smith, John Wakefield, Edw. Patteson, Richard Beach.
 3d, John Bassett, Timothy Ford, Thom. Knowles, Robert Preston.
 4th, Richard Osborne, Robert Hill, Jno. Wilford, Henry Gibbons.
 5th, Francis Brown, Adam Nicolls, Goodman Leeke, Goodman Dayton.
 6th, Wm. Gibbons, John Vincent, Thomas Wheeler, John Brackett.

SECONDLY, FOR THE WOMEN'S SEATS.

In the middle.

- 1st seat, old Mrs. Eaton.
 2d seat, Mrs. Malbon, Mrs. Gregson, Mrs. Davenport, Mrs. Hooke.
 3d seat, Elder Newman's wife, Mrs. Lamberton, Mrs. Turner, Mrs. Brewster.
 4th seat, Sister Wakeman, Sister Gibbard, Sister Gilbert, Sister Miles.
 5th seat, Mr. Francis Newman's wife, Sister Gibbs, Sister Crane, Sister Tuttle, Sister Atwater.
 6th seat, Sister Seeley, Mrs. Caffinch, Mrs. Perry, Sister Davis, Sister Cheever, Jno. Nash's wife.
 7th seat, David Atwater's wife, Sister Clarke, Mrs. Yale, Sister Osborne, Sister Thompson.
 8th seat, Sister Wigglesworth, Goody Johnson, Goody Camfield, Sister Punderson, Goody Meigs, Sister Gregory.
 9th seat, Sister Todd, Sister Boykin, William Potter's wife, Matthias Hitchcock's wife, Sister Cooper.

In the cross seats at the end.

- 1st, Mrs. Bracey, Mrs. Evance.
 2d, Sister Fowler, Sister Ling, Sister Allerton.
 3d, Sister Jaffrey, Sister Rutherford, Sister Livermore.
 4th, Sister Preston, Sister Benham, Sister Mansfield.
 5th, Sister Alling, Goody Bannister, Sister Kimberley, Goody Wilmot, Sister Whitnell, Mrs. Higginson.

In the little cross seat.

Sister Potter, the midwife, and old Sister Nash.

In the seats on the side.

- 1st seat, Sister Powell, Goody Lindon, Mrs. James.
 2d seat, Sister Whitehead, Sister Munson, Sister Beckley, Sister Martin.
 3d seat, Sister Peck, Joseph Nash's wife, Peter Brown's wife, Sister Russell.
 4th seat, Sister Ives, Sister Bassett, Sister Patteson, Sister Elsey.

In the seats on the other side of the door.

- 1st seat, Jno. Thomas' wife, Goody Knowles, Goody Beach, Goody Hull.
 2d seat, Sister Wakefield, Sister Smith, Goody Moss, James Clarke's wife.
 3d seat, Sister Brackett, Sister Hill, Sister Clarke, Goody Ford.
 4th seat, Goody Osborne, Goody Wheeler, Sister Nicolls, Sister Brown.

At the town meeting at which the second list of names was read, "it was agreed that (because there want seats for some, and that the alleys are so filled with blocks, stools and chairs, that it hinders a free passage) low benches shall be made at the end of the seats on both sides of the alleys for young persons to sit on." But these additional seats did not suffice; for, about twelve months later, the townsmen, or, as we now term them, the selectmen, were "desired to speak with some workmen to see if another little gallery may not for a small charge be made adjoining that [which] is already." This mention of the gallery prompts us to suggest that, as, with few exceptions, the persons who had seats assigned to them by name were heads of families, young men and young women sat in the gallery, as was the general custom in New England in later generations. There is reason for believing that the boys clustered together on the gallery stairs, and that though not allowed to wear their hats, as their fathers were, they sometimes disturbed the "exercise" with their exuberant vitality. That the interior of the building was cared for and kept free from dust is evident from the minute: "It is ordered that sister Preston shall sweep and dress the meeting-house every week and have one shilling a week for her pains."

Toward the rude sanctuary in the Market Place, the persons whose names are written above, and many others too youthful or too lowly in station to be dignified with an assigned seat, went up in the morning of every Lord's Day. The first drum was beaten about eight o'clock in the tower of the meeting-house and through the streets of the town. When the second drum sounded, an hour later, families came forth from their dwellings and walked in orderly procession to the House of God; children following their parents to the door, though not allowed to sit with them in the assembly after they were of sufficient age to be separated from their mothers. The ministers in the pulpit wore gowns and bands, as they had done in England; their Puritan scruples reaching not to all the badges of official distinction which they had been accustomed to see and to use, but only to the surplice.

The only other public buildings on the Market Place were a school-house and a watch-house. The latter was for the comfort of the watchmen who were on duty at night, and on Sundays and lecture days and other days, ordinary and extraordinary, of solemn worship. In 1645

It is ordered that the market-place be forthwith cleared, and the wood carried to the watch-house, and there piled for the use and succor of the watch in cold weather; and the care of this business is committed to the four sergeants.

From a record four years later, it appears that this work of clearing the Market Place was to be performed by the inhabitants, each working in his turn, either personally or by proxy; that some trees were then still standing; and that some of the inhabitants had not yet done their share of the labor. Probably a wood-pile had been provided sufficient for the use and succor of the watch for four years; after the lapse of which time, "it was propounded that some wood might be provided for the watch.

The sergeants were desired to inquire who hath not wrought in the market-place, that they might cut some wood out; and in the meantime the treasurer was to provide a load." A watch ordinarily consisted of one intrusted as master of the watch and six other watchmen.

The master of the watch is to set the watch an hour after sunset, dividing the night into three watches, sending forth two and two together to walk their turns, as well without the town as within the town and the suburbs also, to bring to the court of guard any person or persons whom they shall find disorderly, or in a suspicious manner within doors or without, whether English or Indians, or any other strangers whatsoever, and keep them there safe until the morning and then bring them before one of the magistrates. If the watchmen in any part of their watch see any apparent common danger, which they cannot otherwise prevent or stop, then they are to make an alarm by discharging their two guns, which are to be answered by him that stands at the door to keep sentinel, and that also seconded by beating of the drum. And if the danger be by fire, then with the alarm, the watchmen are to cry: fire! fire!! And if it be by the discovery of an enemy, then they are to cry: arm! arm!! all the town over, yet so as to leave a guard at the court of guard. The master is to take care that one man always stand sentinel in a sentinel posture without the watch-house, to hearken diligently after the watchmen, and see that no man come near the watch-house or court of guard; no, not those of the present watch who have been walking the round, but that he require them to stand, and call forth the master of the watch to question, proceed, or receive them as he shall see cause. The master of the watch is also to see that none of the watchmen sleep at all, and that none of their guns remain uncharged till the watch break up, and also that no man lay aside his arms while the watch continues.

In 1647 "it was propounded that men would clear wood and stones from their pale-sides, that the watchmen in dark nights might the more safely walk the rounds without hurt thereby." The pales with which the house-lots were inclosed were in some cases six feet and in other cases five feet high. In some instances rails were used for fencing, but the use of such an expression as "pale-sides" in the record, seems to imply that the streets were more commonly separated from the inclosures by pales. The avenues which led out of the town plat were provided with gates, which at night were shut, and doubtless locked.

New Haven excelled all the other plantations of New England in the elegance and costliness of its domestic architecture. Hubbard, the historian, who was seventeen years of age when New Haven was founded, speaks of its "error in great buildings," and afterward alludes to it again, saying: "They laid out too much of their stocks and estates in building of fair and stately houses, wherein they at the first outdid the rest of the country." Tradition reports that the house of Theophilus Eaton was so large as to have nineteen fireplaces, and that it was lofty as well as large. Its principal apartment, denominated—as in the mother country—the hall, was the first to be entered. It was sufficiently spacious to accommodate the whole family when assembled at meals and at prayers. It contained, according to the inventory taken after the Governor's decease, "a drawing table," "a round table," "green cushions," "a great chair with needle-work," "high chairs," "high stools," "low chairs," "low stools," "Turkey

carpets," "high wine stools," and "great brass andirons."

"The parlor," probably adjoining the hall, and having windows opening upon the street, served as a withdrawing room, to which the elder members of the family and their guests retired from the crowd and bustle of the hall. But, according to the fashion of the time, the parlor contained the furniture of a bedroom, and was occasionally used as the sleeping apartment of a guest.

Mather, speaking of Eaton's manner of life, says that "it was his custom when he first rose in the morning to repair unto his study;" and again, that, "being a great reader, all the time he could spare from company and business, he commonly spent in his beloved study." There is no mention in the inventory of "the study;" but perhaps the apartment referred to by Mather was described by the appraisers as "the counting-house," the two names denoting that it was used both as a library and as an office.

If these three rooms filled the front of the mansion, the reader may locate behind them at his own discretion, the winter kitchen, the summer kitchen, the buttery, the pantry—offices necessarily implied, even if not mentioned, as connected with an extensive homestead of the seventeenth century—and then add the brew-house and the warehouse, both mentioned in the inventory.

Of the sleeping apartments in the second story, the green chamber, so called from the color of its drapery, was chief in the expensiveness and elegance of its furniture, and presumably in its size, situation and wainscoting. The walls of the blue chamber were hung with tapestry, but the green drapery was of better quality than the blue. The blue chamber had a Turkey carpet, but the appraisers set a higher value on the carpet in the green chamber. All the other sleeping rooms were furnished each with a feather-bed of greater or less value, but the green chamber had a bed of down. In this chamber, probably, was displayed the silver basin and ewer, double gilt and curiously wrought with gold, which the Fellowship of Eastland Merchants had presented to Mrs. Eaton in acknowledgment of her husband's services as their agent in the countries about the Baltic. The appraisers valued it at forty pounds sterling, but did not put it in the inventory, because Mrs. Eaton claimed it as "her proper estate."

There was in the house, in addition to the bowl and ewer, plate to the value of one hundred and seven pounds eleven shillings sterling. Taking into consideration what we know of the house and furniture, we must conclude with Hubbard, that the Governor "maintained a port in some measure answerable to his place."

Of course there was no other house in the plantation equal to that of Governor Eaton; but President Stiles has transmitted the names of three other planters whose mansions he includes with that of Eaton among the four which excelled in stateliness all other houses erected in New Haven by the first generation of its inhabitants. The three were Mr. John Davenport's, Mr. Thomas Gregson's, and Mr.

Isaac Allerton's. * He informs us that he had himself in his boyhood been familiar with the interior of Mr. Davenport's house, and that it had thirteen fire-places. He tells us on the authority of one of the mechanics who demolished the Allerton house, that the wood was all of oak and of the best joiner-work.

The average dwelling-house of the first generation of planters was supported by a frame of heavy timber. White oak was a favorite wood for this purpose, and some of the larger pieces were considerably more than a foot square. Such a house had a stone chimney measuring, perhaps, ten feet in diameter where it passed through the first floor; being even larger in the cellar, and tapering as it ascended, the fire-place in one of the apartments of the first floor being six or eight feet long. A door in the middle of the front side of the house opened into a hall, which contained the principal stairway on the side opposite to the entrance and opened on the right hand and on the left into front rooms used as parlors, but furnished, one or both of them, with beds; which, if not commonly in use, stood ready to answer such drafts upon hospitality as are frequent in a new country, where all traveling is by private conveyance. The apartment most used by the family, in which they cooked and ate their food, and in winter gathered about the spacious fire-place, was in the rear of the chimney. At one end of it was a small bedroom and at the other a buttery.

The frame of such a house was covered with clapboards or with shingles, and after a little experience the planters learned to prefer cedar shingles to perishable and inflammable thatch as a covering for the roof. The floors were of thick oak boards fastened with wooden pins. The rooms were plastered on the sides; but the joists and floor above were exposed to view. In the parlors, the side contiguous to the chimney was usually wainscoted, and thus displayed wide panels from the largest trees of the primeval forest. The window sashes, bearing glass cut into small diamond-shaped panes and set with lead, were hung with hinges to the window-frames and opened outward. The doors were of upright boards, fastened together with battens, and had wooden latches. The outside doors were made of two layers of board, one upright and one transverse, fastened together with clinched nails, so arranged as to cover the door with diamond-shaped figures of equal dimensions. The front door was made in two valves, which, when closed, met in the middle and were fastened in that position by a wooden bar, placed across from one post to the other, and secured by iron staples.

Lower in rank than these framed buildings were log-houses, which, when small and built with little expenditure of joiner-work, were called huts rather than houses: as on a Western prairie a log cabin is even now distinguished from a log-house.

* Isaac Allerton was one of the pilgrims who came to Plymouth in the Mayflower. Having fallen under censure on account of some commercial transactions in which he was the agent of the colony, he removed first to Marblehead and afterwards to New Haven. A lot was granted him on Union street, near Fair street, where he built "a grand house with four porches."

In the seventeenth century, as compared with the present day, household furniture was rude and scanty, even in England; and doubtless emigration to a new country deprived the planters of New England of some domestic conveniences which they might have possessed if they had remained at home. A few of the most distinguished men in New Haven had tapestry hangings in their principal apartments; and Governor Eaton had, in addition to such luxuries, two Turkey carpets, a tapestry carpet, a green carpet fringed, and a small green carpet, besides rugs; but the mansion of a planter who had been a London merchant is not to be taken as a fair specimen of contemporary dwellings.

Besides the beds, which stood in so many of the apartments, the most conspicuous and costly piece of furniture in a house was, perhaps, a tall case of drawers in the parlor. It was called a case of drawers and not a bureau; for at that time a writing-board was a principal feature of a bureau. If, as was sometimes the case, there were drawers in the lower part and a chest at the top, it was called a chest of drawers. This form, being in itself less expensive, received less of ornament, and was to be found even in the cottages of the poor. Still another form had drawers below and doors above, which, when opened, revealed small drawers for the preservation of important papers or other articles of value. This form was sometimes called a cabinet. After the death of Governor Eaton, "there was found in his cabinet a paper, fairly written with his own hand, and subscribed also with his own hand, having his seal also thereunto affixed," which was accepted as his last will and testament, "though not testified by any witnesses nor subscribed by any hands as witnesses." The inventory of Governor Eaton does not mention a cabinet, but specifies among the items "in the green chamber," which was evidently the most elegant of his apartments, a cupboard with drawers. This was doubtless, under a more homely name, the same piece of furniture which in the probate record is called a cabinet.

The inventory of Governor Eaton makes no mention of a clock, and probably there was none in the Colony of New Haven while he lived, unless his friend Davenport had so early become the possessor of the "clock, with appurtenances," which, after the death of its owner, was appraised at £5.

At a later date a clock outranked the case of drawers however elegant, by its greater rarity and greater cost. For a long time after their first appearance, clocks were to be found only in the dwellings of the opulent, the generality of the people measuring time by noon-marks and sun-dials.

Table furniture, as compared with that of the present day, was especially scanty. Forks were not in common use in England till after the union of New Haven with Connecticut, though, as Palfrey suggests, there was a very liberal supply of napkins, as if fingers were sometimes used for forks. Spoons used by families of the middle class were commonly of a base metal called alchymy, though some such families had a few spoons of silver. But if silverware was not in general use, families of opulence seem to have been well supplied with it.

Governor Eaton had, including the basin and ewer presented to Mrs. Eaton by the Eastland Fellowship, more than £140 worth of plate, and Mr. Davenport's plate was appraised at £50.

Table dishes were generally of wood or of pewter, though china and earthenware are specified in the inventory of Mr. Davenport's estate. Vessels of glass are also sometimes mentioned in inventories. Drinking vessels, called cans, were cups of glass, silver or pewter, with handles attached to them. Porringers were small, bowl-shaped vessels for holding the porridge commonly served for breakfast or supper. Usually they were of pewter and supplied with handles. Meat was brought to the table on platters of pewter or of wood, and from these was transferred to wooden trenchers, which, in their cheapest form, were square pieces of board, but often were cut by the lathe into the circular shape of their porcelain successors.

In all but the most wealthy families, food was cooked in the apartment where it was eaten, and at the large fire-place, which by its size distinguished the most frequented apartment of the house. A trammel in the chimney, by means of its hook, which could be moved up or down according to the amount of fuel in use at the time, held the pot or kettle at the proper distance above the fire. At one end of the fire-place was an oven in the chimney. Supplementary to these instruments for boiling and baking, were a gridiron, a long-handled frying-pan, and a spit for roasting before the fire. At the end of the room, pewter platters, porringers and basins, when not in use, were displayed on open shelves; and hanging against the wide panels of the wainscot were utensils of tin and brass, the brightness of the metal showing forth the comparative merit of the house-keeping.

The diet of the planters necessarily consisted chiefly of domestic products; though commerce supplied the tables of the wealthy with sugar, foreign fruits and wines. Kine and sheep were few during the early years of the colony, but there was such an abundance and variety of game, that the scarcity of beef and mutton was but a small inconvenience. In town, venison brought in by English or Indian hunters was usually to be obtained of the truck-master; and at the farms, wild geese, wild turkeys, moose and deer were the prizes of the sharpshooter. The air in spring and autumn was sometimes perceptibly darkened with pigeons; the rivers were full of fish; on the sea-shore there was plenty of clams, oysters and mussels. Poultry and swine soon multiplied to such an extent, that they could be used for the table; and within ten years from the foundation of New Haven, beef had become an article of export. The abundance of game, of pork, and of poultry, doubtless hastened the exportation of this commodity. Tillage produced, besides the maize, the beans, and the squashes indigenous to the country, almost every variety of food to which they had been accustomed in England.

The diet for breakfast and supper was frequently porridge made of meat and of peas, beans or

other vegetables. Frequently it was mush and milk. A boiled pudding of Indian meal, cooked in the same pot with the meat and vegetables which followed it, was often the first and principal course at dinner. It seems to have been assigned to the first course, in the interest of frugality, to spare the more expensive pork and beef. Of esculent roots, the turnip was far more highly prized and plentifully used than the potato. Tea and coffee had not yet come into general use so as to be articles of commerce even in England, but beer was the common drink of Englishmen at home and in America. A brew-house was regarded as an essential part of a homestead in the New Haven colony, and beer was on the table as regularly as bread.

While the breakfast, dinner and supper described above may be taken as a specimen of the diet frequently appearing on the table of a New England family in the seventeenth century, they are by no means to be regarded as fixed by a rule from which there was no variation. There were flesh-days and there were fish-days in every week; and on Saturday, the oven being heated for baking bread, a pot of beans was put in, which, being allowed to remain for twenty-four hours, furnished a warm supper for the family when they returned from public worship. There was variation from and addition to the ordinary fare on those numerous occasions, when friends, traveling on horseback, stopped to spend the night, or to rest in the middle of the day. Then the table was burdened with variety and abundance according to the means of the family and the providence of the mistress. Feasting reached its acme on the day of the annual thanksgiving, when there was such plenty of roast meats, and so extraordinary an outcome from the oven, that ordinary diet was for some days afterward displaced by the remains of the feast.

No picture of domestic life in New England could be complete which did not exhibit the family observing the annual thanksgiving. Rejecting Christmas, the Puritans established in its place another festival, which became equally domestic in the manner of its observance. Children who had left their parents to prepare themselves for the duties of adult life, or to occupy homes which they themselves had established, were gathered again in the home of their nativity, or under the roof of those whom they had learned since they were married to call father and mother. Here they recounted the blessings of the year, and united in giving thanks to God. If there were children's children, they came with their parents, and spent the hours which remained after worship in feasting and frolic.

Family worship was an important feature of domestic life in a Puritan household. It was important because of its frequency, regularity, and seriousness. Whenever the family came to the table for breakfast, dinner or supper, there was a grace before meat, and when they left it, a grace after meat, every person standing by his chair while the blessing was asked and the thanks were given. The day was begun with worship, which included

the reading of Scripture and prayer, and ended with a similar service, all standing during the prayer. A member of Governor Eaton's family reports:

It was his custom, when he first rose in a morning, to repair unto his study—a study well perfumed with the meditations and supplications of a holy soul. After this, calling his family together, he would then read a portion of Scripture among them, and after some devout and useful reflections upon it, he would make a prayer, not long, but extraordinarily pertinent and reverent; and in the evening some of the same exercises were again attended. On the Saturday morning he would still take notice of the approaching Sabbath in his prayer, and ask the grace to be remembering of it and preparing for it; and when the evening arrived, he, besides this, not only repeated a sermon, but also instructed his people with putting of questions referring to the points of religion, which would oblige them to study for an answer; and if their answer were at any time insufficient, he would wisely and gently enlighten their understanding; all which he concluded by singing a psalm.

In the New Haven Colony the Lord's Day began, according to the Hebrew manner of reckoning, at sunset. Saturday was the preparation day. The diet for the morrow was made ready so far as was possible, and the house was put in order. The kitchen floor received its weekly scrubbing, and the floor of the parlor was sprinkled anew with the white sand from the sea-shore. Before the sun had disappeared beneath the western horizon, the ploughmen had returned from the fields; the mistress and her maids had brought the house-work to a stop. Because "the evening and the morning were the first day," they began their Sabbath observance at evening. It was because Saturday evening was a part of the Lord's Day that the master of a house added to the usual family worship some endeavor to impart religious instruction to his children and servants.

New Haven retained its custom of beginning the Lord's Day at evening through the seventeenth and eighteenth centuries. Whatever may have been the disadvantages of the custom, they were of a worldly and not of a spiritual nature. Perhaps less labor was accomplished; though it admits of question whether the subtraction of an hour or two from the work-time of Saturday did not, by a more thorough restoration of strength to the laborer, increase rather than diminish the labor accomplished. There can be no question that the custom was more favorable to the religious improvement of the Lord's Day than that which, by exacting extra hours of labor on Saturday, occasions unusual fatigue at the end of the week. It is also indisputable that the custom exerted a refining influence by means of the social intercourse on Sunday evening, for which it afforded opportunity. Every house was then dressed; and every person, even if obliged on other days to delve and drudge, was in his best apparel. Sunday in the New Haven Colony was at once a holy day and a holiday; the Puritan restraint with which it was kept till sunset, giving place in the evening to recreation and social converse.

Though young men were by law forbidden "to inveigle or draw the affections of any maid, without the consent of father, master, guardian, governor or such other who hath the present interest or charge, or, in the absence of such, of the near-

est magistrate, whether it be by speech, writing, message, company-keeping, unnecessary familiarity, disorderly night-meetings, sinful dalliance, gifts," or any other way, yet every respectable young man knew of some house where he might meet on Sunday evening one of the maidens whom he had seen in the opposite gallery of the meeting-house, without fear that her father, master, guardian, or governor would be displeased.

The marriages which resulted from these Sunday evening visits of the young men, were not solemnized by a minister of religion, but, according to the Puritan view of propriety, by a magistrate. The requirement that marriage should be contracted before an officer of the civil authority, was a protest against the position that marriage is a sacrament of the Church. Clandestine marriage was carefully prevented by the requirement that the intention of the parties should be three times published at some time of public lecture or town-meeting, or be set up in writing upon some post of their meeting-house door in public view, there to stand so as it may be easily read, by the space of fourteen days. Although the same statute required that the marriage should be in "a public place," this requirement was sufficiently answered when spectators were present; and usually marriages were solemnized at the home of the bride.

A marriage implied a new home—perhaps a farm to be cut out of the primeval forest, and a house to be built with lumber yet in the log. A portion of the work had preceded the marriage, but a life-long task remained. The people were generally frugal and industrious, and the women in their sphere were as truly so as the men. The mistress and her maids, if she had them, were as busy in the house as the master and his servants in the fields. Besides the house-work, the dairy-work, the sewing, and the knitting, there was everywhere spinning, and in some houses weaving. They spun cotton, linen, and wool. New Haven probably had in its Yorkshire families special skill in the manufacture of cloth. Johnson, speaking in his "Wonder Working Providence" of that part of Mr. Rogers' company which began a settlement in Massachusetts and called it Rowley, after the name of their former home in Yorkshire, says: "They were the first people that set upon making of cloth in the Western World, for which end they built a fulling-mill and caused their little ones to be very diligent in spinning cotton, many of them having been clothiers in England." This industry, so far at least as spinning is concerned, spread through the whole community. Every farmer raised flax, which his wife caused to be wrought into linen; and wherever sheep were kept, wool was spun into yarn for the knitting-needles and the loom. A young woman who could spin between sunrise and sunset more than thirty knots of warp or forty of filling, was in high estimation among sagacious neighbors having marriageable sons. This industry occupied a chamber in the dwelling-house, or a separate building in the yard. The music of the wheel was frequently accompanied with song. Tradition relates that when Whalley and Goffe were

concealed at Milford in a cellar under a spinning-shop, the maids, being accustomed to sing at their work and unaware that any but themselves were within hearing, sang a satirical ballad concerning the regicides, and that the concealed auditors were so much amused that they entreated their friend, the master of the house, to procure a repetition of the song.

The simple, regular life of a planter's family was favorable to health. As compared with the present time there was but little excitement and but little worry for man or woman. As compared with Old England in the seventeenth century, New Haven, during the twenty-seven years in which it was a separate jurisdiction, might be called a healthy region. England was then often ravaged by the plague. While Mr. Davenport was vicar of St. Stephen's, the City of London was visited with a pestilence which swept away thirty-five thousand of its inhabitants. The parish register records the vote of the parishioners that Mr. Davenport shall have of the parish funds, in respect of his care and pains taken in time of the visitation of sickness, as a gratuity, the sum of £20.

In coming to New Haven the planters found a more salubrious, or certainly a less deadly atmosphere than they had breathed in England; nevertheless they were grievously afflicted with sickness, malaria having been more prevalent than in the other New England colonies.

"It is not annual," says Hubbard, "as in Virginia, there being sundry years when there is nothing considerable of it, nor ordinarily so violent and universal; yet at some times it falls very hard upon the inhabitants, not without strange varieties of the dispensations of Providence; for some years it hath been almost universal upon the plantations, yet little mortality; at other times it hath been very mortal in a plantation or two, when others that have had as many sick, have scarcely made one grave; it hath been known also in some years that some one plantation hath been singled out and visited after a sore manner when others have been healthy round about."

Much has been written of the depression which settled upon the town of New Haven in consequence of the failure of its expectations in regard to commerce, and there is no reason to doubt that the planters were so much disappointed in such expectations, that they projected a new plantation on the Delaware Bay, and were willing to listen to proposals that they should remove to Ireland and to Jamaica. But perhaps the prevalence of malaria may have had much to do with the discouragement of the people; for, as this disease in modern times takes away the energy and hopefulness of the patient, so it was then, as Hubbard testifies, "attended with great prostration of spirits."

Mr. Davenport, writing to his friend Winthrop, who included a knowledge of medicine in the encyclopedia of his acquisitions, concerning the great sickness which prevailed in New Haven in 1658 and 1659, mentions such symptoms as gripings, vomitings, fluxes, agues and fevers, giddiness, much sleepiness, and burning. He says, "It comes by fits every other day." He informs him that the supply of medicine he had left with Mrs. Davenport is spent. "The extremities of the people have caused her to part with what she reserved for our own fam-

ily, if need should require." He adds, in a postscript, "Sir, my wife desires a word or two of advice from you, what is best to be done for those gripings and agues and fevers; but she is loth to be too troublesome; yet, as the cases are weighty, she desires to go upon the surest ground and to take the safest courses, and knoweth none whose judgment she can so rest in as in yours."

With all the despondency resting upon the town, there was mingled the same comfort which comforts all communities afflicted with malaria, namely, the conviction that the evil is not so great as in some other places. Mr. Davenport, when writing that "many are afflictively exercised," adds, "though more moderately in this town, by the mercy of God, than at Norwalk and Fairfield. Young Mr. Allerton, who lately came from the Dutch, saith they are much more severely visited there than these parts are. It is said that at Maspeag, the inhabitants are generally so ill that they are likely to lose their harvest through want of ability to reap it."

It is evident that the care of the sick must have been an important part of domestic life in New Haven while these malarial diseases prevailed. With more or less of skill, and more or less of success, every family nursed its sick. With what degree of skill the disease was combated at first, the reader may guess from the declaration of Hubbard that the "gentle, conductitious aiding of nature hath been found better than sudden and violent means by purgation or otherwise; and blood-letting, though much used in Europe for fevers, especially in the hotter countries, is found deadly in this fever, even almost without escaping."

The restraint which the Puritans put upon their feelings appears, perhaps, more wonderful when death entered the house than at any other time. We have a detailed report of the manner in which Governor Eaton carried himself when his eldest son was called to die:

His eldest son he maintained at the college until he proceeded master of arts; and he was indeed the son of his vows and the son of great hopes. But a severe catarrh diverted this young gentleman from the work of the ministry, whereto his father had once devoted him; and a malignant fever, then raging in those parts of the country, carried off him with his wife within two or three days of one another. This was counted the sorest of all the trials that ever befell his father in the days of the years of his pilgrimage, but he bore it with a patience and composure of spirit truly admirable. His dying son looked earnestly on him and said: "Sir, what shall we do?" Whereto, with a well-ordered countenance, he replied: "Look up to God." And when he passed by his daughter, drowned in tears on this occasion, to her he said: "Remember the sixth commandment, hurt not yourself with immoderate grief; remember Job, who said, 'The Lord hath given and the Lord hath taken away; blessed be the name of the Lord.'" You may mark what a note the spirit of God put upon it—"In all this Job sinned not nor charged God foolishly." "God accounts it a charging him foolishly when we don't submit unto him patiently." Accordingly he now governed himself as one that had attained unto the rule of weeping as if he wept not; for it being the Lord's day he repaired unto the church in the afternoon, as he had been there in the forenoon, though he was never like to see his dearest son alive any more in this world. And though, before the first prayer began, a messenger came to prevent Mr. Davenport's praying for the sick person who was now dead, yet his affectionate father altered not his

course, but wrote after the preacher as formerly, and when he came home, he held on his former methods of divine worship in his family, not, for the excuse of Aaron, omitting anything in the service of God. In like sort, when the people had been at the solemn interment of this his worthy son, he did with a very impassionate aspect and carriage then say, "Friends, I thank you all for your love and help, and for this testimony of respect to me and mine—the Lord hath given, and the Lord hath taken; blessed be the name of the Lord." Nevertheless, retiring hereupon into the chamber where his daughter (in-law) then lay sick, some tears were observed falling from him while he uttered these words, "There is a difference between a sullen silence or a stupid senselessness under the hand of God, and a childlike submission thereunto."

Social life among the planters of the New Haven Colony, had for its basis contemporary social life in England, but was modified by Puritanism and by emigration to a wilderness. Some features of it which seem strange to one acquainted only with the present age, were brought with them across the water and disappeared earlier than in the old country. They brought with them English ideas of social rank, of the relative duties of parents and children, of the reserve and seclusion proper for young women, and of the supervision under which young people of the different sexes might associate. They did not originate the public sentiment or the legislation on these subjects which provokes the merriment of the present age.

Their religious convictions, of course, influenced their social life. It would be impossible that any community as homogeneous and as earnest in religion as they were, should not have some peculiarity springing from this source. A peculiarity of the Puritans was seriousness. Such convictions as they cherished will necessarily produce more than an average seriousness of manner; and if this be true in a prosperous community, whose tranquillity has not been disturbed for a generation, we should expect to find even more seriousness among a people who have expatriated themselves for their religious convictions. If we again take Theophilus Eaton as an illustration, he was a man of gravity when residing in London and in the East countries. He would have been such if the Puritan party had been in power, and he consequently in security. He was probably more so by reason of the annoyances and dangers to which he and his friends were exposed. Having undertaken to establish a new plantation in the wilderness, his greater responsibility would naturally produce a deeper seriousness. A member of his family testifies that "he seldom used any recreations, but, being a great reader, all the time he could spare from company and business he commonly spent in his beloved study." It would be an error, however, to suppose that this seriousness had with it no admixture of gaiety; for Hubbard, who was partly his contemporary, describes him as "of such pleasantness and fecundity of harmless wit as can hardly be paralleled."

Residence in a new country also influenced social life, but not as much as in many other cases of removal to a wilderness. It has been said in modern time that emigration tends to barbarism; but this could not have been true in their case in

any considerable degree. From the first Sabbath they maintained the public worship of God. Before the first year had passed their children were gathered into a school. Laws were as diligently executed as anywhere in the world. Every plantation had in it from the first, some persons of polite manners, to whom those of less culture looked up with respect.

New Haven was from the first a compactly settled town of more than one hundred and thirty families, and some of its inhabitants were not only refined but wealthy. The peculiarity of their social state was not that they were more barbarous than other Englishmen, but it consisted rather in that mutual dependence and helpfulness usually to be found in a new country.

News from home was communicated to the neighbors. "Letters of intelligence," an institution which during the existence of the colony began to give place to printed newspapers, were passed from hand to hand. Corn was husked and houses were "raised" by neighborly kindness. The whole plantation sympathized with a family afflicted with sickness, and the neighbors assisted them in nursing and watching. Families entertained travelers after the manner of Christians of the first centuries, and highly prized their visits as seasons of fellowship, and opportunities for learning the news of the day. The train-band and the night-watch were also peculiar features of the social system incident to a plantation in the wilderness. Comparing the social state in the New Haven Colony with that which now obtains on the same territory, we find more manifestation of social inequality. This appears in the titles prefixed to names. The name of a young man had no prefix till he became a master workman. Then, if he were an artisan or a husbandman, he might be addressed as goodman, and his wife might be called goodwife or goody. A person who employed laborers, but did not labor with them, was distinguished from one whose prefix was goodman, by the prefix Mr. This term, of respect was accorded to elders, magistrates, teachers, merchants, and men of wealth, whether engaged in merchandise or living in retirement from trade. Social inequality was also strikingly manifest in "the seating of the meeting-house," the Governor and Deputy-Governor being seated on the front form, and allowed its whole length for the accommodation of themselves and their guests, while others were disposed behind them and in the end seats according to social position; but a back seat of the same length as those in front was considered sufficiently long for seven men. The women on the other side of the house were arranged with the same consideration of rank. No seats were assigned to persons inferior to a goodman and a goodwife.

Although many of the people were much confined at home during the week by domestic industry, all assembled every Sunday for worship. In but few cases was the attendance perfunctory. They went to the House of God from a sense of duty, but they went with a willing mind. They were interested not only in the worship and in-

struction of the Church, but in the assembly. Their social longings were gratified with the announcement of intended marriages; with "bills" asking the prayers of the Church for the sick, for the recently bereaved, for those about to make a voyage to Boston; or with "bills" returning thanks for recovery from a dangerous illness, or for a safe return from a journey or a voyage. Besides such personal items as reached their ears by way of the pulpit, others came to them in a more private way, as they spoke with acquaintances dwelling in a different quarter or at the farms. It was a satisfaction to persons who during the week had seen only the inmates of their own houses and a few neighbors, even to look on such an assembly.

Let the reader fancy himself entering the Market place while Stephen Metcalf and Robert Bassett, "the common drummers for the town," are sounding the second drum on Sunday morning. The chimney-smoke rises, not only from the habitations of the town, but from as many Sabbath-day houses as there are families dwelling at the farms.* From every direction families are approaching the square. The limping Wigglesworth, whose lameness was afterwards so severe "that he is not able to come to the meeting, and so is many times deprived of the ordinances," starting early from his house (which was in Chapel street, near the intersection since made by High street), is the first to enter the south door of the sanctuary. Lieutenant Seeley, straight and stalwart in contrast with this poor cripple, stands near, conversing with the Master of the Watch, as the watchmen move away to patrol the town. Following Wigglesworth comes "the Right Worshipful Stephen Goodyear, Esquire," Deputy-Governor, and his neighbor, the reverend Teacher of the church, William Hooke, afterward Chaplain to Oliver Cromwell, wearing gown and bands. On the east side of the market-place the Pastor, also in gown and bands, comes, in solitary meditation, through the passage, which the town had given him, between Mr. Crane's lot and Mr. Rowe's lot, "that he may go out of his own garden to the meeting-house." His family, that they may not intrude upon him in this holy hour, come through the public street. Governor Eaton, with his aged mother leaning on his arm, walks up on the opposite side of the same street, and crosses over from Mr. Perry's corner, followed by his honored guests and the rest of his numerous household. When all but a few tardy families have reached the meeting-house, the drums cease to beat. The squadron on duty for the day march in and seat themselves on the soldiers' seats, near the east

door, which is "kept clear from women and children sitting there, that if there be occasion for the soldiers to go suddenly forth, they may have free passage."

Days of extraordinary humiliation were appointed by the General Court from time to time, in view of public calamities or apprehended danger. On such days there were two assemblies, and abstinence from labor and amusements was required, as on the Lord's day, though with less rigidity of interpretation, the prohibition crystallizing in later times into the formula, "all servile labor and vain recreations on said day are by law forbidden." On Thanksgiving Day, as we learn from Davenport's letter to Winthrop, in which he mentions Governor Newman's sickness and death, there were also two services in the meeting-house. Adding these occasional assemblies to those of the Lord's Day, we find that the whole population were often called together. But there were, besides, convocations on lecture days, occasional church meetings, and, in the several neighborhoods, "private meetings, wherein they that dwelt nearest together gave their accounts, one to another, of God's gracious work upon them, and prayed together and conferred, to their mutual edification." These private meetings were held weekly and in the daytime, as appears from a question which Mr. Peck, the Schoolmaster, propounded to the Court: "Whether the master shall have liberty to be at neighbors' meetings once every week?" Assemblies for worship were certainly a very important feature in social life.

Almost equally prominent were military trainings. Soldiers were on duty every night. One-fourth of the men subject to bear arms were paraded before the meeting-house every Sunday, and were at frequent intervals trained on a week-day. Six times in the year the whole military force of the plantation was called out. A general training brought together not only those obliged to train, but old men, women, and children, as spectators of the military exercises, and of the athletic games with which they were accompanied. Almost as many people were in the Market place on training day as on Sunday, and those who came had greater opportunity for social converse than on the Day of Worship. The enjoyment which each experienced in watching the maneuvers of the soldiers, and the games of cudgel, backsword, fencing, running, leaping, wrestling, stool-ball, nine-pins, and quoits, was enhanced by sharing the spectacle with the multitude, meeting old friends, and making acquaintance with persons of congenial spirit.

Election days were also occasions when the people left their homes and came together. The meeting of a plantation court did not indeed bring out the wives and daughters of the planters as a general training did; but when the annual election for the jurisdiction took place, the pillion was fastened behind the saddle and the goodwife rode with her goodman, even from the remotest plantation, to truck some of the yarn she had been spinning, for ribbons and other foreign goods, as well as to gather up the gossip of the year. On such

* A Sabbath-day house was a hut in one end of which horses might be sheltered, and in the other end was a room having a fire-place and furnished, perhaps, with a bench, a few chairs and a table. Here the owners arrived soon after the first drum, and, if cold, kindled a fire. Here they deposited their lunch and any wraps which might be superfluous in the Meeting-house. Hither they came to spend the intermission of worship. The writer remembers such houses in a country parish near New Haven, where he visited when a child. In one of them he spent an intermission, dividing his attention, when in the room devoted to the human inmates, between doughnuts and the open fire-place, with its rusty fire-dogs and large bed of live coals, but preferring the company of the pony behind the chimney to that of the solemn people before the fire. He was born a little too late to remember Sabbath-day houses in New Haven, but his father has told him where this and that family had such accommodations.

occasions a store of cake was provided beforehand, and "election cake" is consequently one of the institutions transmitted from our forefathers.

For several years there were two fairs held annually at New Haven, one in May, and one in September, for the sale of cattle and other merchandise. These, of course, attracted people from all parts of the jurisdiction.

In addition to these public assemblies of one kind and another, there was daily intercourse between neighbors. Women sometimes carried their wheels from one house to another, that they might spin in company. There were gatherings at weddings and funerals. There was neighborly assistance in nursing and watching the sick. There was, as has been already related, social visiting in the evening of the Lord's Day. There were house-raising, when the neighbors assembled to lift and put together the timbers of a new dwelling; and house-warmings, when being again invited, some months later, they came to rejoice with those who had taken possession of a new dwelling. There were huskings in the autumn when the maize had been gathered and brought in; but in the plantation of New Haven single persons were not allowed to "meet together upon pretence of husking Indian corn, out of the family to which they belong, after nine of the clock at night, unless the master or parent of such person or persons be with them to prevent disorders at such times, or some fit person intrusted to that end by the said parent or master."

In view of the frequency with which the planters were convened in greater or less companies, it is evident that, however affected by their Puritanism and by emigration to a wilderness, they were a social people. They did not retire within themselves to live recluse from human converse; but endeavored to purify their social life. In this respect New Haven resembled the other New England colonies; but, contrary to a somewhat prevalent opinion, did not go as far as the other colonies in attempts to control social life by legislation. In Massachusetts, Winthrop writes, about six months after the settlement at New Haven was begun, that "the Court, taking into consideration the great disorder general throughout the country in costliness of apparel and following new fashions, sent for the elders of the churches and conferred with them about it, and laid it upon them, as belonging to them, to redress it, by urging it upon the consciences of their people, which they promised to do. But little was done about it; for divers of the elders' wives were in some measure partners in this general disorder." Some years previously there had been an order of the Court prompted by similar feelings, and having a similar design. Afterward there were in different years several orders designed to restrain extravagance in apparel, especially amongst people of mean condition; one of them expressly providing that "this law shall not extend to the restraint of any magistrate or other public officer of this jurisdiction, or any settled military officer or soldier in term of military service, or any other whose education and employments have been above the ordinary degree, or whose

estates have been considerable, though now decayed."

But nothing similar to this is found on the records of New Haven. Some writer noticing that both Plymouth and New Haven differed from Massachusetts, in that they did not attempt to regulate dress, says that Plymouth was too poor and New Haven too rich for such legislation. Perhaps, however, New Haven was restrained from enacting sumptuary laws more by its mercantile character than by its wealth. Its leading men had been accustomed not only to wear rich clothing themselves and to see it worn by others, but to increase their estates by selling cloth to all comers who were able to pay for it. Their feelings were consequently different from those of a man like Winthrop, who had never been a merchant, and had, like other English country gentlemen, regarded rich apparel as a prerogative of the gentry.

Did space permit, this sketch of New Haven as it was during the lifetime of its first planters might be much amplified; but we must now follow the history of the town as it descends the stream of time. The first generation had, with very few exceptions, disappeared when the seventeenth century came to an end. Meanwhile the General Assembly of Connecticut had passed an order "that from the east bounds of Guilford to the west bounds of Milford shall be for future one county, which shall be called the County of New Haven." In this, as in other counties established about the same time, a court was held semi-annually for the trial of cases which did not put in jeopardy life, limb, or continued residence within the colony. In cases not involving more than twenty shillings, the trial might be in these County Courts before the judges without a jury; but in the Superior Court at Hartford, where were tried appeals from County Courts and all actions involving loss of life or limb or banishment, the law required that a jury should be impaneled.

In 1667 the General Assembly of Connecticut granted to "the town of New Haven, liberty to make a village on the East River if they see it capable for such a thing, provided they settle a village there within four years from May next." In 1670 the same authority incorporated "New Haven village" as a town and named it Wallingford. A few planters were on the ground before this last action; but during the year in which it was incorporated as a town, an organized company removed from New Haven to occupy the New Haven village. A committee appointed by the town of New Haven was vested with power to manage the whole business of commencing the settlement. This committee held the lands as trustees and conveyed them to actual settlers as a free gift from the proprietors of New Haven. They also arranged and directed in all matters of common concern in the new plantation till May, 1672, when the inhabitants being fully organized, assumed the management of their own affairs. The committee then resigned their trust.

Wallingford is the only town whose territory was taken out of that of the town of New Haven before

the incorporation of the city in 1784. The subtraction of fifty families from its census for the settlement of Wallingford made the growth of New Haven appear less than it really was. The inhabitants of Wallingford, though in a different town, were tributary to New Haven in the way of trade; as were the people of Derby, which in 1675 was also incorporated, its territory being taken from that of Milford. It was, doubtless, in hope of some advantage to the trade of New Haven, that its proprietors relinquished their right to the common lands at Wallingford. The following statistics show the fluctuations in the wealth of New Haven from the time of its submission to Connecticut onward. The table shows also the number of taxable persons in 1676 and thereafter. They are taken from the Connecticut Records.

Estates in New Haven.	Value.	Persons.
In 1666.....	£17,474
1667.....	10,580
1668.....	15,932
1669.....	15,402
1670.....	16,140
1671.....	13,759
1672.....	13,017
1673.....	14,290
1674.....	14,881
1675.....	13,550
1676.....	12,993	237
1677.....	12,707	214
1678.....	13,713	294
1679.....	13,973	265
1680.....	14,280	268
1681.....	12,463	240
1682.....	12,367	238
1683.....	12,467	248
1684.....	13,127	268
1685.....	15,428	302
1686.....	15,426	303
1687.....	14,191	323
1688. Usurpation of Andross.		
1689.....	16,286	317
1690.....	15,559	322
1691.....	15,622	321
1692.....	14,546	316
1693.....	14,413	262
1694.....	14,009	256
1695.....	15,101	283
1696.....	15,525	290
1697.....	15,642	300
1698.....	15,890	310
1699.....	16,534	315
1700.....	16,769	330

A comparison of these statistics with those of Hartford shows that the two towns made progress with nearly equal step.

The records of Connecticut exhibit a list of the freemen in the town of New Haven in 1669, from which one may learn the names of nearly all its principal inhabitants one year before the settlement of Wallingford. The names as returned by the Constables were:

Mr. William Jones	James Heaton
Mr. James Bishop	Isaac Beecher
Mr. Matthew Gilbert	W ^m Wooden
Cap ^t John Nash	John Johnson
Mr. Samuel Street	John Clark
W ^m Andrews	W ^m Wilmot
Mr. Thomas Yale, Sen ^r	Joseph Mansfield
W ^m Peck	Rich ^d Sperry
Roger Alling	Alling Ball
John Gibbs	Tho: Kimberly
L ^t Thomas Munson	Moses Mansfield
Jno Mosse	Jonathan Tuttle
Jno Cooper, Sen ^r	Eliezer Brown
Nicholas Elsey	Joseph Benham
W ^m Thorpe	Thomas Tuttle
Samuel Whitehead	Jere: How
John Brackett	Daniel Sherman
James Russell	Jno. Cooper, Jun ^r
Henry Glover	Samuel Munson
Jere Whitnell	Joseph Moss
W ^m Bradley	Windle Johnson
Philip Leek	John Hall, Jun ^r
John Harriman, Sen ^r	Jno Thomas, Sen ^r
David Atwater	Jno Miles
Thomas Morris	Edward Perkins
W ^m Basset	Samuel Miles
John Winston	Isaac Turner
Henry Bristow	James Clark
Joseph Alsup	Matthew Moulthrop
Abra: Doolittle	Ellis Mew
John Chidsey	John Potter
John Alling	James Dennison
W ^m Payne	John Osbill
John Jackson	Samuel Hemingway
Nathaniel Merriman	Mr. John Hodshon
Ralph Lines	Mr. Tho: Trowbridge
Ephraim How	Thomas Barnes
Abra: Dickerman	George Ross
Jere: Osborne	Timothy Ford
John Gilbert	John Peck
Mr. William Tuttle	Joseph Peck
Mr. Benjamin Ling	Samuel Alling
Tho: Mix	Thomas Yale, J ^r
John Hall, Sen	Thomas Sandford
W ^m Holt	Joseph Bradley

In June, 1675, Philip, of Mount Hope, which is perhaps an Anglicized form of the aboriginal Montaup, or Montop, commenced hostilities against the English in his neighborhood. Other tribes were soon found to be confederate with him and a bloody conflict ensued, known in history by the name of King Philip's War; a conflict too

dreadful, by reason of savage barbarities and tortures, to be told in its details to modern ears. Philip was a son of Massasoit, the Sachem of the Pokanokets and the early friend of the English at Plymouth. Massasoit had two sons, known during his lifetime as Wamsutta and Metacomet. One day, after the death of Massasoit, his eldest son, who had succeeded to his father's authority, came to the Court at Plymouth, and, after having made several other requests which it was not difficult to grant, expressed a wish to have an English name. "In this matter, it cost the Court," says Palfrey, "nothing to gratify him, and they may be supposed to have increased his content by acquainting him with the magnificent import of their choice. They ordered that for the future he should be called by the name of *Alexander Pokanoket*; and desiring the same thing in the behalf of his brother, they named him *Philip*." Alexander's reign was soon terminated by his death, and his brother Philip became the chief Sachem of the Pokanokets.

In one sense King Philip's War may properly be said to have terminated with his death in August, 1676; for not only all the region into which he himself had carried devastation and slaughter was henceforth quiet, but the tribes north and west of the Pokanokets were either driven far away from their homes or had submitted to the English. In another sense, King Philip's War may be said to have continued till 1678, for the English settlers in Maine and New Hampshire were in as great danger of the tomahawk and scalping-knife after the death of Philip as those in Plymouth and Massachusetts and Connecticut had been in 1675 and 1676.

From the outbreak of King Philip's War in June, 1675, till the death of that sachem in August, 1676, New Haven suffered from constant danger and frequent alarms.

At a town meeting on the 2d of July, just twelve days after hostilities were commenced.

Mr. Jones* acquainted the town that the occasion of calling the meeting so suddenly, was concerning the rising and outrage of the Indians in Plymouth colony at Seakonk and Swansy, which was informed by letters sent from the Narragansett country to the Governor, the copies of which were sent to us, that we consider and prepare in time against the common danger. After the reading of the letters, it was moved that every person now would be quickened to have his arms ready by him for his use and defense. And it was advised that those who live abroad at the farms be careful not to straggle abroad into the woods, at least not yet, till we have further intelligence of the Indians' motions, and that they keep watch in the night to discover danger, and upon intelligence of danger to get together to stand for their defense at the farms or else to come to the town. Mr. Jones further informed that Philip the Indian was a bloody man, and hath been ready formerly to break out against the English, but had been hitherto restrained. But now war was broke forth, and it is likely must be prosecuted.

*Hannah Eaton, the youngest child of Theophilus Eaton, returned to England with her mother soon after her father's death, and there became the second wife of William Jones, a son of one of the regicide judges. Mr. Jones emigrated with his family to America soon after his marriage to Hannah Eaton, and on the 23d of May, 1662, was made a freeman of New Haven Colony. On the 28th of the same month he was elected a magistrate, and re-elected in 1663. In 1664 he was chosen Deputy-Governor. After the union with Connecticut, he was chosen a magistrate of that colony, and so continued to be chosen annually for thirty-three years.

The town was also informed that the magistrates had had speech with our Indians, and they denied all knowledge of Philip's motions, neither did they like them, and also said that they had no men gone that way, and would give us any intelligence they meet with, and that if any strange Indians come to them they will inform us and not harbor them. The town ordered that an account be taken of the Indians; how many men they are and where they are; and Matthew Moulthrop, who now took the constable's oath, was to warn them and look after them.

At a meeting September 24, 1675,

The town did desire Mr. William Jones, Mr. James Bishop, Capt. William Rosewell, Lieut. Thomas Trowbridge, Lieut. Thomas Munson, Jeremiah Osborne, and Henry Glover, to be a committee to consider of and erect some fortification at the Meeting-house as had been spoken of, as also in any other place or places about the town as they or the major part of them agree.

Also the town by vote desired and appointed Capt. William Rosewell to prepare the great guns, or so many of them as is necessary, to be fit for service.

The town, considering the present commotions and our danger, by vote appointed, whilst these exercises are on us, that all the inhabitants bring their arms and ammunition to the meetings upon the Sabbaths and other public days.

On the 12th of October,

At a meeting of the dwellers in the town, the farms not being warned, Mr. Jones acquainted the town that the cause of calling the town together was the sad tidings that was come unto us of the burning of Springfield and some persons slain by the Indians, and thereupon the committee which was appointed by the town to consider of fortifying for defense, thought it was necessary to call the town together to acquaint them what thoughts they had had; that besides what was doing at the Meeting-house, it might be useful to make some fortification at each street and at the angles of the town and fortify some houses; and also there had been speech about fortifying around the square of the town with a line of palisades or posts on the side of the quarters; and now he desired to consider and speak their minds.

Upon debate of these things, it was propounded and ordered that at the ends of the streets and at the four angles, these fortifications or places of shelter against the shot of an enemy should be set up as the committee shall appoint, and the persons in the town to work freely at it until they were finished.

It was appointed, and by vote ordered, that all small wood, brush and brushwood within half a mile of the town plat should be cut down and cleared away, that it might not afford shelter to Indians to creep in a skulking manner near the town.

On the 18th of the same month there was another meeting, at which

Mr. Jones acquainted the town that the occasion of this meeting was the danger we are in according to the intelligence that cometh unto us as by letters from Major Andross to the General Court, informing that there is a strong confederacy amongst the Indians in these parts against the English, and that our pretended friends are in the plot, and that this light moon they did intend to attack Hartford and some other places as far as Greenwich; as also Major Treat informs that the Narragansetts are in great preparations for war. Also the General Court and Council do advise all the plantations to fortify themselves the best way they can against the common enemy. And therefore it is our duty to use all means for defense and to do it unanimously. Also acquainted them that the Committee had viewed some houses for fortification, and desired that it might be speedily attended.

In the debate upon the matter, some propounded for fortifying some houses first, others propounded and thought it better to fortify with a line about the town. It was put to vote which should be done first, and the vote was to garison some houses first;* and then in a second vote it was

* Mr. Harriman's was one of the fortified houses. This was the house built by Deputy-Governor Goodyear on the site where Moseley's New Haven House now stands.

agreed and ordered that there should be a line of fortification made about the town, as had been spoken of from the Committee in a former meeting.

On the 30th of the same month there was another meeting, and further arrangements were made for hastening the fortification.

The Deputy-Governor (Leete, of Guilford) being present in the meeting, spoke much to the encouragement and advising of the inhabitants to go on with the work, and to do it with unanimity, seeking the safety of the whole as far as may be, but especially as in the natural body the hands and all the members seek the securing of the heart.

The success which had attended the sudden and general rising of the savages was succeeded by disaster and great slaughter when the English had had time for military organization. In the course of the autumn an army of 1,000 men was raised by the three colonies of New England for a winter campaign against the Narragansetts, who though at the first uprising they had made a treaty of neutrality with the English, were now confederate with Philip. The quota required of Connecticut was three hundred and fifteen men; but she sent three hundred Englishmen and one hundred and fifty Mohegans and Pequots. These were divided into five companies, one of which had for its captain Nathaniel Seeley, of Stratford, son of the Robert Seeley who, at the first settlement of New Haven, had been second in military command in that plantation.

The whole corps was commanded by Major Robert Treat, of Milford, afterward Governor of Connecticut at the time when the surrender of its charter being demanded, the document so mysteriously disappeared from the table of the General Assembly.

Those who planned this campaign were sensible that an expedition at this season would be most distressful and hazardous. They were not without apprehension that the whole army might perish should the troops be obliged to lie uncovered a single night in the open field. It did not escape their deliberations (says Trumbull) that the snow often fell so deep that it would be extremely difficult, if not impossible, to send any succor to the army in case of any misfortune; but they considered this as the only probable expedient of defeating the enemy and preventing the desolating of the country. Observing that "it was a humbling providence of God that put his poor people to be meditating a matter of war at such a season," they appointed the second of December to be observed as a solemn fast, to seek the Divine aid.

The Connecticut troops formed a junction with those from Massachusetts and Plymouth on Saturday, the 18th of December, and were obliged, as they had been the night previous, to remain uncovered in the open field. On Sunday morning, at the dawning of the day, the whole army commenced to march toward the enemy, who were in a swamp about fifteen miles distant. The troops from Massachusetts led the van; the two Plymouth companies were in the center; the Connecticut men guarded the rear. Wading through the snow until nearly one o'clock in the afternoon, without fire to warm or food to refresh them, they found themselves in the immediate neighborhood of the enemy's seat. It stood upon an eminence in the

center of a large swamp; was fortified with palisades; and compassed with a hedge on the outside of the line of nearly a rod's thickness. The only entrance which appeared practicable was over the trunk of a tree, which had been felled in such a position as to form a bridge across a body of water lying between the fort and the swamp which surrounded it. This log lay from four to six feet above the ground, and was commanded in front by a block-house, and on the left by a flanker.

As soon as the Massachusetts men entered the skirts of the swamp, they discovered an advanced party of the enemy and immediately fired upon them. Returning the fire, the enemy retreated toward the only passage-way into the fort, and the Massachusetts troops, led by their officers, mounted the log and followed the enemy into the fort, without waiting to form themselves or reconnoiter the fort. But there was more of courage than skill in this haste, for before the main body of the army could wade through the deep snow and come up to the aid of the few who had crossed the bridge, these heroes, were all either slain or driven back. But as the troops continued to come up, they continued to cross the bridge, notwithstanding the fire which poured upon them from every part of that side of the fort, as well as from the sheltered batteries of the block-house and the flanker. While the Connecticut troops were thus forcing their way into the fort, three of her five captains were killed, one of them falling from the fatal log, and Seely, so well known in New Haven, being shot down at the head of his company soon after they had achieved an entrance. A fourth received a mortal wound. Possibly the attempt to force an entrance over the log might have proved a failure, if a break had not been discovered in the line of palisades at a distance from the spot where the fight was hottest. A small party of English finding this neglected place, where the only fortification consisted of a high and thick hedge of trees and brush, climbed over it unobserved, and running down between the wigwams, attacked on the rear the Indians, who were crowded closely together in defense of the entrance of the fort. Thus assailed in front and rear, they were driven from the flanker and the block-house, so that the English on the outside had no more difficulty in crossing the bridge. Pressing in with great spirit, they drove the enemy from that part of the fort to the center, and from one covert to another, till, with horrible yells, the savage foe fled out of the fort and into the wilderness. As they retired, the soldiers set fire to the wigwams, about six hundred in number, all of which were instantly consumed, together with great store of corn and wampum.

It was supposed that three hundred warriors were slain, besides many wounded, who afterward died of their wounds and of cold. Nearly the same number of men were captured, and in addition three hundred women and children.

It was nevertheless a dearly-bought victory. Six English captains had fallen in the action; another had been mortally wounded; eighty men in all had been either killed or fatally injured; a hundred

and fifty more were wounded, who afterward recovered. But the sufferings of the army had only just begun. They had too hastily destroyed the wigwams that might have sheltered them during the night; and now, having already marched fifteen miles since daybreak, and fought a battle which lasted more than three hours, they again, as the sun was going down, took up their line of march, and spent the most of the night as they had spent the morning, in wading through the snow. Two hours after midnight they reached shelter at Wickford. The night was very cold and stormy, and the snow was deep. Several of the wounded died of cold and fatigue during the march. Many of the soldiers were frozen and their limbs exceedingly swollen. Four hundred were disabled and unfit for duty. The Connecticut troops suffered more than those from the other colonies. They had spent a night in the open field before they made a junction with their allies, and, in addition, that which immediately preceded the battle. They had sustained a much greater loss in the action, in proportion to their number, because they had entered the fort when the fire of the enemy was deadliest.

The destruction of the Narragansett fort with its stores, though not so utterly and immediately ruinous to the Narragansetts as the similar disaster at Mystic had been to the Pequots in the year preceding the foundation of New Haven, was, however, the beginning of the end of their tribal existence. They were still able to harass the English, scattering themselves in different directions, plundering and burning towns by surprise. But the fortune of war was against them after the destruction of the fort with its stores. They were driven from their own territory in the course of the spring and summer, and so cut off from almost every kind of subsistence, that in July and August of the year 1676 they began to come in to the English in large bodies, and submit themselves to the mercy of their conquerors.

The town meetings at New Haven in which fortification was ordered, were, so far as we have yet noticed the record of them, antecedent to the destruction of the Narragansett fort. The next extract from the town records which we present relates to a meeting held February 7, 1676, when the remnant of the foe, scattered in different directions, were surprising one village after another with conflagration and butchery. These surprises had happened chiefly in Massachusetts, but friendly Indians, sent out "to make discovery of the enemy," had brought back intelligence that they meant soon to fall upon the western line of the seaboard settlements.

At that meeting on the 7th of February,

It was propounded, that now the winter season, which had hindered the finishing of the fortification about the town, wearing off, it might go forward again and be perfected, and that the present state of things as to the war calls for attendance to that work, especially the Narragansetts appearing in such hostility; and the last intelligence from the Council at Hartford was that the enemy doth scatter into several bodies to disperse themselves into the country; and they being hungry will seek for supply, and the consideration of what damage may come should hasten us in our duty to be in the use of means for our safety.

On the 6th of March

Mr. Jones acquainted the meeting that the reason of calling them together was to consider of the fortification, which went slowly forward, and that it were good the inhabitants would be quickened to the work, the season for business coming on, and the war continuing; and there are reports of twenty-one hundred Indians in a body up in the country; and it is said they intend to set out about this time or the middle of this month, and fall upon the towns on the River, and so come down and along the coast as far as New York, and do what spoil they can. Also we hear of killing two men at Springfield. Therefore we had need be quickened into all due means for our safety, and to attend it speedily.

Jeremiah Osborne acquainted the town that the committee for the fortification had met according to former order, and had appointed himself and John Punderson, Junior, to oversee and set the work forward, and that they had gotten in all the wood which was ordered from the inhabitants, or within about fifteen loads; and that to finish the line on their side, they do think there will want one hundred loads; and also there are not gates; and without all be finished it will not be safe. John Cooper, Senior, also, overseer on their side, informed that there would want one hundred loads of wood to finish the line on their side.

It was propounded for a supply of wood to finish the line, and after it had been debated, it was by vote ordered that every team in the town and farms, except those on the east side of the East river, do each of them bring to the work one load of suitable wood (and those that have not teams to help to cut it); and to bring it, at the furthest, on the 8th and 9th days of this month, and to lay it according as the overseers of the work shall appoint; as also the said overseers to see that those who are behind for the time past bring in portions; and any person that shall neglect to attend the work according to this order, to be under the penalty the Council hath appointed.

It was ordered that no Indian be suffered to come into the town to see the fortifications, or take notice of any of our actings and motions; and that, by the constable, warning be given them that not any of them may come into the town, nor unto any English houses; and that if any Indian come into the town, he be apprehended and sent back again; yet, what may be, to avoid any misusage of them.

The gates were spoken of, and it was informed that Mr. Augur and Mr. Trowbridge would give, each of them, twenty shillings toward making of them; and it was left to the committee to get all the gates finished, and all the fortification also.

It was ordered that no person shall plant any Indian corn within two rods of the stockade line.

On the 11th of the same month

Mr. Jones informed that the occasion of calling the meeting was to publish some orders from the Council respecting the towns in the colony, particularly New Haven. The said orders were read.

It was moved, that now there being some quantity of wood brought for the line, that all persons, young and old, that are able to work, should work at it, which was with common consent agreed and ordered to be attended to, as the sergeants in their squadrons shall give notice; and to set out to work when the drum beateth in the morning; and every one that is defaulty herein shall, as a fine for his neglect, pay five shillings, which shall be improved for the benefit of the work.

The Council, in their orders read, appointed that a committee be chosen to regulate the ditching and breast-work; and the town chose and appointed the committee for the fortification to do that work also, or the major part of them. John Nash, who had been of that committee for fortification, desired the town to spare him in this, because he had many occasions, and he might be more beneficial to persons about their arms, which many stood in need of; and it was by some consented unto, and none spake to the contrary.

At a town meeting, April 25, 1676,

It was ordered, after some debate, that the fortification line about the town should be attended and finished as soon as seed could be got into the ground; and that when all the

wood that should be brought from several persons yet behind, is brought in, what is then wanting, the committee to appoint how it shall be supplied, and the line finished.

The records do not give complete proof that the palisade was ever finished. It sometimes happened that orders passed in town meeting were never executed. But as we find the town ordering about a year afterward, when there was a fresh alarm, that all persons should have their arms and ammunition in readiness, and that watches and wards should be attended, without a word about finishing the line, it is probable that the palisade was completed in the spring of 1676. In December, 1678.

On account of the peace, the town ordered that all fortification wood or stuff, whether set up or lying down, which is not quarter-fence, be sold by the townsmen for the good of the town. But the order was not carried into execution, for on the 31st of January, 1681, the townsmen propounded to sell the fortification to those whose fence was and is to be where it is standing, at sixpence a rod. The town ordered that the fortification wood be sold, as it stands, to owners of fence, in the place where it stands, at sixpence a rod, if they will buy it; or else the townsmen to sell it as they can after the 1st of May next. Also further ordered that every person do make his fence in the aforesaid line.

The peace referred to was the end of the war with the Eastern Indians; a war which, beginning immediately after the uprising of Philip, continued two years after his death. The palisade at New Haven, if finished as soon after April 25, 1676, "as seed could be got into the ground," ceased in a few weeks after its completion to have that urgent reason for its existence which had impelled the inhabitants to its erection; but as long as there were any Indians in any part of New England waging war against the English, it was thought prudent to retain a fortification already set up.

That the order to fortify private houses was carried into execution, appears in the record of a meeting held October 18, 1675.

Goodman Harriman acquainted the town that the sentinels going daily upon his house, upon the platform, did do him some damage breaking or removing the shingles (they being decayed), so that the water came the more into the house, and did propound, that if the town did think it for their convenience to make use of his house that way, that they would do something in helping him to cover it. The town having heard what was said, answered to the said Goodman Harriman that what he had said was considerable, and therefore the town did desire and appoint the townsmen to advise about the matter and speak with Goodman Harriman, and so do as they shall see good reason and cause for.

That the order to fortify the Meeting-house was carried out, appears from a record dated December 6, 1685, when the town having voted to build some additional seats in the Meeting-house, "ordered that what of those planks or timbers that were the flankers at the Meeting-house, which are not useful for the aforesaid seats, shall be sold."

In 1680 the third division of lands was arranged and issued. The number of acres to be allotted to each proprietor was determined by the number of persons in his family, and the amount of estate on which he paid taxes. Those who had been "soldiers in the late war," received for that reason a larger portion, two hundred acres being divided among the soldiers. A few young men who had

never before been enrolled as taxpayers, but had served in the army, were allowed to draw "a portion of land for their heads, or what estate they have in the list." The number of acres allotted to a soldier was proportionate to his time of service.

When the number of acres to which each was entitled had been ascertained, the proprietors were enrolled in two companies; one to have their allotments east of the town, and the other on the opposite side. Then lots were drawn to determine which of each company should have his "accommodation" nearest to the town, and in what order of proximity the allotments of the others should be set off to them. Some who desired it were permitted to divide the acres they were to receive into two portions, and thus, by drawing two numbers, increase the chances of having some of their land nearer to their homesteads. The two tables following exhibit the names of all the proprietors in 1680; the number of persons which each had in his family; the amount of his estate; and the number of acres he was entitled to in the new division. Ciphers indicate that the proprietor is non-resident; or, that having divided his lot into two lots, he has connected his family with the other.

Now for the eastern side of the town the persons who are to have land in the third division: Here followeth their names in the order their lots came forth from the first throughout unto the last:

By order of the Committee of the Third Division.

The atrocities of Philip's War had been followed by dangers and alarms of a different kind. King Charles the Second had graciously granted to Connecticut a charter as liberal as it could be without conceding the independence of the province. During his reign no attempt had been made to retract this royal gift. He became angry with Massachusetts and vacated its charter; but had never expressed displeasure with Connecticut.

King James the Second had no sooner come to the throne than he attempted to unite all New England under one Governor appointed by himself. Sir Edmund Andross accordingly was sent to New England to carry into execution the royal pleasure.

Plymouth having no charter, and Rhode Island submitting at once, the only obstacle was in the Charter of Connecticut. On the thirty-first day of October, 1687, Andross made a formal demand at

Hartford, where the General Assembly were sitting, for the surrender of the charter.

Trumbull says:

The assembly were extremely reluctant and slow with respect to any resolve to surrender the charter, or with respect to any motion to bring it forth. The tradition is that Governor Treat strongly represented the great expense and hardships of the colonists in planting the country; the blood and treasure which they had expended in defending it, both against the savages and foreigners; to what hardships and dangers he himself had been exposed for that purpose, and that it was like giving up his life now to surrender the patent and privileges so dearly bought and so long enjoyed.

The important affair was debated and kept in suspense until the evening, when the charter was brought and laid upon the table where the assembly was sitting. By this time great numbers of people were assembled, and men sufficiently bold to enterprise whatever might be necessary or expedient. The lights were instantly extinguished, and one Captain Wadsworth, of Hartford, in the most silent and secret manner, carried off the charter and secreted it in a large hollow tree, fronting the house of Hon. Samuel Wyllys, then one of the magistrates of the colony. The people appeared all peaceable and orderly. The candles were officiously relighted; but the patent was gone, and no discovery could be made of it or of the person who had conveyed it away. Sir Edmund assumed the government, and the records of the colony were closed in the following words:

"At a general court at Hartford, October 31, 1687, his excellency, Sir Edmund Andross, knight and captain-general and governor of his majesty's territories and dominions in New England, by order from his majesty, James the Second, King of England, Scotland, France and Ireland, the 31st of October, 1687, took into his hands the government of the colony of Connecticut, it being by his majesty annexed to Massachusetts and other colonies under his excellency's government.

FINIS."

Before returning to Massachusetts, Sir Edmund made a tour through the colony as far west as Fairfield, and as far east as New London. He spent a Sunday in New Haven, where, as tradition reports, his eye fell upon Dixwell at the morning service in the Meeting-house. At noon he inquired the name and occupation of the person whom he described, and was told that he was a merchant of the name of James Davids. Sir Edmund replied that he knew he was not a merchant, and became particularly inquisitive in regard to him. Probably Colonel Dixwell was informed of the Governor's inquisitiveness, for he was not present at the afternoon service. On the same Sunday the Governor's anger was stirred because the Deacon gave out the fifty-second psalm to be sung. In Sternhold and Hopkins' version, which was then in use, the psalm reads:

"Why dost thou, tyrant, boast abroad
"Thy wicked works to praise?
"Dost thou not know there is a God,
"Whose mercies last always?

"Why doth thy mind yet still devise
"Such wicked wiles to warp?
"Thy tongue untrue, in forging lies,
"Is like a razor sharp.

"Thou dost delight in fraud and guile,
"In mischief, blood and wrong;
"Thy lips have learned the flattering style,
"O false, deceitful tongue."

The tradition is that the new Governor resented the choice of this psalm as a personal insult, but was obliged to subside into silence when told that

* Sold to Mr. James Pierpont and has been by the said Nathaniel Tuttle.

it was the custom of the church to sing the psalms in course.

Sir Edmund's government proved to be unnecessarily and provokingly arbitrary, as well as contrary to the charter which Connecticut so highly valued. One of his tools boasted, in a letter to England, that the Governor and his Council were "as arbitrary as the Great Turk."

All business relative to the settlement of estates must be transacted at Boston, however distant the residence of the heirs might be, and the fee for the probate of a will was fifty shillings, however small the estate. The Governor laid taxes at his pleasure without assembling the representatives of the people, and even in the absence of a majority of his council. He declared that the titles of the colonists to their lands were of no value—that Indian deeds were no more worth than "a scratch with a bear's paw."

Not the fairest purchases and most ample conveyances from the natives; no dangers, disbursements, nor labors in cultivating a wilderness and turning it into orchards, gardens, and pleasant fields; no grants by charter nor by legislatures constituted by them; no declarations by preceding kings nor by his then present Majesty, promising them the quiet enjoyment of their houses and lands; nor fifty or sixty years undisturbed possession, were pleas of any validity or consideration with Sir Edmund and his minions. The purchasers and cultivators, after fifty and sixty years improvement, were obliged to take out patents for their estates. For these, in some instances, a fee of fifty pounds was demanded. Writs of intrusion were issued against persons of principal character who would not submit to such impositions, and their lands were patented to others.*

The heaviest share of this oppression fell upon Massachusetts and Plymouth. Connecticut, as it was farther removed from the seat of government, was less exposed to the notice of the oppressors. But the people throughout the entire territory which had recently been the Colony of Connecticut, were "in great fear and despondency. They were no strangers to what was transacted in the neighboring colonies, and expected soon to share fully with them in all their miseries. A general inactivity and languishment pervaded the whole public body. Liberty, property and everything which ought to be dear to men, grew every day more and more insecure."

In this state of things, news came in April, 1689, that the Prince of Orange had landed in England to take possession of the government. The people of New England did not wait to see if he would succeed in his enterprise, but rose at once to rid themselves of their oppressors. Boston, seizing and imprisoning the royal governor, appointed a provisional government, which took to itself the name of a "Council for the Safety of the People and Conservation of the Peace."

As soon as tidings of the revolution in Massachusetts reached New Haven, a town meeting was called, and was held on the third day of May. It had been unlawful under the tyranny of Andross to have more than one town meeting in a year. In the preceding year the town had been convened on "the third Monday of that month by order ap-

pointed for town meetings, to choose selectmen and other officers." This year it was held on the third day of the month, and probably as soon as it could be assembled after it was known that Andross was in prison; for the provisional government at Boston was organized on the 20th of April. The record of the meeting is as follows:

After the opening of the town meeting and prayer made for direction from God in this dangerous juncture, the town were informed of the late dissolution of the government at Boston by the Governor, Sir Edmund Andross, his resignation of the same, with surrender of the Castle and Fort into other hands, intrusted till further orders from the present powers in England. And this change hastened by the discovery of a dangerous plot against Boston, to destroy that place as we are credibly informed; which great overture hath occasioned or necessitated the freemen in all or most places in the colony to choose their deputies to meet together in the usual place and at the usual time of election, to consider together what to do, and to have the proxies of the freemen ready, if need be, in order to the reassuming and settlement of government according to charter, to prevent anarchy or confusion and the dangerous effects thereof, especially when we have grounds and cause to suspect Indians or other enemies. And for the better understanding of the premises and our further consideration what to do, the printed Declaration from Boston was publicly read.

It is not improbable that some of the leading men in Connecticut, as well as in Massachusetts, were expecting the movement of the Prince of Orange, for the deliverance of England from the yoke of the Stuarts. It is affirmed by Gershom Bulkley, a writer friendly to Andross, that the "gentlemen of Connecticut" received encouragement from England, by letter, to take their charter government again, "telling them they were a company of hens" if they did not do it. Palfrey inclines to the opinion that there was a conspiracy throughout New England to rise against Andross, and that the landing of the Prince of Orange at Torbay was an unexpected opportunity for the conspirators. He finds support for this theory in the care with which the "printed declaration from Boston is composed, as if it were "a work of time," to which brief mention of the enterprise of the Prince had been added after the news of it arrived. In either case everything favors the supposition that the leading men in Connecticut had made preparation for the resumption of government under the charter. At the town meeting in New Haven, Captain Moses Mansfield and Lieutenant Abraham Dickerman were appointed Deputies to the General Assembly which convened on the eighth day of the same month, and "ordered that all the laws of this colony formerly made according to Charter, and courts constituted in this colony for administration of justice as they were before the late interruption, should be of full force and virtue for the future, and till the Court should see cause to make further and other alteration and provision according to charter." "All the present military officers" were confirmed; Justices of the Peace were appointed for the towns where no magistrates resided; the armament of the Fort at Saybrook was provided for. The Governor was charged to convene the General Assembly, if occasion should require anything to be acted respect-

* Trumbull.

ing the charter. Then, having appointed a day of fasting the Assembly adjourned.

Upon the 26th of May, a ship arrived at Boston with advice that William and Mary were proclaimed King and Queen of England. The joyous news soon reached Connecticut. A special Assembly was called, which convened on the 13th of June. On the same day, William and Mary, Prince and Princess of Orange, were proclaimed with great ceremony. Never was there greater or more general joy in New England than upon the accession of William and Mary to the throne of Great Britain.*

So great was the delight with which New England heard of the expulsion of the Stuarts and the accession of William and Mary, that they rushed with enthusiasm into the sacrifices and perils of another Indian war. France, espousing the cause of the Stuarts, invaded England, and sent an army of Canadians and Indians to harass the English planters of New England. Connecticut, less exposed than her neighbors, sent assistance to New York and Albany, and at the same time made preparation to resist invasion, whether by land or by sea. New Haven, at a town meeting March 3, 1689,

Ordered (1) a military watch; (2) the whole body of listed soldiers to bring their arms on the Sabbath-days; (3) mounted scouts to be sent out from day to day; (4) four houses in town and some houses at the farms to be garrisoned, and the water-side to be fortified; (5) committee to manage the whole of this affair, and with the greatest expedition; (6) that for the fitting out of a flying army, as there may be occasion, out of our listed soldiers we will draw forth a tenth part, to be commanded by such officers as the Major-General shall appoint, with the approbation of a major part of said flying army. Also voted, that the inhabitants agree and order, that for the present exigency, and till we may come to a better settlement, the Dragoon company submit their arms to be viewed by Lieut. John Miles, and themselves, in case of any inroad or assault, to be commanded by him, and that all others attend Captain Mansfield's view of Arms and Command, as there shall be occasion, for the common safety of the place.

On the 6th of August 1690, the town meeting present by their vote, recommend to the committee for fortification appointed by the General Court, that with all the speed it may be, the fortification be carried on according to former agreement, viz., the water-side; two of the houses at present, the other two to be further considered at another town meeting.

Not only New Haven, but the whole Colony of Connecticut passed through this French and Indian war occasioned by the expulsion of the Stuarts from England, without invasion. The people willingly bore great burdens of taxation in preparing to repel invasion, and in expeditions to Canada; but were mercifully preserved from such massacres as those at Schenectady, and Salmon Falls on the river which divides New Hampshire from Maine. This war, commencing in 1690, had cost Connecticut, when it came to an end in 1697, twelve thousand pounds sterling. The Legislature had been obliged to levy taxes, amounting in the course of three years to more than two shillings on the pound, on the whole list of the colony. The taxes were not collected in money, for there was not money enough in the colony to pay the taxes of a single year. "Its whole circulating cash amounted only to about two thousand pounds." "The taxes were laid and collected in grain, pork,

beef, and other articles of country produce. These commodities were transported to Boston and the West Indies; and by this means money and bills of exchange were obtained, to pay the bills drawn upon the colony in England, and to discharge its debts at home."

After five years of rest another French and Indian war commenced. It found Connecticut so impoverished, that she was obliged to issue paper money. Hitherto, by heroic taxation, the colony had been able to pay the expenses of its protracted military operations. But when her Majesty, Queen Anne, proposed to send a fleet to Boston with five regiments of regular troops, and required Connecticut to send 350 men, and the governments east of Connecticut 1,200 more, to co-operate with these regulars in an attack on Quebec, and at the same time required Connecticut to furnish her quota toward an army from Connecticut, New York and New Jersey, to make a simultaneous attack on Montreal, the Legislature of Connecticut, at a special assembly voted "that to assist in the expedition, for want of money otherwise to carry it on, there be forthwith imprinted a certain number of bills of credit on the colony, which, in the whole, shall amount to the sum of £8,000 and no more."

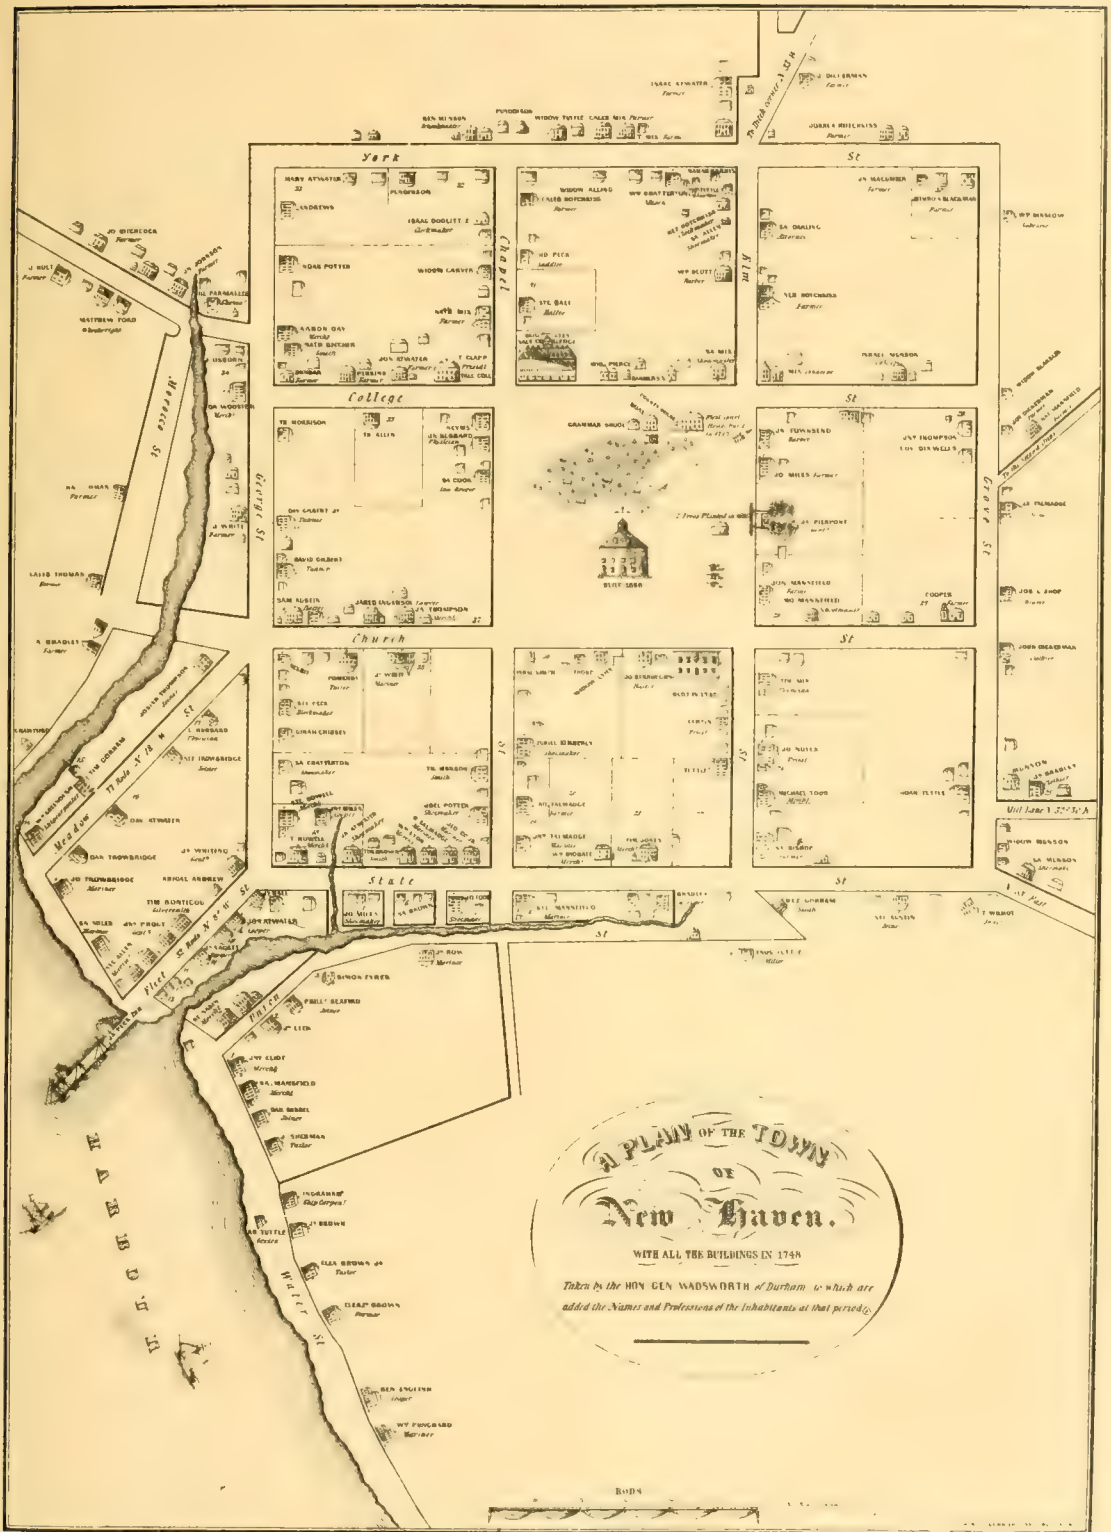

It was enacted, says Trumbull, that the bills should be issued from the treasury as money, but should be received in payments at one shilling on the pound better than money. One-half only was to be signed and issued at first; and the other was to remain unsigned until it should be found necessary to put it into circulation. Taxes were imposed for the calling in of one-half of it within the term of one year, and the other at the expiration of two years. The Legislature showed their zeal not only by contracting this debt, but by voting an address of thanks to her Majesty for her royal care and favor to the colonies in devising means for the removal of an enemy by whom the colonies had been so great and repeated sufferers.

But this attack on Canada under Queen Anne was as fruitless as the similar attack under King William had been. A treaty of peace between Great Britain and France, signed March 30, 1713, was proclaimed in Connecticut on the 22d of the following August, and, though the people regretted that the enemy in the rear had not been subdued, they rejoiced greatly in the advent of peace.

There was a third and a fourth French war before Canada became subject to Great Britain. While Canada was held by the French, the English colonists ever felt insecure, and were willing to make unexampled sacrifices of blood and treasure to dispossess the rival nation which had stirred up the red men to fall upon unsuspecting villages with the firebrand, the tomahawk, and the scalping-knife.

But little can now be learned in detail of what Connecticut—of what New Haven—suffered in these Indian wars. The fields of battle were distant from New Haven and outside of Connecticut; but the impoverishment consequent upon so many wars was here felt as well as elsewhere, and almost every family mourned for a son who had died afar

* Trumbull.

from home. Trumbull, the historian of Connecticut, reckons that in King Philip's War alone, the united colonies of New England lost one-eleventh of their entire militia, as well as one-eleventh of their homesteads. If we add, in imagination, to this destruction of life in a single war, the desolations of five other periods of Indian warfare, we shall, perhaps, better comprehend the heroism of our fathers and the price of our heritage.

There was an interval of just one hundred years between the commencement of King Philip's War and the commencement of the War of the American Revolution. During this period there were thirty years of Indian warfare; and the longest truce was that of the eleven years which preceded the battle of Lexington. But the late Indian war differed from the earlier, in that they were carried on, not by the unaided colonies, but by the strong arm of Great Britain. The war in which Canada was finally reduced was especially helpful to the colonies in the stimulus it gave to trade.

The extension of settlements (says Trumbull); the increase of cultivation, numbers, commerce and wealth of the colonies, for about ten or twelve years after the pacification of Paris, were almost incredible. During the war, and this whole subsequent period, money was plenty and suffered no depreciation. Provisions of every kind, especially pork and beef, were in the best demand. This called forth the utmost exertions of the husbandman in the cultivation of his fields, and enabled him with facility to pay the taxes which the state of the country demanded. It was the policy of Connecticut, in this favorable period, to tax the people as highly as they could cheerfully bear, providing substantial funds, in short periods, for the payment of their whole debt. To assist them in supporting the war, the Legislature called in all their outstanding debts. Contracts were made with the British commissary, annually, for several years, for provisions to the amount of four thousand pounds sterling. This was paid in money, or in bills of exchange. These contracts were principally for pork. At the same time great quantities of fresh provisions were furnished the armies in droves of fat cattle. The merchants had a safe and prosperous trade. Especially after the peace, an almost boundless scope of commerce and enterprise was given to the colonists. In these favorable circumstances, with the return of thousands of her brave and industrious inhabitants to the cultivation of their fields and the various arts and labors of peace, the colony was soon able to exonerate itself from the debt contracted by the war.

We cannot see how the colonies, without this income of wealth from the old country, could have been prepared for a successful prosecution of war with England. New Haven more than kept pace with the rest of the colony in the increase of wealth. Mr. Trowbridge, in his paper on the "Ancient Maritime Interests of New Haven," quotes Dr. Dana as saying that, in 1740, the whole navigation of New Haven consisted of two coasters and one West India vessel, and adds his own belief that such had been substantially the case for sixty years previous.

With the fall of Quebec, and the subsequent cession of Canada to Great Britain in 1763 (says Mr. Trowbridge), the maritime interests of New Haven may be said to have been successfully established; and so rapidly did the commerce increase, that from almost nothing in the decade from 1740 to 1750, it had, in the following ten years, grown so much, that from 1760 to 1770 some thirty vessels annually left the port on foreign voyages, and during that time commercial relations were initiated between New Haven and the West India Islands, which, with but slight interruption, have con-

tinued to the present time. Trade was also maintained with Great Britain, especially with Ireland, where the flaxseed raised in Connecticut was in demand. In 1764 there arrived here from the City of Dublin the brig *Derby*, of forty tons, bringing for a cargo twenty tons of coals and thirty-eight Irish servants.

The sums of the estates in New Haven returned for taxation show a large increase of wealth between 1700 and the commencement of hostilities with England. The following schedule, which we copy from the Colonial Records of Connecticut, illustrates this statement, and shows the quinquennial increase:

ESTATES IN NEW HAVEN.

1765.....	55,695	19	3
1770.....	63,335	4	1

The first movement toward the incorporation of a city within the limits of the town of New Haven preceded the Revolution. At a town meeting on the 9th day of December, 1771, the following was put on record:

Whereas, a motion was made to the town that this town might have the privileges of a city, and that proper measures might be taken to obtain the same, it is thereupon voted that Roger Sherman, John Whiting, Thomas Darling, Daniel Lyman, David Wooster, Joshua Chandler, James A. Hillhouse, Simeon Bristol, Caleb Beecher, Esq., Samuel Bishop, Jr., and Messrs. James Peck, Benjamin Douglas, Ralph Isaacs, Adam Babcock, Thomas Howell, Joel Hotchkiss, Samuel Clark, Jr., and John Woodward be a committee to take the same into consideration, and judge of the motion what is best for the town to do with regard to the same, and report thereon to the town at another meeting.

As no report of this committee has been found, it is probable that in the excitement preceding the Revolution the project dropped out of sight, and was not again agitated till the war had come to an end.

We have already mentioned that but one new town was taken out of the original territory of New Haven before the city was incorporated. But several distinct parishes, or religious societies, had been instituted besides that in Wallingford. East Haven applied for incorporation in 1707 and received a charter so ambiguous, that it was, and has been ever since, difficult to determine what the General Assembly meant to authorize.

New Haven was quite willing they should be a separate parish, but quite unwilling they should be a separate town, and ordered her townsmen, "with good advice in all proper methods of law," to oppose the endeavor of their "neighbors at the iron works." Mr. Dodd, in his *East Haven Register*, intimates that Governor Saltonstall, who was a neighbor on the other side of the iron-works, used official influence against East Haven, in resentment,

because not a single vote was given for him in that village, the people having become incensed against him for waging war on their geese when they strayed to Saltonstall Lake and the Governor's farm on its bank.

The General's Assembly, in 1710, either with or without the Governor's inspiration, taking into consideration the act of 1707, declared, in interpretation thereof, that there is nothing contained in the said act that concerns property of lands, or that excludes the said village from being within the Township of New Haven, nor that intends to give the said village the liberty of choosing deputies distinct from the Town of New Haven. In 1716 the controversy was renewed, and the General Assembly reiterated its decision of 1710.

Silenced by the terror of lawsuits and "the powers that be," East Haven submitted till "another generation arose that had not known a Saltonstall."

On the 18th of December, 1752, at a meeting of the inhabitants, it was voted, that we will take up the privileges that the General Assembly and the Town of New Haven have formerly granted. On the 6th of December, 1753, the Selectmen that day chosen sent a communication to the inhabitants of New Haven in town meeting assembled, notifying them that East Haven had organized a town government "in order that the said Town of New Haven may hereafter exempt themselves from any further care or trouble respecting the affairs of the said Town of East Haven, the regulation thereof, or the appointment of officers therein."

"These proceedings, however," says Mr. Dodd, "brought upon them once more the broad hand of the General Assembly."

Several other attempts were made, but without avail, till, in 1785, New Haven having given her consent, it was

Resolved by the General Assembly, "That the said inhabitants of said parish of East Haven be, and they are hereby constituted a Town, by the name of East Haven."

The controversy had related chiefly to the title to common lands, and was settled by the confirmation of what the village of East Haven had done in the allotment of land to settlers, and the relinquishment on the part of East Haven of claim to all the common land in the other parts of New Haven.

West Haven was, "upon the petition of the West Farmers in New Haven, constituted a separate society to carry on the worship of God among themselves" by an Act of the General Assembly in 1715; and by a similar act the same privilege was granted in 1716 to North Haven upon the petition of the "farmers on the northeast part of the town of New Haven."

About the middle of the century the parish of Amity, now called Woodbridge, was separated from the first society in New Haven; and several years afterward a parish in Hamden was established, part of it being taken from New Haven and part from North Haven.

President Dwight, in the description which he

gives of New Haven in the first volume of his travels in New England, states, without referring to his authority, that in 1756 the township of New Haven contained 5,085 inhabitants. He reports also a population in 1774 of 8,295. The latter statement accords with a census taken by order of the General Assembly. The town then included Woodbridge, Hamden, North Haven and East Haven. Dr. Dana, in the notes to his Century Sermon, gives the population of the city in 1787 as 3,364. Of these 1,657 were males and 1,707 females. The number of each age from 1 to 90 stood thus:

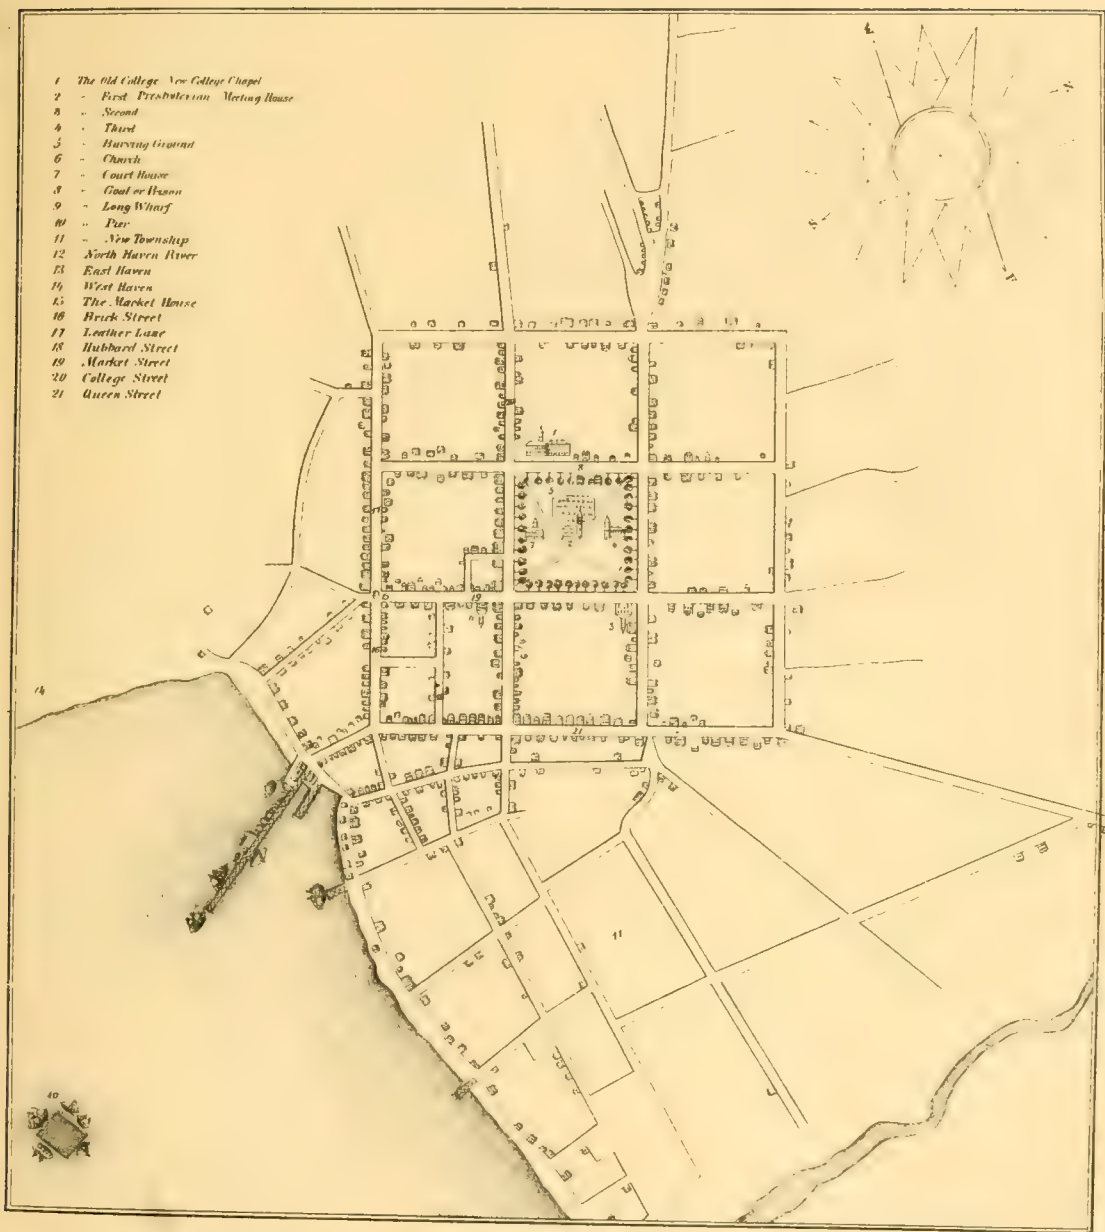

AGE.	NUMBER.	AGE.	NUMBER.	AGE.	NUMBER.
1	173	31	45	61	11
2	113	32	42	62	8
3	100	33	38	63	9
4	119	34	33	64	10
5	107	35	49	65	13
6	100	36	50	66	8
7	87	37	31	67	3
8	96	38	31	68	5
9	89	39	36	69	3
10	85	40	52	70	6
11	70	41	29	71	1
12	80	42	33	72	2
13	86	43	29	73	2
14	95	44	18	74	2
15	71	45	28	75	3
16	103	46	22	76	1
17	62	47	34	77	5
18	84	48	9	78	2
19	62	49	12	79	3
20	74	50	35	80	4
21	77	51	17	81	0
22	57	52	14	82	0
23	58	53	6	83	1
24	55	54	12	84	1
25	66	55	17	85	0
26	51	56	18	86	1
27	55	57	10	87	1
28	50	58	11	88	0
29	40	59	7	89	0
30	66	60	28	90	1

The value of the table is diminished, but not destroyed, by errors which cause a discrepancy of 21 between the total as Dr. Dana gives it and that which is rendered by the addition of the particulars.*

The progress of the town is illustrated by the four maps which accompany this chapter. The map of 1641 shows the number, names and location of the proprietors at that date. The map of 1724 exhibits the names of householders as they were remembered by Mr. Joseph Brown, and preserved by President Stiles. We are indebted to Gen. Wadsworth, of Durham, for the map of 1748, on which he has inscribed the names of nearly all the householders at that time. The map of 1775 shows the buildings but not the names of the inhabitants.

* Professor Dexter informs me that this census was a private enterprise, undertaken, as he learns from Stiles' Diary, by Messrs. Josiah Meigs, Isaac Jones, David Daggett, and others, September 8, 1787, and some preceding days. Mr. Meigs published the full result in his newspaper, the *New-Haven Gazette*, for September 20th. By comparing the report in the *Gazette* with Dr. Dana's copy, it appears that it was Mr. Meigs' printer who made the mistakes.

PLAN OF NEW HAVEN, 1717, BY PRESIDENT STILES

CHAPTER III.

NEW HAVEN DURING THE WAR OF THE REVOLUTION.

THE General Assembly of Connecticut at its May Session in 1764, appointed a committee to prepare a State paper setting forth the reasons why the Stamp Act, which the British Ministry proposed to bring before the Parliament, ought not to pass. At the October session the reasons alleged in this report were adopted by the Assembly as their own, and it was resolved that a copy of them should be sent to Richard Jackson, Esquire, the agent of Connecticut in London. Jared Ingersoll, a distinguished citizen of New Haven, whose monument still stands in the crypt of the Center Church, was one of the committee to prepare this document. Ingersoll, soon after its adoption, sailed for England, taking with him one hundred printed copies of the statement of reasons. Soon after his arrival in London he received notice that the General Assembly had associated him with Mr. Jackson as the agent of the colony. But in vain did Ingersoll, Franklin, and other Americans, remonstrate against the passage of the bill. Ingersoll, before he went abroad, had written to a personal friend who happened to be one of the joint secretaries of the treasury, and as such was anxiously studying how the bill might be best shaped:

The people think, if the precedent of a Stamp Act is once established, you will have it in your power to keep us as poor as you please. The people's minds, not only here, but in the neighboring provinces, are filled with the most dreadful apprehensions from such a step's taking place; from whence I leave you to guess how easily a tax of this kind would be collected. Don't think me impertinent, since you desire information, when I tell you that I have heard gentlemen of the greatest property in neighboring governments say, seemingly very coolly, that should such a step take place they would immediately remove themselves with their families and fortunes into some foreign kingdom. You see I am quite prevented from suggesting to you which of the several methods of taxation that you mention would be the best or the least exceptionable; because I plainly perceive that every one of them, or any supposable one, other than such as shall be laid by the legislative bodies here, to say no more of them, would go down with the people like chopt hay. As for your allied plan of enforcing the acts of trade and navigation and preventing smuggling, let me tell you that enough would not be collected here in the course of ten years to defray the expenses of fitting out one, the least, frigate for an American voyage; and that the whole labor would be like burning a barn to roast an egg.

It was Ingersoll who preserved the eloquent protest which Colonel Barre made in Parliament against the passage of the act. One of the ministers had affirmed the right of Britain to tax "the children planted by our care, nourished by our indulgence, and protected by our arms." Colonel Barre, who had served in America as an officer in the army, and knew the history of the colonies, instantly exclaimed:

They planted by *your* care! No! Your oppressions planted them in America. They fled from your tyranny to a then uncultivated and inhospitable country, where they exposed themselves to almost all the hardships to which human nature is liable; and among others, to the cruelties

of a savage foe, the most subtle, and, I take it upon me to say the most formidable of all people upon the face of God's earth; and yet actuated by principles of true English liberty, they met all these hardships with pleasure compared with those they suffered in their own country from the hands of those who should have been their friends.

They nourished by *your* indulgence! They grew by your neglect of them. As soon as you began to care about them that care was exercised in sending persons to rule over them in one department and another, who were perhaps the deputies of deputies to some member of this house, sent to spy out their liberties, to misrepresent their actions and to prey upon them; men whose behavior on many occasions has caused the blood of those *sons of liberty* to recoil within them; men promoted to the highest seats of justice, some of whom, to my knowledge, were glad by going to a foreign country to escape being brought to the bar of a court of justice in their own.

They protected by *your* arms! They have nobly taken up arms in your defense; have exerted a valor amidst their constant and laborious industry for the defense of a country whose frontier was drenched in blood, while its interior was yielding all its little savings to your enrichment. And believe me, remember I this day told you so, that same spirit of freedom which actuated that people at first will accompany them still. But prudence forbids that I should explain myself further. God knows I do not speak from party heat; what I deliver are the genuine sentiments of my heart. However superior to me in general knowledge and experience the respectable body of this house may be, yet I claim to know more of America than most of you, having seen and been conversant in that country.

The people, I believe, are as truly loyal as any subjects the King has; but a people jealous of their liberties, and who will vindicate them if they should be violated. But the subject is too delicate, and I will say no more.

Mr. Ingersoll was present when this unpremeditated eloquence burst from the lips of Barre, and to him we are indebted for its preservation. It was reported by him at the time to a friend in Connecticut, and was first given to the world in a New London newspaper.

The sentiments of Colonel Barre (says Mr. Ingersoll in a letter to Governor Fitch) were thrown out so entirely without premeditation, so forcibly and so firmly, and the breaking off was so beautifully abrupt, that the whole house sat awhile as if amazed, intently looking and without answering a word. I, even I, felt emotions that I never felt before, and went the next morning and thanked Colonel Barre in behalf of my country.

But the ministry were determined to pass the bill, and no argument or entreaty could turn them from their course or prevent them from obtaining a majority in both houses of Parliament. Mr. Ingersoll did, by his personal influence with one of the Secretaries of the Treasury, who had the bill in his hands for revision and amendment, succeed in removing some of the worst features of the bill, as, for example, the tax on marriage licenses. But the bill passed the House of Commons on the 27th of February, 1765; was agreed to by the Lords on the 8th of March; and a fortnight later received the royal assent.

The leading civilians in the colonies, though disposed to prevent the passage of the bill if possible, were expecting quietly to submit to its execution if

it became a law. Mr. Ingersoll therefore did not hesitate to accept the position of Stamp-master for Connecticut. But when he landed in Boston early in August he found the city in a blaze of excitement. As soon as the Bostonians learned that Andrew Oliver was to be the Stamp-master in their city, they hung up his effigy on a stately elm, already known as the Great Tree. In the evening an "amazing" multitude followed the image, laid out on a bier, through the streets, and burned it in front of the Stamp-master's residence. Not long afterward, the newspaper announced that "the Great Tree at the south end of the town upon which the effigies of a Stamp-master was lately hung, was honored last Wednesday with the name of the Tree of Liberty; a large plate of copper with that inscription in letters of gold being fixed thereon."

Seizing upon an expression in Colonel Barre's eloquent speech, those who in all parts of New England demonstrated their hostility to the stamp act by acts of violence, called themselves Sons of Liberty. In Connecticut, many of the leading civilians were very conservative. Governor Fitch having done all he could to prevent the passage of the act, was disposed to submit to its execution till its repeal could be procured by lawful means. A majority of his Council were of the same mind. But Timothy Pitkin, the Lieutenant-Governor, and Jonathan Trumbull, one of the Councillors, were so strongly opposed to acquiescence, that when the Governor was about to take the oath required by the act, they indignantly left the room, refusing even to be present. At the next election, though Governor Fitch had been regularly nominated for re-election, the people chose Timothy Pitkin, Governor, and Jonathan Trumbull, Lieutenant Governor.

The clergy were leaders of the people in opposition to the Stamp Act. They preached and prayed against it as if it plainly proceeded from the Evil One in opposition to the Kingdom of God. The Rev. Stephen Johnson, of Lyme,* a descendant of Thomas Johnson one of the first planters of New Haven, wrote for the *Connecticut Gazette*, printed in New London :

The advocates for these measures seem to be counsellors of Rehoboam's stamp. Instead of hearing the cries and redressing the grievances of a most loyal and injured people, they are for adding burden upon burden, till they make the little finger of his present majesty a thousand times heavier than the loins of his good grandfather; and would bind all fast with a military chain. Such counsels ended in Israel in such a revolt and wide breach as could never be healed. That this may end in a similar event is not improbable to the providence of God, nor more improbable to Britons than five years ago this Stamp Tax was to Americans.

But Johnson was moderate compared with the Professor of Divinity in Yale College. In the *Connecticut Gazette*, printed in New Haven, there appeared on the 9th of August, five days before the outbreak in Boston, an article signed "Cato," said to have been written by Professor Daggett. Some

one, arguing that if the Stamp Act must be enforced, it was better that the stamps should be distributed by Americans, had inquired, "Had you not rather these duties should be collected by your brethren than by foreigners?"

"No! vile miscreant! indeed, we had not," answers Cato. "If your father must die, is there no defect in filial duty in becoming his executioner, that the hangman's part of the estate may be retained in the family? If the ruin of your country is decreed, are you free from blame for taking part in the plunder?"

When Ingersoll arrived at his home in New Haven, he found a great and dangerous excitement among the people. Before his arrival, the inhabitants of Norwich, in a regularly warned town meeting, had unanimously voted "that the clerk shall proceed in his office as usual, and the town will save him harmless from all damage that he may sustain thereby." In this early demonstration against the Stamp Act there was nothing personal; for it was not yet known who the distributing officer would be. But, after Ingersoll's return, demonstrations of hostility became not only more frequent, but personal. Sometimes public meetings protested in an orderly and dignified manner against the Act as a violation of natural right and of the British Constitution. More frequently,

Short, pithy sentences, ridiculing the ministry and setting forth the Stamp Act in vivid, though not always refined, language, circulated from sheet to sheet of the colonial newspapers, or passed from neighbor to neighbor in familiar discourse; quaint proverbs, scornful satires, jests, with biting edge, pamphlets all glowing with indignant remonstrance or wailing with the cry of expiring freedom, hand-bills with single sentences of dark warning, posted upon the doors of public offices or hawked about the streets by daylight, moonlight, and torchlight; anonymous letters addressed to gentlemen in high judicial or executive places—all flew hither and thither upon their several errands. The passions and the understanding were also addressed through the eye. Copies of the Stamp Act were carried in procession, and buried with funeral honors as equivocal as could well be conceived. Sometimes it was buried with the effigy of the officer who had been appointed to execute it.*

"We hear from Norwich and New London," says the *Boston Evening Post*, "that last week the Stamp Master for the colony of Connecticut was hung in effigy at each of those places, and afterwards burnt, amid the shouts and acclamations of a great number of people." These demonstrations took place on the 22d of August. On the 26th there were exhibitions of popular displeasure at Windham and Lebanon, with some variations in the programme. In hope of allaying the excitement, Ingersoll inserted in the *Connecticut Gazette* of August 30th, the following card :

TO THE GOOD PEOPLE OF CONNECTICUT.

When I undertook the office of Distributor of Stamps for this colony, I meant a service to you, and really thought you would have viewed it in that light, when you came to understand the nature of the Stamp Act, and that of the office; but since it gives you so much uneasiness, you may be assured if I find (after the Act takes place, which is the first of November) that you shall not incline to purchase or make use of any stamped paper, I shall not force it upon you, nor think it worth my while to trouble you or myself with any exercise of my office; but if, by that time, I shall find you generally in much need of stamped paper and very

*Mr. Johnson's wife was a descendant of William Dummer of New Haven, and the first ancestor of the family which remained in the colony, having previously embraced the cause of the Revolution.

*Bancroft.

anxious to obtain it, I shall hope you will be willing to receive it of me (if I shall happen to have any) at least until another person more agreeable to you can be appointed in my room.

I cannot but wish you would think more how to get rid of the Stamp Act than of the officers who are to supply you with the paper, and that you had learned more of the nature of my office before you had undertaken to be very angry at it.

I am yours, etc.

J. INGERSOLL.

NEW HAVEN, 24th August, 1765.

On the 6th of September "the Civil Authority, Selectmen, and a considerable number of the principal Gentlemen and Inhabitants of the town of New Haven, being occasionally met at the Court House in said town, were informed that there was a report that a considerable number of persons from some of the neighboring towns were expected to assemble in said New Haven, and to be joined by some of the people of the town, to show their resentment against the gentleman appointed Distributor of Stamps for this colony, and that it was said that some of the principal men of the town would countenance the thing. Whereupon the gentlemen present unanimously declared their dislike and disapprobation of any such proceeding as being of dangerous tendency, and resolved to use their endeavors to discourage and prevent any such riotous assembly, and would advise the people of this town not to be concerned therein. They at the same time declared that they were desirous that proper and lawful measures might be taken to obtain a repeal of the late Stamp Act, which occasions so great and universal uneasiness in the country; and they thought the most likely way to effect it would be for the colonies to unite in a dutiful remonstrance to the King and Parliament for relief. And that the wisdom of the Honorable General Assembly (the time of whose session is near at hand) may safely be relied on to conduct the affair on behalf of this colony."

The above is a verbatim report of this law and order meeting, as it was printed in the next issue of the *Gazette*.

In the same issue appeared another card from Mr. Ingersoll, as follows:

In order to show to people on this side of the water how little it was apprehended on the other side, by the most zealous friends of America, that their having anything to do with the stamp appointments would subject them to the censures of their friends, I beg leave to give some account of the manner in which those appointments happened, and in particular that for New York, in doing which I am sure I shall be excused by those gentlemen whose names I shall have occasion to mention.

I ought in the first place to observe, that about the time the Parliament began their session last winter, the agents of the colonies met together several times in order to concert measures for opposing the Stamp Act; in consequence whereof the Minister was waited on by them in order to remonstrate against the same, and to propose, if we must be taxed, that we might be allowed to tax ourselves; a very particular account of which, of the difficulties that occurred upon every proposed plan, and of all the arguments *pro* and *con*, and of the several steps taken in the progress of the bill through the House of Commons, was communicated by me in several letters to the Governor of this colony, and which I understand have been publicly read to the General Assembly.

The merchants of London trading to America also met together about this time and appointed a committee of them-

selves to make all the opposition they could to the Stamp Bill. Of this committee, Mr. Alderman Trecothick was Deputy Chairman.

It is well known to many people of the first figure in Boston and New York, as well as elsewhere, that Barlow Trecothick, Esq., who was brought up at Boston under the late Mr. Apthorp, and whose daughter he married, afterward removed and settled in London, where he has acquired a great estate with the fairest character, and is at this time one of the Aldermen of the City of London, and well known by all who have the honor of his acquaintance, to be a steady, cool, but firm friend to America. This committee of merchants were pleased to invite the agents to a joint conference. They were frequently together and several times before the Minister, upon the Stamp and other bills that related to America, where Mr. Trecothick was always principal spokesman for the merchants.

After the Stamp Bill passed into an act, and the Minister had resolved on the general measure of offering to the Americans the offices of Stamp Distributors in the respective colonies, for reasons, as he declared, of convenience to the colonies, he sent for Mr. Trecothick, and desired him to name some friend of his in whom he could confide for the office of Distributor for the province of New York. Mr. Trecothick said to him, as I am well warranted to assert, to this effect: "Sir, you know that I am no friend to the Stamp Act. I heartily wish it had never taken effect, and fear it will have very ill consequences; however, it is passed, and, I conclude, must have its operation. I take it as a favor that you are willing to put the principal offices into the hands of the Americans, and esteem it an honor done me that you permit me to name a person for New York," and so named Mr. McEvers, and went, I believe, of his own accord, and gave bond for him at the office, and all (most undoubtedly) without the privity or knowledge of that gentleman.

And upon this general plan and principle were all the appointments made, that is to say, the offer was made generally to those who had appeared as agents or friends of the colonists, to take it themselves or nominate their friends, and none of them all refused as I know of. Indeed things were not, I believe, viewed in that very strong light at that time, either there or here, as they now are here.

There happened but three instances of persons then on the spot belonging to the old continent colonies, to whom the offer was made, who were in a condition to accept it themselves; these were Colonel Mercer, from Virginia, and Mr. Meserve, son of the late Colonel Meserve, from New Hampshire (who happened accidentally in London at that time upon business of their own), and myself.

Now upon this view of the matter, will not every unprejudiced mind believe that Alderman Trecothick was, in the first place, a sincere friend to the colonies, and really averse to the passing the Stamp Act, when even his interest as well as his inclination and connections led him that way? for 'tis well known he deals largely with America and could not expect to have his own affairs bettered by the act. In the next place, will anybody suppose that he imagined by this step he should expose a valued friend to the resentments of his country?

Again, when the measure of making the appointments in America was thus general, and come into as generally, will any one think that any one of the persons concerned imagined he betrayed his country by falling in with the measure?

Perhaps at this time, when popular rage runs so very high, some may think the friends of America mistook their own and their country's true interest when they listened to these overtures, but who can think their intentions were ill?

I thought this brief narrative was a piece of justice due to those who have fallen under so much blame of late for meddling with the obnoxious offices above mentioned.

And here I cannot but take notice how unwilling some news writers seem to be, to publish anything that serves to inform the minds of the people of any matters, which tend to abate their prejudices. They even make use of some kind of caution, I observe, to prevent the people from listening to any such cool and dispassionate dissertations and remarks which at any time they happen to publish, and at the same time deal out their personal abuses in the most unrestrained manner, repeating with pleasure the accounts of the most extraordinary libellous exhibitions and practices—practices,

which My Lord Coke describes as being not only the most injurious to individuals, but a scandal to government, tending to the breach of the peace and stirring up sedition, the dreadful effects of which we already begin to see, and which, it appears to me, can answer no other public purpose except so to incense the mother country against us as that they will refuse even to treat with us upon the subject of our burdens. I wish all such persons would bear in their minds those few lines which the facetious poet so aptly applies in his "Hudibras" to the beginning of those civil dissensions which laid England in ruins about a century ago.

When civil dudgeon first grew high,
And men fell out, they knew not why;
When hard words, jealousies and fears
Set folks together by the ears, etc.

NEW HAVEN, September 10, 1795.

J. I.

On the 17th of the same month, there was a town meeting in New Haven, which is thus reported in the *Gazette* of September 20th:

On the 17th inst., the freemen of this town met here. After choosing Roger Sherman, Esq., and Mr. Samuel Bishop to represent them in the General Assembly to be holden next month, they unanimously desired those Representatives to use their utmost endeavors (at the Assembly now sitting at Hartford and also at the ensuing session here) to obtain a repeal of the Stamp Act. The Stamp-Master General of this colony was at the said meeting, where these words were read aloud: "Likewise voted that the freemen present earnestly desire Mr. Ingersoll to resign his stamp office immediately." Numerous were the signs of consent to this vote, when a gentleman condemned it as needless and inconsistent after their former proceedings. The Stamp Officer then arose and declared in the strongest terms that he would not resign till he discovered how the General Assembly were in that respect. It is said he is gone to Hartford to make that important discovery, and he has written to New York requesting that the Stamp Paper may be detained there till it is wanted here.

It was indeed true that Mr. Ingersoll had gone to Hartford. As we have his own account of his journey, we will give it in full.

As the affair of the 19th inst., relative to my renouncing the office of Distributor of Stamps for this colony, is too public to be kept a secret; and yet the particulars of it not enough known to prevent many vague and different reports concerning it, I thought it might be well to give the public a brief narrative of that transaction, which I shall do with all possible impartiality, without mentioning the names of any of the concerned, and without any remarks or animadversions upon the subject.

Having received repeated and undoubted intelligence of a design formed by a great number of people in the eastern parts of the colony to come and obtain from me a resignation of the above-mentioned office, I delivered to the Governor on the 17th at New Haven, on his way to meet the General Assembly at Hartford on the 19th, a written information acquainting him with my said intelligence and desiring of him such aid and assistance as the emergency of the affair should require. On the 18th I rode out with his Honor and some other gentlemen, members of the Assembly, in hopes of being able to learn more particularly the time and manner of the intended attack.

"About eighteen miles hence on the Hartford road," we met two men on horseback, with pretty long, and large new made, white staves in their hands, whom I expected to be part of the main body. I accordingly stopped short from the company and asked them if they were not in pursuit of me, acquainting them who I was and that I should not attempt to avoid meeting the people. After a little hesitancy, they frankly owned that they were of that party, and said there were a great number of people coming in three divisions: one from Windham through Hartford, one from Norwich through Haddam, and one from New London by the way of Branford, and that their rendezvous was to be at Branford on the evening of the 19th, from thence to come and pay me a visit on the 20th; these men said they

were sent forward to reconnoiter and to see who would join them. I desired them to turn and go with me as far as Mr. Bishop's, the tavern at the Stone House, so called. One of them did. Here I acquainted the Governor and the other gentlemen with the matter and desired their advice. The Governor said many things to this man, pointing out to him the danger of such a step and charging him to go and tell the people to return back; but he let the Governor know that they looked upon this as the cause of the people, and that they did not intend to take directions about it from anybody.

"As I knew, in case of their coming to New Haven, there would most likely be an opposition to their designs and most likely by the militia, I was afraid lest some lives might be lost, and that my own estate might receive damage; I therefore concluded to go forward and meet them at Hartford, and accordingly wrote a letter to the people who were coming in the two lower divisions, acquainting them generally with my purposes with regard to my exercising the office aforesaid, and which I had the day before delivered to the Governor to be communicated to the Assembly, which were in substance that I should decline the business if I found it generally disagreeable to the people, and which I hoped would be sufficient; but if not that I should be glad, if they thought it worth their while, to meet them at Hartford and not at New Haven, assuring them that I should not attempt to secrete myself. This done, I got Mr. Bishop to go down to New Haven, with a letter to my family that they and my house might be put in a proper state of defense and security, in case the people should persist in their first design of coming that way.

"Having taken these precautions, I tarried that night at Mr. Bishop's. The next morning, Thursday, the 19th, I set off alone about seven o'clock for Hartford, but just as I was mounting, Mr. Bishop said he would go along and see what should happen, and accordingly overtook me, as I did Major Hall, a member of the Assembly upon the road; and so we went on together until we came within two or three miles of Wethersfield, when we met an advanced party of about four or five persons. I told them who I was, upon which they turned, and I fell into conversation with them upon the general subject of my office, etc. About half a mile further, we met another party of about thirty, whom I accosted, and who turned and went on in the same manner. We rode a little further and met the main body, who, I judge, were about five hundred men, all on horseback and having white staves, as before described. They were preceded by three trumpets, next followed two persons dressed in red, with laced hats; then the rest, two abreast. Some others, I think were in red, being, I suppose, militia officers. They opened and received me; then all went forward until we came into the main street in the town of Wethersfield, when one riding up to the person with whom I was joined and whom I took to be the principal leader or commandant, said to him: "We cannot all hear and see so well in a house; we had as good have the business done here." Upon this they formed into a circle, having me in the middle with some two or three more, who seemed to be principal managers, Major Hall and Mr. Bishop also keeping near me. I began to speak to the audience, but stopped and said I did not know why I should say anything, for that I was not certain I knew what they wanted of me.

"They said they wanted me to resign my office of Stamp Distributor. I then went on to tell them that I had always declared that I would not exercise the office against the general inclinations of the people; that I had given to the Governor, to be communicated to the Assembly, my declarations upon that head; and that I had given orders to have the stamped paper stopped at New York, from whence it should not come until I should be able to learn from the Assembly that it was their choice and inclination to have it come, as I did not think it safe to bring it in without; that I was under bonds to the Stamp Office in England, and did not think it safe or proper for me to resign the office to every one that should ask it of me; and that I only wanted to know the sense of the Government, whether to conform to the act or not, in order to my getting dismissed from my office in a proper manner. And as it had been said that the Assembly would not say anything about the matter, I had now put it upon this fair footing, that if they did not, by some act relative to the affair, plainly show their minds and

inclination to have the stamped paper brought into the colony, I should not think it safe, as times were, to suffer the same to come in, nor take any steps in my office. Also observed to them that the Governor would have power and instructions to put in another if I should be removed; that the step could do them no good. They said: 'Here is the sense of the Government, and no man shall exercise that office.' I asked if they thought it was fair that the counties of Windham and New London should dictate to all the rest of the colony? Upon this, one said: 'It don't signify to parley. Here is a great many people waiting, and you must resign.' I said: 'I don't think it proper to resign till I meet a proper authority to ask it of me,' and added: 'What if I won't resign; what will be the consequence?' One said: '*Your fate.*' Upon which I looked him full in the face, and said: '*My fate, you say?*' Upon which a person just behind, said '*The fate of your office.*' I answered that I could die, and perhaps as well now as another time, and that I should die but once. Upon which the Commandant (for so, for brevity's sake, I beg leave to call the person who seemed to have the principal conduct of the affair said): 'We had better go along to a tavern' (which we did), and cautioned me not to irritate the people. When we came against the house, and the people began to alight, I said, 'You can soon tell what you intend to do; my business is at Hartford; may I go there or home?' and made a motion to go. They said, 'No, you shall not go two rods from this spot before you have resigned,' and took hold of my horse's bridle; when, after some little time, I dismounted and went into the house with the persons who were called the committee, being a certain number of the principal persons, the main body continuing without doors. And here I ought not to omit mentioning that I was told repeatedly that they had no intentions of hurting me or my estate, but would use me like a gentleman. This, however, I conclude they will understand was on condition I should comply with their demands.

"When I came into the house with this select committee, a great deal of conversation passed upon the subject and upon some other matters, as my being supposed to be in England when the first leading vote of Parliament passed relative to the Stamp Act, and my not advising the Governor of it; whereas I was at that time in America—and the like, too tedious to relate. Upon the whole, this committee behaved with moderation and civility, and I thought seemed inclined to listen to certain proposals which I made; but when the body of the people came to hear them they rejected them, and nothing would do but I must resign.

"While I was detained here, I saw several members of the Assembly pass by, whom I hailed, acquainting them that I was there kept and detained as a prisoner, and desired their and the Assembly's assistance for my relief. They stopped and spoke to the people, but were told they had better go along to the Assembly, where they might possibly be wanted. Major Hall also, finding his presence not altogether agreeable, went away; and Mr. Bishop, by my desire, went away to let the Governor and the Assembly know the situation I was in.

"After much time spent in fruitless proposals, I was told the people grew very impatient, and that I must bring the matter to a conclusion. I then told them I had no more to say, and asked what would they do with me? They said they would carry me to Windham a prisoner, but would keep me like a gentleman. I told them I would go to Windham; that I had lived very well there, and should like to go and live there again. This did not do. They then advised me to move from the front window, as the sight of me seemed to enrage the people. Sometimes the people from below would rush into the room in great numbers and look pretty fierce at me, and then the committee would desire them to withdraw.

"To conclude: After about three hours spent in this kind of way, and they telling me that certain of their gentlemen, members of the General Assembly, had told them they must get the matter over before the Assembly had time to do anything about it; and that it was my artifice to wheedle the matter along until the Assembly should, somehow or other, get ensnared in the matter, etc. The commandant coming up from below, told me, with seeming concern in his countenance, that he could not keep the people off from me any longer; and that if they once began, he could

not promise me when they would end. I now thought it was time to submit. I told him I did not think the cause worth dying for, and that I would do whatever they should desire me to do. Upon this I looked out at a front window, beckoned the people, and told them I had consented to comply with their desires, and only waited to have something drawn up for me to sign. We then went to work to prepare the draft. I attempted to make one myself; but they not liking it, said they would draw one themselves, which they did, and I signed it. Then they told me that the people insisted on my being sworn never to execute the office. This I refused to do somewhat peremptorily, urging that I thought it would be a profanation of an oath. The committee seemed to think it might be dispensed with, but said the people would not excuse it. One of the committee, however, said he would go down and try to persuade them off from it. I saw him from my window amidst the circle, and observing that the people seemed more and more fixed in their resolution of insisting upon it, I got up and told the people in the room I would go down and throw myself among them, and went down, they following me. When I came to the circle they opened and let me in, when I mounted a chair which stood there by a table, and having pulled off my hat and beckoned silence, I proceeded to read off the declaration which I had signed, and then proceeded to tell them that I believed I was as adverse to the Stamp Act as any one of them; that I had accepted my appointment to this office, I thought, upon the fairest motives; that learning how very obnoxious it was to the people, I had found myself in a very disagreeable situation ever since my coming home; that I found myself at the same time under such obligations, that I did not think myself at liberty peremptorily to resign my office without the leave of those who appointed me; that I was very sorry to see the country in the situation it was in; that I could, nevertheless, in some measure, excuse the people, as I believed they were actuated by a real, though a misguided, zeal for the good of their country; and that I wished the transactions of that day might prove happy for this colony, though I must own to them I very much feared the contrary—and much more to the same purpose.

When I had done, a person who stood near me told me to give 'Liberty and Property' with three cheers, which I did, throwing up my hat into the air; this was followed by loud huzzas; and then the people, many of them, pleased to take me by the hand, and tell me I was restored to their former friendship. I then went with two or three more to a neighboring house, where we dined. I was then told the company expected to wait on me into Hartford, where they expected I should publish my declaration again. I reminded them of what they had before told me, that it might possibly ensnare the Assembly for them to have an opportunity to act or to do anything about this matter. Some inclined to forego this step, but the main body insisted on it. We accordingly mounted, I believe by this time to the number of near one thousand, and rode into Hartford, the Assembly then sitting. They dismounted opposite the Assembly House and about twenty yards from it. Some of them conducted me into an adjoining tavern, while the main body drew up four abreast and marched in form round the Court House, preceded by three trumpets sounding, then formed into a semicircle at the door of the tavern. I was then directed to go down and read the paper I had signed, and which I did within the hearing and presence of the Assembly; and only added that I wished the consequences of this day's transaction might be happy. This was succeeded with 'Liberty and Property' and three cheers, soon after which the people began to draw off, and I suppose went home. I understand they came out with eight days' provision, determined to find me if in the colony.

"I believe the whole time I was with them was better than three hours, during a part of which time, I am told, the Assembly were busy in forming some plan for my relief; the Lower House, thinking to send any force, were it in their power, might do more hurt than good to me, agreed to advise the sending some persons of influence to interpose by persuasion, etc., and communicated their desire to the Upper Board, in consequence whereof certain gentlemen of the House were desired and were about to come to my relief, it being about half an hour's ride; but before they set out they heard the matter was finished. Had they come, I conclude it would have had no effect.

"This, according to the best of my recollection, is the substance of the transaction, and in most of it I have had the concurrent remembrance and assent of the before-mentioned Mr. Bishop. If I have omitted or misreported anything material, I hope it will be imputed to want of memory only, as I mean not to irritate or inflame, but merely to satisfy the curious, and to place facts in a true and undisguised light. "J. INGERSOLL.

"NEW HAVEN, September 23, 1765.

"P. S.—I perceive these people, the night before this affair happened, placed a guard round the Court House in Hartford, and at my usual lodgings in that town, also securing the passage over the bridge in the town, and all the passes, even by the Farmington road, to prevent my getting into town that night—a needless pains had they known it. The Members of the Assembly arrived in town the same evening.

Copy of the above-mentioned resignation:

"I do hereby promise that I will never receive any stamped papers which may arrive from Europe, in consequence of any Act lately passed in the Parliament of Great Britain, nor officiate in any manner as Stamp Master or Distributor of Stamps within the colony of Connecticut, either directly or indirectly; and I do hereby request all the inhabitants of this his Majesty's colony of Connecticut (notwithstanding the said office or trust has been committed to me) not to apply to me hereafter for any such stamped papers, hereby declaring that I do resign said office, and execute these presents of my own free will and accord, without any equivocation or mental reservation.

"In witness whereof, I have hereunto set my hand.

"J. INGERSOLL.

Tradition reports that some rough jests were given and taken during the ride from Wethersfield to Hartford, the populace reminding their victim that his initials were those of Judas Iscariot; and Mr. Ingersoll, who chanced to ride a white horse, declaring that he had now a clearer idea, than ever he had before conceived, of that passage in the Revelation which describes Death on a pale horse and Hell following with him.

In view of the turbulent and violent proceedings of the 19th of September, Governor Fitch issued a proclamation on the 23d of the same month, warning the people of the colony against such violations of the peace.

Ingersoll's public resignation did not entirely satisfy the Sons of Liberty. Receiving two anonymous letters calling on him to give some further assurance with regard to his intentions, and to confirm them with an oath, and having, as he says, "good reason to think those letters came from a large number of people belonging to this colony," he declared:

1. I never was, nor am now, desirous or even willing to hold or exercise the aforesaid office, contrary to the mind and inclination of the general body of people in this colony.

2. I have for some time been, and still am, persuaded, that it is the general opinion and sentiment of the people of this colony (after mature deliberation) that the Stamp Act is an infringement of their rights, and dangerous to their liberties, and therefore I am not willing, nor will I, for that and other good and sufficient reasons, as I suppose (and which I hope and trust will excuse me to those who appointed me), exercise the said office against such general opinion and sentiment of the people; and generally, and in a word, will never at all, by myself or otherwise, officiate under my said deputation. As I have, so I will, in the most effectual manner I am able, apply to the proper board in England for a dismission from my said office.

J. INGERSOLL.

NEW HAVEN, ss., Jan. 8, 1766.

Then personally appeared Jared Ingersoll, Esq., and made oath to the truth of the foregoing declaration; by him subscribed before me. DANIEL LYMAN, Just. Peace.

The first day of November, 1765, was the time appointed for the law to go into execution.

Friday, the first morning in November, (says Bancroft) "broke upon a people unanimously resolved on nullifying the Stamp Act. From New Hampshire to the far South, the day was introduced by the tolling of muffled bells; minute guns were fired and pennants hoisted at half-staff; or a eulogy was pronounced on liberty and her knell sounded, and then again the note changed, as if she were restored to life; and while pleasure shone on every countenance, men shouted "Confusion to her enemies." Even the children at their games, though hardly able to speak, caught up the general chorus, and went along the streets merrily carolling: "Liberty, Property, and no Stamps."

The publishers of newspapers which appeared on Friday, (continues Mr. Bancroft) were the persons called upon to stand the brunt in braving the penalties of the Act. Honor then to the ingenious Benjamin Mecom, the bold-hearted editor at New Haven, who, on that morning, without apology or concealment, issued the *Connecticut Gazette*, filled with patriotic appeals; for (said he,) the press is the test of truth, the bulwark of public safety, the guardian of freedom, and the people ought not to sacrifice it.

As the *Gazette* went to press, the editor inserted this notice,

NEW HAVEN, November 1, 1665.

This morning three bells in this town which are near neighbors, began to toll here, and still continue tolling and saluting each other at suitable intervals. They seem to speak the word No-ven-ber, in the most melancholy tone imaginable.

The Americans were perhaps emboldened to resist the Stamp Act by the news which came before it went into execution, that the King had determined to organize a new ministry, and that Lord Chatham was to be at its head. They submitted to all the inconveniences and risks which attended the transaction of business without the required stamps, in hope that legality would soon be restored to the forms of business by a repeal of the Act. After the first day of November no Courts of Justice sat in New Haven for several months; but as spring approached, the inhabitants in town-meeting signified their desire that the Courts, and especially the Honorable the Superior Court, would sit as formerly for the administration of justice. The Courts accordingly resumed their functions, not only before tidings arrived of the repeal, but before the repeal itself. News came to New Haven on Monday the 19th of May, 1766, that King George had approved the Bill repealing the Stamp Act. He had signed on the morning of the 18th of March, among other bills, what afterward he regarded as the well-spring of all his sorrows, "the fatal compliance of 1766."

Mr. Mecom in his *Gazette* of May 23d, announces: Last Monday morning, early, an express arrived here with the charming news; soon after which many of the inhabitants were awakened with the noise of small arms from different quarters of the town; all the bells were rung, and cannon roared the glad tidings. In the afternoon the clergy publicly returned thanks for the blessing, and a company of militia were collected under the principal direction of Colonel Wooster. In the evening were illumination, bonfire and dances; all without any remarkable indecency or disorder.

The repeal of the Stamp Act was not the end of the controversy between the Parliament and the Colonies. Pitt, now created Earl of Chatham, did

indeed form a new Ministry, but of heterogeneous elements, some of which were hostile to America. If the Premier had retained his health he might perhaps have guided the course of events so that the troubles of the next decade would never have occurred. As it was, the Ship of State, though nominally commanded by a friend of America, was actually guided by those who believed that Americans should be taxed by Parliament rather than by their own colonial assemblies. Such men might think it a matter of policy to repeal an Act which they found could be enforced only by importing armies into the colonies and retaining them there perpetually; but their views of what was just were unchanged. Charles Townshend, the Chancellor of the Exchequer, was determined to tax America; not so much for the avails of the tax, as to maintain the right to do so. In the absence of Chatham, an Act was passed ostensibly for the regulation of trade, but providing that tea, paints, paper, glass and lead should pay a duty at the colonial Custom-Houses. The colonists on their part resisted this mode of taxation, by non-importation. Leagues were formed in every town, of persons pledged not to use any manufactured articles but such as were of home product, and not to trade with merchants who kept on sale goods imported from Great Britain.

The year 1770 was (says Hollister) one of peculiar interest in Connecticut. The merchants of the colony had kept the articles of agreement entered into with those of New York, in relation to the non importation of British goods, with singular fidelity. In New York, on the other hand, these articles had been in many instances violated with a shamelessness that elicited such universal indignation that it was resolved that a general convention of delegates from all the towns in the colony should meet at New Haven on the 13th of September, to take into consideration the perilous condition of the country, to provide for the growth and spread of home manufactures, and to devise more thorough means for carrying out to the letter the non-importation agreement.

Preparations for this meeting occupied the minds of the people throughout the colony for months, and the zeal in behalf of home manufactures, and in opposition to trade with Britain, increased as the discussion proceeded. "Frequent town meetings were held, speeches were made, and resolutions were passed; many of which found their way to England, and caused the ears of the British ministry to tingle, and their cheeks to redden with anger." This mode of opposition enlisted women as well as men and "the popular feeling in favor of domestic manufactures grew to be a passion. The women of the colony, without reference to rank, encouraged their husbands, sons and lovers, and vied with them in bringing back the age of home-spun. The sliding of the shuttle, the buzz of the spinning-wheel, the bleaching of cloth upon the lawn that sloped downward from the kitchen door of the family mansion to the rivulet that threaded the bottom of the glade, found employment for the proudest as well as the humblest female in the land."

New Haven appointed its delegates to this convention on the 10th of September. In town-meeting it was "voted that Colonel Nathan

Whiting, Mr. Adam Babcock, Joshua Chandler, Esq., Daniel Lyman, Esq., Mr. Jesse Leavenworth, Mr. Ralph Isaacs, Captain Joel Hotchkiss, and Dea. David Austin, be a committee to meet the gentlemen who may be appointed in the other towns in this colony, to meet on the 13th day of instant September, to consider what may be done toward promoting the commercial interests of the colony."

On the 18th of September, at another town-meeting, a committee of thirty-eight, consisting of Thomas Darling, Adam Babcock, David Wooster, Joshua Chandler, Daniel Lyman, Roger Sherman, John Hubbard, Simeon Bristol, Samuel Hemingway, Benjamin Smith, Andrew Bradley, Thomas Howell, Joseph Munson, William Greenough, Nathan Whiting, Joel Hotchkiss, David Austin, Samuel Bishop, Jr., Ralph Isaacs, Phineas Bradley, John Whiting, Stephen Ball, Jeremiah Atwater, John Woodward, James Thompson, Jesse Leavenworth, Enos Alling, William Gregory, Jacob Pinto, Hezekiah Sabin, Samuel Sacket, Caleb Beecher, William Douglas, Jared Ingersoll, James A. Hillhouse, Isaac Beers, Timothy Jones Jr., and Amos Botsford, was appointed "to take into consideration the present state of the commercial interests of this place, and report their opinion what they judge is best and needful to be done relative thereto."

It does not appear that this committee ever made a report to the town. Not long after its appointment, the Parliament, frightened at the unanimity with which the Americans had joined in and adhered to their non-importation agreement, and moved by petitions from British merchants whose traffic with America had been interrupted, amended the Act for the regulation of trade, so as to remove all duties except that on tea. This was retained at the express command of the King, for the sake of bearing testimony to the right of England to tax the colonies. But as the Americans would not use tea, there was no collision till 1773, when an attempt was made to secure the payment of three-pence per pound at the colonial Custom-Houses, by remitting the duty of nine-pence per pound which had been required when tea was imported into England. The King was willing his subjects in America should purchase tea at a lower price than those in England, if they would pass through the form of paying a duty on it. But when the tea ships arrived in the harbor of Boston, there was a tea-party of an unexpected character, and the tea was thrown overboard. The quietness which had reigned for three years was suddenly terminated by this outbreak of popular indignation. Even those who had stood up in Parliament in defense of the Americans were now ready to support the Ministry. A bill introduced into Parliament in the beginning of 1774, punished Boston for the tea-party by closing its port against all commerce. Another punished Massachusetts by abridging the privileges secured to it by its charter.

The Boston Port Bill contributed more than any other one thing to precipitate the collision between the mother-country and the colonies which had been impending since tidings came of the Stamp

Act. The inhabitants of Boston assembled in town meeting on the 14th of May, and

Resolved, That it is the opinion of this town that if the other colonies come into a joint resolution to stop all importation from and exportation to Great Britain and every part of the West Indies till the Act be repealed, the same will prove the salvation of North America and her liberties; and that the impolicy, injustice, inhumanity, and cruelty of the Act exceed our powers of expression. We therefore leave it to the just censure of others, and appeal to God and the world.

Copies of this vote were transmitted to each of the colonies. The General Assembly of Connecticut being in session at the time, appointed a day of humiliation and prayer; ordered an inventory to be taken of all the cannon, small arms, ammunition, and other military stores belonging to the colony at the battery of New London; incorporated several new military companies, and passed pungent resolutions in censure of the ministry. The several towns throughout the colony held town-meetings in which resolution of sympathy with Boston were passed, and committees of correspondence were appointed to communicate with other towns and especially with Boston. One of the earliest of these town-meetings was at New Haven.

At a legal town-meeting, held at New Haven on the 23d day of May, 1774, Daniel Lyman, Moderator;

Voted, That we will to the utmost of our abilities, assert and defend the liberties and immunities of British America, and that we will co-operate with our sister towns in this and the other colonies in any constitutional measures that may be thought most conducive to the preservation of our invaluable rights and privileges.

Voted, That Joshua Chandler, Esq., Samuel Bishop, Jr., Esq., Daniel Lyman, Esq., Mr. Stephen Ball, Pierpont Edwards, Esq., John Whiting, Esq., Mr. Isaac Doolittle, Mr. David Austin, Capt. Joseph Munson, Mr. Peter Colt, Mr. Jeremiah Atwater, Mr. Timothy Jones, Jr., Mr. Isaac Beers, Capt. Timothy Bradley, Mr. Silas Kimberly, Simeon Bristol, Esq., Mr. Joseph Woodward, and Capt. Joel Hotchkiss, be a standing committee for the salutary purpose of keeping up a correspondence with the towns of this and the neighboring colonies, and, in conjunction with them, pursuing in the present important crisis, such judicious and constitutional measures as shall appear to be necessary for the preservation of our just rights, the maintenance of public peace, and support of general union, which at this time is so absolutely requisite to be preserved throughout this continent.

Also, Voted, That a copy of the above resolves shall be transmitted to the Committee of Correspondence for the town of Boston, in answer to their letter to this town.

This meeting adjourned to the third Monday of June next, at two of the clock in the afternoon.

At a town meeting held in New Haven, by adjournment, upon the 20th day of June, 1774;

Voted, That Samuel Bishop Esq., be desired to inform the Honorable Committee of Correspondence of this colony, that it would be very agreeable to this town to have a General Congress as soon as may be, and that in their opinion a General Annual Congress would have a great tendency to promote the welfare and happiness of all the American Colonies.

Voted, That upon the request of the Committee of Correspondence, the Selectmen be desired to call a town meeting.

The time fixed for closing the port of Boston was the first day of June. With only a few days' notice, the inhabitants found their means of subsistence cut off. The immense property in warehouses and wharves became in a measure useless. Persons dependent on wages and salaries were destitute of income. But so deep and wide-spread was the sympathy with Boston, that contributions

flowed in from every quarter. The next town-meeting in New Haven was chiefly occupied with arrangements for the relief of those thus deprived of an opportunity to earn a livelihood.

At a town-meeting held in New Haven, by adjournment, upon the 18th day of October, 1774;

Voted, That it is the opinion of this town, that a subscription be set on foot for the relief of inhabitants of the town of Boston that are now suffering in the common cause of American freedom, and that Messrs. Joseph Munson, David Austin, Benj. Douglass, Adam Babcock, Enos Alling, Isaac Doolittle, Henry Daggett, Jonathan Osborne, Isaac Chidsey, Azariah Bradley, Silas Kimberly, Samuel Candee, James Heaton, Jr., Stephen Jacobs, Timothy Bradley, Amos Perkins, Simeon Bristol, Theoph. Goodyear, Isaac Beecher, Jr., Timothy Ball, and Samuel Beecher, be a committee to receive in subscriptions, and transmit what may be so collected to the Selectmen of the town of Boston, to be by them disposed of for the support of the inhabitants of the town or Boston.

No report appears on the records of the amount of these subscriptions, but there is reason to believe that as New Haven was not behind other towns in its zeal for "the common cause of American freedom," so it was not deficient in generous gifts to Boston. In some towns the amount contributed was put on record. The town of Windham sent two hundred and fifty fat sheep; the contributions from Norwich consisted of money, wheat, corn, and a flock of three hundred and ninety sheep. Wethersfield sent a large quantity of wheat.

But arrangements for this subscription were not the only transactions of the town-meeting held on the 18th of October. It was also

Voted, That the Selectmen build a suitable house to put the town's stock of powder in, of such dimensions as they shall judge needful, either upon the land of Messrs. Beers, Doolittle or Meloy.

Voted, That the Selectmen procure a stock of powder, agreeable to the law in such case provided, *as soon as may be*, for the town's use.

Adjourned without day.

The action in regard to powder was doubtless occasioned by a resolution passed a few days before by the General Assembly, viz.:

Resolved by this Assembly, that the several towns in this colony be and are hereby ordered to provide, as soon as may be, double the quantity of powder, ball, and flints that they were heretofore by law obliged to provide, under the same directions and penalties as by law already provided.

It is evident in the light of history that this resolve of the Assembly, and the corresponding action of the town, meant more than appears in the language used. They were preparing to use powder if necessary; but they spoke with a reserve like that with which the Assembly six months later referred to Lexington and Concord.

Whereas it is represented to this Assembly that sundry acts of hostility and violence have lately been committed in the province of Massachusetts Bay by which many lives have been lost; and that some inhabitants of this colony are gone to the relief of the people distressed: It is thereupon

Resolved by this Assembly, that Captain Joseph Trumbull and Mr. Amasa Keyes be and they are hereby appointed a committee to procure all necessary provisions for the inhabitants of this colony who have gone to the relief of the people aforesaid, and that they superintend the delivery out and apportioning the same among them, till this Assembly shall consider what measures are proper to be taken relative thereto, and give orders accordingly.

Meanwhile the General Congress, which the in-

habitants of New Haven at their meeting in June were hoping for,* had met and recommended as a means of redress for the grievances which threatened the destruction of the lives, liberty and property of his Majesty's subjects in North America, "the non-importation, non-consumption, and non-exportation agreement." They recommended that committees of inspection should everywhere be appointed to see that the articles of agreement were faithfully observed. Three delegates from Connecticut attended and acted in this Congress with delegates from each and every of the other twelve colonies. Roger Sherman, an honored citizen of New Haven, was one of the three delegates from Connecticut. The recommendations of Congress were approved by the General Assembly at the October session; and

At a town-meeting holden in New Haven, upon the 14th day of November, 1774, in pursuance of the resolve of the House of Representatives in October last in New Haven, to choose a committee for the purpose mentioned in the 11th article in the association entered into by the late Continental Congress, held at Philadelphia, it was—

Voted, that Roger Sherman, Esq., be Moderator.

Voted, that this town will choose a committee for the purpose mentioned in the 11th article of said association, agreeable to the resolve and recommendation of said House of Representatives.

Voted, that the major part of the committee be chosen within the limits of the First Society.

Voted, that the following persons be a committee for the purpose aforesaid, viz. Jonathan Fitch, Michael Todd, David Atwater, Jr., Samuel Bird, David Austin, Timothy Jones, Jr., Joseph Munson, Peter Colt, Abraham Bradley, Samuel Mansfield, Henry Daggett, John White, Jr., James Gilbert, Robert Brown, Thomas Bills, John Miles, Thomas Green, Daniel Benham, Jonathan Osborn, Stephen Smith, Azariah Bradley, Jonathan Smith, John Benham, Jesse Todd, Giles Pierpont, Timothy Bradley, Enoch Newton, Isaac Beecher, Jr., Joel Hotchkiss, Samuel Martin and Joel Bradley, Jr.

For some reason there was dissatisfaction with this Committee as not being large enough, so that we find this record:

At a town-meeting held at New Haven, by adjournment, upon the 20th day of December, A. D. 1774.

Voted, That this town do approve of the association entered into by the late Continental Congress held at Philadelphia.

Whereas, The inhabitants of the town of New Haven, at their town-meeting, held on the 14th day of November last, called for the purpose of choosing a Committee of Inspection (according to the advice of the Continental Congress, and a vote of the Lower House of Assembly of this Colony), to carry into execution the resolutions of said Congress, did nominate and appoint a committee of thirty-one persons, named in the records of the proceedings of said town, which committee are now unanimously approved by this meeting; and

Whereas, A number of the inhabitants of this town are desirous to have said committee enlarged, in order therefore that there may be peace and unanimity in this town;

Voted, That the following persons be added to said Committee, viz.: Messrs. Stephen Ball, Benjamin Douglass, Phineas Bradley, John Mix, William Greenough, Levi Ives, Isaac Doolittle, Elias Shipman, Amos Morris, Isaac Chidsey, Lamberton Painter, Lamberton Smith, Jr., Joseph Pierpont,

*As early as 1766 Jonathan Mayhew one of the pastors in Boston, being greatly moved by the dangers which threatened the colonies on account of the Stamp Act, wrote to James Otis: Lord's day morning, 8 June, 1766. You have heard of the communion of churches. While I was thinking of this in my bed, the great use and importance of a communion of colonies appeared to me in a strong light. Would it not be decorous for our Assembly to send circulars to all the rest, expressing a desire to cement union among ourselves. A good foundation for this has been laid by the Congress at New York; never losing sight of it may be the only means of perpetuating our liberties.

Joshua Barnes, Amos Perkins, Samuel Newton, Samuel Atwater, Jonathan Dickerman, Timothy Ball, and Amos Hitchcock.

The Committee of Inspection as thus constituted consisted of fifty-one persons, and, like similar committees in the other towns of the colony, had almost absolute power over the comfort and prosperity of their townsmen.

The reader may discover what was expected of the Committee from the following communication to the *Connecticut Journal*.

MESSRS. PRINTERS,—Please to give the following lines a place in your next, and you will oblige your humble servant.

Wednesday evening last, a number of ladies and gentlemen belonging to this town, collected at a place called East Farms, where they had a needless entertainment, and made themselves extremely merry with a good glass of wine. Such entertainments and diversions can hardly be justified upon any occasion; but at such a day as this, when everything around us has a threatening aspect, they ought to be discountenanced, and every good man should use his influence to suppress them. Are not such diversions and entertainments a violation of the eighth article of the Association of the Continental Congress? And is it not expected that the Committee of Inspection will examine into such matters, and if they find any persons guilty of violating said Association, that they treat them according as the rules of it prescribe?

July 19, 1775.

The following extracts from the minutes of the Committee also illustrate the work it was expected to do.

In Committee Meeting, March 7, 1776.

A complaint being made against William Glen, merchant, for a breach of association, by buying tea and selling it at an extortionous price, and also refusing paper currency therefor; said Glen was cited to appear before the Committee and make answer to the foregoing charge; he appeared and plead not guilty, wherefore the evidences against him were called in and sworn, and on motion, voted that the evidence is sufficient to convict William Glen of buying and selling tea contrary to the Association, and ordered that he be advertised accordingly, that no person hereafter have any dealing or intercourse with him.

Also, Freeman Huse, Jr., being complained of for buying and selling tea contrary to Association, was cited to appear before the Committee. He neglecting to appear, or make his defense, the evidences were called in and sworn. On motion, voted that the evidence is sufficient to convict Freeman Huse, Jr., of a breach of the Association, by buying and selling tea, and ordered that he be advertised accordingly, that no person have any further dealing or intercourse with him.

Signed per order of the Committee,

JON'N. FITCH, *Chairman*.

A copy of the minutes. Test. PETER COLT, *Clerk*.

I, William Glen, merchant, being advertised by the Committee of Inspection in this town, as a violator of the Continental Association, for buying tea, and selling it at an exorbitant price, confess myself guilty of the same, for which I humbly ask their and the public's pardon, and promise for the future, my conduct shall be such as shall give no occasion of offense. Professing myself firm for the liberties of America, I desire the Committee and the public to restore me to my wonted favor.

I am, with sincerity, their most humble and obedient servant,

WM. GLEN.

The confession of Wm. Glen being read, voted satisfactory, and ordered to be published.

JON. FITCH, *Chairman*.

A true copy of minutes, examined by

MARK LEAVENWORTH, *Clerk, pro temp.*

May 1, 1776.

An extract of a letter from New Haven to the printer of a royalist paper in New York, will also illustrate the function of a Committee of Inspection. It is dated April 1, 1775.

Our Committee of Inspection have proceeded to very unvarnished lengths. They ordered summonses to be served on several persons who had not been altogether complaisant enough to the mandates of the Congress. One of the committee men demanded of a loyal Constitutionalist: "What! do you drink tea? Take care what you do, Mr. C., for you are to know the committee command the mob, and can in an instant let them loose upon any man who opposes their decrees and complete his destruction." But upon his damning the King, the spirit of the gallant royalist grew impatient, and he opened a battery of execrations upon Committees and Congresses of all denominations. This of course occasioned his being ordered before the whole sanhedrim, where he is to be interrogated after the manner of the Spanish and Portuguese inquisitions. To this complexion is American liberty, through the influence of the King-killing republicans, already arrived. But the culprit is true game and will prove as tough a sapling as ever these big-wigs have tried their strength on. If these choose to carry matters to extremity, now is the time to repel force by force, in defense of the constitutional liberty of the colony; and be the strength of the disaffected what it may, the lives and fortunes of many in this country will be freely hazarded in defense of King George Third and the laws of his realm.

Wednesday, April 19, 1775, having been appointed by his Excellency Jonathan Trumbull, Governor of Connecticut, to be observed throughout that colony as a day of fasting and prayer, the people of New Haven were assembled in their respective places of worship "to offer up fervent prayers to Almighty God for his blessing on our rightful Sovereign, King George the Third, that he may have the divine direction in all his administration, and his government be just, benign, gracious and happy to the nation and these colonies."

Very early in the morning of the same day the troops of that rightful sovereign had shed the first blood in a war which ended in the acknowledgment by King George that his American colonies had become independent States. But no telegraph flashed the news to New Haven to disturb the quiet of its worshiping assemblies. When the tidings came on Friday, about noon, Benedict Arnold, Captain of the Governor's Guards, immediately called out his company, and proposed that they should start for the aid and defense of their friends in Massachusetts. About fifty of the company consenting to accompany their commander, he paraded them the next morning, before the tavern where a committee were in session, and applied to the committee for powder and ball.* Those who had charge of the ammunition declining or delaying to supply him, Arnold threatened to take by force what he needed. Colonel David Wooster, who, a few days later, was appointed Major-General of the Militia of the colony, being present in the meeting of the committee, went out and endeavored to re-

strain the impetuosity of the young man, advising him to wait for orders from the proper authority, before starting for the scene of conflict. Arnold answered the veteran of three-score and four years: "None but Almighty God shall prevent my marching." The committee, perceiving his fixed resolution, supplied him, or did not prevent him from supplying himself with the powder and ball he required; and he with his company marched off immediately, reaching Wethersfield on the next day at evening, and the quarters of the Massachusetts army at Cambridge on the 29th of April.

In Force's "American Archives" may be found "An agreement subscribed by Captain Arnold and his company of fifty persons when they set out from Connecticut as volunteers to assist the provincials at Cambridge."

To all Christian people, believing in and relying on that God, to whom our sinners have at last forced us to appeal:

Be it known, that we, the subscribers, having taken up arms for the relief of our brethren, and defense of their, as our, just rights and privileges, declare to the world that we from the heart disavow every thought of rebellion to His Majesty as supreme head of the British Empire, or opposition to legal authority, and shall on every occasion manifest to the world, by our conduct, this to be our fixed principle. Driven to the last necessity, and obliged to have recourse to arms in defense of our lives and liberties, and from the suddenness of the occasion deprived of that legal authority, the dictates of which we ever with pleasure obey, we find it necessary, for preventing disorders, irregularities and misunderstandings in the course of our march and service, solemnly to agree to and with each other on the following regulations and orders, binding ourselves by all that is dear and sacred, carefully and constantly to observe and keep them.

In the first place, we will conduct ourselves decently and inoffensively as we march, both to our countrymen and one another, paying that regard to the advice, admonition and reproof of our officers, which their station justly entitles them to expect, ever considering the dignity of our own character, and that we are not mercenaries, whose views extend no farther than pay and plunder, whose principles are such that every path that leads to the obtaining these is agreeable, though wading through the blood of their countrymen; but men acquainted with and feeling the most generous fondness for the liberties and inalienable rights of mankind, and who are, in the course of divine providence, called to the honorable service of hazarding our lives in their defense.

Secondly.—Drunkenness, gaming, profaneness and every vice of that nature shall be avoided by ourselves and discontinued in us by others.

Thirdly.—So long as we continue in our present situation of a volunteer independent company, we engage to submit on all occasions to such decisions as shall be made and given by the majority of the officers we have chosen; and when any difference arises between man and man, it shall be laid before the officers aforesaid, and their decision shall be final. We mean by officers the captain, lieutenants, ensign, sergeants, clerk, and corporals; the captain, or, in his absence, the commanding officer, to be the moderator and have a turning or casting voice in all debates; from whom all orders shall from time to time issue. Scorning all ignoble motives, and superior to the low and slavish practice of enforcing on men their duty by blows, it is agreed that when private admonition for any offense by any of our body committed will not reform, public admonition shall be made; and if that should not have the desired effect, after proper pains taken and the same repeated, such incorrigible person shall be turned out of the company as totally unworthy of serving in so great and glorious a cause, and be delivered over to suffer the contempt of his countrymen.

As to particular orders, it shall from time to time be in the power of the officers to make and vary them as occasion may require, as to delivering our provisions, ammunition

* This company, however, reported at a meeting, at which, as we have previously seen, the "Middle Branch" as well as the "New Britain" companies were present, and were preserved, but tradition relates that Roger Sherman was appointed Major-General of the Militia of the colony, and that the opposition to taxation by any other Legislature than that of the colony was maintained. Many of the soldiers, at least more or less in sympathy with the Sons of Liberty, and a few weeks afterwards, were ordered to take arms against the King, for whom they had sincerely prayed on the preceding Wednesday.

rules and orders for marching, etc. The annexed order for the present, we think pertinent and agreeable to our mind. To which, with the additions or variations that may be made by our said officers, we bind ourselves by the ties above mentioned to submit.

In witness whereof, we have hereunto set our hands, this 24th of April, 1775.

[From the date of this document it appears to have been signed while the company were on the march and probably on Monday morning before they left Wethersfield. It was probably copied from a similar covenant drawn by Silas Deane for Captain Chester's company.*]

It has been stated that as this company passed through Pomfret they were joined by Israel Putnam; but this is an error which ought not to pass uncorrected. Putnam receiving on Thursday at 8 A.M. a despatch from the Committee of Safety at Cambridge, dated Wednesday, 10 A.M., and, at a later hour on Thursday, a second despatch, had mounted his horse, and, riding all night, had reached Cambridge on Friday before Arnold called out his company at New Haven. A letter written by Putnam from Concord, on Friday, to Colonel Williams, soon after appointed to be one of the Connecticut Committee of Safety, was printed in Norwich on Sunday, the 23d, at 4 P.M., in an extra from the office of the *Norwich Packet*.

Not long after the departure of Arnold and his men, Captain Hezekiah Dickerman, with nine members of his militia company, followed their townsmen to the camp at Cambridge.

Both these squads went as volunteers and without assurance of pay from any public treasury, but doubtless with assurances from many of their neighbors of contributions for their support while engaged in the common cause. Perhaps when Captain Dickerman left New Haven, the committee whom Arnold could not wait for, had come to some conclusion what they should do for the maintenance of the volunteers. However it may have been with the town authorities, the General Assembly, at an adjourned meeting which commenced on the 26th of the same month, provided for provisioning "those inhabitants of this colony who had gone to the relief of the people at the Bay;" and at the May Session, directed "all officers who assisted in assembling, or furnishing ammunition to, such of the colony, in the late alarms, who marched East or West, to deliver to the selectmen of their respective towns, their accounts, and the names of those who marched in relief of those in distress and the names of those who supplied, to be laid before the committee of pay table for settlement."

The Selectmen of New Haven received under this resolution of the Assembly, the sum of £238 1s. 11d. for the services and expenses of New Haven men, "in the Lexington alarm."

Benedict Arnold, who thus makes his first appearance on the stage of history, was at this time thirty-five years of age, having been born at Norwich, January 3, 1740. Though regarded as courageous even to recklessness, he was not in high esteem among his townsmen as a man of honor. He had been for some time in business at

New Haven as a druggist, and his sign may still be seen at the rooms of the New Haven Colony Historical Society. He did not confine his traffic however to drugs, as the following advertisement in the *Connecticut Gazette* will make evident.

BENEDICT ARNOLD

wants to buy a number of large, genteel, fat horses, pork, oats, and hay.—And has to sell choice cotton and salt, by quantity or retail; and other goods as usual.

NEW HAVEN, January 24, 1766.

The goods which he offered for sale he had himself imported; and those he desired to purchase were doubtless for export to the West Indies. He was part owner of three small vessels; the *Fortune*, of forty tons; the *Charming Sally*, of thirty tons; and the *Three Brothers*, of twenty-eight tons. It appears from a card in the *Gazette*, dated only a few days after the above advertisement, that he sometimes went as supercargo in his vessels, and that he was not careful to comply with the requirements of the Custom-House. In evading customs, however, he probably was not at all singular; as smuggling was one way of opposing the Stamp Act which about two months before had gone into operation. One of his sailors having given information against Arnold, the Custom-House Officer declined to receive it on Sunday and desired the informer to come on Monday; but Arnold having learned early on Monday what was to be done by the seaman, "gave him a little chastisement," and ordered him to leave town. Afterward finding him in town, Arnold, with others—apparently the other seamen in the same vessel—took the informer to the whipping-post "where he received near forty lashes with a small cord and was conducted out of town."

Mr. Horace Day informs me, that many years ago, desiring to ascertain from one of the oldest and most prominent citizens of New Haven what was the social standing of Benedict Arnold while he was living in New Haven previous to the Revolution, he inquired: "How did your father treat him?" The respectable old gentleman replied: "My father bowed to him whenever they met and said: 'Good morning, Captain Arnold.'" "Well! did your father respect him enough to invite him to his house?" "My father invite Arnold to his house? No, sir; the extent of their acquaintance was 'Good morning, Captain Arnold.'"

As the first blood of the Revolution was shed by British troops in the endeavor to capture munitions of war belonging to the Colony of Massachusetts, the first thought of the provincials was to seize upon Ticonderoga, Crown Point and St. John's, the defenses of Lake Champlain, which were known to be provided with abundant munitions of war and extremely small garrisons. Immediately after the skirmishes at Lexington and Concord, some gentlemen in Connecticut, of whom there at least, David Wooster, Samuel Bishop, Jr., and Adam Babcock, were New Haven men, formed a plan for seizing these fortresses without the publicity incident to any mention of it in the General Assembly. Some of these gentlemen giving their individual obligations with security, they were allowed to borrow

* See Collections of Conn. Hist. Soc., Vol. II, p. 215.

the necessary funds from the public treasury. Sixteen men left Connecticut as secretly as possible, and, as they passed through the Western County of Massachusetts, persuaded about forty yeomen of Berkshire to unite with them in the enterprise. They then advanced to Bennington, where they were joined by Col. Ethan Allen, Seth Warner, and about one hundred Green Mountain boys. At Castleton they received further reinforcements, so that their numbers amounted to two hundred and seventy men.

While this party of sixteen were journeying from Connecticut toward Castleton, and adding to their number as they went, Benedict Arnold was traversing the country from Cambridge to Castleton on a similar errand. Arriving at Cambridge on his March from New Haven, on the 29th of April, he had immediately suggested to the Committee of Safety the importance of seizing Ticonderoga and its tributary fortresses. Whether his mind had spontaneously conceived the idea, or received it as he passed through Hartford and Windham Counties it may be impossible to determine. However that may be, he suggested the adventure to the Massachusetts Committee, and asked that he might himself receive a commission to carry the plan into execution. They gave him the commission and he overtook the Connecticut party at Castleton, arriving there with no companion but a servant. The Connecticut party were already organized, having chosen Ethan Allen, a resident of Vermont, though a native of Connecticut, as chief; James Easton, of Berkshire County, Massachusetts, as second; and Seth Warner, of Roxbury, Connecticut, as third in command.

With characteristic assumption of superiority, Arnold demanded that the whole force should be put under his command. Neither the Connecticut men, who had brought the pay chest with them, nor the hardy mountaineers of the neighborhood, were ready to relinquish the right to choose their own leaders. However, Arnold's commission was examined, and he was, by the choice of those whom he desired to lead, appointed the associate and assistant, of Ethan Allen, the chief commander.

The day before the attack on Ticonderoga was made, Captain Noah Phelps, one of the original sixteen from Connecticut, having disguised himself, entered the fort in the character of a countryman wanting to be shaved. In searching for a barber, he examined everything critically and passed out unsuspected. The story of the capture of the fort at daylight, when Allen meeting the officer in command coming out of his bedroom with his breeches in his hand, demanded the instant surrender of the fort "in the name of the great Jehovah and the Continental Congress," is too familiar to need repetition in all its detail.

The subsidiary fortresses of Crown Point and St. John's were both captured a few hours later, Colonel Warner being sent against the former, and Colonel Arnold against the latter. In one day the Americans gained possession not only of a most important strategic point, but of a large amount of munitions of war not otherwise to be acquired.

The volunteers, who upon the Lexington alarm marched from New Haven to the aid of Massachusetts, remained with the army before Boston only a few weeks. By that time Connecticut had two well organized regiments on the ground, under the command of Generals Spencer and Putnam; and those who did not choose to enlist for permanent service could return to their homes. It is said that about a dozen of Arnold's company enlisted in these Connecticut regiments. One of them, Elias Stilwell, continued in service through the war and rose to the rank of Captain. When the army before Boston was taken into the service of the Continental Congress, Washington, on his way to Massachusetts to take the command, passed through New Haven. The local newspaper, under date of July 5, 1775, announces: "Last Wednesday, his Excellency, General Washington, Major-General Lee, Major Thomas Mifflin, General Washington's *aide-de-camp*, and Samuel Griffin, Esq., General Lee's *aide-de-camp*, arrived in town, and early next morning they set out for the provincial camp near Boston, attended by great numbers of the inhabitants of the town. They were escorted out of town by two companies dressed in their uniform, and by a company of young gentlemen belonging to the Seminary in this place, who made a handsome appearance, and whose expertness in the military exercises gained them the approbation of the generals."

At home, arrangements were made for the defense of the colony, and especially of the towns on the coast. Fifty men, under the command of Captain Joseph Thompson, were employed in building a breastwork and battery at Black Rock, on the eastern shore of New Haven harbor, to repel any hostile attack from British ships. This was done by order of the Governor and Council, and at the expense of the colony, but the work was to be done under the direction of a committee appointed by the town. The Governor was requested by the Council to write to the Committee of the City of New York for the loan of eighteen pieces of iron cannon, and one hundred muskets were ordered to be sent to New Haven from the interior. In December, Captain Thompson and his men being obliged, through the severity of the weather, to discontinue their work, were discharged from further service at Black Rock. In March the work was resumed and was finished in June, when the "colony cannon" * at New Haven were or-

* There is reason to suspect that these "colony cannon" were borrowed from King George's storehouse in New York. For the American Archives contains the following letter from the Selectmen of New Haven to Governor Trumbull.

"NEW HAVEN, MAY 1, 1775.

"SIR,—One of our number waits on your Honor with this to inform the General Assembly, through the channel of your Honor, that we are now in possession of upwards of sixty cannon—nine, six and three pounders—for the use of the colony; out of which a sufficient number may be made use of for the defense of this town, if the honorable General Assembly think proper to order a battery built and carriages made for the guns, with suitable stores of powder and ball to be provided. We refer you to Mr Ball for the particulars of the manner of our being possessed of these cannon, which we think a great acquisition, and shall esteem ourselves happy to receive the directions of the honorable General Assembly how they are to be disposed of.

"We are, with great respect, your most obedient servants,

"JEREMIAH A. WATER,

"ISAAC DOGGETT,

"JAMES GILBERT.

"Honorable JONATHAN TRUMBULL, Esq."

"NEW HAVEN.

DR. WOOLFE

dered to be placed at Black Rock in the care of Captain Thompson, who was directed to build a cheap barrack near Black Rock, doing the labor with his soldiers, and at an expense not exceeding £25. At the same date, £74 10s. 8d. was allowed Captain Thompson toward expenses in building the fort at Black Rock. Also an order was made in his favor for £200 for his company. In October of the same year, Captain Joseph Thompson drew £300 to pay the wages of his company.

An intercepted letter from the Massachusetts traitor, Dr. Church, of a little later date, says:

The people of Connecticut are raving in the cause of liberty. A number from this colony, from the town of Stamford, robbed the king's stores at New York, with some small assistance the New Yorkers lent them. These were growing turbulent. I counted two hundred and eighty pieces of cannon, from twenty-four to three pounders, at Kingsbridge, which the committee had secured for the use of the colonists.

At the end of the war, when it became necessary that borrowed articles should be put back as the borrowers had found them, the gentlemen who, as selectmen, had taken some responsibility in regard to the cannon brought from New York, had to determine what should be done with them.

At a town-meeting December 13, 1784,

Voted, That Messrs. Stephen Ball, Jeremiah Atwater, Isaac Doolittle, James Gilbert and James Rice, be a committee to inquire concerning the cannon brought to this city from New York by Thomas Ivers, etc., and make report at the adjourned meeting.

1784, December 27. *Voted*, That Messrs. Jeremiah Atwater, Stephen Ball, James Rice and Hezekiah Sabin be a committee to examine further with regard to the great guns brought from New York, and do what they judge is needful to be done with regard to them, so as to save the town from any loss and charge relative thereto.

At a town-meeting in New Haven, November 6, 1775, it was

Voted, That every person who looks upon himself bound either in conscience or choice to give intelligence to our enemies of our situation, or otherwise take an active part against us, or to yield obedience to any command of his majesty King George the Third, so far as to take up arms against this town or the United Colonies—that every such person be desired peaceably to depart from the town. A special committee of fifteen was appointed to call before them “to-morrow, or as soon as may be, every person suspected of harboring the sentiments above mentioned,” and on conviction desire them to depart the town, as soon as may be, in a peaceable way.

On the 11th of December, in the same year, it was

Voted, That there be a Committee of Inspection chosen, and that there shall be four persons chosen in each society within the limits of the First Society, and two persons in each of the other parishes in the town.

Voted, That Messrs. Jonathan Fitch, Michael Todd, Eneas Monson, Adam Babcock, Peter Colt, Timothy Jones, Jr., David Austin, John McChive, Isaac Doolittle, Joseph Trowbridge, Thomas Bills, Daniel Bonticou, James Gilbert, Mark Leavenworth, Abram Augur, Joel Gilbert, Joshua Austin, Stephen Smith, Lamberton Painter, Silas Kimberly, Jesse Todd, Noah Ives, Timothy Bradley, Amos Perkins, Joel Bradley, Jr., Bazel Munson, Isaac Beecher, Jr., and Joel Hotchkiss, be the Committee of Inspection for the year ensuing.

In December, 1776, it was voted that the Selectmen of the town be the Committee of Inspection

for the ensuing year. In December, 1777, a vote similar to the above was passed, but three weeks afterwards the Selectmen were released from being a Committee of Inspection, and Isaac Beers, Peter Johnson, Levi Ives, John Miles, Isaac Chidsey, Silas Kimberly, Stephen Ives, Jesse Ford, Stephen Goodyear, and Jared Sherman, were appointed to that service. In the following March, Messrs. James Hillhouse, Abel Burrit, Timothy Atwater, Newman Trowbridge, and Hezekiah Sabin, Jr., were added to the Committee of Inspection.

In March, 1776, Mr. Babcock, of New Haven, moved the Council of the Colony in behalf of Jeremiah Atwater, Isaac Doolittle, David Austin and himself, for liberty to erect a powder-mill immediately, for manufacturing gunpowder at New Haven. It was reported to the Council, on the 27th of August, next following, that “Doolittle and Atwater had manufactured at this date 4, 100 pounds of powder at New Haven.”

Immediately after the commencement of hostilities at Lexington, the General Assembly of Connecticut set about raising an army. At first it consisted of six regiments, to which two more were soon added. David Wooster, of New Haven, was appointed to the chief command of this colonial army with the title of Major-General. The same summer, he was appointed a Brigadier-General in the continental service.

DAVID WOOSTER.

Major-General David Wooster was born in Stratford, Conn., March 2, 1710, and died at Danbury, May 2, 1777. He graduated at Yale College in 1738, and in 1739, when the war broke out between England and Spain, he entered the provincial army as Lieutenant. Subsequently he was appointed to the command of a vessel built and equipped by the colony for the defense of its coast. In 1745 he was a Captain in the regiment of Col. Burr, which participated in the capture of Louisburg, and from that place went in command of a cartel ship to England, where he was received with great favor and made a Captain in the regular British army, to serve under Sir William Pepperell. In the French War, which ended in 1763, he was commissioned by the Governor of Connecticut as Colonel and subsequently as Brigadier-General, and served during the whole war.

Upon the return of peace he engaged in trade in New Haven; first in partnership with his college classmate, Aaron Day, and afterward alone. During his connection with Mr. Day, he resided in a house in George street, which is still standing, and is depicted on the following page by the engraver. Not many years before the outbreak of hostilities with Great Britain, he removed to the new township, where both the dwelling and the warehouse which he occupied are still standing in the street which bears his name, though the gambrel roof which he put upon the house has been removed. This is the warehouse of which Capt. Townsend speaks, in his chapter on the Harbor and Wharves, as the place to which Gen. Wooster conveyed cargoes of

goods, in scows, across fields which are now covered with buildings.

When tidings came of bloodshed at Lexington, Wooster, though less impetuous, was not less prompt than Arnold. In June he had gathered a

Wooster's House.

regiment, and with a commission from the Governor of Connecticut as Major-General, Commander-in-Chief of the six regiments raised by that colony, he was ready to march to New York, where it was expected that a part of the British army which came over in 1775 would land.

Deacon Nathan Beers, himself an officer in the revolutionary army, communicated to the *American Historical Magazine* the following statements concerning General Wooster's departure for New York.

The last time I saw General Wooster was in June, 1775. He was at the head of his regiment, which was then embodied on the Green, in front of where the Center Church now stands. They were ready for a march, with their arms glittering and their knapsacks on their backs. Colonel Wooster had already dispatched a messenger for his minister, the Rev. Jonathan Edwards, with a request that he would meet the regiment and pray with them before their departure. He then conducted his men in military order into the meeting-house and seated himself in his own pew, awaiting the return of the messenger. He was speedily informed that the clergyman was absent from home. Colonel Wooster immediately stepped into the deacon's seat, in front of the pulpit, and, calling his men to attend to prayers, offered up a humble petition for his beloved country, for himself, for the men under his immediate command, and for the success of the cause in which they were engaged. His prayers were offered with the fervent zeal of an apostle, and in such pathetic language, that it drew tears from many an eye and affected many a heart. When he had closed, he left the house with his men in the same order they had entered it, and the regiment took up its line of march for New York.

Before his departure, Wooster with other Connecticut men had concerted the plan for seizing upon the defenses of Lake Champlain, and his signature was affixed to the bond of indemnity to the person who supplied the funds for that service.

From New York, Wooster went with his regiment to Canada, where, after General Montgomery's death, he was chief in command. Returning home in the summer of 1776, he was appointed

first Major-General of the Militia of Connecticut, and was in active service during the whole of the winter of 1776-77, guarding the coast. In the spring he spent a little time at home with his family, where, on Saturday, April 26th, he received information that a large body of the enemy had landed at Compo, in Fairfield. He immediately set off for Fairfield, leaving orders for the militia to be mustered and sent forward as soon as possible. When he arrived at Fairfield, finding General Silliman had marched in pursuit of the enemy with the troops then collected, he followed on with all expedition, and at Reading overtook General Silliman, with a small body of militia, of which he of course took the command, and proceeded the same evening to the village of Bethel. Here it was determined to divide the troops, and part were sent off, under Generals Arnold* and Silliman. The rest remained with General Wooster, who led them by the route of Danbury, in pursuit of the enemy, whom he overtook on the Sabbath, about 4 o'clock, near Ridgefield. Observing a party of the enemy who seemed to be detached from the main body, he determined to attack them, though the number of his men was less than two hundred. He accordingly led them on himself, ordering them, with great spirit and resolution, to follow him. But, being inexperienced militia, and the enemy having several field pieces, our men, after doing considerable execution, were broken, and gave way. The General was rallying them to renew the attack, when he received a mortal wound. A musket ball, from the distance of fifty rods, took him obliquely in the back, broke his back-bone, lodged within him, and could not be found. He was removed from the field, had his wound dressed by Dr. Turner, and was then conveyed back to Danbury, where all possible care was taken of him. The surgeons were from the first sensible of the danger of the case, and informed the General of their apprehensions, which he heard with the utmost composure. The danger soon became more apparent. His whole lower parts became insensible, and a mortification, it is thought, began very early. However, he lived till Friday, the 2d of May, and then, with great composure and resignation, expired. It was designed to bring his remains to New Haven, to be interred here, but this was found impossible, and they were therefore buried at Danbury.

The above narrative of the death of General Wooster is from the *Connecticut Journal* of May 14, 1777. Hollister thus describes the death scene:

A messenger was immediately dispatched to New Haven for Mrs. Wooster, and the wounded man was speedily removed to Danbury. Inflammation soon extended to the brain, and when Mrs. Wooster arrived he was too delirious to recognize her. For three days and nights he suffered the most excruciating agony. On the morning of the 1st of

* Arnold was journeying through Connecticut, on his way from Providence, where he was in command, to Philadelphia, when this disaster occurred, and volunteered aid to Wooster and Silliman. In this engagement he showed his usual coolness and bravery. Having had his horse shot and killed, he sat still upon his fallen steed, with his eye upon a British soldier, who was approaching to run him through with a bayonet, till the man being so near that a pistol could not miss the mark, Arnold drew out from his holsters and shot the man dead.

May the pain suddenly ceased. During that whole day and the next, his wife, who remained constantly at his bed-side, noticed, with the quick eye of a woman's affection, that his mind was laboring with the broken images of scenes that had long ago faded from his recollection, and were now passing in wild review before him. Still, she called vainly upon him for a token of recognition. The paleness of death, the short breathing, the fluttering pulse, at length indicated that the last moment was at hand. She was stooping over him to wipe the death-dew from his forehead, when suddenly he opened his eyes and fixed them full upon her, with a look of consciousness and deep love. His lips trembled. He sought to speak, but his voice was stifled in the embrace of death.

General Wooster was not the only citizen of New Haven who sacrificed his life on that occasion. Against the west wall of the Grove street Cemetery is a brown sandstone, on which is inscribed:

In memory of Mr. David Atwater, a noted apothecary, a valuable member of society, just and upright in his dealings, generously beneficent to the public, diffusively charitable to the poor; a kind and amiable husband, a faithful friend, and a firm advocate for his country; in defense of which he fell a volunteer in the battle at Compo Hill, April 28th, A.D. 1777, æt. 41.

This patriotic volunteer, who, seizing a musket, marched to the defense of his country, was of the Wallingford branch of the Atwater family, but had been for several years in business in New Haven as a druggist. His son, of the same name, his fourth and youngest child, was born in 1777 (the other children having previously died), graduated at Yale College in 1797, and died in 1805. By his death this branch of the family became extinct.

Mr. Atwater's latest advertisement appeared in the *Connecticut Journal* of April 9th:

Just come to hand and to be sold by
David Atwater, Junior.

Rhubarb, Camphor, Balsam Capivi, Oil of Almonds, Gum Arabic, Licorice Ball, Carolina Pink Root, Linitive Electuary, Cinnamon and Mace by the quantity, and other Medicines as usual.

Also Paper by the ream, large and small, Looking Glasses, Dutch Spectacles, Shoemakers' Awls, Brass and Washed Thimbles, Children's Shoe Buckles by the gross, French Barley in small casks, Oatmeal, Currants, the best French Indigo, Whalebone, Logwood, etc.

The same journal, in its issue of April 30th, thus mentions his burial:

"This day the remains of Doct. Atwater were brought to town and buried with military honors."

Three companies of volunteers went from New Haven, of whom the only private killed was the one mentioned above. Abner Bradley and Timothy Gorham were wounded, though not mortally. Excepting the death wound of General Wooster, the casualties to the New Haven men all took place, at Compo Hill, as the British were re-embarking under the protection of fresh troops.

In December, 1777, Articles of Confederation of the United States having been proposed by the Congress to the consideration of the Legislatures of the several States, the General Assembly of Connecticut submitted them to the towns, and New Haven appointed a committee of thirty-three, who, at the next town-meeting, made a report favorable on the whole to the articles, but indicating a few expressions they could wish otherwise. Among their criticisms is, "objection to furnishing troops in

proportion to the white inhabitants only, as we hope the time may be when a black may be a freeman and the owner of property, and then he ought to contribute his proportion toward furnishing troops."

In March, 1778, a Committee on Measures for the Defense of the Town, appointed at a previous meeting, made a report recommending as immediately necessary the following, viz.:

That two small works should be erected at the West Bridge capable of receiving four pieces of ordnance; which would cost two days' work with a good team, and about seventy days' of other labor.

The other only pass into the town from the westward is on the road by or near the paper-mill. The ground there is very advantageous for defense; the whole of it, by which the enemy could pass between the West Rock and any part of the river which is fordable, being easily commanded by cannon. We are of opinion that a small work or redoubt on the east side of the West River on the road leading to Amity, capable of receiving two or three field pieces, is necessary in order to secure that pass. This probably would cost about half the labor of the work proposed at the West Bridge.

The committee proceeded to mention the importance of a field piece at West Haven and another at East Haven, and recommend that the State be asked to establish a camp for recruits in each of those suburbs of the town.

An important measure for the defense of the town had been provided in the first year of the war, viz., a beacon to communicate an alarm to the neighboring towns. We can best inform our readers in regard to the beacon by copying from the *Connecticut Journal* the advertisement of the committee appointed for its erection.

BEACON.

The town of New Haven having this day erected a beacon on Indian Hill at East Haven, now Beacon Hill, about a mile and a half southeast of the town, and ordered us, their committee, to give public notice thereof, we now inform the public in general, and the neighboring towns in particular, that the Beacon will be fired on Monday evening next, the 20th instant, at 6 o'clock. All persons are then desired to look out for the Beacon and take the bearing of it from their respective places of abode, that they may know where to look out for it in case of an alarm, which will be announced by the firing of three cannon. If our enemy should attack us, and we be under the necessity of making use of this method to call in the assistance of our brethren, we request that all persons who come into the town will take care to be well armed with a good musket, bayonet, and cartridge-box well filled with cartridges, under their proper officers, and repair to the State House, where they will receive orders from Colonel Fitch what post to take.

The ministers of the several parishes of this and the neighboring towns are requested to mention to their respective congregations the time when the Beacon will be fired.

PHINEAS BRADLEY,
ISAAC DOOLITTLE,
JAMES RICE,
Commissioners.

NEW HAVEN, 14th November, 1775.

The invasion of New Haven, which its inhabitants apprehended in 1778, came to pass in 1779. On Sunday evening, the fourth day of July in that year, the Lord's day being kept according to the Puritan custom from evening to evening, and holy time having ceased at the going down of the sun, a public meeting was held to prepare for the celebration of the anniversary of the Declaration of Independence. The programme arranged for the morrow has not been preserved to our day, but the

custom of the time authorizes us to believe that there was to have been a public reading of the Declaration of Independence and an oration, followed by a dinner with toasts and speeches. But the order of proceedings was changed by the unwelcome intelligence that the British troops were landing at West Haven.

"The Invasion of New Haven by the British troops, July 5th, 1779," is the theme of a paper read to the New Haven Colony Historical Society, by Rev. Chauncey Goodrich, and published in the Collections of the Society. "The British Invasion of New Haven, Connecticut," is the title of a *brochure* by Charles Hervey Townshend published in connection with the celebration of the one hundredth anniversary of the invasion. We shall avail ourselves freely of the researches of both these writers, and transcribe their language with or without alteration as may best subserve our purpose.

The British fleet, composed of two men-of-war, with tenders and transports to the number in all of about forty-eight vessels, anchored off West Haven Point at an early hour in the morning. It was commanded by Sir George Collier, Commodore, and had on board some three thousand troops under the orders of Major-General Tryon. Fifteen hundred of these were landed at West Haven under Brigadier-General Garth; and the rest were subsequently landed at South End in East Haven, Tryon himself conducting the movement in that quarter. The appearance of the fleet off West Haven had at first occasioned some excitement, which increased when the vessels came to anchor. Alarm guns were then fired, and Colonel Sabin, of the militia, ordered the drums to beat to arms. In the early light of the summer morning, between four and five o'clock, President Stiles, standing on the tower of the College Chapel, saw with the aid of a spy-glass, the movement of boats conveying troops to the shore. This becoming known, the town was at once full of confusion, excitement and alarm. Many persons began to remove furniture and other articles of value back into the country; important papers were secured; articles of plate were buried or secreted. Numbers of men, women, and children went out to the East and West Rocks or to the adjacent country, some as far as Mount Carmel and North Haven. Some remained quietly in their houses; among them were aged, infirm and feeble folk; also some timid Whigs and some who were, openly or secretly, Tories.

The movements of the British fleet, as it advanced to its anchorage, had been watched by several men on the shore, connected with a military company. One of them, Thomas Painter by name, thus relates what he saw:

About the first of March, in the year 1779, I enlisted in a company of artillery under the command of Capt. Bradley, which had been raised and stationed in and about New Haven for the defense of the town. The company was divided into three portions: one for the East Haven side of the harbor; one for the West Haven side; and one for New Haven itself. My place of service was my native village (West Haven), under the immediate command of Lieut. Azel Kimberly. While I was serving in this company, the enemy paid us a visit early in the month of July, landing at the Old Field shore. The night when they came,

I was upon guard at the house then owned by Deacon Josiah Platt, now the property and residence of Mr. Wilmot. Not far from midnight the news came that a large fleet of the enemy's ships were in the Sound, and it was feared that they were destined for New Haven. Soon I with some others of the guard, extended our walk to Clark's Point. As it was a starlight night, we soon discovered the fleet standing in to the eastward, with a slight breeze on the land. We watched their maneuvers until they came to anchor off the Old Field shore, a little before day. I then hastened up to my Uncle Stevens' to inform them of the impending danger; but they were extremely incredulous and unwilling to believe there was really any danger, for they had become accustomed to frequent and unnecessary alarms. I told them that they must be up immediately and get their breakfast if they intended to have it at home and in peace; and I also advised them to hide their valuables and handy articles of clothing, for fear of the worst. Then, mustering up what ammunition I had, and crossing into the other street, I with three others of the guard obtained permission of an officer to go down to the shore and watch the enemy's landing. We then went to the Old Field shore, where we waited until sunrise, when a gun was fired from the Commodore as a signal for landing; and instantly a string of boats was seen dropping astern of every transport ship, full of soldiers and pulling directly for the shore. It was near high water and a full tide, so that the boats could come plump up to the beach. As soon as they came within point-blank shot, we fired into them, and continued to fire until they began to land within a few yards of us. Then I thought it was time either to retreat, or, on the other hand, beg for quarter, rather than run the risk of crossing the open field under the shower of shot which I well knew would be hurled after me. It was an emergency in which I knew not what to do; for after we had been so foolish and impudent as to fire into an army of men, all huddled into their boats, with no opportunity of returning our well-aimed shots, I knew they would soon make short work with us if they once had us in their power. So there was really no alternative but to run and abide the consequences. I therefore instantly started across the fields at the top of my speed and the bullets after me like a shower of hail, which seemed to prostrate all the grass around me. But fortunately I escaped unhurt, and retreating to another good stand on the Rock pasture, I waited the approach of the flank guard. Then I would fire a few shots and retreat to another ambush, and fire a few more and again retreat, and so I continued to do until I got nearly up to the Milford turn-pike road, where there was an adjutant of the enemy killed and left behind.

The British, after landing and forming in line of march, proceeded up the road toward West Haven Green, plundering and destroying on the way. Houses were violently entered, furniture was broken to pieces, beds were cut open to discover any articles of value concealed therein, and many things, as books, papers, and the like, were taken out of doors, heaped up, and set on fire. Tradition tells us that Rev. Mr. Williston, then Pastor of the Congregational Church in West Haven village, was engaged in removing some articles from the parsonage, which stood on the west side of the Green, when the enemy appeared close at hand. Passing out of the back door, he attempted to escape to the woods in the rear of the parsonage, but fell, in climbing over a fence, and broke one of his legs. The Tories of the place and the soldiers, into whose hands he came, threatened to kill him, as he had been active in rousing the patriots to resist British aggression. But Adjutant Campbell, of the British service, rescued him from their violence, had him carried into the house, ordered the surgeon of the regiment to set the fractured limb, and provided that he should be suitably cared for. Mr. Willis-

ton, it is said, "after being saved, sung, and blessed the Lord all the remaining part of the day that he had *broken his leg*, and thus providentially escaped being shot while running from the enemy. He used, in subsequent years, to tell his friends that, though he was suffering bodily pain, it was the happiest day of his life."^{*}

The enemy, on reaching the Green in West Haven, made a halt of two hours. Adjutant Campbell, with other officers, breakfasted at a house opposite the northwestern corner of the Green, then a tavern, and by their presence protected it from attempts at pillaging made by the soldiers. After resting about two hours, the troops took up their line of march, moving in a main column of three divisions of ten companies each, General Garth being nearly in the middle of the column. Their flanking parties extended perhaps fifty or sixty rods on either side.

While the British were marching up through West Haven toward West Bridge, Lieutenant-Colonel Sabin and Captain Phineas Bradley, with such of the militia as made their appearance, marched out on the Milford road to prevent the entrance of the enemy into the town across West Bridge. James Hillhouse, then Captain of the Governor's Foot Guards, having assembled such of his company as he could, and accepted the services of several volunteers, some of whom were members of Yale College, went out with the militia; and while the latter halted at the bridge, Hillhouse crossed the bridge and the causeway, and went down the road within a quarter of a mile of the British. Much of the time for a year or two previous, a Connecticut regiment had been stationed at New Haven for the defense of the place, but at this time there were no American troops within reach, except such as lived in the town. In the course of the day, hundreds came in from the country to render such aid as they could, but too late to prevent the incursion of the enemy. Probably the defenders of the town on the west side did not number two hundred, while the British division, which landed at West Haven, contained nearly ten times as many. Mr. Goodrich informs us that one of the volunteers was his grandfather, Elizur Goodrich. "He was then eighteen years of age, a member of the Senior Class in Yale College, and was boarding at the house of his uncle, Hon. Charles Chauncey, which stood in Church street, where the Third Congregational Church was afterwards built. On hearing of the approach of the enemy, he procured a musket and equipments, and started to join the party under Captain Hillhouse. As he was passing along the street, a lady called to him from the window of a house, asking whether he had a supply of bullets. He replied that he had some. She urged him to come in and get more, and, on his entering the house, opened a drawer, full of bullets, which she had been casting. He seized a handful, and hurried on to join the party, already in motion."

The Rev. Naphtali Daggett, Professor of Divinity in Yale College, had been from the first an ardent champion of the rights of the colonists.

Ten years before the outbreak of hostilities, he published in the *Connecticut Gazette* a series of papers in opposition to the Stamp Act, one of which has been already cited in this chapter and may be found in full in the chapter on the periodical press. The Professor was as prompt with his gun as with his pen. Mr. Elizur Goodrich thus relates how he rode past his pupils on his way to meet the foe.

"I well remember the surprise we felt as we were marching over West Bridge toward the enemy, to see Dr. Daggett riding furiously by us on his old black mare, with his long fowling-piece in hand ready for action. We knew the old gentleman had studied the matter thoroughly and settled his own mind as to the right and propriety of fighting it out, but were not quite prepared to see him come forth in so gallant a style to carry his principles into practice. Giving him a hearty cheer as he passed, we turned down toward West Haven, at the foot of Milford Hill, while he ascended a little to the west and took his station in a copse of wood, where he seemed to be reconnoitering the enemy like one who was determined to bide his time. As we passed on toward the south, we met the advanced guard of the enemy and taking our stand at a line of fence we fired on them several times, and then chased them the length of three or four fields as they retreated, till we found ourselves involved with the main body and in danger of being surrounded. It was now our turn to run, and we did for our lives. Passing by Dr. Daggett, in his station on the hill, we retreated rapidly across West Bridge, which was instantly taken down by persons who stood ready for the purpose, to prevent the enemy from entering the town by that road.

"In the meantime Dr. Daggett, as we heard afterwards, stood his ground manfully, while the British columns advanced to the foot of the hill, determined to have the battle to himself, as we had left him in the lurch, and using his fowling-piece now and then to excellent effect as occasion offered, under cover of the bushes. But this could not last long. A detachment was sent up the hill-side to look into the matter, and the commanding officer coming suddenly to his great surprise on a single individual in a black coat, blazing away in this style, cried out: 'What are you doing there, you old fool, firing on his Majesty's troops?' 'Exercising the rights of war,' says the old gentleman. The very audacity of the reply and the mixture of drollery it contained, seemed to amuse the officer.

"'If I let you go this time, you rascal' said he, 'will you ever fire again on the troops of his Majesty?' 'Nothing more likely,' said the old gentleman in his dry way. This was too much for flesh and blood to bear, and it is a wonder that they did not put a bullet through him on the spot. However they dragged him down to the head of the column, and as they were necessitated by the destruction of West Bridge to turn their course two miles further north to the next bridge above, they placed him at their head and compelled him to lead the way. I had gone into the meadows in the meantime, on the opposite side of the river, half a mile distant and kept pace with the march as they

^{*} Historical Discourse by Rev. Erastus Colton.

advanced towards the north. It was, I think, the hottest day I ever knew. The stoutest men were melted by the heat."

The following narrative of the treatment of Prof. Daggett by the soldiers, was written by himself and sworn to before David Austin, a Justice of the Peace.

An account of the cruelties and barbarities which I received from the British troops after I had surrendered myself a prisoner into their hands.

It is needless to relate all the leading circumstances which threw me in their way. It may be sufficient to observe that on Monday, the 5th inst., the town of New Haven was justly alarmed with very threatening appearances of a speedy invasion from the enemy. Numbers went out armed to oppose them. I, among the rest, took the station assigned me on Milford Hill, but was soon directed to quit it and retire farther north, as the motions of the enemy required. Having gone as far as I supposed sufficient, I turned down the hill to gain a little covert of bushes which I had in my eye, but to my great surprise I saw the enemy much nearer than I expected, their advanced guard being little more than twenty rods distant; plain, open ground between us. They instantly fired upon me, which they continued till I had run a dozen rods, discharging not less than fifteen or twenty balls at me alone; however, through the preserving providence of God I escaped them all unhurt, and gained the little covert at which I aimed, which concealed me from their view, while I could plainly see them through the woods and bushes advancing toward me within about twelve rods. I singled out one of them, took aim and fired upon him. I loaded my musket again, but determined not to discharge it any more; and as I saw I could not escape from them, I determined to surrender myself a prisoner. I begged for quarter, and that they would spare my life. They drew near to me, I think only two in number, one on my right hand, the other on my left, the fury of infernals glowing in their faces. They called me a damned old rebel, and swore they would kill me instantly. They demanded, "What did you fire upon us for?" I replied, "Because it is the exercise of war." The one made a pass at me with his bayonet, as if he designed to thrust it through my body. With my hand I tossed it up from its direction, and sprung in so near to him that he could not hit me with his bayonet. I still continued pleading and begging for my life with the utmost importunity, using every argument in my power to mollify them and induce them to desist from their murderous purpose. One of them gave me four gashes on my head with the edge of his bayonet to the skull bone, which caused a plentiful effusion of blood. The other gave me three slight pricks with the point of his bayonet on the trunk of my body, but they were no more than skin deep. But what is a thousand times worse than all that has been related, is the blows and bruises they gave me with the heavy barrels of their guns on my bowels, by which I was knocked down once or more, and almost deprived of life; by which bruises I have been confined to my bed ever since. These scenes might take up about two minutes of time. They seemed to desist a little from their design of murder, after which they stripped me of my shoe and knee buckles, and also my stock buckle. Their avarice further led them to rob me of my pocket-handkerchief and a little old tobacco box. They then bade me march toward the main body, which was about twelve rods distant, where some officers soon inquired of me who I was. I gave them my name, station and character, and begged their protection, that I might not be any more hurt or abused by the soldiers. They promised me their protection. But I was robbed of my shoes, and was committed to one of the most unfeeling savages that ever breathed. They then drove me with the main body, a hasty march of five miles or more. I was insulted in the most shocking manner by the ruffian soldiers, many of whom came at me with fixed bayonets and swore they would kill me on the spot. They damned me and those who took me, because they spared my life. Thus, amidst a thousand insults, my infernal driver hastened me along faster than my strength would admit in the extreme heat of the day, weakened as I was by my wounds and the loss of blood, which, at a moderate computation, could not be less than one quart.

And when I failed in some degree through faintness, he would strike me on the back with a heavy walking staff, and kick me behind with his foot. At length, by the supporting power of God, I arrived at the Green in New Haven. But my life was almost spent, the world around me several times appearing as dark as midnight. I obtained leave of an officer to be carried into the widow Lyman's, and laid on a bed, where I lay the rest of the day and succeeding night in such acute and excruciating pain as I never felt before.

NAPHTALI DAGGETT.

NEW HAVEN, July 26, 1779.

Dr. Daggett was for a considerable time in much danger of his life from physical exhaustion and the wounds he received. He recovered, however, so far as to be able to preach in the College Chapel during a part of the next year. But it cannot be doubted that his death, which occurred sixteen months afterward, was hastened by this experience of hardship. His affidavit makes no mention of any intercession in his behalf by persons who were on the British side. But there is a tradition that William Chandler, who acted as guide to the enemy on their march, having formerly been a student in the College, interceded for the Professor and secured that his life should be spared. It is also said that when he reached the New Haven Green, in his exhausted condition, he was recognized by one of the Tories of the town who came to meet the British, and at the request of this Tory was set at liberty. Perhaps in the confusion of the affair, the Professor did not know of these acts of mediation in his behalf.

Not far from the spot where Dr. Daggett was taken prisoner, Adjutant Campbell, who had shown so much generosity to Parson Williston, was killed. On reaching the foot of Milford Hill, the British found the fire from the field pieces at West Bridge so effective as to deter them from an attempt to cross the causeway. These guns, served by Captain Phineas Bradley, threw shot across to the foot of the hill and swept the causeway. It being decided to continue the march northward to the next bridge, the Adjutant riding up the hill, perhaps to give the necessary orders to the flanking companies, was seen by a young man belonging in the neighborhood, who, having been engaged in the skirmish, was now sitting behind a tree or wall. As the officer rode near him, he raised his musket, fired, and saw that his shot had taken effect. He then ran from the approaching enemy, whose balls flew around him, escaping to live through a long life and tell the story of shooting this officer to a son born some years after, from whom the narrative came to our time. Campbell was carried into a house, then standing on the south side of the road, where he died, attended by his servant. When the enemy had passed on, and the people of the neighborhood returned, his dead body was found stripped of clothing. Only a cambric handkerchief which had been pressed into the wound remained. It had his name on it, and was for a long time preserved as a relic. The next day he was carried to a place of interment on the north side of the road. His grave was long unmarked by any memorial, and was in danger of being wholly forgotten, until in October, 1831, Mr. J. W. Barber placed over it

a small rough stone bearing Campell's name and the year of his death. The pocket dressing-case of Adjutant Campbell is in the possession of the New Haven Colony Historical Society, his servant having sold it to a resident of New Haven.

We now return to the march of the enemy from the foot of Milford Hill into town by way of Westville. While most of their New Haven assailants had retired across West Bridge, a number of patriots hung on the left flank of the British column and kept up a constant firing all along the road to Hotchkiss-town (as Westville was then called) from behind trees and stone walls. These were for the most part militiamen from the vicinity, and were under the general direction of Aaron Burr, afterward Vice-President of the United States, who, then a young man, was visiting relatives in New Haven. That morning he conveyed his cousin, the youngest daughter of Pierpont Edwards to a place of safety in North Haven and hastened back to aid in repelling the invaders.

Mr. Goodrich has incorporated into his narrative of the invasion, a statement received through Dr. G. O. Sumner from Mrs. Robert Brown. "She was born in 1774, and was consequently about five years of age when the events of which we are speaking occurred. Although of tender years, she seems to have received a very distinct impression of the facts, and to have retained then in a remarkable degree in advancing years. Her father, a Mr. Mix, was a baker by trade and resided in the Hotchkiss-town of that day. On the morning of the invasion, a relative who lived near by, came running into the house and said to Mr. Mix, 'The enemy have landed; you must take your gun immediately and go out to meet them.' He seized his musket, had a few hurried words with his wife, directing her to hide some valuables in the well and to take her children and go to her father's house, which was a mile or more further in the country, and then went out to meet the advancing foe. From an eminence near the house of her grandfather, the child of five years old had a distinct view of the British troops as they marched on. She observed their red coats, the exactness of their march, as though it was all one motion, and thought how small they looked, as being at a distance of a mile or more. On the way to her grandfather's house, the road was full of men hurrying into town with their guns, some on foot, others on horseback. The day was exceedingly hot, and the dust flew in clouds. When they reached the house, she saw her grandfather cutting up great pieces of raw pork and of bread, which she understood to be for the men coming in from the country to defend the town."

Leverett Hotchkiss was in a company of militia which came over from Derby as soon as possible after the alarm was given, and was one of those who annoyed the enemy on their left flank, keeping along the side of the hill, west of the road from Allington to Hotchkiss-town. For a time the attacking party were behind a stone wall crouching down and firing over it. They had fired several times in this way, when the enemy made a move-

ment intended to flank and capture them. The Captain of the company from Derby was behind a large rock and did not perceive the movement of the enemy; but a Lieutenant Holbrook saw it, and jumping up on the rock, urged the Captain to give orders to move so as to escape the danger. He, however, did not appreciate the state of the case, and would not give the order for a change of position. After attempting to rouse the Captain to the emergency of the situation, Holbrook, seeing that the enemy had nearly completed their flanking movement, took the responsibility, and shouted to the men that every one should take care of himself, whereupon they scattered and retreated along the side of the hill. As Leverett Hotchkiss was thus retreating, in company with a man named Bradley, from Derby, the two passed, in crossing a field, under a tree. A limb of the tree hung low, and Hotchkiss bent down his head in passing under it. Just then, a bullet from the pursuing enemy cut off a small branch from the tree, which fell on the neck of Hotchkiss. Bradley was hit and killed at the same time, and, as he dropped, his musket fell on Hotchkiss. The latter escaped, and after the skirmish was over, when inquiries were made about Bradley, he told the story of their experiences, and guided the way to the spot where the body lay.

Later in the fight, one of the British soldiers was captured, and Hotchkiss was appointed to guard him until it was determined what to do with him. As he was watching the prisoner, a man named Humphrey, from Derby, came near them. Having been at first of Tory proclivities, he had enlisted in the service of King George, but had deserted and joined the rebels. The British prisoner seeing him, said, "I know that man; he was in the same regiment, and company, and mess with me." Hotchkiss replied, "Oh! he is not English; he belongs about here." But the prisoner persisted in his statement. The matter was dropped, but afterward Humphrey said to some one, "That man was right, and you see what would have become of me if I had been captured."

The Lieutenant Holbrook referred to, was a man of much courage and efficiency. In the morning, as he was about leaving home, his father said to him, "You are going to fight the enemies of your country; now remember that I had rather see you brought back wounded in front than in running from the enemy." After the enemy gained possession of New Haven, he was in and out of town several times. He saw, as evening came on, how drunk and disorderly they became, and went to the American General in command of the militia who had gathered on the outskirts (General Ward), proposing a night attack on them, asserting that they could easily be captured. When this proposition was rejected, he pleaded hard for a few men to go with him and make an attack, as he was sure that he could greatly alarm them, and probably could capture a large number. But cautious counsels prevailed, and his desire was not granted. He continued in the military service during the war, and became colonel of a regiment.

While the enemy were moving toward Hotchkiss town, Lieutenant-Colonel Sabin, Captain Hillhouse, and Captain Bradley, with the men whom they commanded, went across the fields on the east side of the river, to meet and oppose the enemy at Thompson's Bridge, as that at Hotchkiss town was then called.

Some persons who had fled from New Haven to the houses of friends near West Rock, ascended the rock, and from its front edge viewed the march of the British as they advanced and entered the village. One of the number in after years described the sight as very striking, and even beautiful. The long column of men moving with the regular step of disciplined troops; the mingling color of the uniforms worn, as the bright red of the English Guards blended with the graver hues of the German mercenaries; the waving line of glittering bayonets; the hurried riding back and forth of mounted officers, and the frequent flashes of musketry, no doubt combined to make up a scene which might well attract admiration, were not the occasion so fraught with terror to the spectators.

At the west end of the village was the powder-mill of Doolittle & Atwater, which has been already mentioned. The enemy made a movement in that direction for the purpose of destroying the powder-mill. This being resisted by the patriots, some sharp fighting took place and the attempt was abandoned, and this mill continued to furnish powder throughout the war.

Resuming their march toward the town of New Haven, the enemy's right flank forded the stream a few rods below the bridge, while the main body crossed on the bridge itself. Colonel Sabin, and those who went with him from West Bridge, did not reach the place till the enemy had gained possession of the bridge and the fordable part of the river. They took, however, a position on top of the slight eminence to which the road ascends eastwardly, and gave the invaders a smart fire from the field-pieces till their ammunition failed. The Americans probably availed themselves here, as well as at West Bridge, of the intrenchments thrown up about fifteen months before. An account of the invasion in "Barber's History and Antiquities of New Haven," states that these embankments were quite recently visible; but evidently the writer thought they were cast up on that memorable fifth day of July, not sufficiently considering the difficulty of removing so much earth in a single morning. The Americans being no longer able to use artillery, retreated slowly, continuing to use their muskets as they retired. The tradition is that the enemy came in on Goffe street and on Whalley avenue. Probably the main body moved from Thompson's Bridge, or Derby Bridge, as President Stiles calls it, through Goffe street, skirmishers being thrown out on their right as far as Whalley avenue, and their left flank being protected by the Beaver Pond. When they had passed the Beaver Pond they encountered a body of militia who had come in from the north, and then began the warmest and most protracted fighting which occurred during the day. At Ditch Corner there was, says

President Stiles, "incessant firing on both sides all the afternoon and sundry were slain, and at length the firing ceased in the evening."*

The *Connecticut Journal* of July 7, 1779, also says: "A body of militia sufficient to penetrate the town could not be collected that evening. We were obliged, therefore, to content ourselves with giving the enemy every annoyance in our power, which was done with great spirit for most of the afternoon at or about Ditch Corner."

Leaving their skirmishers fighting at Ditch Corner, the main body passed on, preserving military order, till they reached the dwellings on Broadway, where they broke ranks, and rushed to the work of cruelty and devastation. They vented their spite on the houses, breaking windows and demolishing furniture. Some of them having caught a flock of geese, did not stay to pluck and dress the geese, but boiled them in a large brass kettle and made a hasty meal at the tavern of Mrs. Eunice Tuttle, where Christ Church now stands. Mrs. Tuttle and her family, with the exception of her son, Elisha Tuttle, who, being insane, could not be persuaded to go with his friends, had fled for safety to the Hubbard Farm near West Rock, now owned by the town. This unfortunate man had, on attaining his majority, married and removed into the wilderness of Northern New York, where, while he was on a visit to New Haven, his whole family had been murdered by Indians, except a little daughter, whom they carried into captivity. After a vain search for his daughter, he came back to New Haven heart-broken and deranged. As his derangement often manifested itself in silence, it is probable that his refusal to speak brought upon him the anger of the soldiers. They beat him cruelly, pried open his mouth with a bayonet, and cut his tongue, injuring him so that he died the same day.

The enemy reached the Green a little before one o'clock P.M. Their dead and wounded were carried across the Green and to Long Wharf in seven chairs, a name given to the old-fashioned chaise without a top, and in five wagons (one of which contained ten men). This fact was reported to President Stiles by an eye-witness, and is recorded by him in his diary.

On entering the town, the enemy distributed printed copies of a Proclamation signed by Commander Collier and Major-General Tryon, which was as follows:

By Sir George Collier, Commander-in-Chief of his Majesty's ships and vessels in North America, and Major-General Tryon, commanding his Majesty's land forces on a separate expedition.

Address to the Inhabitants of Connecticut.

The ungenerous and wanton insurrection against the sovereignty of Great Britain, into which this colony has been deluded by the artifices of designing men for private purposes, might well justify you in every fear which conscious

* Ditch Corner was between what is now known as Munson Park on the east, and the Beaver Pond on the west. Goffe street is here wedge-shaped, and at that time the road to Hamden and Cheshire started from the west end of the wedge, the lower end of Dixwell avenue being of modern origin. Orchard street is a part of this old road, or Long lane, as it was called. But Long lane was, as Mr. Sylvanus Butler informs me, broader than Orchard street, a strip two rods wide having been sold to the adjoining proprietors. The militia from the north coming down Long lane, encountered the British at Ditch Corner.

guilt could form respecting the intentions of the present armament.

Your towns, your property, yourselves, lie within the grasp of the power whose forbearance you have ungraciously construed into fear, but whose lenity has persisted in its mild and noble efforts, even though branded with the most unworthy imputation. The existence of a single habitation on your defenseless coast ought to be a subject of constant reproof to your ingratitude. Can the strength of your whole province cope with the force which might at any time be poured through any district in your country? You are conscious it cannot. Why then will you persist in a ruinous and ill-judged resistance? We hoped that you would recover from the phrensy which has distracted this unhappy country; and we believe the day to be near when the greater part of this continent will begin to blush at their delusion. You who lie so much in our power, afford the most striking monument of our mercy, and therefore ought to set the first example of returning to allegiance.

Reflect on what gratitude requires of you; if that is insufficient to move you, attend to your own interest; we offer you a refuge against the distress which, you universally acknowledge, broods with increasing and intolerable weight over all your country.

Leaving you to consult with each other upon this invitation, we do now declare that whoever shall be found, and remain in peace, at his usual place of residence, shall be shielded from any insult either to his person or his property, excepting such as bear offices, either civil or military, under your present usurped government; of whom it will be further required that they shall give proofs of their penitence and voluntary submission; and they shall then partake of the like immunity.

Those whose folly and obstinacy may slight this favorable warning, must take notice that they are not to expect a continuance of that lenity, which their inveteracy would now render blamable.

Given on board his Majesty's ship *Camilla*, on the Sound, July 4, 1779.

GEORGE COLLIER.
WILLIAM TRYON.

Notwithstanding the promise of protection to those who should remain at their homes, the town was given up to promiscuous pillage by the soldiers, from the time of their arrival till the darkness of night came on. A few houses were exempted as occupied by favorers of the British cause. Buildings were forcibly entered; articles of value, as silver plate, watches, buckles, clothing, money, and the like were taken, often in a brutal manner; nor was this the worst, for personal violence was added in many cases to such robbery, and both aged men and helpless females were shockingly abused.

The invaders did not always discriminate between Whigs and Tories, for many of the latter were badly treated. One lady who felt secure in her loyalty to his Majesty, was compelled to fly to the cellar for safety. She concealed herself in an empty hogshead, but the rude soldiers found her and rolled the hogshead with her in it, over and over, till she feared for her life. Before leaving the house, they tore her ear-rings from her ears, as was done in many other cases.

It is said that nine hundred feather beds were carried to New York, and many more wantonly ripped up; some of which were thrown into the harbor. Looking-glasses were generally broken; some few were saved, one of which was in Captain Bradley's house. It appears that on some former occasions Captain Bradley had saved the life of his neighbor, Joshua Chandler, a Tory lawyer, when some furloughed American soldiers in a drunken

frolic had seized him and were threatening to hang him to a neighboring tree. As a return for this kindness, the property of Captain Bradley was protected, though he had been that day foremost in resisting the invaders; a guard being placed at his house by the sons of Chandler, who were officers in the British service.

No buildings were set on fire while the enemy thus had possession of the town. The public buildings, as those of Yale College, the State House, and the churches were injured little if at all. The soldiers dispersed about the town, quartering themselves on the inhabitants and engaging in the work of pillage.

The following incident is given by Rev. Dr. Bacon in his brief memoir of James Hillhouse, published originally in the *American Journal of Education*.

Mrs. Hillhouse, widow of James Abraham Hillhouse, was a member of the Church of England, and her political sympathies were with the British. Hers therefore was one of the few houses to be protected from pillage. Some of the British officers were quartered there and were received with the courtesy due to men who bore his Majesty's commission. Yet the loyal lady was in great danger from the imputation of her nephew's patriotism. It happened that the newspaper containing Captain Hillhouse's patriotic call for recruits came under the notice of the officers almost as soon as they entered the house which was to be protected for its loyalty. The house and its contents would have been immediately given up to the plundering soldiers, had not the lady, with a dignified frankness which repelled suspicion, informed her guests that though the young man whose name was subscribed to that call was a near and valued relative of hers, and was actually resident under that roof, the property was entirely her own, and that the part which he had taken in the conflict with Great Britain was taken not only on his own responsibility, but in opposition to her judgment and her sympathies.

This explanation was accepted and the protection was continued. The "call for recruits" was printed in the New Haven paper of the preceding week, and ends thus:

Who is there that will deprive himself of the pleasure and satisfaction he would derive through his whole life, from reflecting upon his having served a campaign in so important a period of the war. I hereby invite all, and shall make the offer to as many as possible, to engage before the 10th day of July next, when I am to make return to his Excellency. Those who incline to accept, will by making application, receive their bounty in bills, and be kindly treated by their most obedient and humble servant,

JAMES HILLHOUSE.

NEW HAVEN, June 21, 1779.

Another instance in which a dwelling was preserved from pillage by female intervention is told in "Barber's History and Antiquities of New Haven," and in his "Historical Collections of Connecticut." Mr. Amos Doolittle was one of the Governor's Foot Guards who went to Cambridge in 1775, and was no less prompt in his country's service on this occasion. When obliged to retire from Westville, as the enemy advanced, he returned to his house, which was on the west side of College street a little north of Elm street. Throwing his musket and equipments under a bed, he waited the approach of the enemy, and the more anxiously as his wife lay on a sick bed. When the British soldiers came in front of the house, an English lady who was residing with him, went to the door and re-

quested of one of the officers that a guard might be assigned to protect it. The officer with an oath asked who she was. She replied that she was an Englishwoman and had a son in his Majesty's service. On hearing this, the officer ordered a Highlander of his command to protect the house and see that no damage was done to its inmates. It was owing to the address of the same lady that Mr. Doolittle was not carried to New York by the enemy; for some of the soldiers entering the house by the back door and discovering the gun, inquired what it meant, and were for taking the owner prisoner. The lady, with great presence of mind, replied that the law obliged every man to have a gun in his house, adding that the owner of it was as great a friend to King George as themselves.

A musket is in possession of the New Haven Colony Historical Society which was captured with its owner, a Hessian, by Mr. Jonah Hotchkiss, who at the time had his last charge of powder and ball in his own gun. Pointing his weapon at the Hessian he demanded surrender on pain of immediate death. The man surrendered readily, and on searching him, it was found that he had twenty-three charges remaining in his cartridge-box, of which Mr. Hotchkiss availed himself. The Hessian was taken to the dwelling of his captor and remained there several days, being kindly treated. When it became known that the father (Mr. Caleb Hotchkiss) of his captor had been killed in the fight, Jonah Hotchkiss said to him, "If I had known that your people had killed my father, I would not have spared you." The man at last asked permission to go; which, being granted, he left town. This statement came from Mr. Henry Hotchkiss, who deposited with the Historical Society the musket which his grandfather took from the Hessian.

There are in the rooms of the Historical Society four framed maps, not a little defaced by time, two of which are perforated by bullets. They hung at the time of the invasion in the east front chamber of the Mansfield House, which stood between Hill-house avenue and Prospect street as now laid out, and a little north of the spot where North Sheffield Hall now stands. Mr. Nathan Mansfield, the owner and occupant of the house, was a decided favorer of the British side, and was accustomed to offer a petition every morning at family prayers for the success of the arms of King George. Hence he was not among those who resisted the invaders. His sons and sons-in-law were all Whigs, and by their influence saved him from much abuse which he might otherwise have received from the patriots of the town. When the British entered New Haven, the families of his children, and other friends, sought refuge in his house as likely to escape molestation on account of his known sympathies. Then, too, the house was thought to be so far out of town that the enemy would not come to it. In this opinion however, people were mistaken. The enemy advanced in that direction and occupied an old building standing where Sheffield Hall now is, as a guard-house. A strong

guard was stationed there, and the red-coats were soon scattered through the neighborhood. The day was very warm, and the soldiers came to the well in Mr. Mansfield's yard to get water. Some of them entered the house, and one stole a silver tankard belonging to the family, which had been secreted under a bed. Afterward some British officers visited the house, and Mrs. Mansfield made complaint to them of the theft. They promised to make an effort to find and restore the tankard, but she never heard anything more of it. Early on Tuesday morning, as the British were preparing to leave town, some militiamen from an adjoining town came into the vicinity of the house, and seeing the red-coats, fired on them, and then retreated behind the house. The British guard seeing from what direction the shot came, returned the fire, and some bullets passing through the front of the house lodged in the wall. The maps referred to were pierced at the same time.

An account of the injuries and death of Nathan Beers is given in a letter from Isaac Beers, his son, to Nathan Beers, another son, who was a Lieutenant in the American army and on service in Rhode Island. This letter is in the valuable collection of autographs belonging to Prof. E. H. Leffingwell, a grandson of Isaac Beers, who kindly gave Mr. Goodrich permission to copy it.

NEW HAVEN, 16th July, 1770.

Dear Brother, I suppose long before this that you have heard of the great misfortune that has befallen this town in being plundered by the enemy. As I was taken up in attending on father and was in much confusion other ways, I desired Mr. Hazard, who was then here, to inform you of our situation and that our dear father was then near his end by a wound received from those bloody savages; which letter was sent by last post and I hope came to hand. Our father was wounded in his own house some time after the enemy had been in town; the shot was aimed at his breast, but he pushed the gun so far on one side that it passed through his hip; it was at first thought that the wound was not dangerous; but he had lost so much blood before he could have relief that the wound proved fatal. He lived from Monday afternoon, the time he received the wound, till the Saturday following, the most of the time in great distress, and then left this troublesome world, I hope for one far better. Thus we have lost a kind parent by the hands of these merciless wretches at a time which added greatly to the distress we already had to bear with.

As I suppose you will learn by the papers the particulars of the action while they were here, I shall omit it, only just inform you of their behavior in town. They landed at West Haven about sunrise, but were kept from getting into town till about noon on Monday, 5th July. I was made prisoner, but had the good luck to be released soon. No sooner had the enemy got into town than they began to plunder without any distinction of Whig or Tory, carrying off all the valuable articles they could, breaking and destroying the remainder. In many houses they broke the doors, windows, wainscot-work, and demolished everything inside of the house they possibly could. Some few houses escaped by mere accident: Joel Atwater's, Michael Baldwin's, and five or six others in that neighborhood, although the families had all fled. I had the good fortune to be plundered but little. Elias was not plundered a great deal. Father's house was plundered considerably, but not damaged any. Old Mrs. Wooster stayed in her house and was most shockingly abused; everything in the house was destroyed or carried off by them, not a bed left or the smallest article in the kitchen; Deacon Lyman's shared as bad; also William Lyon's and several others in different parts of the town. They left the town early on Tuesday morning; Chandler, Botsford

and Captain Camp with their families went with them. Bill Chandler was their guide into town, for which the Lord reward him! They have carried off several inhabitants prisoners, among them Captain John Mix, Hezekiah Sabin, Senior, Esq'r Whiting, Thomas Barrett, Jere Townsend, Captain Elijah Foster, Adonijah Sherman, etc. There were killed, belonging to town, Constable Hotchkiss, John Hotchkiss, Ezekiel Hotchkiss, Elisha Tuttle, a crazy man, Captain John Gilbert, Joseph Dorman, Asa Todd and several others from the farms and country round.

Since the enemy left this place they have burned the towns of Fairfield and Norwalk, and we were again alarmed that they were returning to burn this town. A person who made his escape from them at Norwalk, says the officers found much fault with the General for not burning this town when they were here, and they swore it should be done yet. This alarms us so much that we have moved all our effects from the town back into the country, and a great many families have gone out, so that we are almost desolate already. Indeed it is the most prevailing opinion among the most judicious that they intended to burn all the seaports.

So far the letter of Mr. Beers goes and then breaks off abruptly. Another account of the circumstances attending the wounding of Mr. Beers is to this effect: When the alarm spread that the enemy were approaching the town, the family of Mr. Beers made ready to leave their home. But the old gentleman would not go with them, saying that he had never taken up arms against the King, and it was not likely that he would be molested. So he remained quietly in his house, on the corner of Chapel and York streets, and his two negro servants stayed with him. As the British troops came toward the corner, and the noise in the street attracted his attention, he went to the door to look out. While he stood there, three shots in rapid succession were fired on the enemy from the garden attached to the house. The smoke being seen to rise in that direction, three British soldiers rushed toward him, calling out, "You d——d old rebel, why do you harbor men in your house who fire on his Majesty's troops?" He replied, "Gentlemen, no one has fired from this house; I can't control men outside of my house." They persisted in abusing him and aimed their muskets at him; he pushed aside two of these and changed the direction of the third, so that the charge entered his hip instead of his breast, as intended. This history of the transaction was narrated by himself to Dr. Æneas Munson, Senior, who was his medical attendant, by whose son (who himself, on one occasion dressed the wound of Mr. Beers) it was transmitted, says Mr. Goodrich, to our time.

On another corner of Chapel and York streets, where the Calvary Baptist Church now stands, and diagonally opposite to the residence of Mr. Beers, stood the house of Mrs. Jeremiah Parmelee. Her husband had been a Captain in Colonel Hazen's continental regiment, and having been severely wounded about two years before, in the battle of Brandywine, had since died. On the near approach of the invaders to that part of the town, Mrs. Parmelee prepared to take her departure for the country. But before her arrangements were completed, she was both surprised and alarmed at a volley of musketry near by, which sent the bullets flying about the house. * Recollecting that a keg of gunpowder was in the cellar—a most

precious as well as dangerous article—she went downstairs, brought it up, and with her own hands concealed it near the well, having previously saturated it with water. While she was so engaged, a ball occasionally whizzed through the air above her head, giving token of the approach of the enemy. Mrs. Parmelee witnessed the assault on her neighbor Mr. Beers, and at a later hour of the day she saw the unfortunate Elisha Tuttle, after he received his wounds and before he died. While filled with horror at what she had seen across the street, she was alarmed by the entrance of soldiers into her own dwelling. They demanded men's shoes, but she told them she had none, as no man lived there. One of the soldiers who had been covetously eyeing a string of gold beads which she wore on her neck, clutched it with a strong hand; she resisted with so much force and success that the string gave way, and the beads flew into the open fire-place among the ashes. The ruffian, discomfited by his failure, left without further attempts at violence. In searching through the ashes afterward, she recovered all the beads but two. To escape further molestation in her isolated and defenseless condition, Mrs. Parmelee left her house, to seek temporary refuge in that of Deacon Stephen Ball, which was in Chapel street, nearly where the Yale School of Art now stands.

Mr. Ball, as a Deacon of the First Church, had the care of the vessels used at the Lord's Supper and for the administration of baptism. They are of solid silver, and some of them have interesting associations connected with them.* When the news came that the British were actually marching into town, the good Deacon felt a natural and proper anxiety to save these sacred vessels. The chimneys of those days were large, and in many cases were provided with ledges or recesses for keeping valuable articles. As the chimney of Deacon Ball's house was so constructed, it was determined to deposit the silver there. His daughter, then eight years old, was lifted up into the chimney sufficiently high to put the vessels into the hiding place. As the British came near the house, this daughter, with two playmates (one of whom was Sally Maria Beers, afterward the wife of Mr. William Leffingwell, and the other Anna Atwater, afterward the wife of Mr. Jeremiah Townsend), went down into the cellar. While there, they heard the soldiers enter at the front door, place their muskets in the hall and disperse through the house for plunder. Mrs. Ball, who remained quietly in the house, wore a string of gold beads, which was taken from her neck. The church silver however remained in safety, and is still in use.

The little girl who hid the silver in the chimney became the wife of Mr. Abraham Bradley.

The house of Mrs. Wooster, which is still standing in Wooster street, was specially obnoxious to the enemy, it being known that she was the widow of an officer in the British army who had espoused

* The Baptismal bowl has on it this inscription: "The Gift of Mr. Jeremiah Atwater to the First Church of Christ in New Haven, A. D. 1735." The history of the bowl is given in the chapter on Churches and Clergymen.

the cause of the rebels. Everything valuable in the house was destroyed or carried away. Among the spoils were a box and two large trunks containing manuscripts. The following correspondence will sufficiently explain their nature and value to New Haven and Yale College.

NEW HAVEN, July 14, 1779.

SIR. The troops of the separate expedition under your Excellency's command, when they left New Haven on the 6th inst., carried away with them, among other things, the papers MSS. of the Rev. President Clap, the late head of this seat of learning. They were in the hands of his daughter, Mrs. Wooster, lady of the late General Wooster, and lodged in the General's house. Among them, besides some compositions, were letters and papers of consequence respecting the college, which can be of no service to the present possessor. This waits upon you, Sir, to request this box of MSS., which can have no respect to the present times, as Mr. Clapp died in 1767. A war against science has been reprobated for ages by the wisest and most powerful generals. The irreparable loss sustained by the republic of letters by the destruction of the Alexandrian Library and other ancient monuments of literature, have generously prompted the victorious commanders of modern ages to exempt these monuments from ravages and desolation inseparable from the highest rigor of war. I beg leave upon this occasion to address myself only to the principles of politeness and honor, humbly asking the return of those MSS., which to others will be useless—to us valuable.

I am, Sir, Your Excellency's most obedient and very humble servant.

EZRA STILES, *President*.

His Excellency Major-General Tryon.

Sent by Captain Sabin, August 17, 1779.

NEW YORK, 25th September, 1779.

SIR,—Disposed by principle, as well as inclination, to prevent the violence of war from injuring the right of the republic of learning, I very much approve of your solicitude for the preservation of Mr. Clap's MSS. Had they been found here, they should most certainly have been restored, as you desire; but, after diligent inquiry, I can learn nothing concerning them. The officer of the party at the house where the box is supposed to have been deposited, has been examined, and does not remember to have seen it, nor apprehends that any such papers fell into the hands of the soldiery. I would therefore indulge a hope that better care has been taken of the collection than you were led to imagine at the date of your letter. This however will not abate my attention and inquiry; nor shall I, if I succeed, omit the gratification of your wishes.

I am, Sir, your very obedient servant,

WM. TRYON.

To the Rev. Mr. Ezra Stiles, President of Yale College, at New Haven.

Received Oct. 21, 1779.

YALE COLLEGE, December 14, 1779.

SIR,—The latter end of October last, I received your letter of 25th September. It is unnecessary for you to make any further inquiry respecting President Clap's manuscript. Capt. Boswell, of the guard, while here on the fatal 5th of July last, showed some of them in town, which he said he had taken from Gen. Wooster's house, and it is presumed that he well knows the accident which befell the rest. Your troops carried away from Mrs. Wooster's a box and two large trunks of papers. One of them was a trunk of papers which the General took to Canada; the others were his own and the President's. On the night of the conflagration of Fairfield, three whale boats of our people, on their way from Norwalk to the eastward, passed by your fleet, at anchor off Fairfield (then in flames), sailed through a little ocean of floating papers, not far from your shipping. They took up some of them as they passed. I have since separated and reduced them all to three sorts and no more, viz.: Gen. Wooster's own papers; Gen. Carlton's French Commissions and orders to the Canadian Militia; and Mr. Clap's, a few of which last belong to this College. This specimen, Sir, shows us that the rest are unhappily and irrevocably lost, unless, perhaps Capt. Boswell might have selected some before the

rest were thrown overboard. If so, your polite attention to my request convinces me that I shall be so fortunate as to recover such as may have been saved.

I am, Sir, your very humble servant,

EZRA STILES.

To his Excellency Gen. Tryon, New York.

Sent by Major Harnage, of the Saratoga Convention troops.

Mr. Ebenezer Huggins resided in the lower part of Crown street in a house which is still standing. The experience of Mr. Huggins and his wife on that memorable day was related to Mr. Goodrich by their granddaughter, Mrs. E. B. M. Hughes.

When the alarm was given in the morning that the enemy were approaching New Haven, Mrs. Huggins, in view of the possibility that her husband might be taken prisoner and carried away, sewed a guinea into the waistband of his clothes. Having occasion to go into the street after the enemy had possession of the town, he took with him a musket for self-defense. This caused him to be made a prisoner on meeting some British soldiers, as "bearing arms against the King of England." He was captured in State street, opposite the spot now occupied by the Mechanics' Bank. Being carried to New York, he was put on board the old prison ship near the Long Island side of the East River. His wretchedness was very great, being uncertain of the fate of his wife and two little children left unprotected in their home. He could neither eat nor sleep, but sat or paced about silently, in anguish insupportable. The commander of the prison ship asked him why he did not eat, and why he appeared so unhappy. He replied, "should you not be wretched had you left a wife and two babes in the midst of the British army?" With compassionate looks and words the officer directed that Mr. Huggins should not be furnished with the ordinary prison fare, but should be supplied from his own table. He was afterward treated with great kindness during the time he remained on the vessel. With the guinea so fortunately sewed into his waistband he managed to purchase a boat, and in this he made his escape at night, crossed the Sound safely and reached New Haven. He brought with him Mr. Robert Townsend, who had also been taken as a prisoner from New Haven. It would seem as if Mr. Huggins were allowed to buy the boat and make his escape; for how otherwise could he have done this under the mouths of British guns?

Mrs. Huggins sat alone in her house on that eventful afternoon, with her two babes, the oldest being about two years old on her knee, and the younger in her arms, her husband gone and no one to advise her what to do—no one to speak to her. A cannon boomed and the ball passed through the room where she was sitting. She heard the tramp of soldiers in the street. Her heart was very desolate as she looked forward to the destruction of herself and her children. She did not ever expect to see her husband again, but already mourned him as dead. She was in momentary expectation that her fate would be decided, when there entered the house a gentleman in the dress of a British officer of the highest rank. Every

word he spoke was polite, kind, and respectful. He told her to fear nothing and wrote on the door of the house, "Let no one enter here. By order of General Garth." She never forgot this kind treatment, and in her old age spoke with gratitude of the fact that there had been human hearts in the breasts of her country's enemies. Later in the day her brother, Mr. Isaac Dickerman, came and took her out to the house of Colonel John Hubbard near West Rock, where she remained during her husband's captivity.

In the early part of the day, this Mr. Dickerman, who lived where Edgewood Farm now is, came into town with an ox-cart to convey persons and things from the house of his father's family in Broadway out to that of the Mr. Hubbard just referred to as a little back of West Rock. He went in the first place down to the residence of Mr. Huggins to bring away some articles for that family. As he passed along the streets with his cart, so many valuable articles were thrown into it by persons endeavoring to save their property, that by the time he reached his father's house, little room was left for the use of those whom he had come especially to help. Some of them climbed on the heaped-up load; others walked by the side of it, driving the cows before them.

John Hotchkiss is mentioned as among those killed in the skirmish on the way from Milford road to Hotchkisstown. He went out in the morning with others to oppose the march of the British, and was shot, among the first of the patriots who fell. He was robbed after being shot, of his silver shoe buckles, knee buckles, stock buckle, sleeve buttons and pistols. Mr. Hotchkiss had married a daughter of Timothy Jones, who was a descendant of Theophilus Eaton by his daughter Hannah. Mr. Goodrich states that Mr. Hotchkiss lived where Alumni Hall now is at the corner of Elm and High streets; that his widow lived there till her death; and that an unmarried daughter occupied the house after her mother's death. The latter part of the statement is probably true; but the *Connecticut Journal* of March 12, 1788, advertises that by direction of the Court of Probate, "the Administrators on the estate of John Hotchkiss, late of New Haven, deceased, will expose for sale, at public vendue, the lot and dwelling-house and other buildings where the deceased dwelt * * * situate in State street."

The house of Michael Baldwin, in George street, mentioned in the chapter on Inns and Hotels as "Mr. Baldwin's Tavern, and near the upper end of Leather lane," is said to have been protected and so to have escaped pillage. The story is that "a British officer who was in this expedition had been a paroled prisoner in the latest French War, and had in some way found a temporary home at this house, which was at that time a sort of country tavern." The writer ventures to correct this tradition by suggesting that this house was in the time of the French War the residence of Colonel David Wooster, and that the recollection of hospitalities received from a brother officer saved the house from pillage.

There was once a house where the Tontine Hotel now is, which some persons still living remember as Ogden's Coffee-house. At the time of the invasion it was the residence of Joshua Chandler, a lawyer of some note in his day. He was a strong Tory and made himself offensive by the advocacy of the British side of the question. Mention has already been made of his rescue from some American soldiers who were threatening to hang him. It is said that the family of Chandler prepared a grand supper in anticipation of the arrival of their British friends, but that, owing to the confusion of the time, and the preoccupation of those for whom it was designed, the expected guests did not appear. Notice was given to Mr. Chandler of the intention of the British to leave on Tuesday morning, and he and his family left with them, never to return. They finally went to Nova Scotia, and on some occasion when most of them were passing from one point on the coast to another by sea, the vessel was wrecked, and, though they reached the shore, they perished miserably by cold and starvation while attempting to make their way through an uninhabited country. The property of Chandler was confiscated and his house passed into other hands. It was variously occupied until removed to make room for the Tontine. It is still standing on Church street further north than when occupied by the Chandlers, and was for many years the home of the Rev. Dr. Leonard Bacon. The Hon. Mr. Upham, of Salem, once called on Dr. Bacon and announced that he was a son of a daughter of Joshua Chandler. His mother had escaped the calamity which fell on the rest of her family, and her son came to look at the house from which his mother had gone out at fifteen years of age never again to visit the home of her childhood.

Two sons of Joshua Chandler were guides to the two divisions of the British troops which landed at the mouth of New Haven harbor on the 5th of July, 1779. William Chandler (Y. C. 1773) was with the party which landed at West Haven, and his brother Thomas was with General Tryon's division in East Haven.

The house now occupied by Miss Foster on Elm street, was in 1779 the residence of Mr. John Pierpont, a grandson of Rev. James Pierpont, an early pastor of the First Church. For some time before the invasion, Mr. Pierpont and his wife (who was a daughter of Nathan Beers, Senior) had felt much anxiety as to the probability of such an occurrence. This anxiety influenced him to make arrangements for the transportation of his family to a certain place in Hamden or North Haven, and for their accommodation there if the exigency should arrive. Mrs. Pierpont had also formed her plans to the same end. When therefore the alarm was given, they were soon ready and on their way to the place of refuge. Part of their valuables were buried in the cellar, and part were carried with them. On the return of the family, one of the chambers was found to bear marks of having been occupied as a temporary hospital. The family had left in such haste, that a batch of bread which had been put into the oven to

bake was overlooked. It was not there when the family returned.

Captain William Lyon resided in a house which stood where the Lyon building now is, in Chapel street. While the British held possession of the town, as some of them were passing down Chapel street on the opposite side from this house, a musket shot was fired at them from its windows, which wounded one of them. It would appear that, the family having vacated the house, some person had entered, gone upstairs, and from one of the windows had fired on this party of the enemy, and then fled by some back way. The soldiers came across the street in great rage, and searched the rooms to find the person who fired on them. Not finding him they committed considerable damage in the way of breaking doors and windows, and by ransacking desks, drawers, and other repositories, and by tearing up and scattering papers. Two of the doors, one having a panel replaced where it had been dashed out by the soldiers, and the other pierced by a musket ball, continued in use as long as the house remained.

There is, in the collection of curiosities in the rooms of the Historical Society, a cannon ball, which, being fired from the British fleet just before it left the harbor, lodged in the chimney of a house then standing at the corner of State and Fair streets. This house, which has given place to a brick block, was built in 1771 by Major William Munson, who died in 1826. It was his residence at the time of which we are speaking, but the family had gone from it when the British entered the town. In the course of the afternoon of Monday, the mother of Major Munson's wife, Mrs. John Hall, who lived a few rods south of the deserted house, went to it to secure some articles of value which had been left there. In coming out of the house after accomplishing her purpose, she was met by two British Officers, one of whom raised his sword in a manner which seemed to indicate to the lady an intention of cutting her throat; but it was only to cut from her neck a string of gold beads which she wore. He also cut the silver buckles from her shoes. It is a tradition, which seems well founded, that after the enemy had finally embarked their troops, and their vessels were leaving the harbor, a gunboat returned up the harbor and fired several times toward the town. The ball in question probably came from one of these discharges. The daughter of Major Munson, Mrs. Grace Wheeler, from whom Mr. Goodrich received the account, remembered to have heard her father say that it came from the harbor, tearing its way through the old Sabin House in Union street, entering his house under a window on the south side, and finally lodging in the chimney near or in the fire-place. She had often seen him when there were visitors at the house, brush off the soot from the exposed surface of the ball, to show it to them.

A brick house is still standing on the corner of West Water and Columbus streets which was in-

habited at that time by Rutherford Trowbridge, an earnest patriot. When the alarm was given that the "Regulars" were coming, he placed his wife and children in a boat at the dike just east of his house, and sent them up the Quinnipiac River to North Haven. The family left in so much hurry that a batch of bread put into the oven to bake was left there. Having thus provided for their safety, Mr. Trowbridge took his musket an old "King's arm," with powder-horn and bullet-pouch, all of which had done good service in the French War in Canada, and went out with the volunteers to West Haven. This musket and equipments are now in the rooms of the Historical Society. He with others went down toward West Haven Green and attacked the British. He was accustomed to say that "after crossing West Bridge, every man seemed to be fighting on his own hook." When the enemy came on in force and were compelled to march up to Hotchkiss town, he went to the hills at their left and aided in annoying them by firing from behind trees and walls. He said that the British kept together and did not attempt to pursue the assailants on the hill sides, but returned the fire whenever they could see the patriots, and that bullets came whizzing abundantly past the heads of those who were behind the trees. After the enemy gained possession of the town, Mr. Trowbridge was in it, but did not dare to go to his own house lest he should fall into their hands. This house was in plain sight from another, since known as the Totten House, at the corner of West Water and Meadow streets. At this latter place, then inhabited by Captain Thomas Rice, who was a Tory, General Garth and other British officers were entertained. Captain Rice was a strong personal friend of Mr. Trowbridge, though they differed diametrically as to public affairs. Some of the British officers noticed the house of Mr. Trowbridge and asked, "Who lives there?" On hearing the name of the owner, and that he was what they called a rebel, and also that he had a brother who was a captain in the "rebel" army, and a near relative who was in command of an armed brig holding a letter of marque and cruising against British commerce, they gave orders to visit the house. Captain Rice, desirous of saving his friend's property, interceded, saying that the family had been gone from town for some time, and that the house was shut up. Whereupon the order was countermanded and the house escaped visitation. On the return of Mr. Trowbridge and family after an absence of two days, everything was found undisturbed, even to the bread in the oven. When Captain Rice was asked, after the British had gone, how he could say that the family had been absent "for some time," his reply was that some time was a very indefinite period.

The house of Captain Caleb Trowbridge, which was across Meadow street from Captain Rice's, did not fare so well. It was furnished with unusual elegance for those days, and was replete with conveniences and luxuries. The cellar was stored with choice wines and liquors. The owner was the relative of Mr. Rutherford Trowbridge already

referred to as commanding a war vessel cruising against British commerce. On learning this fact, the enemy sacked his house, brought his fine furniture out to the street and burned it. Long afterward when the house was undergoing repairs, bullets were found in the ceiling and wainscoting which had been fired into the building by the British.

Not far from this house was one in Whiting street, occupied by Rev. Bela Hubbard, D.D., the Rector of Trinity Church. He was a man of great kindness of heart, and at this time of trouble many of his parishioners came to his house for comfort and protection. A party of British soldiers were pursuing a poor deaf and dumb girl through the street, and she rushed into the house of Dr. Hubbard. He had witnessed the whole affair and both excited and anxious to keep the pursuers from seizing the girl, he called to his wife, "Grace, what shall I do?" She said, "put on your gown." He did so and appeared in the door of the house in his gown with the Prayer Book in his hand. The soldiers as they saw him, said, "Oh! there is a clergyman of the Church of England," took off their caps, bowed and passed along.

John Whiting, Esq., Clerk of the Courts, was also resident in this neighborhood. He was asked, previous to the possession of the town by the enemy, whether he would not make his escape. His reply was that he had not borne arms, that he was loyal to the King, and, pointing to an engraving of King George which hung on the wall of the room, he added, "This will protect me." But when the soldiers came into the house, they did not respect his claim to loyalty. He was holding an office under the rebel government, and moreover, was a Deacon in the First Church. He was carried off a prisoner, and so quickly, it is said, that he had not time to put on his wig.

Among those who had been wounded was Elizur Goodrich, the grandfather of the Rev. Chauncey Goodrich to whom we are indebted for collecting many of the incidents related in this narrative. Mr. Goodrich received a bullet in his leg, but continued in the fight till the enemy entered the town. He then went to his room and lay down on his bed, overcome with excitement and the extraordinary heat of the day. A British soldier entered the room, and, either informed of the part he had taken, or suspecting it by reason of his appearance, stabbed him in the breast. The wound was severe, but not mortal; for he sprang up and, wounded as he was, seized the soldier, pushed him against the wall and handled him so severely that the man begged for his life, and was let off on this appeal. Though exhausted by the struggle and suffering with pain, Mr. Goodrich made his way down Chapel street to the house of Abiathar Camp, originally from Durham, where Mr. Goodrich's father was settled minister of the town. This house stood where the Chapel street Church afterward stood, and where Masonic Temple now is, and was protected, its owner being a Tory. Mr. Camp readily gave all needed assistance to the wounded son of his former pastor; had the wounds cared for; and provided him with food

and shelter for the night. It was the last night that Mr. Camp and his family spent in that house. They left New Haven in the morning with the British troops.

Among those who were wounded were two brothers of the name of Bassett, James and Timothy. They lived with their parents in a house still standing when Mr. Goodrich read his article to the Historical Society, near the station of the New Haven and Northampton Railroad at Hamden Plains. Each of them had served a term of either draft or enlistment in the continental army. Timothy had been under General Gates, and had taken part in the battles near Saratoga which preceded the surrender of Burgoyne. James had served in New Jersey and Pennsylvania, and had come home in broken health. On hearing the alarm, the young men took down their muskets and hurried into town with others from that quarter. They participated in the fight at Ditch Corner, and both were wounded; James being hit by a musket ball, which broke his arm, and Timothy being shot through the body. As the last fell, a British soldier stepped forward, and after appropriating whatever on his person was of value, was about to inflict a fatal blow, when William Chandler interposed, saying that he was well acquainted with the young man; that they had often hunted foxes together; and begged that, as the wound already inflicted seemed likely to prove fatal, no further violence should be used. James reached home in the evening and reported that his brother had been killed. The next morning, the father came into town in search of Timothy, and found that he had been carried into a house and was yet living, though in a condition of extreme exhaustion. With much difficulty he was conveyed home, and after continuing for nearly a year in a feeble state of health, he recovered in a measure, although he suffered to the end of life from the effect of his wound. This statement was furnished to Mr. Goodrich by Mr. George B. Bassett.

Our narrative has dwelt thus far on the movements of that part of the invading expedition which landed in West Haven. We have still to give attention to that detachment which landed on the east side of the harbor.

We have already taken notice that soon after the commencement of the war, a beacon was established on what has since been known as Beacon Hill. In the night of Sunday, July 4th, about midnight, the three guns gave the signal of alarm appointed to accompany the firing of the beacon. Chandler Pardee, then eighteen years of age, was sitting at the door of a friend's house not far distant from Black Rock Fort, engaged in social chat with other young people. It being Sunday evening he was wearing the dress-suit of those days, part of which consisted in short breeches, and shoes with silver buckles. On hearing the alarm guns the young men sprang for their muskets, and hastened to the appointed rendezvous. Pardee with his mind more intent on present duty than on his silver

buckles, did not wait to change his dress shoes for others more suitable for the work before him, an omission which came near costing him his life. The little company of militia proceeded to the point where the old light-house still stands, taking with them, in addition to their muskets, a small cannon or swivel drawn by an old white mare. There they waited for the landing of the enemy, which was delayed till late in the forenoon; the boats being busy in the service of the other detachment. "Before noon, (says General Tryon) I disembarked with the 23d, the Hessian, Landgrave, and King's American Regiments, and two pieces of cannon, on the eastern side of the harbor, and instantly began the march of three miles to the ferry from New Haven east toward Branford. We took a field-piece, which annoyed us on our landing, and possessed ourself of the Rock Battery of three guns, commanding the channel of the harbor, abandoned by the rebels on our approach. The armed vessels then entered and drew near the town."

The landing was effected in two divisions, one of which directed its course so as to reach the shore on the south or Sound side of Light-house Point, the other on the harbor side. Each boat had a gun mounted on the bow, and as it neared the shore, opened fire on the little company that obstructed the landing. Our men replied with their swivel; but being only a handful against so many, they saw that it would be useless to resist the landing of the enemy; and a retreat was ordered. But one of them, more plucky or more rash than the others, declared that he would not go till he had had one shot at them with his musket, and took position behind a tree, waiting till they should come within range. As they drew near the shore, an officer stood erect in the foremost boat, flourishing his sword, and shouting "disperse, ye rebels." Here was an opportune mark for the man behind the tree, of which he took advantage. He fired, apparently with deadly effect, as the officer fell into the bottom of the boat, and it is certain that one of the enemy was buried hastily a little north of the spot where the light-house stands. It was probably Ensign and Adjutant Walkins, of the King's American Regiment whose commanding officer was Colonel Edmund Fanning, a son-in-law of General Tryon and a graduate of Yale College in the class of 1757.

The route our men took in their retreat was along the Cove, where they halted, probably with the idea of making a stand behind some slight breast works which had been thrown up there. But seeing that the enemy were moving so as to surround them, they again retired.

The first man killed by the British on this side of the harbor was Adam Thorpe, of Cheshire. He had been drinking freely of cider-brandy, and had fired several times on the enemy. When he came to a place in the road opposite the north gate of Raynham, the seat of the family of Townsend, he refused to go any further, declaring that he would not run another step for all Great Britain. He was as good as his word, and consequently was soon pierced by many bayonets. A stone was afterward placed on

the spot where he was killed, bearing the inscription, "Here fell Adam Thorpe, July 5, 1779."

Somewhere along the course of the retreat occurred the affair which nearly proved fatal to Chandler Pardee. In passing through a piece of marshy ground he missed his footing, and stepping into the soft earth, one of his feet sunk in quite deep, so that in pulling it out, he lost his shoe off with its silver buckle attached. Hoping to recover it, he tarried behind. While in a stooping position, feeling in the mud with his hand for the shoe, a musket ball from the pursuing enemy struck him in the lower part of the back, and traversed his body to the breast, where it lodged near the surface. He was able to get to a comfortable place to lie down before the enemy came up with him. They were in three squads, each of which stopped to hold some conversation with him. Those in the first and second of these squads spoke kindly and offered assistance, which he declined. Those in the third were quite abusive and threatened to finish him with their bayonets; but the officer in command restrained them from violence and offered to take him with them. This offer he declined, preferring to take the chance of being found by his friends. After examining his wounds and pronouncing him surely beyond hope of recovery, the squad went on, leaving him to his fate. Some hours passed before he succeeded, by his repeated signals, in attracting friends to his assistance. At last, being heard and discovered, he was carried into a house near by, where surgical aid being procured, the ball was easily extracted. His recovery from so dangerous a wound amazed every one; but none more than the surgeon who attended him. He lived to be the father of several children, and to have many grandchildren. Among the latter were Alfred W. Morris, and the three brothers, Chandler, Luman, and Ruel Pardee Cowles. A subsequent incident in his history is of interest in connection with the story of his wound. About a year passed before he was sufficiently recovered to engage in active employment. Afterward, he engaged in the service of his country, and at the age of twenty was a prisoner of war in New York City. On one occasion he heard some British soldiers on guard over him, in conversation about their exploits at the invasion of New Haven, relating how many rebels they had killed and where they had killed them. He interrupted them by calling in question the accuracy of their statements, and remarked that he thought they did not kill all whom they thought they had killed. But the soldiers were quite confident, and mentioned the case of the man shot in the fresh meadow in East Haven. Said Pardee, "I can convince you that you did not kill that man." Their reply was that they were sure that they killed him. One of them claimed to have fired the fatal shot, to have seen the man on the ground in the agonies of death, and to have examined the wound where the bullet passed through the body. Chandler then by way of convincing them, related the conversation between himself and them as they passed by him. Then, removing his clothing, he showed where the ball entered and

where it was cut out by the surgeon. "Yes," said he, "I am the man you shot in the fresh meadow." "Well," said some one, "have not you got enough of fighting us yet?" "No," he answered, "I hope to kill a thousand of you before I die." "You are a good fellow," was the reply, "come and take a glass of toddy."

Within the Black Rock Fort was a garrison of about nineteen men, including the neighbors who came in to assist. They were, it is believed, under the command of Captain Moulthrop. Mr. Joseph Tuttle, who lived quite near the fort, and his eldest son, a lad of seventeen years, were among the volunteers who had come into the fort in the morning. Mrs. Tuttle, taking six younger children and a few valuables, retired in an ox-cart to the north part of the town, looking back upon her home as the flames rose to heaven. The little garrison held the fort till their ammunition was exhausted, when they left it after spiking and dismounting the guns, hoping to escape along the beach. But they were taken prisoners by the skirmishers and carried off to New York.

A chief object of the invaders was to gain possession of Beacon Hill; and toward Beacon Hill was the retreat of the patriots. To the northeast of the Tuttle House, on the site of the present residence of Hon. A. L. Fabrique, was a clump of bushes, and toward the road a brush hedge. Some of the patriots masked themselves behind this hedge, and poured a destructive fire upon the enemy as they were pursuing at the double quick the rebels whom they saw retreating toward the hill.

While widening Townsend avenue, June, 1870, the tradition of the slaughter of the enemy near the Tuttle House was well sustained, says Mr. Charles Hervey Townshend, by the discovery of human bones found while moving stumps of trees planted by Mr. Townshend's father forty years before.

These bones were proved not to be Indian by Dr. T. Beers Townsend, who was on the spot when the graves were opened, and made a most careful examination. These dead were all probably buried in the ryelands on the west side of the road and just north of the Tuttle mansion; and the spot being burnt over, the locality of the graves was not discovered; and as many wounded soldiers were seen to be taken to the boats and carried to the ships, it was supposed that the dead were also removed in order to hide their great loss. While the doctor was making a careful examination of the bones, the writer with a spade thoroughly searched the graves, and, besides bones, found a number of German silver buttons, and some of lead and composition (white metal) about the size of a dime. A copper coin was also found, which has excited much interest. It was the size of an English half-penny, and known as a stiver. It had a hole in the circumference, and was probably held by means of a string attached to the neck of the wearer. On the face side is the motto: "Dominus Auxit Nomen;" in its center the figure of a man with a mantle about his loins, in a sitting position, left hand on his hip and in his right hand a sword drawn over the head as if to strike; to the right a laurel branch. The figure is represented sitting inside a circular fence with gate in front. The other side is a laurel wreath with the word in center, "Hollandia."

The invaders having possessed themselves of the Rock Fort and Beacon Hill, spread themselves out upon the adjacent heights, where they lay upon their arms during the night. We have little

account of their movements during the rest of Monday and the morning of Tuesday, except that small parties roamed through the neighborhood, taking whatever they could carry away, and destroying whatever they could not carry. General Tryon crossed the ferry to New Haven to confer with General Garth, and returned the same evening to his quarters.

Very early on Tuesday morning, the British began to evacuate New Haven in accordance with the plan determined on by the two Generals in their conference on Monday afternoon. The 54th Regiment marched to Long Wharf, and was sent from the wharf to their transports. The remainder of General Garth's division crossed the ferry and joined General Tryon's division. The militia of the surrounding towns had collected in such numbers that the British Generals probably had some apprehension that their two divisions might be separated, and one or both cut off from their vessels in the harbor. Tryon reports that at half-past one on Monday the plan had been that Garth should commence burning the town as soon as he had secured Neck Bridge, but that "the collection of the enemy in force on advantageous ground, and with heavier cannon than his own, diverted the General from that passage." The great amount of drunkenness among his troops seems to have troubled General Garth. It was this trouble, probably, which caused the embarkation of the 54th so early in the morning, and the transfer of the remainder across the ferry, where they would find less rum while waiting for the boats.

The families of Tories were notified of the intended evacuation, and four families went with the troops who embarked at Long Wharf. A rear guard of one hundred and fifty men set fire to the store-houses on the wharf between six and seven o'clock, and were then conveyed to the ships.

In the course of Tuesday forenoon, Major-General Ward, of the State militia, crossed Neck Bridge with four regiments, which by this time had gradually assembled, and pressed on the enemy, compelling them to evacuate Beacon Hill, which our people immediately occupied, planting a field-piece there, from which a lively fire was kept up on the British vessels. Tryon, in retiring, burnt the barracks at Black Rock, and embarked his troops toward evening. The houses near Light-house Point were, with one exception, burned before the embarkation. As the fleet did not sail till Wednesday, a boat was sent to burn the one house which had thus far escaped. It belonged to Mr. Jacob Pardee, the father of Chandler, whose adventures have been related.

Mr. Townshend gives a list of the names of East Haven residents who went forth to meet the invaders, adding "There were many others which I have no means now of knowing."

Rev. Nicholas Street, Captain Amos Morris, Captain John Moulthrop, Captain Josiah Bradley, Captain Jedediah Andrews, Elam Luddington, John Morris, Dan Bradley, Moses Thompson, Jesse Luddington, Isaac Hotchkiss, Elihu Bradley, Dan Tuttle, John Dennison, Edward Russell, Jr.,

Isaac Chidsey, 1st, Joshua Austin, Israel Bishop, Abram Bradley, Phineas Curtis, Jacob Goodsell, Nathan Luddington, Ambrose Smith, Joseph Russell, Stephen Sheppard, Timothy Bradley, David Grannis, Joseph Tuttle, Matthew Rowe, John Woodward, Jr., John Hughes, Elisha Andrews, Patterson Smith, Stephen Smith, Samuel Holt, John Fillet, Samuel Townsend, Stephen Pardee, Samuel Smith, Jr., Thomas Grannis, Samuel Crumb, Samuel Holt, Abram Chidsey, James Adkin Broton, Isaac Forbes, Moses Hemingway, James Thompson, Asa Mallory, Caleb Smith, Samuel Hemingway, Samuel Sheppard, Eben Roberts, Daniel Wheden, Samuel Thompson, Simeon Bradley, John Hemingway, Eyria Field, Stephen Tuttle, John Barnes, Levi Chidsey, Israel Potter, Joseph Mallory, Jared Bradley, John Goodsell, Stephen Woodward, John Woodward, Sr., Isaac Pardee, Jehiel Forbes, Levi Pardee, Isaac Chidsey, 2d, Gurdon Bradley, Dan Holt, Abijah Bradley, George Londcraft, Asa Bradley, David Eggleston, Ezra Rowe, Amos Morris, Jr., Henry Freeman Hughes, Elias Townsend.

From the "East Haven Register" by Rev. Stephen Dodd, it appears that the enemy burned on the east side of the harbor, eleven dwelling-houses, nine barns, and several other buildings. The value of the buildings thus destroyed, as estimated by a Committee of the Legislature was £4,154 9s. 5d. The largest individual loss was that of Mr. Amos Morris, being £1,235 15s. 4d.

Mr. Morris and his son Amos, Jr., residing at the Point, were peculiarly exposed to annoyance from the British and the Tories. They had built a fine new house a few years before the war, and this was among the houses destroyed. On that memorable Monday morning, he with his large family had been busy in the early hours removing articles of furniture and the like, to hiding-places where they hoped they might be secure. All the stock except swine were driven away; small things as tools, pieces of crockery-ware, were concealed in the woods; and a stocking-leg filled with silver coin was thrust into a hole in a stone wall. Much of this property, however, was found and carried off, probably in part at least by Tories. The crockery was broken in pieces. The stocking-leg full of silver remained undiscovered, notwithstanding the fact that the red-coats passed directly over the wall where it was hid, and that one end of the stocking was exposed to view. The women and children were sent away in full time to escape personal danger, while Mr. Morris and his hired man remained at the work of securing the property to the last moment. When it seemed to him quite unsafe to stay longer, he said "Now I will put a tankard of cider on the table and perhaps they will spare my house." He went to the cellar for the cider, and as he came back he caught sight of the enemy, and exclaiming, "Here they are upon us," made a hasty retreat, followed by the man. Moving so as to keep the house between themselves and the approaching enemy, they reached a stone wall. In climbing over this they were seen and a shower of bullets flew over them as they skulked along the

wall with their heads down. Presently they came to the usual gateway in such walls, an open space with rails for closing it. As they passed this opening and were seen, another volley of musketry greeted them, but they escaped unhurt and were soon out of danger. The rails did not escape so well, being riddled by the balls. One of these rails, notwithstanding its perforated condition, continued in use as late as the year 1845, when a relic-hunter saw and coveted it. The perforated part was sawed out and found its way to the rooms of the Historical Society at Hartford.

The amount of property destroyed by the British in New Haven was estimated by a Committee of the Legislature at £24,893 7s. 6d. This includes of course the amount mentioned above as destroyed on the east side of the harbor.

There were, according to the *Connecticut Journal* of the following Wednesday, twenty-seven persons killed and nineteen wounded on the American side. The loss on the British side, as reported by General Tryon to General Sir Henry Clinton, amounted to fifty-two. Of these he reports three killed, thirty-two wounded and seventeen missing.

There is no reason to doubt that it was at first designed to burn the town. General Garth probably changed his mind in consequence of the great amount of drunkenness among his troops, and the strength of the military force which soon assembled. By Monday night so many militiamen had come in, that the British General preferred a quiet withdrawal to the fight which would certainly have followed a conflagration. "The enemy unexpectedly, and with the utmost stillness and dispatch, called in their guards and retreated to their boats," says the *Connecticut Journal*, and the report of General Tryon says: "As there was not a shot fired to molest the retreat, General Garth changed his design and destroyed only the public stores, etc." In concluding the narrative of the invasion, we present the greater part of the letter of General Tryon from which this extract is taken. It was copied into the *Connecticut Journal* from the *London Gazette* of October 6, 1779.

NEW YORK, July 20, 1779.

Having on the 3d instant joined the troops assembled on board the transports at Whitestone, Sir George Collier got the fleet under way the same evening; but the winds being light, we did not reach the harbor of New Haven until the 5th, in the morning. The first division, consisting of the flank companies of the Guards, the Fusiliers, the 54th regiment, and a detachment of the Yagers, with four field-pieces, under the command of Brig. General Garth, landed about 5 o'clock, a mile south of West Haven and began their march, making a circuit of upwards of seven miles, to head a creek on the west side of the town.

The second division could not move till the return of the boats; but before noon I disembarked with the 23d, the Hessian, Landgrave, and King's American regiments, and two pieces of cannon, on the eastern side of the harbor, and instantly began the march of three miles to the ferry, from New Haven East to Branford. We took a field-piece which annoyed us on our landing, and possessed ourselves of the Rock Battery of three guns, commanding the channel of the harbor, abandoned by the rebels on our approach. The armed vessels then entered and drew near the town.

General Garth got into the town, but not without opposition, loss, and fatigue, and reported to me at half-past one that he should begin the conflagration, which he thought it merited, as soon as he had secured the bridge between us

New Haven during the War of the Revolution.

*British Invasion of New Haven July 5th 1779.
Drawn by President Stiles*

over Neck Creek. The collection of the enemy in force on advantageous ground, and with heavier cannon than his own, diverted the General from that passage, and the boats that were to take off the troops being not up, I went over to him, and the result of our conference was a resolution that with the first division he should cover the north part of the town that night, while with the second I should keep the heights above the Rock Fort. In the morning the first division embarked at the southeast part of the town, and, crossing the ferry, joined us on the East Haven side, excepting the 54th, which were sent on board their transports. In the progress of the preceding day from West Haven, they were under a continual fire; but by the judicious conduct of the General, and the alertness of the troops, the rebels were everywhere repulsed. The next morning, as there was not a shot fired to molest the retreat, General Garth changed his design and destroyed only the public stores, some vessels and ordnance, excepting six field-pieces and an armed privateer, which were brought off.

The troops re-embarked at Rock Fort in the afternoon with little molestation; and the fleet leaving the harbor that evening, anchored the morning of the 8th off the village of Fairfield. * * * The general effect of the printed address from Sir George Collier and myself to the inhabitants, recommended by your Excellency, cannot be discovered till there are some further operations and descents upon their coasts. Many copies of it were left behind at New Haven and at Fairfield.

I have the honor herewith to transmit to your Excellency a general return of the killed, wounded and missing on this expedition.

At the first town-meeting after the invasion, it was voted that the commissioned officers in the parishes call upon those persons who neglected to appear and oppose the enemy, and defend the town in the late invasion, and know their reasons for their neglect, and the same report to the town.

At the same meeting a committee was appointed to examine into the reasons of the conduct of those persons who continued in town at the time when said town was in the possession of the enemy, and report at the next meeting. On the 16th of August that committee reported

That Messrs. Ebenezer Lines, Stephen Munson, Martin Gatter, Ebenezer Chittenden, Abraham Bradley, John Chandler, Theophilus Munson, James Rice, Eli Beecher, Richard Eld, Abel Buel, Joseph Bradley, Benjamin Sanford, Stephen Bradley Thomas Davis, Truman Huse, Joseph Munson, James Lane, Samuel Nesbit, Elizur Brown, James Sherman, James Gilbert, Elias Shipman, Newman Trowbridge, Zephaniah Hatch, Thomas Wilmot, Edward Burk, Jehiel Forbes, Eli Forbes, William Day, Enos Hotchkiss, Jesse Upson, Thaddeus Perrit, John Miles, Jr., Nehemiah Hotchkiss, Noah Tucker and Patrick O'Colley have waited on the said committee and given their reasons for tarrying in town during the time aforesaid; which reasons appear to the committee sufficient to justify their conduct in tarrying in town at said time.

The committee further report that Messrs. Stephen Ball, Thaddeus Beecher, John Townsend, Richard Cutler, Leveret Hubbard, Jr., Ebenezer Huggins, Joel Buck, Josiah Roberts, Gad Wells, Charles Prindle, Edmund French, Isaac Beers, Elias Beers, Thomas Rice, Samuel Chatterton, Nathan Howell, Stephen Trowbridge, William Lyon, Jeremiah Atwater, George Cook, Asa Austin, Miles Gorham, Leveret Hubbard, John Whiting, Thomas Howell, Prout Bonticou, William Mansfield, Joseph Adam, Jeremiah Townsend, Jr., Benoni Pardee, James Thompson and Henry Gibbs have waited on the committee and give their reasons for tarrying in town at the time aforesaid, which reasons do not appear sufficient to justify their conduct in tarrying in town at said time; but the committee taking into their serious consideration the particular situation said persons were in at that time; that the alarm was sudden and the time too short for them to move their families and effects; and that many of them were kept from their own concerns by lending their useful aid and assistance to repel the common enemy; and the most of them being persons who have ever

been accounted good members of the community; the committee think it their reasonable duty to recommend them to the good will and candor of the inhabitants of the town; hoping they will pass over in silence whatever was wrong in their conduct at that time, as it fully appears to the committee an error in judging what was best for them to do in the hurry and confusion they were in, rather than from any design or predetermination to tarry in town, and submit and put themselves under the protection of the enemies of the United States of America. The committee make the foregoing report in favor of said persons, on condition that they associate themselves with the rest of the good people of this town to repel our merciless enemy, if they should ever invade us again.

The committee further report that they have notified Messrs. Enos Alling, Bela Hubbard, Richard Woodhull, John Alling, David Cook, Edward Carrington, Benjamin Pardee and Daniel Upson of their appointment, and the time when and the place where the committee would wait upon them, but they have either refused or neglected to appear and give their reasons; which refusal or neglect of said persons, the committee judge to be in contempt of the authority of this town.

The committee find that Messrs. Elijah Forbes, William Ward, Oliver Burr, Abraham Bradley, Jr., Samuel Goodin, Zinah Denison, Amos Doolittle, William Brintrall, John Mix, Thomas Burrit, Adonijah Sherman, William Doaks, Benjamin Osborn, Jonah Baldwin, Samuel Tuttle and John Baldwin, were in town when the enemy took possession; but they were either taken off by the enemy or have since moved out, or have otherwise been out of the way, and have never been notified of the appointment of the committee for the purpose aforesaid.

The committee would likewise acquaint the town that they have made up the foregoing report upon the reasons which these persons gave themselves, without calling on any evidence to contradict them; which method of taking their reasons appears to the committee very partial. Moreover the committee are very confident that there are evidences, which if called would contradict the account that hath been given by some of said persons.

All which the committee humbly submit.

By order of said committee,
PHINEAS BRADLEY, *Chairman*.

The report of the committee is to a modern reader in more than one respect inexplicable. For illustration, Amos Doolittle, who upon the first tidings of hostilities in 1775, had marched to Cambridge with the Governor's Guards, and had on the very day of the invasion been in the ranks of the Guards repelling the enemy, is arraigned as recreant to duty and left under reproach. On the other hand some are cleared on their own testimony, when the committee knew of conflicting evidence.

New Haven was not again visited by the enemy. In 1781 New London was invaded by the traitor Arnold, and suffered atrocities compared with which the conduct of Tryon and Garth was honor and chivalry.

The recurrence of the name of Arnold is a temptation to copy from the *Connecticut Journal* a recital of the ceremonies with which the people of New Haven expressed their wrath when they heard of his treason.

OCTOBER 19, 1780.

A concise description of the figures exhibited and paraded through the streets of this city on Saturday last.

A stage raised on the body of a cart, on which was an effigy of General Arnold sitting. This was dressed in regimentals, having two faces, emblematical of his traitorous conduct, a mask in his left hand, and a letter in his right hand from Beelzebub, telling him that he had done all the mischief he could do, and he must hang himself.

At the back of the General was a figure of the Devil dressed in black robes, shaking a purse of money at the General's left ear, and in his right hand a pitchfork, ready

to drive him into hell as the reward due for the many crimes which his thirst for gold had made him commit.

In the front of the stage, and before General Arnold, was placed a large lantern of transparent paper with the consequences of his crime thus delineated, *i.e.*, one part, General Arnold on his knees before the Devil, who is pulling him into the flames; a label from the General's mouth with these words, "My dear sir, I have served you faithfully," to which the Devil replies, "And I'll reward you." On another side, two figures hanging, inscribed "The Traitor's Reward," and written underneath, "The Adjutant-General of the British army and Joshua Smith, the first hanging as a spy, and the other as a traitor to his country." On the front of the lantern was written the following: "Major-General Benedict Arnold, late Commander of the Fort West Point. The crime of this man is high treason. He has deserted the important post, West Point on Hudson's River, committed to his charge by his Excellency, the Commander-in-Chief, and is gone off to the enemy at New York.

"His design to have given up this fortress to our enemies has been discovered by the goodness of the omniscient Creator, who has not only prevented him carrying it into execution, but has thrown into our hands André, the Adjutant-General of their army, who was detected in the infamous character of a spy.

"The treachery of this ungrateful General is held up to public view for the exposition of infamy, and to proclaim with joyful acclamation another instance of the interposition of bounteous Providence.

"The effigy of this ingrate is therefore hanged (for want of his body) as a traitor to his native country and a betrayer of the laws of honor."

The procession began about four o'clock in the following order:

Several gentlemen mounted on horseback.

A line of Continental officers; sundry gentlemen in a line.

A guard of the City Infantry. Just before the cart drums and fifes playing the Rogues' March. Guards on each side.

The procession was attended with a numerous concourse of people, who, after expressing their abhorrence of treason and the traitor, committed him to the flames, and left both the effigy and the original to sink into ashes and oblivion.

The alarm which the visit of Arnold to the sea-coast of Connecticut occasioned, is the only event in the history of New Haven to which we need call attention before the announcement of peace. On the very day when New London was in flames, and the garrison at Fort Griswold was put to the sword after their surrender, the New Haven paper contained this notice.

NEW HAVEN, September 6, 1781.

On Friday morning last, between one and two o'clock, three of the enemy's vessels, a brig of sixteen guns and two armed sloops, came off to West Haven and landed one hundred and fifty men, who, having secured the sentinels and guards, eleven in all, surrounded several houses, where they fixed guard in such a manner that not the least alarm was given, nor was the invasion generally known in the parish (though compact) till near sunrise; all which time the enemy were collecting cattle, horses and other plunder. Several families knew nothing of the affair, nor missed their cows till they went to milk them. The alarm was not given in town till too late to afford any assistance, the enemy having effected their designs and got on board the vessels. They took off four of the inhabitants and about thirty head of cattle and horses.

The capture of Cornwallis, at Yorktown, in October of the same year, determined the great contest in favor of the Americans. The armies of the two

nations remained in the field for another year; but there was but little fighting, and a well-founded expectation of peace prevailed. The *Connecticut Journal* thus notices the rejoicing over the surrender of Cornwallis:

NEW HAVEN, November 8, 1781.

There have been public rejoicings in this and the neighboring towns on account of the signal and important victory obtained by His Excellency, General Washington, over General Earl Cornwallis. In this town, on Monday last, a numerous assembly convened at the Brick Meeting-House, where the audience were highly entertained with an animating, pathetic and ingenious oration, delivered by one of the tutors of the college, and a triumphant hymn sung by the students. The clergy and a number of other gentlemen dined in the State House. In the evening, the State House, College, and all the other houses round the Market place, were beautifully illuminated; the whole was conducted with the greatest regularity, good nature, festivity and joy.

On the 30th of November, 1782, provisional articles between the United States and His Britannic Majesty were signed at Paris, in which the United States were declared to be free, sovereign, and independent. On the 19th of April next following, at noon, General Washington proclaimed to the American army the cessation of hostilities. As soon as trustworthy tidings of that announcement reached New Haven, arrangements were made for a celebration. The following notice of the celebration appeared in the *Connecticut Journal*.

NEW HAVEN, May 1, 1783.

Thursday last was observed as a day of festivity and rejoicing in this town, on receipt of indubitable testimony of the most important, grand, and ever memorable event, the total cessation of hostilities between Great Britain and these United States, and the full acknowledgment of their sovereignty and independence. Accordingly, the day, with the rising sun, was ushered in by the discharge of thirteen cannon, paraded on the green for that purpose, under elegant silk colors, with the coat of arms of the United States most ingeniously represented thereon, which was generously contributed upon the occasion by the ladies of the town. At nine o'clock in the forenoon, the inhabitants met in the Brick Meeting-House for divine service, where were convened a very crowded assembly. The service was opened with an anthem, then a very pertinent prayer, together with thanksgiving, was made by Rev. Dr. Stiles, President of Yale College; after was sung some lines purposely composed for the occasion, by the singers of all the congregations in consort. Then followed a very ingenious oration, spoken by Mr. Elizur Goodrich, one of the tutors of the college, after which a very liberal collection was made for the poor of the town, to elevate their hearts for rejoicing. The service concluded with an anthem.

A number of respectable gentlemen of the town dined together at the coffee-house. After dinner, several patriotic toasts were drank.

At three o'clock were discharged thirteen cannon; at four, twenty-one ditto; at five, seven ditto; at six, thirteen ditto; at seven were displayed the fireworks, with rockets, serpents, etc.; at nine o'clock a bonfire on the green concluded the diversions of the day. The whole affair was conducted with a decorum and decency uncommon for such occasions, without any unfortunate accident. A most pacific disposition and heartfelt joy was universally conspicuous, and most emphatically expressed by the features of every countenance.

CHAPTER IV.

NEW HAVEN DURING THE WAR OF THE REBELLION.

ON the 7th of November, 1860, it was known that Abraham Lincoln had been elected President of the United States. This election was a triumph of the policy of the party which aimed to restrict slavery to the territory in which it already existed. It extinguished in the breasts of those who loved the institution of slavery, all hope of extending it into the virgin soil of the public domain by constitutional measures. Their only remaining hope now lying in illegal and revolutionary expedients, they determined to make war upon the National Government, to prevent, if possible, the inauguration of the President-elect, and to use the months that intervened before his accession to authority, in possessing themselves of the national purse and the national sword. By the aid of traitors in high places, they seized upon forts and arsenals within the States which afterward seceded, having first filled them with arms and ammunition; they scattered the army by sending the soldiers who had garrisoned the fortresses of the South to the forts on the remotest frontier of the West; they dispatched the vessels of the navy to the remotest seas; they emptied the treasury of the public money. By the aid of patriots as watchful to preserve the national life as the traitors were to destroy it, Lincoln escaped the plot for assassinating him on the way to the seat of Government, and was inaugurated on the 4th of March, 1861. On Friday, the 12th of April, the War of the Rebellion began by the bombardment of Fort Sumter, in the harbor of Charleston. Major Robert Anderson, a faithful and loyal officer of the United States Army, having refused to surrender the fortress to the rebels, they commenced to fire upon it at half-past four o'clock on the morning of that memorable day. On Sunday the fort was evacuated, and on Monday, President Lincoln, recognizing the fact that hostilities had begun, issued a call, for three months' service of 75,000 volunteers, and summoned an extra session of Congress to meet on the 4th of July. Saturday, Sunday, and Monday were days of intense excitement in New Haven. The strife of parties had been running high for months. Many citizens of New Haven had blamed the Republican party for exasperating the South by the election of Lincoln, and their sympathies had been with the secessionists more than with the men who had just come into power at Washington. But the bombardment of Sumter excited the indignation of this class of men, so that, with few exceptions, they immediately espoused the side of the Union against those who had fired upon the flag of the nation. Whatever fears had been previously entertained; whatever doubts disturbed the minds of thoughtful men in regard to the fidelity of Northern Democrats to the Union—it was immediately apparent that they were going to bury the issues of the past

and join with those who had elected Lincoln, in maintaining the Constitution and the Union. On Tuesday, the 16th, came the proclamation of the Governor of the State, calling for one regiment of volunteers for immediate service, and immediately enlistments began. On Wednesday, the 17th, about 1,200 of the Massachusetts quota of troops passed through New Haven, and were received at the depot, between Chapel and Wooster streets, by a great crowd, and saluted with cheers and music. On Thursday, the 18th, a second regiment was called for, and New Haven designated as its rendezvous. On Friday, a Home Guard of several hundred men—many of them too old to go to the war—was organized to preserve the peace of the city and prevent insurrection. Sunday was a day of as much excitement as the preceding Sabbath had been, but much less quiet. Another detachment of Massachusetts troops passed through the city in the course of the day. On Monday a large temporary building on Olive street, fronting Court street, built for the Presidential campaign, and named "National Hall," was hired for one year for the use of the Home Guard and other military uses, and here the Guard were drilled on successive evenings. Here also squads of men, who had enlisted in country towns, were quartered for several days, till regimental quarters were provided. Other squads found shelter at the State House. As soon as tents could be obtained the regiment was full, and went into camp on Monday, April 22d, near the hospital, in a field which is now covered with dwellings and gardens. So great was the zeal for enlistment, that within two days after the First Regiment was mustered in, several companies of the Second had arrived in New Haven, and all of its ten companies were making daily progress in filling their ranks. The companies, as they successively arrived, were provided with temporary shelter.

On Monday evening, the 22d of April, a crowded and spirited meeting was held in Music Hall to give voice to the popular feeling. The *New Haven Daily Register* of the next day reports it with the heading:

"GLORIOUS MEETING IN MUSIC HALL.

NEW HAVEN, UNION ALL OVER."

Mayor Welch presided, and men of all parties participated. Addresses were made by Rev. Dr. Leonard Bacon, Rev. Dr. Cleaveland, James F. Babcock, James Gallagher, Thomas H. Bond, W. S. Charnley, Thomas Lawton, Charles Ives, C. S. Bushnell, Ira Merwin and Rev. W. T. Eustis; and every patriotic sentiment was cheered to the echo. Resolutions were passed recommending the Common Council to appropriate ten thousand dollars for the families of volunteers. The city

authorities conformed to the recommendation, but doubled the amount. On Tuesday, the 23d, the ladies of the city met in large numbers at the shirt factory of Winchester & Davies, in Court street, to make garments and bedding for the soldiers. At the North Church, at Dr. Cleaveland's Church, and at the rooms of Mr. Shaver, a teacher of drawing, there were also parties of ladies making shirts, bandages and lint. A day or two afterward the Veteran Grays organized themselves as a home guard. Such was the record of New Haven during the last half of the memorable month in which the War of the Rebellion commenced.

Early in May a third regiment was called for, and immediately began to fill up. The greatest enthusiasm prevailed among the young men; and fathers and mothers willingly permitted their sons to enlist for the preservation of the national life.

On Thursday, May 9th, the First Regiment left New Haven for the theatre of war. At 3 o'clock p.m., they were reviewed at the camp near the hospital by Governor Buckingham and staff, and immediately commenced their march, through Davenport avenue, Broad, College, Chapel, Union, and Water streets, to the steamer *Bienville*, on which they were to sail without knowing whither. The next day, Friday, May 10th, the Second Regiment, under Colonel Alfred H. Terry, left its camp in Brewster Park, now Hamilton Park, about 6 o'clock p.m., and marched down Whalley avenue, Broadway, and Elm street to the Green, where at 7 o'clock a set of regimental colors was presented and received. Prayer having been offered by the venerable Dr. Leonard Bacon, the march was resumed, and the soldiers, accompanied and followed by an immense crowd of sympathizing friends, proceeded through Chapel and State streets, to the Steamer *Cahawba*, lying at Long wharf. The steamer, casting off its hawser about half-past eleven o'clock, moved away amid the cheers of the multitude. The patriotic enthusiasm of New Haven on that day was not greater than when the First Regiment departed, but there was a deeper and more tender personal interest in the Second, for the reason that so many of its officers and privates were citizens of New Haven. Two companies were entirely made up from the city in which the regiment had been organized, and one of them was the historic "New Haven Grays." The Colonel, Alfred H. Terry, though born in Hartford, had been brought up in New Haven, and three other New Haven men were on his staff.

On the 20th of May the Third Regiment, which had rendezvoused at Hartford, passed through New Haven. Arriving by train, they left the cars at Grand street, and marched to Long wharf, escorted by the Governor's Horse Guard, under command of Major Ingersoll, the Governor's Foot Guard, under Major Norton, and a company from General Russell's School. This was the last of the regiments enlisted for three months of service. Orders came about the time that the Third Regiment passed through New Haven that a fourth regiment should be raised, and that the enlistment should be for three years.

New Haven's first martyr to the war was Theodore Winthrop, who was killed at the battle of Great Bethel, Va., June 10th, 1861. He was born in New Haven, September 22, 1828; graduated at Yale College in 1848; and for the sake of his health visited soon after his graduation, England, Scotland, France, Germany, Italy and Greece. Returning to New York, he became tutor to Mr. W. H. Aspinwall's son, and afterward accompanied his pupil to Europe. On his return he entered the counting-house of Mr. Aspinwall in New York. He resided about two years in Panama, in the employ of the Pacific Mail Steamship Company; visited California, Oregon, and Vancouver's Island; resumed his situation in the counting-house for a short time; and then joined the unfortunate expedition of Lieutenant Strain, to explore the Isthmus of Darien. In 1854 he came home with shattered health, studied law, was admitted to the bar, and commenced practice in St. Louis; but the climate proving uncongenial, he soon returned to New York. When President Lincoln's proclamation calling out the militia was issued, after the fall of Fort Sumter, he joined the famous Seventh Regiment of New York, and went with it to Washington. Before the expiration of its term of service, he became military secretary to General Butler, at Fortress Monroe, with the rank of Major. He volunteered to accompany the expedition to Great Bethel, and when leading a charge upon the enemy's redoubt, leaped upon a log, shouting, "Come on, boys, one charge and the day is ours." A North Carolina drummer, seeing so fair a mark, borrowed a gun, took deliberate aim and buried a bullet in his bosom. He fell dead, "nearer to the enemy's works than any other man." His body was brought to New Haven and buried in the Grove street Cemetery.

Winthrop had fine literary taste, and would, doubtless, if his life had continued, have distinguished himself in literature. He was the writer of an article which appeared in the *Atlantic Monthly* of the same month in which he was killed, describing the march of the New York Seventh Regiment from Annapolis to Washington; and he left in manuscript three novels, "Cecil Dreeme," "John Brent," and "Edwin Brothertoft," which, since his death, have been given to the public.

The first regiment of volunteers for three months completed the quota of Connecticut; but three regiments were filled and accepted, and still there were twenty-four companies in different parts of the State and in different degrees of progress toward fullness. The second and third regiments having been accepted by President Lincoln, on condition that Connecticut should send two regiments of men enlisted for three years, and Governor Buckingham having agreed to the condition, well knowing that they would be needed, a call was issued on the 11th of May for the enlistment of men for three years, and in sufficient numbers to constitute two regiments. At the same time the men enlisted for three months were discharged. Most of them immediately gave their names to be enrolled for three years, and were in haste to go to

the front lest, as they said, the regiments already in the field should inconsiderately finish the war without waiting for reinforcements.

The General Assembly of Connecticut having adjourned *sine die* on the 3d of July, Governor Buckingham spent the Fourth at New Haven. In the forenoon there was a review of the volunteer and militia companies; in the afternoon a mass meeting to listen to addresses and the singing of the Children's Brigade.

Some weeks before, Mr. Benjamin Jepson, teacher of music in the public schools, had issued a circular, in which he urged that all children should be imbued with ineradicable love of country by early instruction in our national songs, and invited the children to assemble and rehearse a programme for the Fourth of July. In response to this call, a thousand children had assembled from time to time for practice. At two o'clock on the anniversary of the Declaration of Independence, the Children's Brigade assembled at the National Hall in Olive street, and, forming in procession, marched through some of the principal streets to the State House. The line included in the boys' division a representation of the Boston Tea-party in the costume of Indians, the Washington Zouaves, the Wide-awake Fire Engine Company, with a miniature engine, the Marine Guard, and the Infant Rifles; and in the division of the girls, the Daughters of Columbia, the Goddess of Liberty in a floral car, Young America with Continental Guard, Brother Jonathan in full costume, and the Union of the States, represented by thirty-four young ladies. The costumes of the children accorded with the parts assigned them; each carried a flag, and the entire procession was interspersed with banners and various appropriate devices. Arriving at the State House, the children were seated on the steps ascending to the north portico, and thus presented a beautiful tableau to the vast audience of from ten to twenty thousand, who stood below to listen to their songs.

The time of the three-months' men expired in July, and the First and Second regiments were mustered out at New Haven. The First arrived on the 28th of July, and the Second on the 5th of August. As the people had assembled to see them depart, so they now came in equal numbers to welcome their return. The volunteers for three months, almost unanimously re-enlisted for three years. More than five hundred men of these three regiments were afterward commissioned officers. They arrived home just in time to re-enlist and make themselves useful in drilling recruits; for on the 15th of August Governor Buckingham called for four more regiments, to be numbered in the order in which they were mustered in. The Sixth to be commanded by Colonel Chatfield, recently Colonel of the First, and the Seventh, under Colonel Terry, formerly of the Second, were to rendezvous at New Haven. The camp was located on Oyster Point, and there squads and half-formed companies from different parts of the State were received. Many who had been in the three-months' service joined these regiments. The veterans put their awkward comrades

rigidly through the manual, exercising them in company and battalion drill, morning, afternoon, and evening. The Sixth left New Haven on the 17th of September for Washington, and the Seventh followed on the 18th. From Washington they were despatched to the coast of South Carolina.

The Eighth did not pass through New Haven, but left Hartford on a steamboat.

The Ninth, recruited at Camp English, New Haven, was composed of men of Irish birth or parentage. Its commanding officer was Colonel Thomas W. Cahill, a much-respected citizen of New Haven, long connected with our State militia as Captain of the Emmet Guards. The recruits for this regiment came chiefly from the cities and large towns in the lower counties of the State, New Haven contributing about 250 men.

When Governor Buckingham issued orders in September, 1861, for the formation of the Tenth, he reached the limit set by the General Assembly in its May session. He therefore convened the assembly in a special session. In that session a law was passed, authorizing the Governor to enlist, organize and equip, according to his discretion, an unlimited number of volunteers, and directing the Treasurer to provide two million dollars in addition to the two millions already appropriated.

In accordance with this action of the General Assembly, the Eleventh, the Twelfth and the Thirteenth were organized in the autumn of 1861, and the Thirteenth spent the winter in barracks in the carriage factory of Durham & Booth, at the corner of Chapel and Hamilton streets. Their quarters being in the city, they were constantly visited by patriotic men and women, who brought the soldiers not only sympathy and moral support, but many physical comforts and luxuries. Prayer-meetings were numerous attended in the chapel by citizens as well as soldiers; quartets came and sang, and orators discoursed in the hearing of the soldiers. There was more sickness, however, within those brick walls than in the tented field of the Twelfth at Hartford.

Colonel Birge, who commanded the Thirteenth, was a strict disciplinarian. He enjoined neatness, cleanliness, and military bearing. Every belt and every shoe must be polished; every gun-barrel and bayonet must shine like a mirror; every hand must wear a glove of spotless white; every form must be erect. By some the Thirteenth was called "a dandy regiment," and it was thought that the men would never be willing to spoil their clothes in a fight. A year or two afterward, at the close of a hot battle, Colonel Birge being reminded of this prediction, replied: "I notice that they did not run away like some dirty regiments." Life at the barracks ended March 17th, when the regiment embarked on the Granite State for New York, thence to be conveyed by ship to the mouth of the Mississippi.

About the time when the Thirteenth began to appeal to the people of New Haven, by its presence in the midst of them, for personal attention, came also a circular from the National Sanitary Commission, which called for much labor, especially of

women. In the fitting out of the first three regiments, individuals, and especially women, had rendered much aid. The State being unprepared for war, everything for the outfit of soldiers was wanting, and was needed immediately. The ladies of New Haven, as has been already said, met and prepared bedding and clothing for the recruits who came to New Haven in April and May. The Fourth and Fifth Regiments needed less of this aid from private persons, because the State had taken care that the soldiers should be supplied through commissary officers, with clothing and other comforts, such as the earlier recruits had received from the bounty of patriotic individuals. Friends of the three-months' volunteers, however, continued to send to them boxes of comforts and luxuries as long as they were away from home. The Sanitary Commission had been organized at Washington in June, but the responses to its calls were not very liberal till autumn. The need of such an organization became so apparent, that, in October, arrangements were made for forwarding contributions of every kind suitable for hospital use as fast as they might be brought in. At a meeting for making such arrangements, A. C. Twining, Alfred Walker, Charles Carlisle, S. D. Pardee, Thomas R. Trowbridge, and Moses C. White were appointed a committee to aid in furnishing supplies for sick and wounded soldiers. Other members of the committee aided, but Mr. Walker was foremost in the work of this committee. On the 10th of October, he gave public notice that he would receive, pack and forward whatever the people saw fit to contribute for the Sanitary Commission. That he did not expect a large business, either in receiving cash or forwarding goods, is evident from the fact that he began to keep his account on the last leaves of an old ledger, devoting the last two pages to the cash account, and the preceding four to a record of articles received and forwarded. On the 19th he sent the first box; by November 6th he had filled the four pages, ending with box 287. Seeing such an unexpected increase of business, he secured free transportation by steamboat to New York, and thence with Government freight to Baltimore and Washington. The records and accounts were kept gratuitously by himself and those in his employ. The packing was done gratuitously by volunteers, who were for the most part of the sex that cannot fight. By such means the entire cash expenditure for a year was only \$1,242.01, which included boxes and freight. The cash brought in with other articles amounted to \$1,232.03. The record for the first year shows that Mr. Walker had forwarded 371 boxes and barrels to the Sanitary Commission and 44 boxes to Connecticut regiments. The value of the whole was, at a moderate estimate, more than \$25,000.

At the commencement of his second year's work, the ladies of New Haven came to his aid, organizing the New Haven Soldiers' Aid Society, to act mainly in co-operation with the United States Sanitary Commission, but with a special eye to the requirements of Connecticut regiments. The Society was permitted to occupy rooms in the State House,

and here the ladies were constantly employed for three years. Here cloth was cut and delivered to friends from towns in the interior to be made up; here garments were received when made, and packed to be sent to hospitals for distribution to the sick and wounded. The New Haven Society was, soon after its formation, authorized to act for the whole State in behalf of the U. S. Sanitary Commission, and one hundred and twenty towns, through their local associations, became its tributaries. These auxiliaries greatly swelled the list of consignments to Washington.

The officers of the New Haven Society were: *First Directress*, Mrs. A. N. Skinner; *Second Directress*, Miss M. T. Twining; *Third Directress*, Mrs. W. A. Norton; *Managers*, Mrs. William Bacon, Mrs. E. Barrett, Mrs. Bassett, Miss E. Bradley, Miss C. L. Brown, Mrs. L. Candee, Mrs. C. Candee, Mrs. R. Chapman, Miss R. Chapman, Miss C. Collins, Miss Dickerman, Mrs. H. DuBois, Mrs. J. W. Fitch, Miss J. Gibbs, Mrs. J. Goodnough, Mrs. E. S. Greeley, Miss M. Hillhouse, Miss I. Hillhouse, Miss S. B. Harrison, Mrs. C. A. Ingersoll, Mrs. B. Jepson, Miss A. Larned, Mrs. H. Mansfield, Mrs. H. Plumb, Mrs. D. C. Pratt, Miss P. Peck, Mrs. W. H. Russell, Mrs. G. B. Rich, Mrs. J. A. Root, Miss E. Sherman, Mrs. J. Sheldon, Miss M. Storer, Miss A. Thacher, Mrs. A. Treat, Mrs. C. R. Waterhouse, Mrs. William Winchester, Miss D. Woolsey; *Corresponding Secretaries*, Mrs. B. S. Roberts, Miss J. W. Skinner; *Recording Secretary*, Mrs. H. T. Blake; *Treasurer*, Mrs. Emily M. Fitch; *Advisory Committee*, Messrs. Alexander C. Twining, Charles Carlisle, Thomas R. Trowbridge, Alfred Walker, Stephen D. Pardee, and Dr. Moses C. White.

This society received and disbursed in cash between November 1, 1862, and November 18, 1865, the sum of \$27,304.96, of which amount the ladies earned by a Sanitary Fair, in 1862, \$2,912.26. The balance came from various towns and individuals, but New Haven was not behind any town in the State in the generous competition.

The records of the society, and the letters which it received from the U. S. Sanitary Commission and other consignees, are deposited with the New Haven Colony Historical Society. With them are the records which Mr. Walker kept from October, 1861, to November, 1865, of which the following is a summary:

Number of cases sent to the U. S. Sanitary Commission since October, 1861,	1,202
Number of cases sent to Connecticut regiments and hospitals	120
Total	1,412

The cases forwarded by Mr. Walker contained, of course, contributions from all parts of the State; but the ladies of New Haven not only gave their time and labor at the rooms of the society in the State House, but were zealous contributors and collectors.

The following table exhibits the contents of the 1,412 cases forwarded from New Haven to the U. S. Sanitary Commission and to Connecticut regi-

ments and to hospitals, from October 1, 1861, to November 1, 1865:

DENOMINATION.	QUANTITY.
Dried apples.....	30 barrels.
Other dried fruit (4 barrels).....	323 pounds.
Blackberry and other cordials.....	251 gallons.
Wine and spirits.....	340 "
Bay rum and cologne.....	188 bottles.
Jellies and jams (160 pounds)....	1,686 jars.
Farinaceous food.....	1,346 pounds.

On Thanksgiving Day, 1864, final victory being within the field of vision, the U. S. Sanitary Commission sent to the soldiers in the field a dinner, consisting, among other things, of six hundred tons of turkeys, numbering about 200,000. Connecticut furnished her full share of these; but it having been ascertained that the First Connecticut Cavalry was beyond the reach of those who carried the Thanksgiving dinner, the New Haven Soldiers' Aid Society sent them a dinner for New Year's Day. It was thus acknowledged by their Chaplain:

CAMP OF FIRST CONNECTICUT CAVALRY,
NEAR WINCHESTER, VA.,
January 3, 1865.

MRS. B. S. ROBERTS, *Soldiers' Aid Society, New Haven.*

MADAM,—You will be glad to know that the many good things contributed by our friends in New Haven reached here safely, and were a very considerable contribution to the grand *dinner* which our regiment enjoyed yesterday afternoon. Everything came in good condition—thanks be to excellent cooking and excellent packing. Our tables spread upon the snow, were covered with seventy-eight turkeys, one hundred and twenty-five chickens and with any quantity of mince pies, cakes, cheese, apples, pickles, preserves, etc.—an ample supply, not only for the immediate occasion, but for one or two meals to-day. If you could have heard the "Three cheers for the friends at home," and the many expressions of delight at the practical assurances afforded that, in all the holiday enjoyment, the soldier was not forgotten, you would have been fully repaid for the trouble which our enjoyment has cost you. With the help of your contribution of gloves and mittens, I was enabled to present to the regiment about 350 pairs—a very acceptable New Year's gift to men who had for two cold months done, barchanded, the hardest of cavalry work. * * *

Be good enough to accept our hearty acknowledgment to yourself and the ladies of your association, believing me, in behalf of the command,

Very respectfully and gratefully,

THEODORE J. HOLMES,

Chaplain First Connecticut Cavalry.

The Chaplain's Aid Commission was organized not long after the New Haven Soldiers' Aid Society. Mr. Alfred Walker, who had for a year been very active in forwarding cases to the Sanitary Commission, learning that his son, the Rev. Edward A. Walker, the Chaplain of the Fourth Regiment, which had been transformed from the Fourth Infantry to the First Heavy Artillery, desired a large tent for a chapel and reading-room, collected two hundred and twenty-five dollars and purchased the tent. After it had been exhibited for a day or two on the Green, it was forwarded to the regiment in Maryland, where it was set up, much to the satisfaction not only of the Chaplain, but of the officers and privates generally. The Chaplain soon after wrote:

The Temple of Nature, sufficient in summer, is too chilly in December; and of late it has been too leaky overhead and too wet under foot to be very inviting, and the number of worshippers has been sadly out of proportion to the accommodation. Now we have a church and Divine Service and something more like a Sabbath. We have our prayer-meetings and Bible-class, our lectures, temperance-meetings and musical society. We have also a melodeon; for when the men heard that the tent was coming, they started at once a subscription, declaring that they would now have service in style.

This canvas chapel and reading-room being found so useful, an association was formed of men from all parts of the State to supply Connecticut regiments with chapel-tents, books, magazines and newspapers, and generally to aid chaplains in promoting the moral and spiritual welfare of the soldiers. It was called the Chaplains' Aid Commission. Its officers were: *President*, Governor William A. Buckingham; *Vice-President*, Lieutenant-Governor Benjamin Douglass; *Corresponding Secretaries*, Rev. L. W. Bacon, Rev. A. R. Thompson; *Recording Secretary*, Francis Wayland; *Treasurer*, Stephen D. Pardee. The members of the commission, in addition to those in office, were: President Theodore D. Woolsey, Right Rev. John Williams,

Rev. Robert Turnbull, Rev. Leonard Bacon, Rev. G. W. Woodruff, Rev. P. S. Evans, H. M. Welch, H. B. Harrison, William H. Russell, William B. Johnson, Edward W. Hatch, Richard D. Hubbard, Henry T. Blake, F. J. Kingsbury.

The people responded to the call of the commission with great liberality. Money sufficient to purchase tents for the Fifth, Sixth, Seventh, Eighth, Tenth, Eleventh, Twelfth, and Thirteenth Regiments was soon collected. Each of the ten regiments in the field was also furnished with a library of from seventy-five to one hundred and twenty-five bound volumes. Mr. Wayland who, his brother being Chaplain of the Seventh, had special facilities for informing himself concerning the value of the aid thus rendered to the chaplains, cheerfully gave not only much time, but the use of his law office to the commission. For each of the libraries he provided a strong portable case, so constructed that by turning the key it was prepared for transportation and as easily prepared for use on its arrival at a new camp. By July, 1,284 bound volumes and 5,448 magazines had been sent, and an uncounted number of illustrated and religious newspapers. The books sent were of high character and great variety. Many of them were purchased expressly for the purpose by the Secretary, and others were choice volumes culled from their private libraries by friends of the soldiers. The tents and libraries were received with delight by officers and privates. Chaplain Hall, of the Tenth, wrote :

It is the most convenient thing imaginable. I have constructed a long writing desk, on which I place all the papers which you so kindly furnish me : at the end of the desk is my library of books. You will always find from ten to fifty men in the tent, reading or writing. The library is just the thing needed. The books are well assorted and entertaining.

The chapel-tents, however, were found to be so liable to seizure for military uses, that only those regiments which have been mentioned were supplied with them, and most of these were either left behind for want of transportation, or converted into hospitals. After about a year of active service, the Chaplains' Aid Commission rested for a time from its labor, till the Connecticut branch of the United States Christian Commission was organized in 1864. The officers of this branch were, with a few changes, the same as the officers of the Chaplains' Aid Commission. The work also was similar in some respects, but included the sending of voluntary Christian workers to the camps and hospitals.

The winter of 1861-62 saw a revolution in the construction of naval vessels. The old dynasty of wooden ships of war passed away, and the new era of iron came in. The Navy Department had determined to build an iron-clad as an experiment, and the contract had been taken by Mr. Cornelius S. Bushnell, an enterprising citizen of New Haven. To assure himself of the stability and buoyancy of the vessel under the stipulated coat of iron, he consulted with Captain John Ericsson, of New York, who showed him the plan of a vessel which was not merely iron-clad, but wholly of iron. Want of money had prevented Ericsson from constructing

a vessel according to his plan, but he believed that the vessel, if constructed, would be a success. Mr. Bushnell became a convert to Ericsson's opinion, and offered to risk his entire fortune in the experiment. A contract between the two was written and signed, and the work of construction commenced immediately. In just one hundred days the monitor was launched and immediately proceeded to Fortress Monroe, just in time to sink the Merrimac, and demonstrate the future worthlessness of "wooden walls." Mr. Bushnell had been much respected in New Haven, but by this achievement he became the hero of the day.

CORNELIUS SCRANTON BUSHNELL

was born in Madison, New Haven County, Conn., July 18, 1828. His father, Nathan Bushnell, and his mother, Chloe Scranton, were each descended in direct line from Francis Bushnell and John Scranton, who emigrated from England to the New Haven Colony in 1638, in the company which purchased the Guilford plantation from the Indians, and erected the stone house which may still be seen in good condition just north of the Guilford depot. The boyhood of Mr. Bushnell was spent in the retirement of his native town. Opportunities were few, but work was plenty on the farm and in his father's quarry. In winter he attended the village school, making the best use he could of the meager facilities it afforded. At the age of fifteen his life-work began. Starting out on a coasting vessel, he became, in less than a year, master of a sixty-ton schooner, and, by great effort and economy, succeeded in saving during the next five years the sum of \$2,700. This he invested in a house in New Haven, which henceforth became his home. The day after he became of age he was married to Emily Fowler Clarke. The result of the marriage was the birth of nine sons and one daughter, viz.: Sereno Scranton, Samuel Clarke, Charlotte Beecher, Cornelius Judson, Nathan, Henry Northrop, Ericsson Foote, Winthrop Grant, Edward William, Levi Ives.

Soon after his marriage he entered into partnership with his brother, Nathan Townsend Bushnell, in the wholesale and retail grocery business, establishing what has been, and still is, the largest business of its kind in the State. Early in 1858 he had become interested in the New Haven and New London Railroad, which was greatly embarrassed for want of funds. It had become evident that the running of trains must be abandoned unless a larger earning capacity could be secured; which could only be obtained by extending the road to Stonington. Mr. Bushnell was chosen president, and pushed the new enterprise with such vigor (obtaining assistance on his own notes indorsed by friends, and by securing a contract with Daniel Drew, of the Stonington steamboat line, to advance his notes for \$15,000, as rent of the steamboat dock at Groton) that through trains began to run from Boston to New York in 1860. Great difficulty was experienced, however, by the refusal of the New York road to sell through tick-

C. S. Burdwell

ets, or check baggage, owing to a contract then in force with the Hartford road. Mr. Bushnell accordingly had recourse to the Legislature, then in session at Hartford, and by the help of Charles R. Ingersoll, representative from New Haven, and afterward Governor of the State, secured the passage of a bill compelling the New York and New Haven Railroad to afford the Shore Line Railroad equal facilities with those granted to any other line. The bill was stoutly opposed by the powerful railroad corporation, which was managed then in Hartford, and not obeyed until the Supreme Court of the State issued a mandatory order after wearisome litigation. Mr. Bushnell's next effort was to obtain recognition of the U. S. Postal Department, and secure through mails over the Shore Line Road, but a long and exciting struggle was necessary before the result was gained. Meanwhile the war had begun, and Mr. Bushnell turned his attention to ship-building, employing the services of Samuel H. Pook, one of the most experienced and scientific naval constructors in the United States, who (after the completion of the steamship *Stars and Stripes*) had matured plans for the iron-plated steamship *Galena*. At the request of Hon. Gideon Welles, Secretary of the Navy, Mr. Bushnell, greatly aided by Hon. James E. English, Member of Congress from New Haven, had already secured the passage of a bill authorizing the Secretary of the Navy to appoint three naval experts to examine all plans for iron vessels, and adopt whatever might be approved. Under this bill a contract was entered into for the construction of the *Galena*. But many naval officers, doubting the ability of the vessel to carry the amount of armor proposed, the plans were submitted to Captain John Ericsson, of New York, who pronounced them satisfactory, saying that the vessel would easily perform the work that was expected of her. It was at this interview, however, that the plan of the Monitor was first brought to light. Mr. Bushnell having gained the information he desired concerning the *Galena*, was about to retire, when Captain Ericsson asked him if he would like to see a battery which would be absolutely impregnable to the heaviest shot or shell, and then placed before him the model of the Monitor, which he had invented many years before, but which, owing to the strained relations existing between him and the Navy Department, he had never presented to the United States Government.

Overjoyed at the discovery of the Monitor, and receiving *carte blanche* to do with the invention as he thought best, Mr. Bushnell at once called upon Secretary Welles and laid the plans before him, announcing that now the country was safe. He next associated with himself Messrs. Griswold and Winslow, of Troy, N. Y., as partners in the enterprise, offering each of them a quarter interest in the undertaking, retaining a quarter each for Captain Ericsson and himself, and then, with his associates, submitted the plans to the Naval Board. President Lincoln was greatly pleased with the plan, as were two members of the Board, Admirals Smith and Paulding. But Captain Davis declared that he would never sign a report recommending

its adoption. Matters thus had come to a standstill, and would have so remained indefinitely, had not Mr. Bushnell succeeded, by a pardonable subterfuge, in getting Captain Ericsson to come to Washington and plead the case before the assembled Board, which resulted in the adoption of the Monitor, though under such conditions as to make her construction the result of the ardent patriotism of her builders; who were under obligation to refund the money advanced by Government on account, in case the vessel should not prove a success on her trial trip. It should be borne in mind, therefore, that the Monitor was the property of the gentlemen above named when she went into action at Hampton Roads, and by defeating the *Merrimac*, saved Washington and the Union. Meanwhile other enterprises were on foot. A ship-yard was established at Fairhaven, Conn., from which Mr. Bushnell turned out more steamships for the Government than were furnished by any other builder in the country. In connection with Captain Ericsson and associates, eight monitor batteries, much improved on the original, were constructed, among them the *Puritan* and *Dictator*, either of which could have contended successfully with the navy of any nation in the world.

His relations with the Government necessitated his frequent presence in Washington, and brought him into contact with many public men. One of them, Senator Dixon of Hartford, placed Mr. Bushnell's name in the original Pacific Railroad bill as one of the corporators, and from that time forward this enterprise commanded his closest attention. He attended the meeting for organization at Chicago in 1863, and was appointed on the committee to procure subscriptions to the stock; two millions being required and twenty per cent. paid in, before the company could begin business. Of this two millions Mr. Bushnell secured more than three-quarters, and was himself the largest subscriber to the original stock. He was also largely instrumental in securing the amendment of 1864, without which it would have been impossible to finish the road. He was also the only corporator who remained from first to last in connection with the enterprise; leaving the Company only after it had become a great success, and, unfortunately for himself, embarking in the construction of what is now the Atlantic end of the Southern Pacific Railroad. Owing to the great financial depression of 1873, and the repudiation of Louisiana, the Company, from which Mr. Bushnell was to have received millions of dollars on contract, failed, and so embarrassed him that he was compelled to suspend, losing thus the large fortune which he had spent twenty years in accumulating. Overwork and anxiety prostrated him, and for some years his health was far from good. During 1864 he purchased an extensive iron property, called Iron Ridge, in Wisconsin, and erected a blast furnace, using charcoal as fuel, making pig iron at a lower price per ton than at any other furnace in the country. This property he sold to Byron Kilbourn's Rolling Mill Company for a large profit on the original cost. He also, with

associates, purchased a large lead and silver mine in Utah, which was afterwards sold to English capitalists for over \$300,000 profit. In 1871-72 he erected the Masonic Temple in New Haven, at a cost of more than \$200,000; at the present time not worth half the cost, owing to the removal of the railroad depot. In 1865-70 he built the horse railroad over the Cincinnati and Covington, Ky., great wire bridge, extending for several miles into the latter city. On January 10, 1869, Mr. Bushnell's wife died at New Haven, and was universally mourned.

On the 15th of March, 1870, Mr. Bushnell was married to Mrs. Caroline M. Hughston, widow of Hon. J. A. Hughston, of New York, by whom she had had three children, one son and two daughters. One of these daughters, Annie, has since died; the other has been married to Mr. Bushnell's third son, Cornelius Judson.

On the 9th of June, 1862, the General Hospital of Connecticut at New Haven was, by special arrangement with the War Department, opened for the reception of sick and wounded soldiers. The patients were, like other patients, under the care of the Hospital Society until April 7, 1863, at which time the care of the sick and wounded soldiers was transferred to the War Department. The building was vacated by the Hospital Society and leased to the Government, and thus became an army hospital, under the name of "The Knight Hospital." The name honored a beloved physician of New Haven, and the presence of hundreds of sick and wounded heroes in the city excited sympathy and desire to help in every humane and patriotic heart. Every day the hospital was visited by ladies, who wrote letters, assisted the surgeons in dressing wounds, and in many ways made themselves useful. The clergymen of the city were in turn present every day, to celebrate Divine Service for the benefit of those who were well enough to attend, and to administer the consolations of religion at the bedside of those who sent for them. These visitors brought daily gifts of fruit and flowers. The accommodations of the hospital were supplemented with temporary barracks and tents, so that hundreds could be simultaneously under treatment.

The battle of James Island occurred June 16, 1862. In it fell Captain Edwin S. Hitchcock, who was a private in the New Haven Grays when that company went to the war as part of the Second Regiment. Returning at the end of three months, he was appointed the deputy of the Postmaster in New Haven, but being solicited by Colonel Terry to raise a company for the Seventh, he did so, and received a Captain's commission. Hon. James M. Townsend, a former Captain of the Grays, who had befriended the company in many ways during its three months of service, permitted Captain Hitchcock to organize his company under the name of the "Townsend Rifles," and the popularity of both the patron and the commanding officer accelerated enlistment. The Townsend Rifles were the first company of Union troops that landed on the soil

of South Carolina, in November, 1861. From that time until the following June, Hitchcock participated in the toils and privations of the siege of Charleston. A day or two previous to the battle of James Island, he was sent forward, in command of Companies B and G, to reconnoitre the position of the foe. Preparations were made in accordance with the information thus obtained, and on the morning of the 16th of June an intrenchment of the rebels was assailed, the First Connecticut Battery opening with artillery, and the Seventh charging at double-quick. The official report says: "Captain Edwin S. Hitchcock, of Company G, among the foremost, and enthusiastically cheering on his men, was severely wounded in the thigh. He continued to call out cheerfully, and to fire rifles handed him by his men, until he received a rifle ball straight from the front through his upper lip. Four of his men undertook to carry him to the rear. While they were doing this, two of them—Sergeant W. H. Haynes and Private J. N. Dexter—were wounded by rifle balls, and they were obliged to leave the gallant Captain dying there." He died within the rebel lines, but his conspicuous valor had so stirred the admiration of the foe that they placed his body in a box and buried it with honor. The body was afterward taken home and reburied, with additional honors. A monument was erected to his memory by members of his company, which will be more appropriately described in the chapter on cemeteries.

In August of the same year, the battle of Cedar Mountain saddened every heart in New Haven, for in that fatal engagement she lost two of her noblest sons.

Lieutenant Henry M. Dutton was born at New Haven September 9, 1836. He was a son of the Hon. Henry Dutton, Professor of Law in Yale College, and in previous years Governor of Connecticut. Graduating at Yale College in the class of 1856, he studied law, and when the war burst into flame had acquired a larger practice than usually falls to the lot of lawyers in the first years of their profession. Inducing scores to join him, he left his office in Litchfield, and went to Hartford as a private in the Fifth Regiment. As a reward of success in recruiting, he received a Lieutenant's commission, and his popularity and influence were not less when he was an officer than they had been when he was in the ranks. From August, 1861, to August, 1862, he was on the bank of the Potomac, and learned its fords and ferries for nearly a hundred miles in doing duty as an officer of the picket. Sometimes only four of the twenty Lieutenants of his regiment were on the roll as ready for service, the others being absent or sick; but Dutton was constantly on hand, and found his pleasure in the discharge of duty, even when required to watch every fourth night. At the camp in Hartford and in Maryland, by the camp fire at night and as the regiment halted at noon on the march, Dutton was a favorite with officers and soldiers, on account of the buoyancy of his spirits. None could tell more amusing stories; none could repeat more snatches of poetry; none could better

sing a song; none so good a physician amid discomfort, home-sickness and blues as he. His cheerfulness shortened many a weary mile, and burst forth refreshingly in gleeful laughter and winning story. On Sunday morning, May 25, 1862, the regiment was for the first time exposed to a shower of rebel bullets, and one of Dutton's comrades says:

Well do I recollect amid that wild storm of the rebel charge, when their advance forced itself almost up to our lines, the splendid bearing of Lieut. Dutton as he maintained the line of his company, and with upright form and sword gleaming through the smoke, encouraged his men, until Ewell's whole division fell back repulsed before three scant regiments.

About this time his friends noticed that a change had come over him. He was still as cheerful and occasionally as gay as ever, but he was also at times thoughtful and serious. The same friend who described his bearing at Winchester, says:

From our first crossing into Virginia he had become gradually changed. Books became the companions of his leisure hours, or alone with some esteemed comrade, he gave voice to that thorough religious and heroic spirit that lay beneath the sparkling surface, and told of his glorious aspirations for the future life and his bright hopes for the future of his country. At Front Royal, about the last of June, in company with him I attended the last little prayer meeting which assembled in the regiment previous to his death; and as he did our singing that day, I felt that not the lips only but the heart entered into the spirit of the hymns. Soon after he became for a time a tent-mate of my own, and my interviews with him led me more than ever before to admire in him the man, the hero and the Christian.

The battle of Cedar Mountain was fought August 9th, 1862. Commencing at 5 P. M. it was at first an artillery duel, the two forces being about a mile from each other. Rapidly the enemy multiplied their batteries and concentrated upon the National troops a fire of such intolerable severity that it was determined to silence some of the guns by a charge of infantry. To General Crawford's Brigade, consisting of the Forty-sixth Pennsylvania, Tenth Maine, Twenty-eighth New York, and Fifth Connecticut was assigned the duty of capturing an enfilade battery on the right front. It was about six o'clock when the order was given. The troops sprang forward at the double quick into a murderous fire, which came not only from the battery in front, but from the whole line of the enemy. Still they pressed on, leaving in their path a wake of their dead and wounded. With loud cheers they rushed into the woods from which the unseen batteries were belching forth their incessant volleys, when there sprang from the underbrush such an overwhelming force of the rebels, pouring in such a point-blank fire of musketry, that the battery could not be taken. The Fifth Connecticut preserved its ranks till the men reached a small brook that flowed through the field. Here fifty men were struck down in two minutes. Most of the companies lost their leaders and straggled back to the protection of the wood from which they had issued. A large number, borne forward by the impetuosity of the charge, rushed into the midst of the enemy concealed near the battery and were there slain or captured. All the field officers were killed or made prisoners, and all the other officers, except five,

were wounded. After Captain Corliss was wounded, Lieut. Dutton led his company across the field, though but a remnant reached the wood in which the enemy were concealed. He is reported to have seized more than once the regimental flag from some fallen hero and borne it on till he could commit it to some one still able to carry it aloft. His commanding form could not long escape, and he fell, pierced by a volley of musketry. "History," says John S. C. Abbott, "has presented to my view few scenes more sad than the vision of the venerable father of this young man, wandering, a few days after the battle, over this field in the unavailing endeavor to find the remains of his beloved and only son."

Major Edward F. Blake, a son of Eli W. Blake, was born at New Haven, November 25, 1837. Graduating at Yale College in the class of 1858, he was for a time undecided in respect to his career in life, and spent two years in the study of modern languages and general literature. In 1860 he made choice of the law as a profession, and entered the Yale Law School. A few months afterward the war broke out, and though as yet uncertain whether duty called him to the tented field, he began at once to study army tactics and joined a company organized for daily drill. It cost him a severe struggle to decide upon entering into army life, so many phases of which were repugnant to his tastes and feelings. But he was not one to shut his eyes on any duty, and from month to month he approached nearer to the devotion of himself to his country. Accustomed from boyhood to annual camping-out parties and long rowing excursions, he went in the summer of 1861 with a party of friends to spend his vacation in the usual manner. While thus absent from home, he said one day to his companions, "Who would believe, fifty years hence, that we spent a month roving in this way up the Connecticut River, when great armies were fighting for the life of our Government?" In August, soon after his return from this excursion, he tendered his services to the Governor. A friend writes his recollections of a conversation he had with him as they chanced to meet one moonlight evening soon after he had come to a decision.

Although perfectly cheerful, as he always was, he was less gay—not in such exuberant spirits as I had often seen him. He had evidently been thinking very seriously and deliberately. He told me that he had not yielded to a first impulse—to any hasty enthusiasm—which might have prompted him to go at once into the army. He had preferred to wait, to satisfy himself that the war was what it seemed to him, "one of the pivotal wars of the world." I remember his expression perfectly. He had thought about it, he said, calmly, and was sure now that it was so—a war of principles; a war on which immense results for the whole world depended. And he said that with this conviction he was resolved to go as soon as he could, to have his share in it. I wish that I could remember our talk, word for word. I can only recall its general tone, and his manner and expression, so serious, so unselfish, so good, and that particular phrase, "one of the pivotal wars of the world."

In October he was appointed Adjutant of the Fifth Connecticut, then in the field in Maryland, and in the summer of 1862 was promoted to be Major. Shortly after his promotion, he was ordered to Connecticut as bearer of dispatches to the Gov-

ernor. It so happened that this detail brought him home on the day of the College Commencement, when classmates and friends were present to join with his family in welcoming his return. It was a dark hour of the war, and his heart was full of solicitude for his country. He said in private conversation, and said again when called up for a speech, "Young men of intelligence and education ought to join the army; they are needed and can do much." The next Sabbath he was at the communion table in the church where his family worshiped, with father and mother, brothers and sisters around him; before the next Sabbath he had returned to the field, had led his men into action, and had led them for the last time. In the heat of the action, as the Fifth was crossing the open field, a few men on the left flank faltered in their advance and sought shelter behind some rocks and bushes. Major Blake, running toward them, shouted, "Never let it be said that Connecticut men wavered to-day," rallied them and led them on to the woods in which the rest of the regiment were gallantly contending against great odds of numbers and position. Here Major Blake was instantly killed by a rebel bullet as he was waving his sword and encouraging his men. His body rests in an unknown grave.

During the winter of 1861-62, it had been thought that the number of enlisted men was sufficient to put down the Rebellion. The War Department issued orders April 3, 1862, discontinuing the recruiting service, and the ardor of the people for enlisting subsided. In May, when the Secretary of War asked Governor Buckingham for 600 men to fill up the Eighth, Tenth and Eleventh, so few responded that the call was modified into an order for the organization of a Fourteenth Regiment to join the 50,000 men designed for the camp of instruction at Annapolis. But the Fourteenth made slow progress in filling up, till in midsummer a new uprising of the people commenced, which was occasioned by disasters to the Union arms. As long as the people believed that there were men enough in the field, they preferred the pursuits of peace; but they were determined to save the country. The Governors of the loyal States united in a letter to the President, urging him to "call for such numbers of men as might in his judgment be necessary to garrison and hold all the numerous cities and military positions that have been captured by our armies, and to speedily crush the Rebellion." In response, the President issued a proclamation on the 1st of July, calling for 300,000 men, and on the 3d of July for the "immediate formation of six or more regiments." The response was speedy and vigorous. A large and spirited meeting was held in New Haven at Music Hall. Commodore Foote presided, and speeches were made by Governor Buckingham, Senator Dixon, Rev. Dr. Bacon, and Charles Chapman, of Hartford. It was resolved to put a regiment (the Fifteenth) into the field immediately. A recruiting committee was appointed, of which the active men were William S. Charnley, H. M. Welch, H. B. Harrison, S. D. Pardee, William H. Russell, A. D. Osborne, P. A. Pinkerman, Francis Wayland, Jr., J. W. King, E. S. Quintard,

D. J. Peck, Luman Cowles, Lucius R. Finch, Wyllis Bristol, C. A. Lindsley, John Woodruff, Lucius Gilbert, E. I. Sanford, Eli Whitney, B. S. Bryan, James H. Lansing, J. C. Hollister, J. D. Candee, D. H. Carr, E. Downes, C. S. Bushnell, Charles W. Elliot, D. C. Gilman, Rev. William T. Eustis, John A. Porter, C. B. Rogers, John W. Farren, R. S. Fellowes, L. R. Smith, H. E. Pardee, Alexander McAllister, H. D. White, N. D. Sperry.

Recruiting began immediately, and the committee, meeting daily, pushed the work so rapidly that the regiment was full and ready to move on the 25th of August. Dexter R. Wright was appointed Colonel, Samuel Tolles was Lieutenant-Colonel, and Eli W. Osborne was Major. These gentlemen were all from New Haven.

The camp was at Oyster Point, where the Seventh had rendezvoused, and from this camp the regiment took its departure on the 28th of August for Washington. No sooner was the camp vacated by the Fifteenth than it was occupied by the squads and companies that came for the Twentieth, which was immediately full, and departed on the 11th of September.

The call of the Governor was for six or more regiments, and the response was seven full regiments and a battery of light artillery, with 115 men.

But the call of July 3d was followed by another call from the Governor on the 4th of August for seven regiments of nine-months' men. Many, whose duties at home would not permit them to be absent for three years, cheerfully volunteered for nine months, but before the quota of Connecticut was full, recruiting lagged, and the Governor announced on the 21st of August that there would be a draft on the 3d of September, unless the requisition should be previously filled. Preparations were made for the draft, and among other preparations, four camps were established in different parts of the State, one of which was Camp Terry, at Grapevine Point, in New Haven. Many towns, and among them New Haven, filled their quota. On the day appointed for a draft, a crowd, estimated at from three to five thousand, gathered in the morning at the north portico of the State House. A citizens' meeting was organized, with Thomas R. Trowbridge as Chairman, and Edwin A. Tucker as Secretary. Joseph Sheldon immediately offered, on behalf of Arthur D. Osborne, \$15 each for two volunteers, in addition to all bounties. James Gallagher offered \$15 for one man. I. W. Hine and William A. Beckley each made the same offer. William Franklin offered \$15 for each of ten men; N. D. Sperry \$15 for each of ten more; John Woodruff \$15 for each of twenty more; Thomas R. Trowbridge \$15 each for thirty more; Hiram Camp \$15 for each of ten more. Each announcement was greeted with loud applause. Rev. George De F. Folsom made a short and spirited address, and offered \$15 for each of five men. A call was made for a general contribution, to be equally divided among those who should volunteer. S. T. Parmelee offered \$100; D. J. Peck, \$50; and James Gallagher having called for more, sums

of from \$1 to \$20 were passed up till the sum of \$1,200 for equal distribution had been received. At noon fifty-two men had volunteered, and \$15 each had been offered for eighty-eight more, besides an interest in the fund for equal distribution. Enlistments were continued, but at 3.45 o'clock twenty-five men were needed to fill the quota. The Selectmen then gave notice that the draft would begin at 4 o'clock; but as the number was nearly complete at 4 o'clock they delayed, and at half-past 4, N. C. Hall announced that the quota was full, and that there would be no draft in New Haven. Nine tremendous cheers broke forth, and the crowd dispersed.

The Twenty-third, the Twenty-seventh, and the Twenty-eighth rendezvoused at New Haven at the camp on Grape-vine Point. One of them left for the front in October and the others in November. In the course of two months Connecticut had awaked from the sleep to which she had resigned herself after the departure of the Thirteenth, and had raised fifteen additional regiments. New Haven had furnished her quota, and had been, and still continued to be, one of the chief centers of military activity. Many of her citizens made frequent visits to the camp, and welcomed to their homes the soldiers with whom they became acquainted.

In September, 1862, one of the heroes of the war in whom New Haven felt a special interest, fell in battle. Joseph King Fenno Mansfield was born in New Haven, though his parents removed to Middletown in his infancy. His ancestors had resided in New Haven from the first settlement of the town. Educated at West Point, he had continued in the army till the breaking out of the Rebellion, when he was promoted to be a Brigadier-General in the regular army. While bravely leading on his forces in the battle of Sharpsburg, September 17, 1862, he received a mortal wound, which soon terminated his life. When informed that there was no hope for him, he calmly replied, "If it be God's will, it is well." Middletown was the chief mourner. "No man was better known or loved in Middletown than Mansfield;" but the city of his birth was in sympathy with the city of his residence in the mourning at his burial.

At the battle of Fredericksburg, New Haven lost Captain Bernard E. Schweizer, a brave German soldier; Captain Addison L. Taylor, who being, when the war broke out, a pupil and a military instructor in General Russell's Collegiate and Commercial Institute, had drilled Captain Joseph R. Hawley's Company in the three months' service; Frank E. Alling, a student at Yale when he enlisted; and Sergeant Thomas E. Barrett, a much esteemed and successful teacher in the Eaton School. All these were in the Twenty-seventh Connecticut.

The State election of 1862 had been very quiet. Party excitement had subsided. The peace Democrats had shut their mouths, and the war Democrats were not disposed to displace Governor Buckingham. New Haven, unlike some other towns, had never witnessed any public anti-war demonstrations. Apparently the whole community were

united in the prosecution of the war. There was really, however, among those who were united in the prosecution of the war, a difference of opinion in regard to the manner of conducting it. The Democrats insisted that nothing should in any case be done that was not in accordance with the Constitution. The Republicans, though not disposed to alienate any true patriots, held that in such a struggle for the national life, the rebels had lost their right to that property in men which the Constitution guaranteed, so that whenever military necessity demanded the abduction or emancipation of slaves, the rebels were to be deprived of such auxiliaries. But there was great difference of opinion among Republicans during the year 1862 on the question whether all disloyal masters should be deprived of their slaves. One blow after another was struck at slavery. In March it was abolished in the District of Columbia, Congress appropriating \$1,000,000 for the compensation of loyal masters, and offering to give pecuniary aid "to any State which may adopt a gradual abolishment of slavery." It caused great joy in New Haven that its distinguished son, the Hon. James E. English, voted for the abolition of slavery in the District of Columbia. In June, a bill prohibiting slavery in the Territories was passed. On the 22d of September the President announced by proclamation that on the 1st day of January, 1863, he should, as an act of military necessity, declare all slaves free in every State then in rebellion against the United States. On the 1st day of January the proclamation was accordingly issued. Though approved by Republicans, it awakened some opposition, and a division took place in the ranks of the Democrats of Connecticut, some continuing to act with the Republicans in the support of Governor Buckingham, and others endeavoring, in the State election of 1863, to place Thomas H. Seymour in the gubernatorial chair. Two years of war had not sufficed to restore the Union. It had now become a war against slavery, and no great advantage had resulted to the Union cause from the emancipation of the slaves. The "peace men" of Connecticut rallied under the cry of "No more war," and declared that the Union could be saved only by the cessation of hostilities. So many "war men" were absent from the State, that there was reason to fear that the peace men were in the majority, and furloughs were freely given to soldiers to come home and fight the foe who were in the rear. The soldiers were unanimous in the opinion that the war should continue, and those who could not procure furloughs sent home the most impassioned appeals. This was in New Haven as dark a time as there was during the war. A daily union prayer-meeting was held to express the desire of the people that God would save the nation. The contest was so close, that though the State polled more votes in the absence of twenty-five regiments than she did in the Presidential election of 1860, Buckingham's majority was only 2,637.

While the Assembly was in session, tidings reached New Haven of the death of another of her heroes.

ANDREW HULL FOOTE

was born at New Haven, September 12, 1806. His father, the Hon. Samuel A. Foote, graduated at Yale College in 1797, and studied law; but the want of health compelling him to engage in active life, he became junior partner with his wife's father, in the West India trade, in New Haven. The trade with the West Indies was unusually prosperous in the latter part of the eighteenth century and the first few years of the nineteenth, but was crippled by the War of 1812. The next year after this war commenced, Mr. Foote removed from New Haven to Cheshire, his native town, and there his home was till his death. He was one of the representatives from Connecticut in the fifteenth and in the sixteenth Congress, a Senator of the United States from 1827 to 1833. He was again elected a representative to Congress, but being also chosen Governor of the State, he soon resigned his seat in Congress. His wife, Eudisia, daughter of Gen. Andrew Hull, of Cheshire, was a woman worthy of her husband. Andrew Hull Foote, the second son of this excellent couple, was bright, strong-willed and amiable, with a full share of that adventurous spirit which prompts boys to "go to sea." His father, instead of urging him to go to college, consented, after he had spent some years at the Episcopal Academy in Cheshire, that he should follow his bent and enter the navy. His first voyage was under the command of Lieutenant Gregory, better known now to New Haven people as Admiral Gregory, and was the occasion of a life-long friendship between the two Admirals. His second voyage was with Commodore Hull, in the Pacific Ocean. His hope was that his next cruise would be in the Mediterranean, trusting that his father's influence would procure for him what all young naval officers covet. But he was disappointed, and found himself assigned to further duty amid the West India Islands, where he had served with Gregory. While he was absent on that voyage, his mother received from him a letter which began with such words as these: "Dear Mother,—You need not be anxious any more about your sailor boy. By the grace of God, he is safe for time and for eternity." From this announcement he proceeded to tell of a great change that had come over him, including the definite purpose, "henceforth, in all circumstances, I will act for God." From that high purpose he never receded. His brothers saw a great change in him when he came home from sea the third time. The natural qualities which made him attractive, and were of themselves a promise of eminence in his profession, were beginning to be exalted and ennobled by this purpose to act for God. In that purpose there was the germ of a new and higher life. Such a purpose, breathed by God's spirit into a manly soul, makes that soul more manly. In eight years from the time he entered the service, during which he had been almost continually at sea, the midshipman became a lieutenant. Twenty-five years more made him a commander. After many years of almost uninterrupted service at sea, he was assigned to duty at the Naval Asylum at Philadelphia, that he might

enjoy a season of rest. Devoting himself to the welfare of the pensioners under his command, he won their affectionate confidence, obtained a beneficial moral influence over them, and by persuading many of them to give up their spirit ration and to pledge themselves for total abstinence from intoxicating drinks, introduced into the navy a new principle—the principle of voluntary self-reformation and self-improvement among the common sailors. That principle was further established in his next cruise. As first lieutenant of the Cumberland, on the Mediterranean, he persuaded the entire crew to abstain from intoxicating drinks. On his return from the two years' cruise in the Cumberland, being disabled by a painful disease of the eyes, he was ordered, after six months' absence, to the Navy Yard at Charlestown, Mass., where he remained through the whole period of the Mexican War. As soon as he was sufficiently recovered, he was put in command of the brig Perry, and sent to the coast of Africa, to serve again under his old friend, Commodore Gregory. Here he did much to promote harmonious co-operation between the British and American squadrons, and thus to break up the slave trade. In the Perry also he persuaded the seamen to forego the liquor ration, and had the pleasure of bringing back his vessel from that sickly coast without the loss of a single man. After another rest he sailed from the Chesapeake Bay in command of a magnificent sloop-of-war, the Portsmouth. Two years afterward he returned, having won the applause not only of his own countrymen, but of all "outside barbarians," by the bombardment and storming of the barrier forts in the Canton river.

His career as a navigator was now ended. He was assigned to duty at the Brooklyn Navy Yard, and when after three years the great rebellion broke out, his naval experience, wonderful promptitude and executive ability were put in requisition to prepare vessels for service. But the hero of the barrier forts of China was thought to be the right man to storm the forts which the rebellion had built on the Mississippi, the Tennessee and the Cumberland, for the protection of the States on the Gulf of Mexico. Foote was sent to Cairo, Illinois, to prepare a fleet of gunboats as speedily as possible. In three months everything was ready, and on Monday, the 2d of February, 1862,* a combined naval and land expedition left Cairo for the purpose of reducing Fort Henry on the Tennessee River. The land forces were under the command of General Grant. The naval armament consisted of seven gunboats under Commodore Foote. None but the officers knew its destination. It was generally believed that it was to descend the Mississippi. On Thursday of that week Fort Henry surrendered to the gunboats before the arrival of the land forces, which had disembarked nine miles below the fort. Ten days afterward, by the co-operation of army and navy,

* On Sunday, the day preceding his departure from Cairo, Commodore Foote went to church as usual, and finding that no minister was present, went into the pulpit, read a portion of Scripture, offered a fervent prayer, and in an address pertinent to all, but especially to the soldiers present, recommended that faith in God which he exemplified in his life.

U. H. F. etc.

Fort Donelson was captured, General Grant making his neat little speech to the commander who inquired for terms of capitulation: "Unconditional surrender. I propose to move immediately upon your works." Foote was severely wounded at Donelson, but, supported by crutches, he remained on duty till Island Number Ten, the uppermost and strongest of the rebel forts which obstructed the passage down the Mississippi, was captured on the 8th of April. His health was now so impaired by long and close application, by the pain of his wound, and grief at the sad tidings from home that three of his children had sickened and died, that his physicians enjoined him to leave the remainder of the work in other hands. He came home and spent a few months with his family, but before he was physically able reported himself ready for service. He was ordered to Washington to organize a new bureau in the Navy Department, and when his work was so far advanced that other hands could carry it on, he was transferred to the South Atlantic squadron. He accepted the appointment, feeling that his health was so impaired that he should never return, but determined to do his utmost for his country. Promoted soon after the capture of Island Number Ten to be a Rear-Admiral, he left home for his new command with higher rank than ever before; but was not permitted to enter upon his new career. The disease which his strong constitution had so long resisted, obliged him to stay in New York, and there he died, at the Astor House, June 26, 1863.

The time of the nine months' regiments expired in the summer of 1863, and in August the Twenty-third was formally received in New Haven and welcomed in an address by Mayor Tyler; the Twenty-seventh by Rev. Dr. Leonard Bacon; and the Twenty-eighth by Alderman Edwin Marble. The greater part of the Twenty-seventh had been captured at Chancellorville, and had recently been released from Libby Prison; but the seventy-five who escaped capture had fought in the thickest of the fight at Gettysburg, where of the seventy-five, eleven were killed, twenty-four wounded, and four captured. Henry C. Merwin, its Lieutenant-Colonel, was among the dead. He went as Sergeant with the New Haven Grays into the Second Regiment at the outbreak of war. After the muster-out, he remained at home till it became evident that the nation must put forth all its strength. He then gathered around him a full company of men for the Twenty-seventh, and was elected Lieutenant-Colonel.

Along the weary march to Gettysburg he inspired the men with his own indomitable spirit, and on that fated wheat-field, where the missiles of the enemy mowed down the waving grain, he fell mortally wounded, breathing words of noble self-forgetfulness: "My poor regiment is suffering fearfully!"

Though a native of Brookfield, he spent most of his life in New Haven.

In the same battle, Captain Jedediah Chapman, of New Haven, was killed. He also was a member of the Grays, and went with them in the three-months' service.

In the summer of 1863, when the soldiers who had enlisted for nine months were about to return

to their homes, another requisition was made for troops. On the 1st of July, it was ordered by the War Department that there should be a draft; that Connecticut should furnish 7,692 men; and that to cover exemptions 11,539 should be drafted. The draft was in many places opposed with great violence, and hostility to it culminated in New York in a bloody mob, in which the peace men vented their hatred of the war upon the unfortunate race who had been the innocent occasion of the strife. Negroes could not walk the streets in safety, and in several instances were clubbed to death or hung upon lamp-posts. Similar violence was threatened in New Haven, and was only prevented by the vigilance of the Mayor, Morris Tyler, and the co-operation of hundreds of good citizens, who kept themselves in constant readiness to support the right with all their might. Once, when the excitement was at the highest, every house occupied by people of color was vacated, and its inmates were sheltered for a night under the roof of some friendly neighbor.

So many of the drafted men were exempted for one cause and another, and so many deserted, that the gain to the army was of little importance. Another requisition was therefore made in October, and a draft ordered in case the requisition was not filled by January 5, 1864. Large bounties being offered, enlistments multiplied. Nevertheless, a draft would have been inevitable, but for a change of policy and of orders. Other States were already sending as soldiers men of color, and Connecticut in the draft of July had not refused to enroll men of color, or to accept their service if the lot fell upon them. A bill was now passed in the General Assembly authorizing the organization of regiments of colored men, and Governor Buckingham immediately called upon that class of citizens to volunteer, promising the same pay as for other soldiers. A thousand men soon offered themselves, and were organized as the Twenty-ninth Regiment. The Thirtieth Regiment was soon afterward commenced, and during the winter was recruited with material of the same kind, though it never became full. In addition to this expedient for completing the quota of the State, recruiting officers were sent to the three years' regiments in the field to offer a furlough of thirty days and a large bounty to those who would re-enlist. The large bounties attracted also veteran soldiers from Europe, so that, though the call in October for 300,000 men before January 5, 1864, had been modified into a call for 500,000 before March 10th, and the quota of Connecticut thereby increased from 5,432 to 9,053, the requisition was fully met, and there was no occasion for a draft. The next requisition was made March 14th, and the whole number required by the President being 200,000, the quota of Connecticut was 5,260. In two weeks the quota was full by voluntary enlistments, with so large a surplus to be credited on any subsequent call, that no demand was afterwards made upon Connecticut.

The year 1864 was a time of more hopefulness in New Haven than any preceding year since the commencement of hostilities. There were vicissitudes

tudes in the fortune of war; but the public mind had settled since the battle of Gettysburg in the summer of 1863, into the belief that sooner or later the Rebellion must collapse. The Southern Confederacy was surrounded by a military cordon so strong, that the utmost its Generals could accomplish was to keep possession of the territory thus surrounded. They could spare no forces for another invasion of the North. The Union armies must, sooner or later, advance their lines inward upon the territory they inclosed, or, by patient waiting and masterly inactivity, exhaust the resources of the foe. As the year advanced, and Sherman marched through Georgia to the sea, the hopelessness of the Confederacy became more and more apparent; and confidence of final success supervened upon the doubt and uncertainty which had burdened the public mind at an earlier stage of the conflict.

But the brighter prospect for the republic did not immediately bring to the soldiers exemption from danger and death, or to their friends an end of bereavement. In every church in New Haven many pews were occupied with families clad in the apparel of mourning, and every month increased the number. In June, Captain William Wheeler was killed while on the march with Sherman through Georgia. He was born in the City of New York August 14, 1836, but when he entered Yale College, his widowed mother removed to New Haven, and the family have, from that time, continued to reside here. When the war commenced he was practicing law in New York, and joined the famous Seventh Regiment. When the Seventh returned, he joined a Battery of Light Artillery, and was in several engagements in 1862 and 1863, including that of Gettysburg, where his battery was actively engaged on each of the three days. On the second and third days it was stationed on the crest of Cemetery Hill at the curve in our convex line, where the hardest fighting took place. He was soon afterward promoted to the Captaincy of his battery as a reward for his faithful and efficient service in a subordinate position. In October, he, with his battery, was transferred to Sherman's army, and arrived at Lookout Mountain a little too late to participate in its capture. At Chattanooga the question of re-enlistment came up, and Captain Wheeler, who had previously determined to leave the army in October, 1864, when the three years for which he had enlisted would expire, finding that all the men in his battery, except two, were willing to re-enlist if he would remain with them, but not otherwise, determined to retain his commission, and thus secure so many more men to the service of the country. But in the battle of Culp's Farm, near Marietta, seeing a vacant space between the First and Second divisions of the Corps, he moved his battery into the gap, and though informed by the General commanding one of these divisions that he could spare no infantry to support him, bravely replied, "Then I will support myself." A few minutes after, as he was sighting a gun, a rifle ball from a rebel sharpshooter pierced his heart, and he died instantly.

Another family in the same congregation mourned the death of Colonel Frank H. Peck. He was born in New Haven in 1836; graduated at Yale College in 1856, and went out to New Orleans in 1861 as Major of the Twelfth. Almost immediately it devolved upon him to be in command of the regiment, Colonel Deming being detailed to act as Mayor of New Orleans, and Lieutenant-Colonel Colburn as Superintendent of a railroad. In January, 1863, Colonel Deming having resigned, Major Peck was promoted to be Lieutenant-Colonel. During November and December, 1863, the men of his regiment having re-enlisted, the General commanding the division to which they belonged issued the following order:

HEADQUARTERS, FIRST DIVISION,
10TH ARMY CORPS,

NEW IBERIA, LA., January 1, 1864.

General Orders, No. 2.—The Twelfth Connecticut Volunteers, Lieutenant-Colonel F. H. Peck commanding, having re-enlisted, will comply with Special Orders, No. 1, from headquarters, 10th Army Corps, and proceed to New Orleans.

The General commanding this division thinks it due to this regiment, and to the Lieutenant-Colonel commanding it, to express his high opinion of its good conduct, whether in the face of the enemy or in camp, and especially the promptness with which it has come forward to re-enlist under the first call of the President of the United States. His regiment is the first that has been called upon under the law. It has set a good example. The country, and the authorities which represent the country, will not fail to honor the Twelfth Connecticut.

By command of Brigadier-General Emery,
FREDERICK SPEED,
A. A. General.

The regiment then returned home on the thirty days' furlough allowed to re-enlisting veterans. Arriving at New Haven on Friday morning, February 12th, in the steamer *Traveler*, the regiment was met at the dock by the city authorities, and, under escort of the Fair Haven Band, Battalion Veteran Reserve Corps, New Haven Grays, a Company from Russell's School, National Blues, Light Guard, city officers in carriages, marched to Music Hall, where a breakfast had been prepared for them. After the repast, Mayor Tyler welcomed the men in a brief and graceful speech, to which Lieutenant-Colonel Peck responded as follows:

In behalf of the officers and members of the regiment I thank you. We have been reminded many times that we were not forgotten by the friends at home. For a long period we have felt we possessed your friendship. But we feel that your generous demonstrations are entirely beyond our deserts. Two years ago this month, we left this city to join the army of General Butler. Since that time we have been in active service in the face of the enemy. How active that service has been, four hundred vacancies on our rolls to-day show. But discouragements and failures have never yet appalled us, we assure you. On the contrary, not to have re-enlisted would have seemed like abandoning the principles which actuated us in entering the service. At a proper time we shall be ready to take the field again. And let me say that it depends upon you who remain at home, as much, if not more than upon us, what the result of this contest will be. You who remain enjoying the blessings of peace should see to it that you are loyal in your legislation, loyal in your conversation, loyal in all things; and we pledge you our lives to carry your flag and our flag with honor into the face of the enemy.

The furlough having been extended, the regiment left New Haven on the morning of May 8th, and

arrived at New Orleans on the 17th of that month.

In the course of the summer, the Army Corps to which the Twelfth belonged was transferred from the Department of the Gulf to the command of General Sheridan in the valley of the Shenandoah in Virginia. On the 26th of August, Lieutenant-Colonel Peck received a commission as Colonel, in consequence of the resignation of Colonel Colburn. About the middle of September, Sheridan advanced up the valley of the Shenandoah, and in an engagement near Winchester on the 19th of the month, Colonel Peck yielded up his life for his country. As the command, "Forward, double-quick" issued from his lips, he was struck by a piece of a shell which exploded within a few feet of his head and severely wounded him. He died the next morning, saying: "I do not regret that I came to the war; it is all perfectly right;" and again, "I do not know how I could die in a better cause."

Still another family in the same congregation was smitten in the spring of 1865, when Major E. Walter Osborn, of the Fifteenth Regiment, having been mortally wounded in North Carolina, and taken prisoner, died in captivity. He was born in New Haven, and was thirty years old at the time of his death. He was for several years Captain of the Grays, and at all times was an active and enthusiastic member of that popular organization, which he commanded at the first battle of Bull Run when the Grays were in the Second Regiment. When the Fifteenth, or Lyon, Regiment was formed, he accepted the position of Major, in which he had nearly served through his three years of enlistment. He was on detached service when his regiment moved to battle, and on his own application obtained leave to join his comrades and share their fortune. His equable and generous temperament, his unselfishness, and his kindly manner, joined with high manly attributes, attracted love and confidence; and his death was sincerely mourned by the brave men who had known him in camp and battle.

These instances of chivalric surrender of life are conspicuous by reason of the military rank of those who died; but there were hundreds of privates who gave their lives to their country with equal unselfishness. New Haven holds the dust of 625 patriot soldiers of the War of the Rebellion. The verse which a poet of New Haven had previously written of soldiers of the Revolution, is equally appropriate when applied to the graves of these heroes of a later day.

Many of them died here in hospital and were interred afar from home and the graves of their kindred. But many of the soldiers whose remains lie in our cemeteries were natives or residents of our city. The soldier of the Revolution was buried on the field where he fell; but increased facilities of transportation have permitted the modern soldier to be gathered to the garnered dust of his fathers.

Here they repose
After their generous toil. A sacred band,
They take their sleep together, while the year
Comes with its early flowers to deck their graves,

And gathers them again, as Winter frowns.

Theirs is no vulgar sepulcher—green sods
Are all their monument, and yet it tells
A nobler history than pillared piles,
Or the eternal pyramids. They need
No statue nor inscription to reveal
Their greatness. It is round them; and the joy
With which their children tread the hallowed ground
That holds their venerated bones, the peace
That smiles on all they fought for, and the wealth
That clothes the land they rescued—these, though mute,
As feeling ever is when deepest—these
Are monuments more lasting than the fanes
Reared to the kings and demigods of old.

Tidings of the evacuation of Petersburg and Richmond reached New Haven on Monday, the 3d of April. Immediately a national salute was fired, and the bells rang out a joyous peal. Flags waved all over the city. At a meeting in Brewster Hall in the evening, to hear the result of the State election, there was great enthusiasm at the announcement of the news from the seat of the war, as well as at the report that the people of Connecticut had given a majority of 11,066 for their War Governor, and were not disposed to acknowledge that the war was a failure.

About this time, so many discharged soldiers were passing through New Haven on their way home, that a Soldiers' Rest was established in Olive street, where they might find food and shelter. The Quartermaster for the post furnishing an immense tent, and the officer in charge of the Knight Hospital a supply of mattresses and blankets, while a committee of citizens made an arrangement with a restaurant in the neighborhood for meals. The institution was put under the charge of Mr. George Buell, a discharged soldier, with instructions to keep it open night and day for all old soldiers returning home through New Haven, and to supply them gratuitously with food and lodging until they were able to proceed on their journey.

News of Lee's surrender reached New Haven on Sunday evening, April 9th. Between nine and ten o'clock the message flashed over the wires, but before the tidings could be extensively circulated, many, if not most, of the citizens had retired to their beds. They were, however, speedily awakened with the noise of bells and a national salute. The people sprang from their slumbers and rushed to the public square. Wood-piles and lumber-yards, and quartermaster's boxes, were appropriated without preliminary arrangements, and huge bonfires glowed in Chapel street, rendering the principal thoroughfare of our city as light as day. The crowd becoming larger and larger, a procession was formed and proceeded to visit the residences of prominent men. His Honor the Mayor first received the congratulations of the rejoicing people. He briefly responded, expressing his thanks for the honor, and his very great joy at the occasion of this demonstration. Hon. E. C. Scranton, Prof. Northrop, Hon. Henry B. Harrison, C. S. Bushnell, Esq., Hon. E. K. Foster, Hon. N. D. Sperry, Hon. John Woodruff, Edwin Marble, Esq., Rev. W. T. Eustis, Hon. E. I. Sanford, Major Pliny A. Jewett, and Major-General Russell were among those who were called upon. As the procession

moved, a blaze of fireworks was kept in the air, gongs were sounded, dinner-bells were rung, and horns added to the general jubilation of the occasion. The John Brown anthem was sung, and from hundreds of strong voices went up the doxology "Praise God from whom all blessings flow." Houses were illuminated from top to bottom; ladies waved their handkerchiefs, and banners and streamers were everywhere displayed. Till daylight, the city was wild with joy. At sundown the thunder of cannon was again heard on the Green, and simultaneously the bells in all the steeples rang forth a joyful peal.

On Tuesday evening, Tyler's Hall was filled with citizens to make arrangements for a celebration. A committee was appointed, and instructed to report at a meeting to be called by them when they were ready. That committee never reported, for the reason that, on the following Saturday morning, a message came on the wire that Lincoln had been assassinated. As soon as the despatch was put on the bulletin board, business was suspended; stores were closed; in less than an hour private and public buildings began to exhibit the drapery of mourning; flags were put at half-mast; the booming of cannon and the tolling of bells proclaimed the mournful tidings to the most secluded citizen. About ten o'clock A. M., a call for a meeting on the Green at noon was bulletined, and at twelve o'clock the largest assemblage ever witnessed in New Haven came together at the south portico of the State House. Prayer was offered by Rev. Dr. Bacon, and resolutions expressive of sorrow for the death of the martyred President, and determination to support the cause of the country against his murderers, were presented by Hon. James F. Babcock, Rev. Dr. Harwood, Hon. James E. English, Rev. W. T. Eustis, Hon. H. B. Harrison,

Judge E. K. Foster, Hon. R. I. Ingersoll, Rev. Dr. Bacon, and Rev. S. D. Phelps addressed the meeting, and the resolutions were adopted.

On Monday, a week later, the following Proclamation was issued:

MAYOR'S OFFICE,

CITY OF NEW HAVEN, April 17, 1865.

Wednesday, the 10th inst. having been officially appointed as the day for public funeral services in honor of our late President, Abraham Lincoln, I hereby request that all places of business be closed; and that no public amusements be permitted; and that the people assemble at twelve o'clock noon, with their religious teachers, in their respective places of worship, for prayer to Almighty God in behalf of our bereaved country, and for all in authority, especially for him who has been so suddenly called to the executive chair; that he may be enabled to emulate the wisdom and virtue of his illustrious predecessor, and to gain, like him, the confidence and affection of the loyal people of the United States.

By order of the Aldermen.

MORRIS TYLER,

Mayor.

In accordance with the request of the Chief Magistrate of the city, funeral honors were rendered to the Martyr President. It was a day of sorrow, and yet of joy. The people mourned for Lincoln as many a family had mourned for a son slain in battle. But as the joy of such a family was greater than their sorrow, so the rejoicing of the people over the downfall of rebellion, could not be drowned in their mourning for the death of Lincoln. Simultaneous with his death was the restoration of the Union. The joy which otherwise might have been intemperate and forgetful of God, was chastened into seriousness, but was nevertheless a great joy. In the course of four years, from April, 1861, to April, 1865, the War of the Rebellion had many times called the people of New Haven to assemble for prayer or the enlistment of volunteers, or various works in aid of soldiers, but after the solemn obsequies of the 19th of April, 1865, the city was no more disquieted with rumors of war.

CHAPTER V.

ANNALS OF THE CITY OF NEW HAVEN FROM ITS INCORPORATION IN 1784 TO ITS CENTENNIAL IN 1884.

BEFORE the War of the Revolution there was some movement, as we have seen, toward the incorporation of a city within the limits of New Haven. But the war was so imperative in its demands, that neither the General Assembly, nor those who desired a city charter, had leisure to attend to anything else than the salvation of the country from the invading armies of the enemy. But within a year after the proclamation of peace, the movement was resumed. If there had been opposition from persons living in remote parts of the township, much of it had been silenced by the erection of three new towns, viz.: East Haven, North Haven, and Woodbridge. A petition for incorporating New Haven as a city was presented to the General Assembly at the October session of 1783, and a bill in accordance with this petition was passed by the Upper House; but as an ad-

joined session was to be held in January, the Lower House deferred the consideration of the subject. In a town-meeting on the 5th day of January, 1784, the representatives of the town in the General Assembly were requested to exert themselves, that the act for incorporating a part of the town of New Haven be passed with all convenient speed. Three days afterward, the General Assembly passed the desired act of incorporation, enacting that all freemen of this State, inhabitants of New Haven, residing within certain limits, "shall be one body corporate and politic, in fact and in name, by the name of the Mayor, Aldermen, Common Council, and Freemen of the City of New Haven."

The people who asked for the act of incorporation were moved to do so by the hope that it would promote the revival of trade. We have spoken of

the increase of wealth in the town for several years before the war. Commerce was then in a more prosperous condition than ever before. In the year ending May 1, 1774, the exports amounted to \$142,000. Of the articles which contributed to make up this amount, there were 150,000 pounds of flax-seed, 15,000 bushels of wheat, 20,000 of rye, 33,000 of Indian corn, 2,000 oxen, and 1,400 horses. But the war put an end to commerce, and for about eight years New Haven suffered a paralysis of business and a wasting of its wealth. At the conclusion of the war, the ancient enterprise of the merchants of the place immediately began to reappear in the renewal of their intercourse with foreign countries. The incorporation of a city was one of a system of measures for developing and increasing the business of the place. Another was the removal of the animosities produced by a war in which neighbors had arrayed themselves on opposite sides. In a town-meeting, March 3, 1784, it was, on motion of Pierpont Edwards, Esq.,

Resolved, That Pierpont Edwards, John Whiting, David Austin, David Atwater, Sam Huggins, James Hillhouse, Jonathan Ingersoll, and Jonathan Dickerman be a committee to consider the propriety and expediency of admitting as inhabitants of this town persons who in the course of the late war adhered to the cause of Great Britain against the United States, and are of fair characters, and will be good and useful members of society and faithful citizens of this State, and that said committee report to this meeting.

The committee immediately brought in a report, which doubtless had been previously prepared, as follows:

We, your committee appointed to consider, etc., beg leave to report that by the Federal Constitution of the United States, each State, as to its internal police, is sovereign and independent to all purposes not specially excepted in the Articles of Confederation, and the power of admitting to inhabitancy is reserved unimpeached to each State, liable to no restriction or limitation but by its own municipal law: that there is no law of this State that forbids the persons pointed out in the vote of the town from coming into or dwelling therein; that by the express provisions of the statutes of this State, each town has the exclusive right and power of admitting its inhabitants; that by the articles of the Definitive Treaty, and the recommendations of Congress founded thereon, a spirit of real peace and philanthropy toward our countrymen of the aforesaid description is most strongly inculcated; that as these United States, by the blessing of Heaven, established their independence and secured their liberties on that basis, to which their wishes and exertions were directed, and as the great national question on which those persons differed from us in sentiment is terminated authoritatively in favor of the United States, it is our opinion, that in point of law and constitution, it will be proper to admit as inhabitants of this town such persons as are specified in said vote, but that no persons who committed unauthorized and lawless plundering and murder, or have waged war against these United States contrary to the laws and usages of civilized nations, ought on any account to be admitted.

With respect to the expediency of such a measure, we beg leave to report that in our opinion no nation, however distinguished for prowess in arms and success in war, can be considered as truly great unless it is also distinguished for justice and magnanimity, and no people can with the least propriety lay claim to the character of being just who violate their most solemn treaties, or of being magnanimous who persecute a conquered and submitting enemy; that, therefore, the present and future national glory of the United States is deeply concerned in their conduct relative to persons described in said vote; for although at the present moment, while the distresses and calamities of the late war are fresh in our recollection, we may consider a persecuting spirit as justifiable, we must, whenever reason assumes her

empire, reproach such a line of conduct, and be convinced that future generations, not being influenced by our passions, will form their ideas of our character from those acts which a faithful historian shall have recorded, and not from our passions, of which they can have no history. That as this town is most advantageously situated for commerce, having a spacious and safe harbor, surrounded by a very extensive and fertile country, which is inhabited by an industrious and enterprising people fully sensible of the advantages of trade, and as the relative and essential importance and consequence of this State depend on the prosperity and extent of its agriculture and commerce, neither of which can alone render it important and happy, we are of opinion that in point of real honor and permanent utility, the measure proposed will be highly expedient.

The report of the committee was accepted and approved, and the Selectmen were directed to act according to it in the admission of inhabitants.

The General Assembly had already provided, in the act incorporating the city, that,

Whereas, There are many persons living within said limits, who by law are qualified to be freemen of this State, that have not taken the oath provided by law to be taken by freemen—that all such persons living within said limits, who shall, before the second Monday of February next, procure the major part of the Selectmen of the said town of New Haven, to certify that they are qualified to be admitted and made free of this State, and shall, after procuring such certificate, take, before some Assistant of this State or Justice of Peace within and for the County of New Haven, the oath provided by law for freemen, shall, to all the purposes in this act mentioned, be considered as freemen of this State and freemen of the said City of New Haven.

Dr. Stiles records that the total number in the city qualified to become freemen, as certified by the Selectmen, was three hundred and forty-three. Fifty-five of them were college graduates. Eighty-four of the three hundred and forty-three had not taken the freeman's oath; some being absent, some disabled, and some indifferent. Dr. Stiles judges that there were about six hundred adult males living within the city limits; so that if his estimate was accurate, nearly one-half of the adult males were disqualified. The disqualification may have been owing to the want of the required amount of property or to adherence to the enemies of the United States during the war.

In the same session in which the city was incorporated, the General Assembly had made the cities and ports of New London and New Haven free cities and ports for the term of seven years from the first day of June, A.D. 1784, exempting merchants, whether citizens of Connecticut or not, importing foreign goods to the amount of £3,000, or bringing in £2,000 in money, from taxation on the profits of their business; exempting also their ships, if employed four months in a year in the European, Asiatic, or African commerce, "Provided, nevertheless, that no person, who having adhered to the King of Great Britain in the course of the late war, and under pretext of such adherence has been guilty of lawless and unauthorized plundering or murder, or who has waged war against the United States, contrary to the laws and usages of civilized nations, shall be entitled to the benefit of this act." It was further provided that nothing in the act should be construed to interfere with any laws or regulations of Congress, or to imply countenance or allowance of the slave trade.

If, after such declarations from the General Assembly, those inhabitants of New Haven who had been Tories during the war needed any further assurance that they would be kindly received as freemen of the State of Connecticut and of the new City of New Haven, the action of the town must have given them the assurance they required.

There seems to have been a general disposition on the part of those who had sympathized with Great Britain to accept the situation. Both parties united with equal alacrity in the organization of the city government. That the citizens not only desired the co operation of all residents, however alienated in the time past, but wished also to attract strangers to make New Haven their place of residence, appears in a vote passed at a meeting of the Mayor, Aldermen, Common Council and Freemen on the 23d day of September, 1784.

Voted, That Charles Chauncey, Pierpont Edwards, James Hillhouse, Timothy Jones, Jonathan Ingersoll, David Austin, and Isaac Beers, Esqrs., be a committee in behalf of this city, to assist all such strangers as shall come to the city for the purpose of settlement therein, in procuring houses and land on the most reasonable terms, and to prevent such persons, as far as possible, from being imposed upon with respect to rent and the value of houses and lands, and to give them such information and intelligence with respect to business, markets and commerce, mode of living, customs and manners, as such strangers may need; and to cultivate an easy acquaintance of such strangers with the citizens thereof, that their residence therein may be rendered as eligible and agreeable as possible.

It appears from contemporary newspapers that there was a particular class of strangers whom New Haven hoped to attract. Articles *contra* and *pro*, appear in the *Connecticut Journal* of May 8th and May 15th, respecting the desirableness of permitting and encouraging the Tory merchants of New York to remove to New Haven. The action of the State, as well as of the town and of the city, doubtless had reference to those New York men who, it was thought, could bring wealth and business to New Haven. At least one wealthy firm did remove from New York to New Haven. The *Connecticut Journal* of August 25, 1874, contains this announcement.

The subscribers, being desirous of availing themselves of the generous laws and invitation of the Legislature of this State at their late session, have removed from New York to the City of New Haven, where they will open and have ready for sale on Monday, the 6th of September next, a large and elegant assortment of European and India Goods, suitable to the present and approaching seasons, which they will sell at the same advance as they do in New York, a mode they mean strictly to adhere to through the course of their trade. Their friends in general, and particularly those of this State, are requested to call upon them at the above day, or any future period; when they will have the satisfaction of being supplied with goods immediately imported from Europe by inhabitants of this State.

We have for sale Madeira and Sherry wines, of the first quality, by the pipe or quarter-cask; also, London Porter in casks and bottles. N.B.—Cash, Pork, Beef, Potash, Butter and Flax-seed will be taken in payment.

BROOME & PLATT.

NEW HAVEN, August 25th.

It is not known to the writer that any other merchants removed from New York to New Haven. New Haven grew by a natural growth, but New York could not be grafted in upon so small a

stock. The firm of Broome & Platt were for a time, or seemed to be, very prosperous, importing in vessels sailing from Great Britain direct to the harbor of New Haven. But after a few years the business was removed back to New York, and the firm finally failed. The partners both died in poverty in New Haven. Twins were born to Mr. Broome, whom he named respectively George Washington and Horatio Gates; and for the twins, he had constructed the double-headed mahogany cradle which is preserved in the rooms of the New Haven Colony Historical Society. It was received with other articles of furniture by Mr. Ezra Lines in payment of house rent when Mr. Broome had become old and impoverished. Mr. Augustus Lines, in his history of the cradle, relates that his father, Mr. Ezra Lines, was accustomed, when a young man, to work as a tailor in the houses of both the partners of this wealthy firm, for "fifty cents a day and his keeping." He also relates that the younger of the twins spent his last years in Hartford, where he earned a meager support in old age by sweeping and making fires in several offices. The last time Mr. Lines saw him, he inquired, being then nearly eighty years of age, about the mahogany cradle.

Reference has already been made to the census taken in 1787, and we repeat in this place the figures which it reported, showing the sum total of the population within the city limits at that time. The total was 3,364; of whom 1,657 were males and 1,707 were females.

Dr. Dana gives us another census taken in 1800 or 1801, just before the printing of his century sermon. He reports the population at that time as 1,914 males; 2,086 females. This makes a total of 4,000. Families, 730; dwelling-houses, 524; stores, 110; barns and shops, 337.

Dr. Dwight says that the whole number of houses in the spring of 1808, as he numbered them, was 720, and that 314 of them were built "on the streets forming the squares."

The same authority gives 5,157 as the population of the town of New Haven in 1800; of which 4,049 were included in the city. The United States Census gives New Haven in 1810 a population of 6,967. Dr. Dwight explains that this signifies that there were so many in the town; the number in the city being 5,772.

By the act of incorporation, it was provided that there should be a meeting of said city holden annually in June, at such time and place as by the by-laws of said city shall be directed, for the purpose of choosing all the annual officers of said city. And that the annual officers of said city, chosen at such meeting, shall continue in office until the expiration of the month of June then next, unless others shall be sooner chosen and qualified in their stead. It was also provided that the Mayor, having been chosen by the city assembled in legal meeting, should hold his office during the pleasure of the General Assembly. The Act having also provided that the first meeting of the city should be holden at the State House in New Haven on the 10th day of the next February, at nine of the clock in the

forenoon, for the choice of the Mayor, Aldermen, Common Council, and Sheriffs of said city, and minutely defined the method in which the freemen should proceed in their meeting, Roger Sherman was at that meeting elected the first Mayor, and the General Assembly having never intimated that it was their pleasure that he should be removed from the office, continued Mayor as long as he lived.

ROGER SHERMAN

died in 1793. To this record of his death ought to be added some of the principal events of his honorable and useful life. He was born at Newton, Mass., April 19, 1721. When he was at the age of twenty years, his father died, and consequently the care of a large family devolved on him and an older brother. In 1743 he removed to New Milford, Conn., and became a partner with that brother in a mercantile business. His opportunities of attending school in his boyhood had been very limited; but his clear and strong intellect gathered knowledge from every quarter. In 1745 he was appointed county surveyor, and in 1754 he was admitted to the Bar. While a resident of New Milford he also became a Justice of the Peace and a Justice of the Quorum, a Deacon of the Church, and a representative of the town in the General Assembly. Removing to New Haven in 1761, he was soon appointed Judge of Common Pleas, and an Assistant

Roger Sherman's House in Chapel Street.

or Member of the Upper House in the Legislature. He was annually re-elected to the latter office for nineteen years, and held his judgeship till 1789, the latter portion of the time on the Bench of the Superior Court. In 1774 he was appointed a Member of the first Congress, a post in which he continued till his death; at which time he held a seat in the Senate, having been elected thereto in 1791. In the Congress of 1776 he was one of the committee to draft the Declaration of Independence, and during the war he served on some of the most important committees, and was successively a member of the Board of War and Ordnance and of the Board of Treasury. While so much occupied

with national affairs, he was also during the war a member of Governor Trumbull's Council of Safety. For many years previous to the Revolutionary War he was the Treasurer of Yale College; and, the war being ended, his fellow-citizens in New Haven called him to be the chief officer of the newly incorporated city.

In the *Columbian Register* of August 19, 1845, is "A Plan of part of Chapel Street, showing the Buildings and Occupants about the year 1786."

STATE		STREET.

It was drawn by Deacon Charles Bostwick, who is said in the context to be the only person remaining who resided or had his place of business in that section of Chapel street in 1786. Probably Mr. Bostwick was at that date an apprentice to a saddler on Chapel street. In an advertisement in the *Connecticut Journal* of November 6, 1794, "Charles Bostwick respectfully informs the public that he has taken a shop opposite the Church in New Haven, where he carries on the saddling and harness-making business in their various branches." Ten years later he was in Chapel street, informing his customers and the public on the 9th of February, 1804, "that he has removed his saddling business to his new shop, nearly opposite Miles' Tavern." At the time which the diagram represents there was not a brick building on that part of Chapel street. The first brick building between State and Church streets was erected by Colonel William Lyon, and was occupied as a banking-house for the New Haven Bank for several years.

At a city meeting, September 22, 1784, it was

Resolved, That the streets in the City of New Haven be named as follows, viz.: The street from Captain Samuel Munson's corner to Thomas Howell, Esq.'s shop, STATE STREET. The street from Cooper's corner to Captain Robert Brown's corner, CHURCH STREET. The street from Dixwell's corner to Dunbar's corner, COLLEGE STREET. The street from Tench's corner to Andrus' corner, YORK STREET. The street from Captain Samuel Munson's corner to Tench's corner, GROVE STREET. The street from Bishop's corner to Darling's corner, ELM STREET. The street from Rhode's corner to Mr. Isaac Doolittle's corner, CHAPEL STREET. The street from Andrus' corner to Thomas Howell, Esq.'s shop, GEORGE STREET. The street from John Whiting, Esq.'s corner to the head of the Wharf, FLEET STREET. The street from Captain Thomas Rice's to Ferry Point, WATER STREET. The street from Captain Leverett Hubbard's corner to Captain Trowbridge's corner, MEADOW STREET. The street from Mr. Hezekiah Sabin's to Douglas' House, UNION STREET. The street from the Rope Walk to Storer's Ship-yard, OLIVE STREET. The street from Major William Munson's to Captain Solomon Phipps', FAIR STREET. The street from Grove street across the squares, a little west of Pierpont Edwards, Esq.'s house over into George street, ORANGE STREET. The street across the middle squares in front of the Court House and other public buildings, TEMPLE STREET. The street between the dwelling-houses where Mr. Timothy Jones, deceased, dwelt, and where Mr. David Austin, jun., now lives, up through the square to the Green and across the opposite square, near the new Jail, COURT STREET. The street across the upper squares from Grove street to George street, which runs between the dwelling-house and store of Henry Daggett, Esq., HIGH STREET. The street from Mr. Joseph Howell, across the squares, between the old and new houses of Mr. Joel Atwater, CROWN STREET. The street from Mr. Ebenezer Townsend's corner to Captain Moses Ventre's house, CHERRY STREET. The streets or ways from Mr. Josiah Burr's house, out on Mt. Carmel and Amity Roads, BROADWAY.

TEST TIMOTHY JONES,
Clerk.

We propose to follow, in the remainder of this chapter, the course of events through the century which followed next after the incorporation of the city; avoiding, however, as much as possible, subjects which in our Table of Contents have been designated for treatment in separate chapters.

The first thing, after the organization of the city government, which requires mention, was the visit of the first President of the United States.

Washington, having been inaugurated in April,

had suffered with a severe illness in August. Congress having, in September, taken a recess of three months, the President determined to make a tour through New England for the re-establishment of his enfeebled health; for the pleasure of reviewing the scenes of his first military campaign as Commander-in-Chief; and of meeting the associates who had contributed to lessen his toils and invigorate his spirit in times of peril and despondency.

About the middle of October he left New York, accompanied by his two secretaries, Mr. Lear and Mr. Jackson, and was absent a month. He traveled in his own carriage, and proceeded by way of New Haven, Hartford, Worcester, Boston, Salem, and Newburyport, as far as Portsmouth in New Hampshire. He returned by a different route through the interior of the country to Hartford, and thence to New York.*

We extract from the *Connecticut Journal* of October 21, 1789, the following narrative of his passage through New Haven.

On Saturday last the Legislature of this State, now in session in this city, having received information of the approach of the President of the United States of America, passed the following resolve, viz.:

GENERAL ASSEMBLY, STATE OF CONNECTICUT.

NEW HAVEN, October, A.D. 1789.

In the House of Representatives, Mr. Edwards, Governor Griswold, Mr. Tracy, Major Hart, Mr. Dana, Mr. Larned, Mr. Ingersoll, Colonel Seymour, Colonel Leffingwell, Colonel Grosvenor, Mr. Davenport, are appointed, with such gentlemen as the Honorable Council shall join, a committee to prepare and report an address from this Legislature to the President of the United States, on his arrival in this city, and to meet the President at some convenient distance from said city, and attend him to his lodgings, and to present such address as shall be ordered, and to attend the President on his journey as far as propriety shall in their opinion require.

TEST. JAMES DAVENPORT, Clerk.

IN THE UPPER HOUSE.

John Chester and James Hillhouse Esquires are appointed to join the Committee of the House of Representatives in the affair above mentioned.

TEST. GEORGE WYLLYS, Secretary.

The Legislature also requested his Excellency the Governor to order his Company of Guards in this city to attend the committee in escorting the President.

At the time appointed by the President, the committee presented him with the following address.

To GEORGE WASHINGTON, President of the United States of America.

Impressed with the sentiments which animate the millions of our fellow-citizens, We, the Legislature of the State of Connecticut, cannot on this occasion be silent.

Your presence recalls to our admiration that assembly of talents, which with impenetrable secrecy and unvarying decision, under the smiles of Divine Providence, guided to victory and peace the complicated events of the late long and arduous war.

The scenes of perilous horror through which you conducted the American arms, taught your country and mankind to receive you as the greatest of heroes. Your sacred regard to the rights of freemen and the virtues of humanity, inspired the united voice of all America to hail you as the first and worthiest of citizens.

With grateful veneration we behold the father of his country—our friend; our fellow-citizen; our supreme magistrate.

When peace had succeeded to the vicissitudes of war, your ardent desire for retirement was sanctioned by the voice of patriotism.

Your country has again solicited your aid. In obedience to her wishes, you have sacrificed the felicity of dignified retirement, and have hazarded on the tempestuous ocean of

* Sparks' Life of Washington.

public life, the rich treasure of your fame. This display of patriot zeal gives you a new right to what you before possessed, the hearts of all your fellow-citizens.

While we thus express our sentiments and those of the freemen whom we represent, we beg liberty to assure you of our zeal to support your public administrations.

May the Divine Being, who has given you as an example to the world, ever have you in his Holy keeping; may He long preserve you, the happiness and the glory of your country; may the assurance that the government formed under your auspices will bless future generations, rejoice the evening of your life; and may you be finally rewarded with the full glories of immortality.

In the name and behalf of the Legislature of the State of Connecticut,
SAMUEL HUNTINGTON, *Governor*.

To which address the President was pleased to return the following answer.

To the Legislature of the State of Connecticut.

GENTLEMEN,—Could any acknowledgment which language might convey, do justice to the feelings excited by your partial approbation of my past services, and your affectionate wishes for my future happiness, I would endeavor to thank you; but to minds disposed as yours are, it will suffice to observe that your address meets a most grateful reception, and is reciprocated in all its wishes with an unfeigned sincerity.

If the prosperity of our common country has in any degree been promoted by my military exertions, the toils which attended them have been amply rewarded by the approving voice of my fellow-citizens. I was but the humble agent of favoring heaven, whose benign interference was so often manifested in our behalf, and to whom the praise of victory alone is due.

In launching again on the ocean of events, I have obeyed a summons to which I can never be insensible. When my country demands the sacrifice, personal ease will always be a secondary consideration.

I cannot forego the opportunity to felicitate the Legislature of Connecticut on the pleasing prospect which an abundant harvest presents to its citizens. May industry like theirs ever receive its reward, and may the smile of heaven crown all endeavors which are prompted by virtue, among which it is justice to estimate your assurance of supporting our equal government.

G. WASHINGTON.

NEW HAVEN, October 17, 1789.

The President received also the following address from the Congregational Ministers of the City of New Haven.

To the President of the United States.

SIR,—The Congregational Ministers of the City of New Haven beg leave to make their most respectful address to the President of the United States. We presume that we join with the whole collective body of the Congregational pastors and Presbyterian ministers throughout these States in the most cordial congratulations of themselves, of their country, and of mankind, on your elevation to the head of the combined American Republic. As ministers of the blessed Jesus, the Prince of Peace, we rejoice and have inexpressible pleasure in the demonstrations you have given of your sincere affection towards that holy religion which is the glory of Christian States and will become the glory of the world itself at that happy period when liberty, public right, and the veneration of the Most High, who presides in the universe with a most holy and benevolent sovereignty, shall triumph among all the nations, kingdoms, empires and republics on earth. We most sincerely rejoice in the kind and gracious providence of Almighty God, who hath been pleased to preserve your life during your late dangerous sickness, and to restore you to such a degree of health as gives us this opportunity to express our joy, and affords us the most pleasing hopes that your health may be firmly established. We pray the Lord of Hosts, by whose counsels and wisdom you have been carried triumphantly and gloriously through the late war, terminating in the establishment of American Liberty, and perhaps in the liberty of all nations, that He would be pleased ever to have you under His holy protection; continue you a blessing to Church and State; support you under your arduous cares; and perpetuate that estimation and honor which you have justly acquired of your country. May this new and rising republic become, under your auspices, the most glorious for population, per-

fection of policy, and happy administration of government, that ever appeared on earth; and may you, Sir, having finished a course of distinguished usefulness, receive the reward of public virtue in the kingdom of eternal glory.

EZRA STILES.

JAMES DANA.

JONATHAN EDWARDS.

SAMUEL WALES.

SAMUEL AUSTIN, JUN.

CITY OF NEW HAVEN, October 17, 1789.

To which the President was pleased to return the following answer.

To the Congregational Ministers of the City of New Haven.

GENTLEMEN,—The kind congratulations contained in your address, claim and receive my grateful and affectionate thanks. Respecting, as I do, the favorable opinions of men distinguished for science and piety, it would be false delicacy to disavow the satisfaction which I derive from their approbation of my public services and private conduct. Regarding that deportment which consists with true religion, as the best security of temporal peace and the sure means of attaining eternal felicity, it will be my earnest endeavor (as far as human frailty can resolve) to inculcate the belief and practice of opinions which lead to the consummation of those desirable objects. The tender interest which you have taken in my personal happiness, and the obliging manner in which you express yourselves on the restoration of my health, are so forcibly impressed on my mind, as to render language inadequate to the utterance of my feelings. If it shall please the great Disposer of Events to listen to the pious supplication which you have presented in my behalf, I trust the remainder of my days will evince the gratitude of a heart devoted to the advancement of those objects which receive the approbation of Heaven and promote the happiness of our fellow-men.

My best prayers are offered to the Throne of Grace for your happiness and that of the Congregations committed to your care.

G. WASHINGTON.

CITY OF NEW HAVEN, October 17, 1789.

The citizens of this place were highly gratified by the presence of the President of the United States, who came to town last Saturday afternoon in good health. The next day he attended Divine Service in Trinity Church. His Excellency the Governor, his Honor the Lieutenant-Governor, Hon. Roger Sherman, the honorable the Speaker of the House of Representatives, with the Treasurer, dined with him; and attended the afternoon service at the Rev. Dr. Edwards' Meeting.

Early on Monday morning the President set out from hence for the Eastern States.

Dr. Dutton, in his "History of the North Church in New Haven," relates this anecdote.

President Washington, when passing through this part of the country, spent a Sabbath in New Haven. Appointment was made by or for him to attend the Episcopal Church in the forenoon, and the White Haven Church in the afternoon. Some of Dr. Edwards' people, who were desirous (as often happens in similar cases) that their minister should do credit to himself and them by preaching what is flippantly called "a crack sermon," took care that he should know of the appointment. In the afternoon a great multitude followed Washington to the White Haven Church. When Dr. Edwards rose to deliver his discourse, much to the disappointment of those who were desirous of a specially great sermon, he gave out this text: "Train up a child in the way he should go, and when he is old he will not depart from it," and observed: "In speaking from these words, I shall direct my remarks principally to the children in the galleries." He had designed that discourse for that afternoon, and doubtless thought that the services of the sanc-

tuary of the King of kings should not be changed on account of the entrance of an earthly magistrate. Probably Washington respected him more than he did the minister in Rhode Island, who, in similar circumstances, preached a sermon, the object of which was to compare Washington, as the deliverer of his country, with Christ as the Redeemer of the world.

Washington was everywhere greeted on this occasion with demonstrations of attachment to himself personally, and was pleased to find evidence that the new constitution and the administration of the government under it were acceptable to the public. Mr. Sparks says:

Such was the enthusiasm which was now felt by all classes of the community in regard to Washington—an enthusiasm inspired by his virtues and his fame—that it was impossible for him to move in any direction without drawing around him thousands of spectators, eager to gratify their eyes with a sight of his person, to greet him with acclamations of joy, and to exhibit testimonies of their respect and veneration. Men, women and children, people of all ranks, ages and occupations, assembled from far and near, at the crossings of the roads and other public places where it was known he would pass. Military escorts attended him on the way, and at the principal towns he was received and entertained by the civil authorities. Addresses were, as usual, presented to him by corporate bodies, religious societies, and literary institutions, to which he returned appropriate answers.

This journey was in all respects satisfactory to him, not more as furnishing proofs of the strong attachment of the people, than as convincing him of the growing prosperity of the country, and of the favor which the constitution and the administration of government were gaining in the public mind. He was happy to see that the effects of the war had almost disappeared, that agriculture was pursued with activity, that the harvests were abundant, manufactures increasing, the towns flourishing, and commerce becoming daily more extended and profitable. The condition of society, the progress of improvement, the success of industrious enterprise, all gave tokens of order, peace, and contentment, and a most cheering promise for the future.

On his return from this journey the President spent a night in New Haven, but without any public demonstration. The *Connecticut Journal* of November 11, 1789, contains the following:

Yesterday afternoon the President of the United States came to town from the eastward *via* Hartford, and early this morning set out for New York.

In order to promote the increase of traffic, both foreign and domestic, the Chamber of Commerce was instituted April 9, 1794. At first a by-law rendered the officers ineligible to the same offices for more than two years. It appears to have been forgotten for several years after 1814, and, having been brought to light, was repealed in 1837. In the first year of the history of the Chamber, "in consequence of a contagious fever in this city, many of the members left the place, and no meeting was held from the last of July to the 29th of October." With this exception, monthly meetings were held for several years after the organization of the Chamber. Then the interest declined for some years till 1872, when many new members joined simultaneously, and the organization returned to the position and influence it occupied at the beginning of the nineteenth century.

Its Presidents have been Elias Shipman, 1794-96; Joseph Drake, 1796-98; Elias Shipman, 1798-

1800; Isaac Beers, 1800-2; Elias Beers, 1802-4; Henry Daggett, 1804-6; Joseph Drake, 1806-8; Isaac Tomlinson, 1808-10; Henry Daggett, Jun., 1810-12; Isaac Tomlinson, 1812-14; Elias Shipman, 1814-21; Gilbert Totten, 1821-34; Roger Sherman, 1834-37; Ezra Hotchkiss, 1837, died 1866; Thomas R. Trowbridge, 1872-83; Henry G. Lewis, 1883-86; James D. Dewell, 1886.

The contagious fever mentioned as occurring in the year when the Chamber of Commerce was instituted, was a more severe epidemic than has occurred in New Haven from that time to the present. In the appendix to Dr. Dana's Century Sermon, he observes: "In the former part of the year 1794, the scarlet fever, or putrid sore throat, prevailed. To this succeeded the yellow fever. The dysentery followed in 1795. The mortality by the first was 50; by the second, 63; by the last, 75. Of 140 who had the yellow fever, 77 recovered."

The terror which the epidemic of 1794 inspired, may be better appreciated by reading the following edict of non-intercourse. We copy it from a paper which has evidently been "posted up."

NORTH HAVEN, August 26, A.D. 1794.

At a meeting of the Civil Authority and Selectmen of the Town of North Haven, together with a number of other respectable inhabitants,

Resolved: First.—That we heartily sympathize with the inhabitants of the City of New Haven in their present distressed circumstances, and are willing and desirous to assist them every way we are able, consistent with safety.

Second.—That it is our earnest desire that the inhabitants of this town would refrain from going into said city until such measures shall be adopted by the said citizens as shall render it safe for us to go in, of which the earliest notice shall be given.

Third.—It is our desire that the householders of this town would not receive any individual or family that shall come out of said city into their houses until sufficient proof can be obtained of their being clear of that contagious disorder now among them.

Lastly.—That these resolutions be posted up in suitable places, and we will use our influence, and wish all the inhabitants to do the same, to carry them into execution.

JOSEPH PIERPONT,
SAMUEL MIN,

Civil Authority.

PETER EASTMAN,
JOSEPH BROCKEE,
JOSHUA BARNES,

Selectmen.

The first notice in the newspaper of the sickness occurs April 10, 1794:

It is reported in many parts of this State that a disease now rages in this city similar to that which prevailed in Philadelphia last fall, which report is without foundation. The scarlet fever, sometimes denominated the ulcerous sore throat, or canker rash, which has raged in the neighboring towns, has been the prevailing epidemic in this city ever since the 1st of January, 1794. The number who have been affected with this epidemic is 290, of which only 8 have died. The malignancy of the disease has abated, and its symptoms appear comparatively mild.

The following official notice was issued in July, and was followed by weekly reports of the state of the city, published in the *Journal*, by the same committee:

CITY OF NEW HAVEN, JULY 8, 1794.

To the Public.

The epidemic disease which has for some months past been prevalent among the inhabitants of this city, and other sickness, has been truly afflicting to many of the citizens

thereof; and as the reports in the country respecting the mortality of this disease have been various, and, as we believe, very much exaggerated: To relieve the minds of our friends in the country, and by order and direction of the authority and the body of the people in this city, we beg leave to submit to the public the following as an exact statement of the numbers who have died within the limits of this city since the first day of January last past in each month, and shall continue to publish the numbers hereafter weekly during the continuance of the disease:

1794.

From January 1st to February 1st.....	8
" February 1st to March 1st.....	9
" March 1st to April 1st.....	13
" April 1st to May 1st.....	10
" May 1st to June 1st.....	11
" June 1st to July 1st.....	26
Total.....	77

Forty-three of the above number died with the malignant scarlet fever, eighteen with the consumption, sixteen with erratic diseases. Of the above numbers have died fifty-one persons under twenty-one years of age. Six persons have died since July 1st, one of which was an adult.

EENEAS MUNSON.
SIMEON BALDWIN.
DYER WHITE.

A week later the committee report two deaths, and that few persons are now sick in town, and that the epidemic is evidently decreasing. July 23d they report that two deaths only have happened during the week, and that though the epidemic still continues, there are few persons sick with it, and "none of them to our knowledge dangerous." July 30th, the committee report that one person only had died the week past. The next report is dated August 13th. The committee state that having accidentally omitted to publish a list of deaths in this city last week, they now report the names of four persons who died between July 30th and August 5th, and the names of four persons who died between August 5th and August 12th. The next week they report that there have been only four deaths, and certify that they know of but five persons who are now sick with putrid fever, and that some of them are in a fair way of recovery, and they flatter themselves that an observance of the regulations lately adopted will prevent the progress of the fever and remove the apprehensions of their friends in the country.

The next report bears the same date as the poster of the civil authority and Selectmen of North Haven. There had been during the week, nine deaths; all but one of putrid fever.

September 2d.—The committee to make weekly reports of the deaths and state of sickness in this city, certify that the following deaths have taken place since the date of their last publication. [Names of five persons.]

As the committee consider their honor concerned in the faithfulness of their reports, they have felt a degree of mortification to hear that the truth of their reports has in some instances been scrupled; and as they are convinced that a uniform relation of the simple truth is the best mode of correcting the errors of vague and unguarded rumors, they have only to assure the public that in preparing their reports of deaths, their own recollection has always been corrected by the books of the sexton; and they are confident that not a single death in the city has escaped their notice. They are happy further to certify that the scarlet fever, which was the prevailing epidemic at the time they began their reports, is now, they hope, nearly extinct. They do not know of a single patient sick of that disease in the city. They further

certify that they have flattering prospects of a speedy termination of the putrid fever. Several who were sick with it at the date of their last publication have since recovered, and only one has died. We know of but three persons who are hard sick at this time; and four convalescents, some of whom have had the disease very severely. They also certify that no person is now sick of that disease in any part of the city west of the creek dividing the Old from the New Township, nor on the Wharf or its vicinity where the disease began; and that the utmost care has been used for several days past, thoroughly to cleanse the wharf and buildings adjoining, of everything that is thought to aid the progress of the contagion.

September 10th.—The committee report six deaths, and after careful inquiry, further certify that they know of but twelve persons who are any ways affected with the disease, four of whom have had the disease severely and are recovering fast; four or five of the others have the disease slightly, and but one of them is at present considered dangerous. That the sick are still principally in the New Township, two in Fleet street, one in a cross street of the south square, and none on the Wharf; that the disease has evidently within ten days past assumed a milder aspect, and that where a physician has been called on the first appearance of the disease, they have of late been very successful.

September 16th.—The committee report four deaths, and further certify that they know of but seven persons sick of the fever this day; two of these have been very sick and are now convalescing; three are yet hard sick; the others have a prospect of having it lightly.

September 23d.—The committee report three deaths, and further certify that there are fourteen persons sick of the putrid fever; that six of them are better and in a fair way of recovery; that three are dangerous; that the fever has not arrived at a crisis with the others; that the disease still grows milder in its attacks and more readily yields to the power of medicine. They further certify that there is but one person sick in all that part of the city northward of George street and west of Union street, which divides the Old from the New Township; that the public roads leading to and through the city and the principal streets of trade are entirely free from it.

September 30th.—The committee report eighteen deaths, and further certify that there are fifteen persons sick with the putrid fever; eight of whom are getting better, four are dangerous, and the fever has not arrived at a crisis with the other three; and that there is but one person sick with the fever in all that part of the city north of George and west of Union streets.

October 7th.—The committee report seven deaths and further certify that there are twelve persons sick with the fever, three of whom are dangerous; that the fever has not arrived at a crisis with the others, and that one only of the above list has been taken sick within the last three days. They further certify that Dr. Hotchkiss, who is in a fair way of recovery, is the only person sick of the fever within the nine original squares of the city.

October 14th.—The committee report five deaths, and further certify that there are but eight persons in any way afflicted with the disease; that only one

of them has been taken sick within the last six days (with her the fever has not arrived at a crisis); that all the rest, except one whose case is doubtful, are better and in a fair way of recovery.

October 21st.—The committee certify that Mr. Nathaniel Jocelyn, aged 73, who died last evening, is the only person since their last report. He had been sick with the putrid fever, which left him in a declining state. They certify that there are only three persons in any way affected with the fever, one of whom is dangerous, the others recovering; that those sick of the fever are in the new township. They further certify that the families which left the city on account of the sickness, have many of them returned and others are daily returning.

October 29th.—The committee report two deaths, and further certify with peculiar pleasure that the putrid fever (as the late contagious disease has been called) is now wholly extinct, and no remains of it exist in the city. They also certify from their own observation, and particular inquiry of the physicians, that the city at this time, compared with former seasons, enjoys an uncommon degree of health. The committee are happy to find that the alarm of the country has subsided with the cause of it; that the intercourse with the country is again freely opened; and they assure the few of their fellow-citizens who still remain in the country that they may safely return.

Here the work of the committee ends. The *Connecticut Journal* of January 1, 1795, contains the names of persons who died during the year 1794, and of persons who have recovered from yellow fever.

The deaths by scarlet fever were..	50
“ “ “ yellow “ “ ..	63
“ “ “ consumption and	
lingering diseases were.....	51
The deaths by other infirmities	
and diseases were.....	15
Died at sea.....	12

191

Census of the city in 1791, souls, 3,471.

The mortality of 1794 is more than one-twentieth part of the souls.

The number who recovered from the yellow fever was 77.

In the above summary of deaths in 1794, one of the epidemics of that year is called the yellow fever; but that name does not occur in any of the weekly reports issued by the committee.

In 1795, New Haven was again afflicted with an epidemic sickness. This time it was the dysentery. There were, according to Dr. Dana's report, seventy-five deaths in that year by dysentery; a greater number than by either one of the epidemics of the preceding year. A Middletown newspaper reported "in New Haven twenty-five have died in one week, which is seven more than in any one week last year." This statement was made in advocacy of Middletown as the place for the autumnal session of the General Assembly, Hartford being also visited with epidemic sickness. The New Haven paper replies:

The fact is New Haven has suffered greatly from the prevalence of the yellow fever last year and the dysentery this; but when it is insinuated that the distress of the present epidemic is greater than that of the fever in 1794, we declare the information false. Last year two-thirds of those who fell victims to the above-mentioned fever were heads of families; this year, of those who have died with the dysentery more than three-quarters have been children. We cannot boast of the health of our city, but we can say with truth that there is not now more than one-third the number of sick that there were three weeks ago; that not more than four persons are deemed dangerous; that the deaths within the last five days have greatly diminished; and that no person has been attacked with the epidemic for four days past. We can also assert that this disease in its former attacks on this city has invariably subsided in the early part of October or sooner, and that the present weather is happily calculated to obstruct contagion and restore health. Thus circumstanced we hope and believe that the inhabitants of Middletown before the 8th of the ensuing October may congratulate this city on a restoration to health.

As the session of the General Assembly was held in New Haven, we may conclude that the frosts of autumn had put an end to the epidemic before the 8th of October. But for some reason a different policy prevailed in 1795 from that which the civil authority adopted in 1794. There were no weekly reports in the newspaper of the sanitary condition of the city. It is only by way of Middletown that we learn that there were twenty-five deaths in one week.

The only other epidemic in New Haven during the century now under review, sufficiently severe to require a notice from the general historian, is the visitation of the Asiatic cholera in 1832, in which there were twenty-six fatal cases. Taking into consideration the increase in population during the thirty-six intervening years, this was an epidemic much less destructive than those of 1794 and 1795. It was in comparison so mild, that, having here mentioned it, we need not again call it to mind. In 1849 there were a few cases of cholera, but they were too few to constitute an epidemic.

In the *Connecticut Journal* of March, 1798, is "an accurate account of the number of inhabitants, buildings, etc., in the city" on the 15th day of February in that year.

The number of buildings has increased in a very equal proportion to the number of inhabitants.

Proportion of males to females in 1787, as 1,000 to 1,030;
in 1798, as 1,000 to 1,205.

After this unofficial, but apparently careful census, there is nothing which requires notice till we come to the description of New Haven, which President Dwight wrote in 1810.

President Stiles dying in 1795, Timothy Dwight, D.D., was elected the same year to the presidency of Yale College, so that for the remainder of his life he was a resident of New Haven. Entering with zeal into the privileges and duties of local citizenship, he acquainted himself with the statistics and resources of the place, and more than almost any other person wrote out, for the information of his contemporaries living elsewhere, and of subsequent generations of people residing in New Haven, the description of the city as it was during his residence within it. Believing that one who would acquaint himself with the New Haven of that day should see the description of the place as given by Dr. Dwight, we transcribe nearly the whole of it from his “Travels in New England and New York.”

The area occupied by New Haven is probably as large as that which usually contains a city of six times the number of inhabitants in Europe. A considerable proportion of the houses have court-yards in front and gardens in the rear. The former are ornamented with trees and shrubs; the latter are luxuriantly filled with fruit-trees, flowers, and culinary vegetables. The beauty and healthfulness of this arrangement need no explanation.

The houses in this city are generally decent, and many of the modern ones handsome. The style of building is neat and tidy. Fences and out-houses are also in the same style; and, being almost universally painted white, make a delightful appearance to the eye; an appearance not a little enhanced by the great multitude of shade trees, a species of ornament in which this town is unrivaled. Most of the buildings are of wood, and may be considered as destined to become the fuel of a future conflagration. Building with brick and stone is, however, becoming more and more frequent. The mode of building with stone which seems not unlikely to become general, is to raise walls of whinstone, broken into fragments of very irregular form, laid in strong mortar, and then to overcast them with a peculiar species of cement.

The corners, frames of the doors, arches and sills of the windows, cornices and other ornamental parts, are of a sprightly-colored freestone. The cement is sometimes divided by lines at right angles in such a manner as to make the whole resemble a building of marble; and being smooth and white, is, of course, very handsome. Several valuable houses have been lately built in this manner, and the cement, contrary to the general expectation, has hitherto perfectly sustained the severity of our seasons. This mode of building is very little more expensive than building with wood, and will, I suspect, ultimately take the place of every other. I know of no other equally handsome where marble itself is not the material. Both these kinds of stone are found, inexhaustibly, at a moderate distance.

The public buildings in New Haven are the State House, County House, Jail, Alms-house, three Presbyterian, one Episcopal and one Methodist Churches, the Collegiate Buildings, School-houses and Bridges. The State House is a plain and barely decent edifice, in which the Legislature holds one of its semi-annual sessions. The lower story of this building contains the office of the Secretary of State, a jury room, lobbies, etc., and a convenient hall for the Judicial Courts. The second story contains the Council Chamber and the Chambers of the House of Representatives. The churches are of considerable standing, and are barely decent structures. The County House is a good building. The Jail is a strong and decent stone edifice.

A bridge, named the Harbour Bridge, is thrown over the mouth of Wallingford River between this town and East Haven. Three-fourths of this structure are formed of two stone piers, extending from the shores to the channel. The remainder is built on trestles of wood, often styled in this country, piers of wood. It is half a mile in length, is the property of an incorporated company, and cost sixty thousand dollars. This is a useful erection, as it forms a part of the great road from New Haven, through New London and Providence, to Boston, and as it will facilitate several important objects of navigation and commerce. A wharf is already erected from it on the western side of the channel, at which large vessels are moored and repaired, and at which they load and unload with perfect convenience.

The Alms-house is a plain building of considerable size, standing in a very healthful situation on the western side of the town. The mode in which it is conducted is probably not often excelled.

There are two Presbyterian* congregations in this town, and one Episcopal. Two of these are nearly equal in their numbers, and contain each between two and three hundred families. The third contains probably more. This was formerly divided, and has since been wisely and happily reunited. There is also a small society of Methodists, who, by the aid of their charitable fellow-citizens, have been enabled to build a church for their worship.

New Haven, in the legal sense, is both a city and a township. The city includes the eastern part of the township. The western, which is a much larger tract, is bounded by the township of Woodbridge on the north, by that of Milford on the west, and by the Sound on the south. This tract contains the parish of West Haven; and a collection of families, living chiefly on scattered plantations, about equally numerous. The number of inhabitants in both is probably not less than twelve hundred. The last-mentioned division of these people belong to the congregations in the city. This part of the township lies chiefly on the hills, which have been heretofore mentioned as the southern termination of the Green Mountains. The inhabitants of this tract are principally farmers.

A general view of the state of society in the city is given in the following list, taken in the year 1811. At this period there were in New Haven 29 houses concerned in commerce; 41 stores of dry goods; 43 grocery stores; 4 ship-chandlery stores; 2 wholesale hardware stores; 3 wholesale dry goods stores; 1 wholesale glass and china store; 1 furrier's store; 10 apothecaries' stores; 6 traders in lumber; 1 trader in paper-hangings; 6 shoe stores; 7 manufactories of hats; 5 hat stores; 4 book stores; 3 rope walks; 2 sail lofts; 1 ship

* Dr. Dwight preferred that construction of the Saybrook Platform which assimilated the Congregationalism of Connecticut to Presbyterianism, and uniformly used the word Presbyterian to denote the ecclesiastical communion to which he belonged.

yard; 17 butchers; 10 schools; 12 inns; 5 tallow-chandlers; 2 brass-founders; 3 braziers; 26 blacksmiths; 1 bell-founder; 6 tanners; 30 shoe and boot-makers; 6 carriage-makers; 7 goldsmiths; 4 watch-makers; 4 harness-makers; 5 cabinet-makers; 50 carpenters and joiners; 3 comb-makers; 4 windsor chair-makers; 15 masons; 26 tailors; 14 coopers; 3 stone-cutters; 7 curriers; 2 block-makers; 5 barbers; 3 tinners; 1 wheelwright; 1 leather-dresser; 1 painter; 2 paper-makers; 5 printing-offices; 2 book-binders; 5 bakers; and 2 newspapers published. There were also 6 clergymen; 16 lawyers; 6 practicing physicians and 1 surgeon.

One of the clergymen is attached to the College; one was the Bishop of the Episcopal Church of Connecticut; one, far advanced in life, was without a cure. Most of the lawyers in the county reside in New Haven. The physicians also practice extensively in the surrounding country.

I have given you this list, partly because it is, on this side of the Atlantic, the only specimen of the same nature within my knowledge; and partly because it exhibits more perfectly in one point of view, the state of society in an American town than it would be possible to derive from any other source.

The commerce of New Haven is divided into the coasting, foreign, and inland trade. The coasting business is carried on with all the Atlantic States from St. Mary's to Machias. With New York an intercourse is kept up by a succession of daily packets. The foreign trade is principally carried on with the West Indian Islands, and occasionally with South America, most of the countries of Europe, the Madeira Islands, Batavia, and Canton. Several of our ships have circumnavigated the globe. The inhabitants of this town began the business of carrying sealskins from Mas-sachusetts, and, I believe, of carrying sandal-wood from the Sandwich Islands to Canton. The ship Neptune, in the year 1796, fitted out for a sealing voyage at the expense of forty-eight thousand dollars, returned from Canton with a cargo worth two hundred and forty thousand. A considerable part, not far from one-half, of the cargoes imported by the New Haven merchants are sold in New York. A great part also of the produce purchased in New Haven is sold in the same market. This renders it impossible to give an exact account of its commerce. The inland trade consists of an extensive exchange of European, East Indian and West Indian goods, for cash and produce, with the inhabitants of the interior. The following statement, derived from the Reports of the Secretary of the Treasury, will give you the best view of the foreign trade of New Haven which can be obtained:

About one-third of the imports belonging to the merchants of New Haven are landed in New York, and are not included in the above estimate.

The trade of this town is conducted with skill, as well as spirit. Of this the fact that during the last fifteen years the number of failures has been proportionally smaller than in almost any town in the Union, is unequivocal proof. At the

same time it is conducted in a manner fair and honorable. A trick in trade is rarely heard of, and when mentioned, awakens alike surprise and indignation.

It deserves to be mentioned here that the vessels built for the merchants of this town, and intended for foreign commerce, are built with more strength and furnished in a better manner than in most places on this continent. Those who command them are generally distinguished by their enterprise, skill and probity; and are entrusted with the sale and purchase of their cargoes, as well as with the conduct of their vessels, and thus frequently become possessed of handsome property. Several of them also are distinguished by their good manners, good sense, and extensive information. From these facts united it has arisen that very few vessels from this port meet with those accidents which are fatal to others. Indubitable proofs of the enterprise of the inhabitants are seen in the institutions already mentioned; in the formation of turnpike roads; the erection of the bridge described above; and the improvements lately made in the town itself. Of these, leveling and enclosing the green, accomplished by subscription, at an expense of more than two thousand dollars, and the establishment of a new public cemetery, accomplished at a much greater expense, are particularly creditable to their spirit.

The original settlers of New Haven, following the custom of their native country, buried their dead in a church-yard. Their church was erected on the Green, or public square, and the yard laid out immediately behind it in the north-western half of the square. While the Romish apprehension concerning consecrated burial places and concerning peculiar advantages supposed at the resurrection to attend those who are interred in them, remained, this location of burial grounds seems to have been not unnatural. But since this apprehension has been perceived by common sense to be groundless and ridiculous, the impropriety of such a location forces itself upon every mind. It is always desirable that a burial ground should be a solemn object to man; because in this manner it easily becomes a source of useful instruction and desirable impressions. But when placed in the center of a town, and in the current of daily intercourse, it is rendered too familiar to the eye to have any beneficial effect on the heart. From its proper, venerable character, it is degraded into a mere common object, and speedily loses all its connection with the invisible world in a gross and vulgar union with the ordinary business of life.

Besides these disadvantages, this ground was filled with coffins and monuments, and must either be extended farther over the beautiful tract unhappily chosen for it, or must have its place supplied by a substitute. To accomplish these purposes, and to effectuate a removal of the numerous monuments of the dead, already erected, whenever the consent of their survivors could be obtained, the Honorable James Hillhouse, one of the inhabitants to whom the town, the State and the country owe more than to almost any of their citizens, in the year 1796 purchased a field of ten acres near the northwestern corner of the original town, which, aided by several respectable gentlemen, he leveled and enclosed. The field was then divided into parallelograms, handsomely railed and separated by alleys of sufficient breadth to permit carriages to pass each other. The whole field, except four lots given to the several congregations and the College, and a lot destined for the reception of the poor, was distributed into family burying places, purchased at the expense actually incurred, and secured by law from every civil process. Each parallelogram is sixty-four feet in breadth and thirty-six feet in length. Each family burying ground is thirty-two feet in length and eighteen in breadth; and against each an opening is made to admit a funeral procession. At the divisions between the lots, trees are set out in the alleys, and the name of each proprietor is marked on the railing. The monuments in this ground are almost universally of marble, in a few instances from Italy; in the rest, found in this and the neighboring States. A considerable number are obelisks; others are tables; and others, slabs, placed at the head and foot of the grave. The obelisks are placed, universally, on the middle line of the lots, and thus stand in a line successively through the parallelograms. The top of each post and the railing are painted white; the remainder of the post, black. After the lots were laid out they were all thrown into a common stock. A meeting was then summoned of such inhabitants as wished to become

proprietors. Such as attended drew for their lots and located them at their pleasure. Others in great numbers have since purchased them, so that a great part of the field is now taken up.

It is believed that this cemetery is altogether a singularity in the world. I have accompanied many Americans and many foreigners into it, not one of whom had ever seen or heard of anything of a similar nature. It is incomparably more solemn and impressive than any spot of the same kind within my knowledge; and if I am to credit the declarations of others, within theirs. An exquisite taste for propriety is discovered in everything belonging to it; exhibiting a regard for the dead, reverential but not ostentatious, and happily fitted to influence the views and feelings of successive generations.

At the same time it precludes the use of vaults, by taking away every inducement to build them. These melancholy and, I think I may say, disgusting mansions seem not to have been dictated by nature, and are certainly not approved by good sense. Their salubrity is questionable; and the impression left by them on the mind transcends the bounds of mourning and sorrow, and borders at least upon loathing. That families should wish to be buried together seems to be natural; and the propensity is here gratified. At the same time a preparation is in this instance happily made for removing finally, the monuments in the ancient burying ground, and thus freeing one of the most beautiful squares in the world from so improper an appendage.

To this account I ought to add that the proprietors, when the lots were originally distributed, gave one to each of the then existing clergymen of the city. Upon the whole it may, I think, be believed that the completion of this cemetery will extensively diffuse a new sense of propriety in disposing of the remains of the deceased.

The Long Wharf is also a respectable proof of enterprise. Three-fourths of this pier are built of timber and earth, and the other fourth of stone, by an incorporated company, aided in a small degree by lotteries. It is three thousand nine hundred and forty-three feet in length; longer than any other in the United States by more than two thousand feet. On the western side, lots for the erection of stores are laid out and purchased throughout a great part of the extent. On many of them stores are erected.

The inhabitants of New Haven deserve credit for their industry and economy. Almost every man is active in his business; and lives at a prudent distance within his income. Almost all, therefore (with one considerable exception), are in ordinary circumstances, thriving.

The exception, to which I have alluded, is that of the laborers. By this term I intend that class of men who look to the earnings of to-day for the subsistence of to-morrow. In New Haven, almost every man of this character is either shiftless, diseased, or vicious. Employment is found everywhere, and subsistence is abundant and easily obtained; the price of labor is also very high, a moderate day's work being usually purchased at a dollar. Every healthy, industrious, prudent man may, therefore, live almost as he wishes, and secure a competence for old age. The local and commercial circumstances of this town have allured to it a large (proportional) number of these men; few of whom are very industrious, fewer economical, and fewer still virtuous.

The mechanics are in all respects of a different character, and are therefore generally prosperous.

The market in this town is moderately good. The supplies of flesh and fish are ample; and of vegetables sufficient for the demand of the inhabitants, most of whom are furnished from their own gardens. Of fruit, neither the variety nor the quantity is such as could be wished, and might be easily obtained. Indeed this article is fast improving in both respects, and almost every garden yields its proprietor a considerable quantity of very fine fruit; particularly of cherries, pears and peaches; as well as of currants, gooseberries, strawberries and raspberries. The greatest evil which the inhabitants suffer, is the want of a regular system. A few years since, a new market was established in a convenient part of the town and placed under proper regulations. The consequence was that all the customary supplies were furnished abundantly and of the best quality. Unfortunately, however, several respectable citizens opposed the establishment so strenuously and perseveringly, as finally to destroy most of its good effects. There is some-

thing very remarkable in the hostility of the New England people to a regular market. Those who buy and those who sell, manifest this opposition alike; nor has the imperfection and precariousness of the supplies brought in carts to their doors reconciled the former class; nor the superior convenience and certainty of selling at the highest price, persuaded the latter to the adoption of a system so obviously advantageous in all respects to both. A striking example is here presented of the power of habitual prejudice. As the fact is, however, an epicure, may find all his wishes satisfied without much difficulty in this town.

The market prices of beef, round the year, are for the best pieces, by the pound, from 7 to 10 cents; for the poorer pieces, from 3 to 6 cents; of beef, by the 100 lb., from 4½ dollars to 8 dollars; of pork, by the 100 lb., from 4½ dollars to 8 dollars; of good veal, mutton and lamb, by the lb., from 5 to 7 cents; of chickens, ducks and turkeys, by the lb., from 7 to 11 cents; of geese, by the lb. from 6 to 8 cents; of sea bass, striped bass, and blackfish, by the lb., from 4 to 6 cents; of lobsters, by the lb., from 5 to 6 cents; of oysters, by the bushel, from 50 cents to one dollar; of long and round clams and escallops, by the bushel, from 75 cents to one dollar; of flour made of wheat, by the barrel, from six to nine dollars; of rye, by the bushel, from 75 cents to one dollar; of Indian corn or maize, by the bushel, from 75 cents to one dollar; of oats, by the bushel, from twenty-five to thirty-seven and a half cents; of apples, by the bushel, from 33 cents to one dollar; of cider, by the barrel, from one and a half to three dollars.

These prices I have set down to give a succinct view of the expense at which the means of living are furnished here. The article of fuel, which is universally wood, is in this town, and a few others, particularly dear; hickory being from seven to eight dollars the cord of one hundred and twenty-eight feet; oak, five; and pine, three. In the interior, even in old and thrifty settlements, the price is often not more than a third part of what I have specified. It ought to be observed that every marketable article bears here an advanced price on account of the easy and regular communication with New York. Nor ought it to be omitted that, antecedently to the year 1793, all these articles were, at an average, sold for half of the sums mentioned above.*

Dr. Dwight's Table of Exports from 1801 to 1810, placed the word *embargo* opposite the year 1808. The embargo was established by an Act of Congress in retaliation upon Great Britain for the repeated insults which American merchantmen had suffered from British men-of-war. It was thought by the supporters of the act that England would accede to the demand that American vessels should be exempt from search by British cruisers, rather than see her West Indian colonies suffer from the absence of American breadstuffs and provisions. But this was a policy which caused as much distress in the seaports of the United States as in the West Indies. In July, 1808, there were seventy-eight vessels lying idle in the harbor of New Haven. Hundreds of seamen became dependent on charity and were daily fed at a soup kitchen. All along the sea-coast there was indignation, and perhaps nowhere more than in New Haven; for almost all its inhabitants were dependent, in one way or another, on foreign commerce. The merchants, the ship-chandlers, the rope-makers, the block-makers, and the shipwrights, as well as the mariners, found their occupation and means of subsistence taken away. There was not much sale for the produce of the husbandman, nor much employment for the mechanic. A special town-meeting was held on the 20th of August, at which an address to President

* This description of New Haven may be found in Dwight's Travels, Vol. I. Many of the statistics may also be found in a "Statistical Account of the City of New Haven," by Timothy Dwight, President of Yale College.

Jefferson, prepared by Elias Shipman, Noah Webster, David Daggett, Jonathan Ingersoll, and Thomas Painter, was adopted, praying for a modification or suspension of the embargo. The document closed as follows:

In every view of this subject, your memorialists conceive a continuance of the embargo to be as distressing as it is impolitic, and far more dangerous to our own people than to any other nation. We therefore request that—in pursuance of the power vested in you as President of the United States, by an Act of Congress for that purpose—the operations of the several laws imposing an embargo may be immediately suspended.

But it will be more appropriate to speak at length of the distress and indignation felt in New Haven on account of the embargo, in the chapter on Commerce. We allude to this embargo in this connection, because it was so important an event in the general history of the city.

The embargo was removed in June, 1809, and non-intercourse with and non-importation from Great Britain and its dependencies were substituted in its place. The change allowed indirect trade with the British West India Islands, the New Haven vessels landing their cargoes at Dutch and Swedish islands, whence they were transferred to British islands in the vicinity. The *Connecticut Journal* of June 15th, notices the activity and joy which had suddenly returned to the city. In May, 1810, the non-intercourse act was repealed, and the non-importation act ceased to be enforced. From that time, till the War of 1812 with Great Britain, trade with the British West Indies was very active and lucrative. From 1812, till the news of peace arrived in February, 1815, New Haven was of course blockaded by the British fleet in the Sound, and its commerce languished.

But the War of 1812 was so exclusively maritime, that, apart from its influence on commercial prosperity, it added but little to the history of New Haven. The fort which Colonel Thompson built at Black Rock in 1775 and 1776, known during the Revolution as Rock Fort, and afterwards as Fort Hale, being regarded as insufficient for the defense of the town, supplementary works were erected on Beacon Hill, of such extent that hundreds of men were employed for more than a month. The *Journal* of October 4, 1814, says:

This work has progressed with great rapidity, and is now nearly completed. The inhabitants of the neighboring towns deserve and receive the thanks of the public for volunteering their aid in this patriotic labor. On Wednesday and Thursday last, one hundred men from Cheshire, under the direction of Andrew Hull, Esq., labored with great industry and effort at the fortifications for two days. On their return through the city in wagons, with music playing, they were saluted with a discharge of artillery and cheered by the citizens, who had collected in great numbers at the Public Square. On Thursday, one hundred men from the town of North Haven, under the direction of their reverend pastor, Dr. Trumbull, the venerable historian of Connecticut, eighty years of age, volunteered their services, and spent the day in the same patriotic work. This aged minister addressed the throne of grace and implored the Divine blessing on their undertaking. On Friday the same number from Hamden, under command of Captain Jacob Whiting, with great industry labored at the same work, and were saluted and cheered by the citizens on their return. The inhabitants of the town of Meriden, with a patriotism not exceeded by their neighbors, have volunteered their aid for

Wednesday next. It is confidently hoped that our fellow-citizens of other towns in this vicinity, and our own citizens, will in the course of the present week complete the works, which are now nearly finished. Parties who are willing to give their assistance in this preparation for the common defense, are desired to give notice to the committee of the time when it will be agreeable to them to give their attendance. The enemy is hovering on the coast. Where the next blow will be attempted, no one can tell. Preparation to repel invasion cannot too speedily be made.

The earthwork thus thrown up on Beacon Hill was called Fort Wooster. Fortunately peace was proclaimed a few months after the fort was completed, and it encountered no enemy but storms of rain, which have, at length, nearly obliterated its walls.

One of the excitements which the war occasioned in New Haven, followed the capture of the packet Susan the week after the above notice of the fort on Beacon Hill appeared in the *Journal*. The beacon daily signaled to New Haven the passage through the Sound of the blockading vessels, and sometimes when the coast was clear, a packet ventured out on a voyage to New York. Such a signal on Sunday morning, October 1st, tempted Captain Miles, of the packet Susan, who had been waiting several days for a chance to venture out. A week afterward, October 9th, he left New York on the return voyage with a cargo valued at not less than \$15,000. Most of this sum was represented by imported goods of every description. One part of his cargo was several months' supply of paper for the *Connecticut Journal*, the printer of which, in his next issue apologizes to his patrons for giving them an inferior quality of paper. We give the remainder of the story in the language of Mr. Thomas R. Trowbridge, Jr.:

Shortly after passing Stratford Point, in the afternoon of Monday, the Susan observed a sail approaching, evidently from Long Island. The advancing craft was a stranger to all on board, but they did not at all fancy her appearance, and as she continued her course toward him, Captain Miles tacked ship and headed his vessel for Stratford River. The Susan made good headway toward the desired haven, but it was too late. The stranger gained rapidly; and though she had a load of cordwood upon her deck, the practiced eye of Captain Miles perceived through her disguise that she was a vessel in the service of the blockading squadron. He thought, however, that if he could only reach the river, all would be well. He would try at all events; and crew and passengers bent bravely to the sweeps, which had been quickly put out, while visions of Dartmoor and of Halifax Jail presented themselves to their imaginations. The stranger hoisted a British ensign, ran down abreast of them, luffed to the wind, and threw an eight-pound shot across the bow of the Susan. Captain Miles was too old a sailor not to comprehend that marine language, and, with a sigh, he told his helmsman to bring his vessel to the wind. He then dropped his gaff, and in a few minutes a boat came alongside from the cruiser, and out of it a midshipman stepped upon the deck of the Susan, informing Captain Miles that his vessel was a prize to his Majesty's brig Dispatch, and that he would at once relieve him of the further command of the Susan. Several men were immediately sent on board; and, with the passengers and crew, Captain Miles' packet, carrying her rich cargo, was soon standing toward the British fleet off New London.

After a few days, a flag of truce sent out from New Haven returned with Captain Miles and some of his passengers, who were permitted to leave on parole. "The Captain came home," says the

Journal of October 18th, "for the purpose of obtaining the means of ransoming the packet and cargo. He has returned to the squadron with the money, and will probably arrive here again with his vessel to-day."

Great was the joy when the news reached New Haven, on the 13th of February, that the Commissioners at Ghent had agreed on terms of peace.

Immediately the church bells were rung and cannon were fired on the Green. Citizens shook hands and congratulated each other as they met on the streets. The ever-busy boy marked the word *Peace* on doors and fences. The cannon from the fortifications at Beacon Hill and Fort Hale proclaimed to the surrounding villages the joyful tidings that peace was once more to reign over our land. At night the city was illuminated; not a house but had a candle at every window. The streets were filled with a happy multitude; and, if report be true, most of the rum which had weathered the gales of non-intercourse, the embargo act, and the blockade, was consumed during the joyful night of February 13, 1815. There was great rejoicing again when it was known that the President had ratified the treaty. The newspaper in its next issue said: Wednesday last, the treaty having been previously ratified (being also the birthday of Washington), was devoted to the celebration of these two great events, the one as the harbinger of our former glory, the other of our future prosperity. A committee had been appointed to make the necessary arrangements. The day was ushered in with the roar of cannon and the ringing of the church bells. The military were called out. The Governor's Horse and Foot Guards, and the Artillery, appeared in their usual brilliancy. At eleven o'clock the military and citizens repaired to the new Brick Meeting-House, where discourses were delivered by Dr. Dwight and the Rev. Messrs. Merwin and Taylor.*

The years of the war witnessed a great change in the aspect of the Green. Dr. Dwight says in a marginal note to his description of the city:

All the congregations in New Haven voted in 1812 that they would take down their churches and build new ones. Accordingly two of them commenced the work in 1813, the other in 1814. The church of the first congregation was finished in 1814. The other two have been completed the present year (1815). They are all placed on the western side of Temple street, in a situation singularly beautiful, having an elegant square in front. The Presbyterian churches are of Grecian architecture. The Episcopal Church is a Gothic building, the *only* correct specimen, it is believed, in the United States. Few structures devoted to the same purpose on this side of the Atlantic are equally handsome; and in no place can the same number of churches be found, within the same distance, so beautiful and standing in so advantageous a position.

The erection of these three churches, and the obliteration from the Green of the burial ground, by the removal of its monuments a few years afterward, must have greatly enhanced the beauty of a public square, which Dr. Dwight said was the handsomest ground of this nature he had ever seen. As he did not live to see the monuments removed, his commendation must have been pronounced while the Green was still disfigured with grave-stones.

In the same year in which peace with Great Britain was proclaimed, New Haven was for the first time visited by a steamboat. Travel between New Haven and New York had been, before the time of steamboats, chiefly in packets, such as the *Susan*; a round trip occupying a week, or a longer

period as the wind was more or less propitious. The price of passage was from three to five dollars each way. The first steamboat that passed through the Sound was the *Fulton*, Captain Bunker. She made her first trip from New York to New Haven in March, 1815, starting a little past five in the morning and arriving at half-past four in the afternoon. There were thirty passengers on board. On her return she had a large number of passengers, and was fifteen hours on the way, being delayed by a dense fog. The cost of the boat was about \$90,000. The *New York Advocate*, giving an account of the first trip, says, among other things, "We believe it may with truth be affirmed that there is not in the whole world such accommodation afloat as the *Fulton* affords; indeed it is hardly possible to conceive that anything of the kind can exceed her in elegance and convenience." It was then predicted that the time would come when improvements would be made in the machinery and in the model of boats, so that the passage would be made in ten hours. In the course of a few weeks she commenced to make regular trips, the price of passage being five dollars. The following notice of her appeared in the *Columbian Register* of May 13, 1815:

The steamboat *Fulton* arrived here on Monday last at 6 o'clock in the afternoon; she returned to New York the same evening, and arrived here again on Tuesday evening. At 6 o'clock on Wednesday morning she left here with about 80 passengers for Hartford, intending to arrive there on Thursday morning, the day of our great General Election and collection; she arrived at Middletown (a distance of between sixty and seventy miles, one-half of which distance was on the Connecticut River and against a strong current) at 6 o'clock P. M. She stopped there until 4 o'clock on Thursday morning, when she proceeded on and arrived at Hartford in four hours, where she was saluted by the discharge of cannon and the huzzas of the multitudes who were gratified with the sight of a steamboat fifty miles above the mouth of Connecticut River. The steamboat arrived here last night from Hartford and proceeded this day to New York.

In 1817, New Haven was favored with a visit from the President of the United States, James Monroe. Coming from New York in the steamboat *Connecticut*, he arrived at the wharf about 4 o'clock P. M. on Friday, the 20th of June. The President was received by a committee of citizens, and several military companies, and escorted through Wooster, Olive, Chapel, State, Elm and Temple streets, to his lodgings at Mr. Butler's Hotel. On Saturday he visited the gun factory of Eli Whitney, Esq., and the Chemical Laboratory, Library, Mineralogical Cabinet, and Philosophical Chamber of the College. At 12 o'clock he reviewed the troops under arms. After partaking of an elegant dinner, served up in superior style, at Mr. Butler's, in company with the Governor and several other gentlemen he visited the public buildings, the new burying ground, and other places which were deemed worthy of notice. On Sunday morning he attended Divine Service at the Center Church, and in the afternoon at the Episcopal Church. In the evening the Committee, in behalf of themselves and their fellow-citizens, took leave of his Excellency in a short address, expressing the high sense they entertained of his visit, with their sincere

* Thomas R. Trowbridge's paper on the Ancient Maritime Interests of New Haven, in *New Haven Historical Society Papers*. Vol. III.

wishes for his individual prosperity and his successful administration in his exalted station. The address was reciprocated in a manner honorable to his Excellency, and highly gratifying to the Committee. Early on Monday morning the President and his party, which included Mrs. Monroe, departed for Hartford.

From the absorption of the Colony of New Haven into the Colony of Connecticut, to the year 1701, the General Assembly had met in Hartford. Thereafter, the May Session was in Hartford, and the October Session in New Haven, till the adoption of the new constitution in 1818; which, requiring but one session in a year, ordered that the Assembly should meet alternately at Hartford and New Haven on the first Monday in May, New Haven having the even, and Hartford the odd years. By this requirement of the new constitution, New Haven became equally with Hartford a semi-capital, and remained so, till, by an amendment to the constitution, it was determined that there should be but one place for the annual sessions of the Legislature, and, by a majority of votes, Hartford was selected as the capital of the State. Under the new constitution of 1818, the first meeting of the General Assembly at New Haven was held in 1820. The writer well remembers, though it was a few days before he had completed the fourth year of his age, the military and religious ceremonies which distinguished "Election Day."

New Haven was brushed in the evening of September 3, 1821, by a tornado of so great severity, that some notice of it should be recorded in a history of the city. A large church was then in process of erection on the Green, near its northwestern corner. The Methodists of the city, who at that time were few in number, and, though rich in faith, poor in this world's wealth, had made great sacrifices for the accomplishment of their desire to possess such a sanctuary. The town had allowed them to place it on the public glebe. Members of other churches had for various reasons lent a helping hand. The walls were finished; the roof was nearly, but not quite complete, when the wind prostrated the structure into a heap of ruins. It was a terrible disappointment to those who, as it appeared to human judgment, had already given more than they were able, to build their house of worship. But the Methodists were equal to the trial which it was fore-ordained should befall them, and with redoubled sacrifices they re-erected the house, and worshiped in it till they became able to build the more commodious and costly structure now standing on the other side of Elm street.

Great damage was done elsewhere in the city, to dwellings and other buildings, and to the shipping in the harbor. For more than three hours, families were in painful suspense between remaining in their cracking dwellings and venturing on the dangers without. The "September Gale" was characterized by those who at the time were adult, as exceeding everything of the kind which they could

remember; and by those who were then children, it is remembered as more dreadful in its severity than any storm of wind which has since visited New Haven.

The only other tornado which requires distinct mention, occurred in 1839. It differed from that of 1821, in the instantaneousness with which it came and went, passing with a narrow swath through the northwestern part of the city where houses were few, carrying with it in its course every work of man which it encountered, and vainly endeavoring to do likewise with East Rock.

In 1824, the Marquis de Lafayette, attracted by a natural desire to see with his own eyes the marvelous progress made by the country in behalf of whose liberty he had unsheathed his sword almost half a century before, visited America. Although Washington was no more in the land of the living, there were still many companions in the War of the Revolution whom he desired again to take by the hand. Everywhere he was received with the greatest enthusiasm. As soon as information of his arrival in New York reached New Haven, the public joy was expressed by the discharge of cannon and the ringing of all the bells of the town. A deputation immediately sent to New York to invite him to visit New Haven, received a favorable reply. He was expected in this city on the night of the 20th of August, in consequence of which expectation the whole city was illuminated, and a large and splendid transparency with the words, "WELCOME LAFAYETTE," legible at a great distance, appeared aloft in front of Morse's Hotel, Church street, with American and French flags waving around the legend. Smaller transparencies with the same words were seen over the doors of many houses. The shops were full of people, old and young, ladies and gentlemen, inquiring for the General. Owing to numerous detentions on the way he did not reach the city till 10 o'clock the next day, when his arrival was announced by the discharge of 24 guns, and a procession was formed by which he was conducted to the room of the Court of Common Council, where an address was presented by the Mayor to the distinguished guest of the city. The General was presented to the Governor, those officers of the Revolution who were in New Haven, the civil and military authorities, the Faculty of Yale College, the clergy, and hundreds of the citizens; and as they were presented, the General took them each by the hand. The troops were paraded in front of the hotel and fired a salute. They then marched by in review, followed by a train of three hundred students of the college, two and two, with the badges of their several societies. He addressed them to the following effect:

He thanked them for the very kind reception they gave him. He had passed through the town in 1778. He was now most agreeably surprised at the great improvements since made. To see such very fine troops had given him a particular pleasure; but above all, he should always have the profoundest sense of the cordial welcome here given him. Pressing his hand upon his breast, he said

Eli Whitney

he was delighted with the manner of his reception by every kind of person.

At 11 o'clock, the General, with his suite, sat down to breakfast with the Common Council. Among the guests were his Excellency Governor Wolcott, and all the authorities, civil and military, the Reverend Clergy, the Faculty of the College, the New York Committee and the surviving officers of the Revolution. At the same time refreshments were furnished to the military. While at breakfast, the rooms just left by the gentlemen were immediately occupied by the ladies, more than three hundred of whom, with their children, had the pleasure of a particular introduction to the General. At 12 o'clock the General passed to the Green, and reviewed the troops, consisting of the Horse Guards, commanded by Major Huggins; a squadron of cavalry, by Adjutant Harrison; the Foot Guards, by Lieutenant Boardman; the Artillery, by Lieutenant Redfield; the Iron Grays, by Lieutenant Nicoll; and a battalion of infantry, by Captain Bills; the whole under Major Granniss. The General walked down the whole line, shaking hands with the officers and bowing to the men, making appropriate remarks on the troops; and he observed that such an improvement in the appearance of the troops he had not expected.

Standing in the door of Mr. Nathan Smith, in whose house he was introduced to the family, he received the marching salute of the troops, and while waiting for the barouche volunteered by Mr. Street, he was introduced to the house of David C. Deforest, Esq., where, after partaking of some refreshments, he stepped into the carriage, and riding to the south gate of the College yard, was there received by the President at the head of the Faculty, who conducted him through a double line of students to the Lyceum, visiting the Cabinet and Library. Passing through Chapel and York streets to the new burying ground, he stopped a moment to view it. He was pointed to the graves of Humphreys, the Aid of Washington, and of Dwight, the Chaplain of Parsons, whom he remembered in the War of the Revolution. He then proceeded to the house of Professor Silliman; here he made a short visit to Mrs. Silliman's mother, the widow of the late Governor Trumbull. Returning, the students again met him at the bottom of Hillhouse avenue, and passing through Temple street, he again entered the hotel. In a few minutes, it being past two o'clock, he ascended the carriage to depart. The citizens again shouted their acclamations. A squadron of horse led the way, and a long train of coaches and mounted citizens followed. Fifteen guns announced his departure. The city authorities accompanied him to the East Haven Green, and then took leave. He expressed his thanks in a very touching manner for the kind reception he had met with from the New Haven citizens.

ELI WHITNEY.

Not many inventors have been able to anticipate the wants of the future so completely as to prevent the necessity of fundamental changes in their work.

Most machines are produced by evolution, or by the fusion of different ideas from as many minds. Even in this industrial and inventive age, only a few men stand forth as creators in the mechanical arts, as men who have framed their ingenious thought in a model which all their successors must preserve and imitate. Such pioneers were Arkwright, Watt, and one whom New Haven is proud to claim as a citizen, Eli Whitney, the inventor of the cotton-gin. He was born at Westborough, Worcester County, Massachusetts, December 8, 1765. His father's progenitors, and his maternal ancestors, the Fays, were both of English stock, and among the early settlers of Massachusetts. The bent of Eli Whitney's mind was unmistakable from the earliest years. Before he entered his teens he had made a violin for himself, and had improved a fortunate Sunday morning at home, while the rest of the family were at church, by taking his father's watch to pieces, and putting it together again so dexterously that the operation was not suspected. During the Revolutionary War, when iron and steel goods were in high demand, and when the domestic product was of the crudest kind, Eli Whitney, though yet in his boyhood, engaged in the manufacture of nails, and became expert not only in the use, but even in the construction of tools. Not until the age of nineteen had been reached, did he resolve to obtain, if possible, a collegiate education. He persisted in the purpose, in spite of opposition by some of his family and by intelligent neighbors, who thought it "a pity that such a fine mechanical genius as his should be wasted." Owing however to sickness, and to the time spent in preparation and in acquiring money for the necessary expenses, Mr. Whitney was unable to enter Yale College until May, 1789.

While in college, he seems to have devoted especial attention to mathematics and mechanics. When a tutor regretted that he could not show a philosophical experiment to his class because the apparatus was out of order and could not be repaired in this country, Mr. Whitney undertook the task of restoration, and performed it with complete success.

Soon after graduation, in 1792, he went to Georgia, expecting to obtain employment as a private tutor. Disappointed in this hope, he was invited by Mrs. Greene, the widow of General Nathaniel Greene, in whose company he had sailed from New York to Savannah, to reside in her family and pursue his chosen study of the law. Not long afterward, a company of gentlemen visiting at Mrs. Greene's, fell into conversation about the state of agriculture among them and lamented that the cultivation of cotton was unprofitable on account of the difficulty of separating the cotton from the seed. Mrs. Greene—whose house contained many proofs of Mr. Whitney's mechanical skill—introduced him to the company as one who could discover a more convenient method of cleaning cotton, if such a thing were possible. Mrs. Greene desired only to bring her *protégé* to the notice of her friends, but Mr. Whitney took hold in earnest of the subject under discussion. Having obtained in

Savannah some cotton in the seed, he formed a workshop in the basement of Mrs. Greene's house and devoted the winter of 1792-93 to the construction of a machine for cleaning cotton. None knew his employment beside Mrs. Greene and Mr. Phineas Miller, a native of Connecticut, and a graduate of Yale also, who had now become the husband of Mrs. Greene. When the machine was finished, it was housed in a temporary building and displayed to a number of gentlemen who were invited from various parts of the State. It was acknowledged to be a success, the fame of it was spread abroad, and in the ensuing excitement, some of the populace broke open the building by night and carried off the machine. In this way, before Mr. Whitney could complete his model and secure his patent, there were already a number of machines in successful operation, each constructed with some slight deviation from the original, in the hope of evading the inventor's claim to a patent right. Mr. Miller, who was both zealous and wealthy, foresaw a golden future for the new invention, and, May 27, 1793, formed a partnership with Mr. Whitney under the firm name of Miller & Whitney, for the manufacture and sale of cotton-gins. The junior partner immediately started for Connecticut, where it had been determined to locate the factory. On the 20th of June, 1793, his application for a patent was filed with the Secretary of State, Thomas Jefferson, who evinced an especial interest in this machine.

The firm of Miller & Whitney met with discouragements only. Their purpose was to erect machines in every part of the cotton district, and to secure for themselves the entire business of ginning. But they were embarrassed by unavoidable delays; were obliged to borrow money at exorbitant rates; to sustain losses by fire, by sickness, and by numberless defiant infringements upon their patent; and were even assailed by slanderous attempts to prejudice public opinion against the product of the cotton-gin. Appeals to the law against the Georgian trespassers resulted only in loss and vexation, chiefly because the Georgia juries chose to favor their neighbors rather than Miller & Whitney. In April, 1799, Mr. Miller wrote to his partner as follows: "The jurymen at Augusta have come to an understanding among themselves that they will never give a verdict in our favor, let the merits of the case be as they may." In the opening years of this century, the patentees succeeded in obtaining some compensation for their public services from the Legislatures of North Carolina, South Carolina, and Tennessee, but the relief came too late to cheer Mr. Miller, who died December 7, 1803. In the United States Court in Georgia, in 1807, Mr. Whitney obtained his first verdict for damages against a trespasser upon his patent, and afterwards he won several other suits. But these events availed him very little, for thirteen years of his patent right had elapsed, and more than sixty suits in Georgia had been begun before this first decision upon the merits of his claim was granted. "In prosecution of this troublesome business he had made six different journeys to Georgia, several of which were

accomplished by land, at a time when, compared with the present, the difficulties of such journeys were exceedingly great, and exposed him to excessive fatigues and privations, which, at times, seriously affected his health, and even jeopardized his life."

All this expenditure of time, and toil, and talent was but little better than futile. Nowhere in the South did Mr. Whitney receive the treatment which his inestimable public services merited. He bestowed upon the whole cotton-planting community a benefit which should have evoked a universal tribute of gratitude and generous acknowledgment. His property was stolen, his claims ignored or denied, and he himself was treated rather as a swindler than as a benefactor. Measures were taken to secure to him some profit from his skill. They were foiled by persistent opposition and by a stupid prejudice against patents. With proper spirit, Mr. Whitney endeavored to maintain his rights against the legion of aggressors. From the State of Georgia, into which he first introduced his machine, and which profited most by its use, he received nothing, and that which he obtained elsewhere was doled out with so niggardly a hand, that the whole sum did not equal the product of half a cent per pound on the cotton cleaned with his machines in one year. If one man's labor was worth only twenty cents per day, the whole sum which Mr. Whitney received for his invention was less than the value saved in one hour by his machines then in use.

From that time to this, the South has refused or has failed to do justice to Eli Whitney. Throughout the length and breadth of the land which he immeasurably enriched, there is no public mention of him, no towns bear his name, no monuments are erected to his memory.

In 1812, Mr. Whitney applied to Congress for a renewal of his patent, but the majority of the members from the cotton-growing States opposed the petition and the request was refused. The popular disregard of his just claims in the South was described by the inventor himself to Robert Fulton in these words:

"The use of this machine being immensely profitable to almost every planter in the cotton districts, all were interested in trespassing upon the patent-right, and each kept the other in countenance. In one instance I had great difficulty in proving that the machine had been used in Georgia, although at the same moment there were three separate sets of the machinery in motion so near, that the rattling of the wheels was distinctly heard on the steps of the court-house."

Already in 1798, Mr. Whitney had perceived the necessity of some other financial reliance than his great invention, and with that rare sound judgment and self-reliant daring which always characterized him, he determined to engage in the manufacture of arms for the United States.

Through the influence of the Hon. Oliver Wolcott, of Connecticut, then Secretary of the Treasury, Mr. Whitney obtained a contract (January 14, 1798) by which ten thousand stand of arms were to be delivered within a little more than two years.

The works were to be erected, the machinery to be made, and much of it to be invented; the materials to be collected, the workmen to be instructed, and Mr. Whitney himself was hardly conversant with the proposed manufacture. Ten citizens of New Haven, who knew and valued Mr. Whitney's genius and indomitable spirit, secured for him a loan of ten thousand dollars. The Secretary also, from time to time, advanced money. Mr. Whitney purchased the site at the base of East Rock, now known as Whitneyville, and began operations. The filling of the contract indeed occupied ten years instead of two, but Mr. Whitney's product was so satisfactory, and his improvements were so great, as to win the highest encomiums from the Government officials. He was the most successful pioneer in this branch of manufacture in our country. He applied his ingenuity and industry to every detail of the business, and even gave to each workman his personal supervision. Instead of adopting the English method of giving to different workmen the entire construction of different parts of the gun, Mr. Whitney allotted to several workmen different tasks upon the same limb, each man performing continuously a single operation.

In this way the various parts of the gun were shaped and finished in lots of some hundreds or thousands of each. Foreign officials who had an opportunity to examine Mr. Whitney's method of manufacture, prophesied that each weapon thus made would be a model indeed, but that the cost of its production would be comparatively enormous. The ingenious American had the satisfaction of proving that by his system muskets were made not only better, but cheaper than under the former mode.

His division of labor so commended itself to manufacturers generally, that it gradually gained an universal adoption. Our larger factories now could hardly be conducted on any other principle, and the tendency is to specialize still farther. England adopted this system of uniformity in the manufacture of arms in 1855. In 1870 and 1872, Russia and Prussia followed her example, and other European States are now falling into line.

Much of the machinery in Mr. Whitney's factory was original with him or adapted by him; and since his improvements were useful also in the general manufacture of iron and steel, they became of the widest service. Other contracts were obtained by him from the United States Government, and also from the State of New York, and up to the year 1836, the Government was said to save by his improved methods over twenty-five thousand dollars per annum at the two public armories alone. At the present day the saving which has accrued to the Government and to private individuals from the adoption of Mr. Whitney's methods in the manufacture of arms and machinery, has amounted to millions.

In person Mr. Whitney was considerably above the ordinary size, of a dignified carriage, and of an open, manly, and agreeable countenance. In New Haven he was universally esteemed. Many of the

prominent citizens of the place supported him in his undertakings, and he inspired all whom he met with a similar confidence. Throughout the community, and in foreign lands, he was known and honored as a benefactor of the race. With all the Presidents of the United States, from the beginning of the Government, he enjoyed a personal acquaintance, and his relations with the leading men of the country were unimpaired by political revolutions.

While his information was extensive and his culture many-sided, a great power of mechanical invention remained the most remarkable trait of his character. But he possessed an abundant share of one faculty which most inventors lack, and whose absence has caused frequent ruin—the faculty of reasonable patience. His mind indeed wrought with precision rather than with rapidity. His aim was steady. He never abandoned a half-accomplished effort in order to make trial of a new and foreign idea. No man knew better than himself the value of his conceptions, yet no man was more capable of taking a dispassionate view of the chances of success. His early partner, Mr. Miller, was of a very sanguine nature, and Mr. Whitney's calm and judicial temper was often exercised in restraining his more ardent colleague. Mr. Whitney's experience in Georgia afforded him a wide field for the practice of both patience and perseverance. Habitual caution and painstaking industry aided in preserving the admirable balance of his character. His faithful attention covered the minutest details. He constructed factory, machinery, mill-dam, shops, houses and buildings, not only with due regard to artistic propriety and completeness, but also with a seemingly inexhaustible fertility of resource in devising new conveniences and labor-saving contrivances. Mr. Whitney was fortunate in that he lived long enough to receive in some measure the homage due to his achievements.

"He has changed the state of cultivation and multiplied the wealth of a large portion of the country. Every cotton garment bears the impress of his genius.

"The ships in which the great staple is transported across the waters are the heralds of his fame. The cities that rose to opulence by the cotton trade must attribute no small share of their prosperity to the inventor of the cotton-gin. In mechanical operations generally, he set an example of method and precision which others had not even thought of attempting. His liberal views, his knowledge of the world, his public spirit, and his acts of beneficence, insured him a commanding place in society." Moreover, the gentleness of his manners and the delicate kindliness of his feelings endeared him to a large circle of relatives and friends.

In January, 1817, he married Miss Henrietta F. Edwards, youngest daughter of the Hon. Pierpont Edwards.

Four children were born to them, a son and three daughters; but one of the latter died in infancy. The son, who inherited his father's name, has remained an active and honored citizen of New Haven, and conducts to-day the manufactory which his father founded, but which has been greatly en-

larged and altered to meet the demands of modern improvement.

In September, 1822, Mr. Whitney was first attacked by a dangerous and extremely painful disease which immediately imperiled his life, and which from that time progressed slowly but steadily to the fatal end. He studied his malady composedly and thoroughly; alleviated his sufferings, so far as possible, by ingenious appliances of his own invention; and faced the inevitable result with quiet resignation.

After the 12th of November, 1824, his sufferings were almost continuous until the 8th of January, 1825, when he expired. He was accompanied to the grave with every token of respect and affection from the citizens of New Haven; and the Rev. Dr. Day, President of Yale College, pronounced an eulogy over the remains. His tomb, modeled after that of Scipio, at Rome, stands in New Haven's ancient burying ground, and bears the following inscription:

ELI WHITNEY,

The Inventor of the Cotton-Gin.

Of useful Science and Arts the Efficient Patron and Improver.

In the social relations of life a model of excellence. While private affection weeps at his tomb, his country honors his memory.

Born December 8, 1765. Died January 8, 1825.

It has been shown how quickly the planters of the South appreciated the utility of the cotton-gin, and with what avidity they appropriated to themselves its immediate benefits. But the influence of Mr. Whitney's invention was not confined to one generation nor to any limited community. The men who first beheld and used it, lived to see only the beginning of its grand effects. In 1784 a ship sailed into Liverpool harbor with eight bales of cotton from the United States, and was seized, on the ground that so large a quantity of cotton in a single cargo could not be the produce of the United States. From 1791 to 1793 the production of cotton was nearly stationary, and the amount of exportation actually decreased, the total crop in the latter year being about 12,000 bales (5,000,000 pounds) and the total exportation being 487,600 pounds. In 1845, the cotton crop of the United States amounted to 2,395,000 bales (1,029,850,000 pounds) of which more than two-thirds was exported; while by the census of 1880, fifteen millions of acres in the United States were shown to produce in one year 6,000,000 bales of cotton (about 2,400,000,000 pounds), and the export was almost twice as much as the entire crop of 1845. This enormous quantity has not only supplied a cheap fabric suitable for clothing the world over, but it has also placed our country high in the ranks of the producing nations and enabled us to increase with safety our importations from Europe. These achievements the cotton-gin rendered possible. An estimate of the influence of this wonderful industrial development upon our commercial relations can only approximate to the truth, but it is probable that the cotton-gin has been worth to the United States through the exportation of cotton, over five billions of dollars.

That winter's work of a Yankee schoolmaster in a Georgia mansion helped to clear the way for more than a passing glance reveals. It revolutionized the agriculture of the South and enriched its inhabitants. It assured an active market for the public lands in the southwest, accelerated the development of the United States, and bestowed an immediate and permanent value upon regions that must otherwise have remained for a long time valueless. It aided in the discharge of our obligations to foreign countries. It placed hundreds of factories upon our Northern and Southern streams and in the villages of Old England. It strengthened for a time the institution of Slavery in the South, but to the overweening confidence of the South in the importance of its cotton-staple was partially due the Civil War, and the consequent triumph of Northern Free Labor. Above all it cheapened the clothing of man, and to clothe the naked is secondary only to feeding the hungry. Mr. Whitney by this invention created the prosperity of the South, made England rich, and changed the commerce of the world. Lord Macaulay, in one of his brilliant sentences, placed the cotton-gin at the foundation of our republican prosperity, saying "What Peter the Great did to make Russia dominant, Eli Whitney's invention of the cotton-gin has more than equaled in its relation to the power and progress of the United States."

The battle of Navarino on the 20th of October, 1827, achieved the deliverance of Greece from the Turkish yoke. The people of America had warmly sympathized with the Greeks, and there was great joy in New Haven when tidings came of the destruction of the Turkish and Egyptian fleets in the Bay of Navarino by the combined Christian Powers of Europe. The *New Haven Chronicle*, of December 22, 1827, says:

The intelligence reached New Haven on Tuesday morning, and at 12 o'clock the ringing of the bells, the music from the bands, and the shouts of citizens bespoke the joy that was experienced from the tidings of so glorious a victory—glorious not so much from the merits of the battle as from its bearing on the salvation of the Greeks. On Thursday evening the Tontine Coffee House was brilliantly illuminated and a transparency of the words, NAVARINO, OCTOBER 20, 1827, was placed over the portico of that spacious building. On Wednesday an invitation was circulated by the students of Yale College, requesting the citizens to join them in an ILLUMINATION on the evening of that day. Accordingly at half-past seven, the College Buildings were brilliantly lighted, and also many of the dwellings, stores and shops of the city. A beautiful transparency, representing a Turk's Head, underneath which were the words, THE MOSLEM HAS FALLEN AND GREECE SHALL BE FREE, was exhibited at South College.

JAMES HILLHOUSE.

The Hon. James Hillhouse died in 1832. To him New Haven is indebted for much of its thrift and beauty. We have already seen him in the beginning of his manhood, going out to repel the hostile troops who were invading the city. In 1780, the next year after the invasion, "the roll of the House of Representatives in the State Legislature shows the name of "Captain James Hill-

house" as the second representative from the town of New Haven. The next year he was first representative; and thenceforward he was frequently elected by his townsmen to this trust, till the people of the whole State in 1789 called him to a seat in the Council.

In 1790, Mr. Hillhouse was elected one of the five representatives from Connecticut in the Second Congress of the United States, and being successively re-elected, served through the Third Congress and the first session of the Fourth. In 1796 he left the Lower House to enter the Senate, having been chosen to complete the unexpired term of Oliver Ellsworth, who had resigned his seat in the Senate for the seat of Chief Justice in the Supreme Court of the United States. At the inauguration of President John Adams, March 4, 1797, he presented the credentials of his re-election for the full term then commencing. When Mr. Jefferson, after being elected President, withdrew from the presidency of the Senate, Mr. Hillhouse was made President *pro tempore* of that body. He was duly elected to the Senate a third time in 1803, and a fourth time in 1809. The Legislature of Connecticut appointed him in 1810 Commissioner of the School Fund acquired by the sale of lands in Ohio, which Connecticut reserved when she ceded to the United States all her right and title in the land which she claimed under the charter which made "the South Sea" her western boundary. This fund, amounting to \$1,200,000, consisted chiefly of the debts due from the original purchasers of the Western Reserve and those substituted securities which, in the course of a dozen years, had been accepted in their stead by a Board of Managers to whom it was entrusted. From the report of these Commissioners to the Legislature in the October Session in 1809, it appeared not only that a large amount of interest remained unpaid, but that considerable portions of the capital, also, were in danger of being lost by the failure of collateral securities. A committee, of which the Hon. David Daggett was chairman, recommended that the fund should be entrusted to the care and control of one man; and at the next session, in May, 1810, the office of "Commissioner of the School Fund" was created, and the Board of Managers was abolished. Mr. Hillhouse was fore-ordained to be Commissioner of the School Fund. Naturally he was fitted to become a financier, and had had much experience. For twenty-eight years previous to this appointment by the Legislature, he had been the Treasurer of Yale College, giving personal attention to the duties of the office, even when, by reason of his absence from New Haven, an Assistant Treasurer was employed. The committee who recommended the substitution of one manager in the place of five, the Members of the Legislature who changed the mode of managing the fund, and the people of the State who were alarmed for its safety, all had James Hillhouse in mind as singularly competent to a work so laborious and so complicated. With disinterested patriotism and exemplary devotion to the public welfare, Mr. Hillhouse resigned his seat in the Senate and gave his time and his extra-

ordinary strength for fifteen years to the School Fund.

In this period, says Roger Minott Sherman, without a single litigated suit, or a dollar paid for counsel, he restored the Fund to safety and order, rendered it productive of large and increasing annual dividends, and left it augmented to seventeen hundred thousand dollars, of well secured and solid capital. During his administration of the school fund, he attended to little else. At all seasons of the year, however inclement, he journeyed over the extensive country through which his cares were dispersed, guarded the public land from depredation, made himself familiar with every debtor, and the state of his property, and by indefatigable labor, and by kind attention and assistance, improved the circumstances of improvident debtors, through the very measures which he pursued for the security of the Fund.

His extraordinary power of bodily endurance; his superior tact in business; his marvelous patience and perseverance; his sweetness of disposition, perpetually welling up in the presence of unforeseen difficulties and new frustrations, were all necessary elements in the wonderful adaptation he displayed for his work. He had for the first six or eight years of his travels, an assistant almost as extraordinary as himself, in the little mare he called *Young Jin*, which carried his sulky through the States where the School Fund lands lay, sometimes getting over seventy miles in a day. Once he pushed her thirty miles after twilight without stopping, having in a desolate region been dogged by two ruffians who attempted to relieve him of his trunk, containing, though unknown to them, twenty thousand dollars of the public money. Another incident illustrates the multiplicity of perils through which he passed. On one of his school-fund journeys, traversing a forest in Ohio, which for many a long mile had seemed as destitute of human habitations as on the day of creation, there suddenly glided into the path an armed Indian. The apparition was startling, but the rider having nodded to his new companion, kept the sulky moving. The Indian surveyed him earnestly from time to time; and, whether *Young Jin* quickened or slackened her pace, kept at the wheel. After about six miles had been traversed, the sulky drew up, and a fourpence-ha'penny was handed to its persevering attendant. The Redskin received it with a grunt of thanks, turned off into the woods, and was seen no more. James A. Hillhouse, the poet, relating this anecdote of his father, in the notes to his "Sachem's Wood," suggests that if any evil purpose was harbored, perhaps his father owed something to the *sachem-marks* which distinguished his person and aspect. By heredity Mr. Hillhouse resembled an Indian. "He seemed," says Dr. Bacon, his pastor, who describes him as "tall, long-limbed, with high cheek-bones, swarthy, lithe in motion, lightness in his step, and strength and freedom in his stride—he seemed a little like some Indian chief of poetry or romance—the Ontalissi of Campbell's Gertrude of Wyoming; the Massasoit or King Philip of our early history, as fancy pictures them." "The Sachem" was the *sobriquet* by which Mr. Hillhouse was known in Congress as well as elsewhere. It used to be said in the Senate Chamber that he kept a hatchet under the papers and red tape in his desk, and that when the debate

waxed personal he took it out and laid it by the side of his inkstand. His favorite toast among friends was, in allusion to the *sobriquet* by which they called him: "Let us bury the hatchet."

It was the good fortune of the First Commissioner of the School Fund that the measures which he was obliged to take for the safety of the fund were as beneficial to the embarrassed debtors in whose bonds and mortgages the Fund was invested as to the Fund itself. Instead of acting against them as the mere attorney of an adverse party, he was their adviser and acted with them and for them. The forbearance which he (with powers almost unlimited, save by his own fidelity to his trust) was able to exercise, the legal and financial advice which he was so well qualified to give; and the aid, which in one way or another he could render when the claims of other creditors were pressed too urgently, were at the service of any debtor, who, when his embarrassments were cleared away, would give good security for what he owed to the Fund. Thus by the manner in which he discharged his official duty he became at once the saviour of the Fund and the benefactor of those who could not have extricated themselves from their embarrassments by any efforts of their own, and in whose final insolvency the State would have been a losing creditor. In one instance a family were so much benefited by the services which Mr. Hillhouse rendered them beyond what the interests of the School Fund required, that they not only willingly went beyond the requirements of law in the settlement of accounts, allowing compound interest where only simple interest could have been legally demanded, but tendered the sum of six thousand dollars to the Commissioner for his extraordinary exertions in clearing their estate from a complication of mortgages and imperfect titles, so that they were able to secure to the Fund, with solid mortgages, the debt of nearly three hundred thousand dollars which they owed. Similar service rendered in another case where the debt was of less amount was acknowledged by a similar testimonial of gratitude, amounting to nearly twenty-five hundred dollars. And in a third instance of similar character, an allowance of more than fifteen hundred dollars was made by one whose estate had been extricated from embarrassment. Did Hillhouse accept these presents and put the money into his own pocket? Let us divide the question into two, and answer them separately. He did accept the offered presents, but instead of devoting the money to his own use, he paid it all into the treasury of the School Fund. He would not accept for his own benefit a present from those with whom he dealt as a public agent.

What Mr. Hillhouse did for the School Fund in the fifteen years of his administration, was in many respects a different work from that of his successors in office. His task was to extricate the Fund from the embarrassed and perilous condition which threatened its extinction. If that magnificent endowment yields any benefit to the people of Connecticut; if it diminishes the weight of their public burdens; if it secures a school in every neighbor-

hood and within reach of every family, it is to James Hillhouse, more than to any other man, that the debt of public gratitude is due.

At the time when Mr. Hillhouse retired from his office as Commissioner of the School Fund, the citizens of New Haven had determined on attempting the construction of a canal from their harbor to the Connecticut River at Northampton, and he was persuaded to take the leadership of that enterprise. The canal was built, notwithstanding many difficulties and discouragements, and might have been a great public benefit, if canals had not been, soon after it was ready for business, superseded by a mode of travel and transportation which, in its present improved condition, had not entered into the imagination of man at the time when Hillhouse threw the first spadeful of earth from the bed of the Farmington Canal.

From youth to old age, Mr. Hillhouse was an active leader in every concerted endeavor to advance New Haven toward its present beauty. He leveled the Lower Green and inclosed the whole square with a fence; thus obliterating the winding cart-path which, from the time of Eaton and Davenport, had traversed the Market Place diagonally from the northwestern corner to the southeastern. He brought from a farm he owned in Meriden, and set out partly with his own hands, the elms that now interlock their giant arms over the famous colonnade of Temple street. The once renowned, but now almost deserted, air-line turnpike road from New Haven to Hartford, though not laid out by him, was by his executive ability brought to completion. It is related in the folk-lore of New Haven, that while Mr. Hillhouse was superintending the construction of this road, he received a visit from General Wade Hampton, of South Carolina, one of his associates in Congress; that it was a part of his hospitality to show his Southern friend the great public work which was in progress; and that the well-trained oxen at work upon it were much admired by the stranger. "See", said Hampton to the negro servant who attended him, "how those oxen work! Why, Tom, they know more than you do." "Yes, massa," responded Tom, "but dem ar oxen has had a Yankee bringing up." Mr. Hillhouse formed and carried into effect the plan of the Grove street Cemetery, which has become so honored with historic graves, his own among the most illustrious. That was the earliest attempt anywhere to provide a public cemetery so arranged that every family might have its own family burial place.

One office Mr. Hillhouse retained to the end of life. Elected Treasurer of Yale College before he was elected to Congress, he never ceased his care of its finances under all his burdens and labors while in public life; and when, in old age, he had relinquished all other offices and public employments, he still remained the Treasurer of the College. About noon on the 29th of December, 1832, as he was reading a letter on College business, he rose from his chair, and, without saying anything went into his bedroom. Only a moment had passed when his son, having occasion to speak to

him, followed. But the old man was asleep. He had lain down quietly on his bed, and a gentle touch of the Angel of Death had released him from his labors.

President Andrew Jackson visited New Haven in 1833, coming from New York in the steamboat *Splendid*, and arriving on Saturday, June 15th. On landing, the President was received with the salutes of the military and the cheers of the citizens. A procession was formed, according to arrangements previously made, which proceeded under military escort, the ringing of bells, and every demonstration of joy and honor, through some of the principal streets to the State House, where the President was received by the Governor of the State, the Mayor and other officers of the city, the Faculty of the College, and the veterans of the Revolution. He was welcomed in addresses by the Governor and the Mayor, and responded in brief and appropriate remarks. After paying his respects to the ladies assembled in the Senate Chamber, he received the congratulations of citizens in the hall.

He was then, says the *Connecticut Herald*, escorted to the Colleges by the Faculty and students, and having visited the Cabinet and other buildings, was again escorted by the whole procession to his lodgings at the Tontine, where the military passed in review. On Sunday, the President, with his suite, attended Trinity Church; and in the afternoon the North Presbyterian and the Methodist Church, the service at the latter being prolonged for the purpose of having the honor of a visit. At an early hour on Monday morning, the President, the Vice-President, and several gentlemen of his suite visited the manufactory of Messrs. Brewster & Collis, coach manufacturers, in the beautiful villa which has sprung up, as if by magic, in that portion of our city called the New Township. The visit was both early and casual, but everything was in operation and in order, and no one that feels a pride in the honor and interests of our town could fail to be gratified at the exhibition of the extent and economy of the establishment, the industry and skill of the operators, and the courtesy and politeness of the proprietors. From the coach establishment he proceeded to the ax factory of Messrs. Harrison & Co., in the same vicinity. He was conducted through the works by Mr. Harrison, was cheered by the workmen, and was evidently gratified by the hasty view which his limited time permitted. He returned to the Tontine to breakfast, immediately after which, at about half-past six o'clock, he departed for Hartford. On his way, two miles from the city, he visited the gun factory of the Messrs. Blake, at Whitneyville.

The morning of November 13, 1833, was rendered memorable by an exhibition of the phenomenon called SHOOTING STARS, more extensive and magnificent than any hitherto recorded. The morning itself was, in most places where the spectacle was witnessed, remarkably beautiful. The firmament was unclouded; the air was still and mild; the stars seemed to shine with more than their wonted brilliancy, a circumstance arising not merely from the unusually transparent state of the atmosphere, but in part, no doubt, from the dilated state of the pupil of the eye of the spectator, emerging suddenly from a dark room; the large constellation Orion in the southwest, followed by Sirius and Procyon, formed a striking counterpart to the planets Saturn and Venus, which were shining in the southeast; and, in short, the observer of the starry heavens would rarely find so much to

reward his gaze as the sky of this morning presented, independently of the magnificent spectacle which constituted its peculiar distinction. Probably no celestial phenomenon has ever occurred in this country since its first settlement which was viewed with so much admiration and delight by one class of spectators, or with so much astonishment and fear by another class. For some time after the occurrence, the "Meteoric Phenomenon" was the principal topic of conversation in every circle, and the descriptions that were published by different observers, were rapidly circulated by the newspapers through all parts of the United States.

Professor Denison Olmsted commences with the above paragraph an article in the *American Journal of Science*, which he entitles "Observations on the Meteors of November 13, 1833." He then reprints a short article communicated by him to the *New Haven Daily Herald*, and published in the evening of the same day on which the meteors appeared. We reproduce his communication to the *Herald* as an excellent, though brief, description of the remarkable phenomenon seen by so many in New Haven as well as elsewhere.

About daybreak this morning, our sky presented a remarkable exhibition of Fire-Balls, commonly called *Shooting Stars*. The attention of the writer was first called to the phenomenon about half-past five o'clock; from which time until sunrise, the appearance of these meteors was striking and splendid beyond anything of the kind he has ever witnessed.

To form some idea of the phenomenon, the reader may imagine a constant succession of fire-balls, resembling rockets, radiating in all directions from a point in the heavens a few degrees southeast of the zenith, and following the arch of the sky towards the horizon. They commenced their progress at different distances from the radiating point, but their directions were uniformly such, that the lines they described, if produced upward, would all have met in the same part of the heavens. Around this point, or imaginary radiant, was a circular space of several degrees, within which no meteors were observed. The balls as they traveled down the vault, usually left after them a vivid streak of light, and just before they disappeared, exploded or suddenly resolved themselves into smoke. No report or noise of any kind was observed, although we listened attentively.

Besides the foregoing distinct concretions, or individual bodies, the atmosphere exhibited *phosphoric lines*, following in the train of minute points that shot off in the greatest abundance in a northwesterly direction. These did not so fully copy the figure of the sky, but moved in paths more nearly rectilinear, and appeared to be much nearer the spectator than the fire-balls. The light of their trains also was of a paler hue, not unlike that produced by writing with a stick of phosphorus on the walls of a dark room. The number of these luminous trains increased and diminished alternately, now and then crossing the field of view like snow drifted before the wind, although in fact their course was toward the wind.

From these two varieties, the spectator was presented with meteors of various sizes and degrees of splendor; some were mere points, but others were larger and brighter than Jupiter or Venus; and one, seen by a credible witness before the writer was called, was judged to be nearly as large as the moon. The flashes of light, although less intense than lightning, were so bright as to awaken people in their beds. One ball that shot off in the northwest direction, and exploded a little northward of the star Capella, left just behind the place of explosion, a phosphorescent train of peculiar beauty. This line was at first nearly straight, but it shortly began to contract in length, to dilate in breadth, and to assume the figure of a serpent drawing itself up, until it appeared like a small luminous cloud of vapor. This

cloud was borne eastward (by the wind, as was supposed, which was blowing gently in that direction in which the meteor had proceeded), remaining in sight several minutes. The light of the meteors was usually white, but was occasionally prismatic with a predominance of blue.

A quarter before six o'clock, it appeared to the company that the point of apparent radiation was moving eastward from the zenith, when it occurred to the writer to mark its place accurately among the fixed stars. The point was then seen to be in the constellation Leo, within the bend of the Sickle, a little to the westward of Gamma Leonis. During the hour following, the radiating point remained stationary in the same part of Leo, although the constellation in the meantime, by the diurnal revolution, moved westward to the meridian nearly 15 degrees. By referring to a celestial globe, it will be seen that this point has a right ascension of 150 degrees and a declination of about 21 degrees. Consequently it was, when on the meridian, 20 degrees 18 minutes south of the zenith. The weather had sustained a recent change. On the evening of the 11th, a very copious southerly rain fell, and on the 12th, a high westerly wind prevailed, by gusts. Last evening the sky was very serene; a few "falling stars" were observed, but they were not so numerous as to excite particular attention.

The writings of Humboldt contain a description of a similar appearance observed by Bonpland, at Cumana, in 1799. It is worthy of remark that this phenomenon was seen nearly at the same hours of the morning, and on the 12th of November.

YALE COLLEGE, November 13, 1833.

The second centennial anniversary of the planting of New Haven was celebrated April 25, 1838. The following narrative, describing the formalities which distinguished the day, was printed with the historical discourse delivered by Professor James L. Kingsley:

Arrangements having been made by a joint committee of the Connecticut Academy, the Mayor, Aldermen and Common Council of the city, and the Selectmen of the town of New Haven for the celebration of this anniversary,—at about half-past eight o'clock in the morning, the citizens began to assemble near the southern portico of the State House. Scholars of both sexes of the several schools of the city, under the superintendence of their respective instructors, were arranged on the public square, from fifteen hundred to two thousand in number. The military escort consisted of the artillery, under the command of Captain Morris Tyler, and the grays, under the command of Captain Elijah Thompson. The procession was formed under the superintendence of Charles Robinson, Esq., marshal of the day, assisted by several others. From the State House, the procession, comprising the various classes of citizens and strangers, proceeded to Temple street, up Chapel street to College street; through College street to its intersection with George street, at which place, under a spreading oak, Mr. Davenport preached his first sermon just two hundred years before. Here the procession halted for religious exercises. Not only the streets were filled, but the roofs of neighbouring houses were partially covered, and some persons had taken their stations in the trees. The number here assembled was variously estimated from four to five thousand. The exercises at this place were commenced by singing four stanzas of the 80th Psalm, in the version of Sternhold and Hopkins. Tune, *St. Martins*.

"O take us Lord into thy grace,
convert our minds to thee;
Shew forth to us thy joyful face,
and we full safe shall be.

"From Egypt, where it grew not well,
thou brought'st a vine full deare;
The heathen folk thou didst expel,
and thou didst plant it here.

"Thou didst prepare for it a place,
and set her rootes full fast;
That it did grow, and spring apace,
and filled the land at last.

"O, Lord of Hoasts through thy good grace,
convert us unto thee;
Behold us with a pleasant face,
and then full safe are we."

Near the spot where the oak tree is believed to have stood, a stage had been erected, standing on which the Rev. Frederick W. Hotchkiss, of Saybrook, attended by the Rev. Leonard Bacon, offered prayer. Mr. Hotchkiss is a native of New Haven. His mother was a direct descendant of Gov. Jones, and thus connected with the family of Gov. Eaton. Mr. Hotchkiss was distinctly heard by the whole assembly, and the prayer was peculiarly appropriate, solemn and impressive. After the religious exercises were closed, the procession was again formed, and moved down George street to State street; up State street to Elm street; up Elm street, by the place where the houses of Gov. Eaton and Mr. Davenport formerly stood, till it reached Temple street; and then down Temple street to the First Congregational Church, where the Society, whose first pastor was Mr. Davenport, worship, and near which spot the first house of worship was erected. At church, the following exercises were performed. The music was a full choir, under the direction of Mr. Alling Brown.

1. HYMN. By William T. Bacon, A.B.

"Lo! we are gathering here
Now in the young green year.
And welcoming
The days which the ocean o'er
Did, to New England's shore,
Those noble souls of yore,
Our fathers bring.

"Here where now temples rise,
Knelt they 'neath these same skies,
The woods among;
And to the murmuring sea,
And to the forest free,
The home of liberty,
Echo'd their song

"Lives not then in our veins
Speak not our battle plains—
A blood like theirs?
Aye! and from this same sod,
Fearing no tyrant's rod,
To the same Father, God,
Ascend our prayers.

"Make theirs, O God, *our* fame;
Worthy to bear their name,
O may we ever be;
Thus, while each gladsome spring
Comes with its blossoming,
Loud shall our anthems ring,
For them and thee.

"Theirs was the godlike part—
Theirs were the hand and heart—
Trust tried, though few:
Grant that our souls be led,
Thinking of our great dead,
And by their great spirit fed,
To deeds as true.

"So doth the eaglet, nursed
High where the thunders burst,
Gaze with fixed eye,
Till, gained its parent's form,
With the same instinct warm,
It breasts the same loud storm,
And cleaves the sky."

2. READING. Isaiah xxxv. By Rev. Lorenzo T. Bennet, Assistant Minister of Trinity Church.

3. PRAYER. By Rev. Leonard Bacon, Pastor of the First Congregational Church.

4. ANTHEM, from Isaiah xxxiv, 17, and xxxv, 1-2. Words selected by Rev. L. Bacon. Music composed by Rev. Prof. Fitch. The LORD, He hath cast the lot for them,

and his hand hath divided it unto them by line; they shall possess it forever. From generation unto generation they shall dwell therein.

The wilderness and the solitary place shall be glad for them; the desert shall rejoice and blossom as the rose.

It shall blossom abundantly, and rejoice even with joy and singing. The nations, they shall see the glory of the LORD, and the excellency of our God.

5. HISTORICAL DISCOURSE. By Prof. Kingsley.

6. PRAYER. By Rev. Edwin E. Griswold, Minister of the Methodist Church.

7. HYMN. By Rev. L. Bacon.

"The Sabbath morn was bright and calm,
Upon the hills, the woods, the sea,
When here the prayer and choral psalm,
First rose, our fathers' God, to thee.

"Thou heard'st, well-pleased, the song, the pray'r;
Thy blessing came, and still its power
Goes onward, through all time to bear
The mem'ry of that holy hour.

"What change! through pathless woods no more
The fierce and naked savage roams;
Sweet praise, along the cultured shore,
Breaks from a thousand happy homes.

"Law, freedom, truth, and faith in God,
Came with those exiles o'er the waves;
And where their pilgrim feet have trod,
The God they trusted, guards their graves.

"Here peace, beneath thy wings, and truth
And law-girt freedom still shall dwell;
And rev'rend age to manly youth
His treasured stores of wisdom tell.

"And here thy name, O God of love,
Successive thousands shall adore,
Till these eternal hills remove,
And spring adorns the earth no more."

8. BENEDICTION. By Rev. L. T. Bennett.

From this celebration of the second centennial anniversary of the settlement of the town, we pass to the celebration of the first centennial anniversary of the incorporation of the city. Early in the year 1884, citizens began to speak of it as the centennial year, but the celebration was postponed by common consent to the Fourth of July. The act of incorporation passed the Legislature, as we have already related, in the month of January, and the city government was organized in February following. The postponement of the celebration to the Fourth of July, provided a more genial temperature for festivities in the open air, and gave to the national holiday a double gladness.

The day was ushered in with the ringing of bells for one hour and a salute of one hundred guns from the summit of East Rock. At 10 o'clock A. M., his Excellency Governor Waller and staff, were received at the New Haven House, and his Honor, Mayor Lewis, and invited guests at the City Hall, by the second company of Governor's Foot Guards, the second company of Governor's Horse Guards, and the Veteran Grays. At 11 o'clock a procession previously formed, began to move up Chapel street. It proceeded through Chapel to York, York to Broadway, up Broadway and around the triangular Park back to York, York to Chapel, Chapel to Church, Church to George, George to State, State to Eld, Eld to Orange, Orange to Elm, and up Elm

to the north gate of the Green. The procession consisted of eight divisions, all under the direction of Brigadier-General Stephen R. Smith, as Grand Marshal, and each under its own Division Marshal. General Smith was accompanied by his Brigade Staff and many other Aids, and each Division Marshal had a full staff of Assistant Marshals. Between the staff of the Grand Marshal and the head of the first division, was borne the ship Constitution, belonging to the New Haven Colony Historical Society. This miniature man-of-war was picked up in the British Channel in 1764, by the Lark, on a passage from Marseilles to New Haven, and was carried in the procession, at the celebration of peace in 1783, at the celebration of peace in 1815, and at the celebration of the second centennial in 1838.

The first division, led by Division-Marshal General George M. Harmon, consisted of the Second Regiment of the Connecticut National Guard, having all its ten companies in line, followed by a battalion of artillery. Colonel Charles P. Graham, commanding the regiment was accompanied by the officers of his staff. The second division of the procession, led by Division Marshal Colonel Simeon J. Fox, consisted of the Grand Army of the Republic and civic societies. In this division was the Barge Mayflower, containing one young lady representing the "Goddess of Liberty," and thirty-eight young ladies, in appropriate costumes, representing the States of the Union.

The third division, led by Colonel John G. Healey, consisted of civic societies. The fourth division, led by Division-Marshal Captain Jacob P. Richards, consisted also chiefly of civic societies, but was supplemented by a battalion of Antiques and Horribles, which caused much laughter. The fifth division, led by General Edward E. Bradley, contained the invited guests and their military escort, consisting of the second company of Governor's Foot Guards, the Veteran Grays, and the second company of Governor's Horse Guards.

His Excellency the Governor of the State and his staff were on horseback. The Mayor and other officers of the City of New Haven were in carriages attending the Mayors of Hartford, of Bridgeport, of Middletown, of Meriden, of New Britain, of New London, of Norwich, of South Norwalk, of Waterbury. In this division also was the Rev. Thomas R. Bacon, the orator of the day. The sixth division, led by ex-Chief Engineer Hiram Camp, consisted of veteran firemen of New Haven and fire companies from abroad; this part of the procession being so arranged as to show the progress made during the century in apparatus for extinguishing fires. The seventh division, led by Division Marshal Fire Commissioner Luther E. Jerome, consisted of the fire department of New Haven, with all its engines. The eighth division, led by Division Marshal Major Ruel P. Cowles, represented the multimiform industries of the city. The procession was about three miles long, and its rear was later by more than an hour, in passing any given point, than the platoon of police which marched at its head. Its several divisions, having passed over the appointed route,

were dismissed as they passed successively through the Elm street gate into the public square.

The programme of the celebration included two exhibitions of fireworks. The day fireworks at 2.30 P. M., interested a host of people. It was estimated, says the newspaper report, that there were 10,000 people on or surrounding the Green.

At 4 P. M., as many persons as the house could contain, were assembled in the Center Church to listen to the oration of the day. The exercises were introduced by an organ voluntary by Mr. H. P. Earle. Prayer was offered by Rev. Dr. Edwin Harwood. The pupils of the Hillhouse High School sang a Triumphal March from the Oratorio of Naaman. The Declaration of Independence

was read by Rev. Dr. Vibbert, from the same manuscript which he used in the same place fifty years before. After the singing of the hymn, commencing "God ever glorious, Sovereign of Nations," the Rev. Thomas R. Bacon delivered a discourse commemorative of both the Declaration of Independence and the organization of the city government. Afterward was sung the hymn, commencing, "My country, 'tis of thee," and the benediction was pronounced by Rev. Dr. Newman Smyth.

A drizzling rain necessitated the postponement of the fireworks prepared for the evening; and the public celebration terminated at sunset with the ringing of bells and a salute of thirty-eight guns.

CHAPTER VI.

CHURCHES AND CLERGYMEN.

NOT only were the first planters of New Haven religious men, but religion was the end they had in view in establishing a new plantation. Naturally, therefore, during the early years of the colony its religious institutions furnish the material for a large part of its history. John Davenport, the clerical leader of the immigrants, had some years before, while vicar of St. Stephen's Church, Coleman street, London, become a Puritan; but he had never, while in England, separated himself from the national Church, and probably never would have done so, if the Puritan party in the Church had been in the ascendant. Forced by circumstances to become a separatist from the Church of England, he adopted the principles of the pilgrims of Plymouth in regard to the true model of a Christian Church; but retained the view in which he had been brought up, that only those whose Christian character was certified by the Church, should have authority in the civil government. The company which he led out of Massachusetts to settle at Quinnipiac, comprised, it is likely, a great variety of opinions. His friend, Theophilus Eaton, the Moses, as Davenport was the Aaron, of the exodus, seems to have agreed entirely with the clerical leader of the colony; but Samuel Eaton, the brother of Governor Eaton, was at the opposite extreme of opinion. He had become, while in England, a separatist, and the pastor of a Congregational Church.

There were others in the colony who, having become Congregationalists either in England or in Massachusetts, leaned to the Plymouth idea of keeping civil government independent of the Church. It was perhaps this divergence of views which obstructed for fourteen months the organization of both Church and State. During these months of abeyance, a discussion in writing was carried on between Davenport and Samuel Eaton, a fragment of which has been preserved in a printed treatise of Davenport entitled, "A Discourse about Civil Government in a New Plantation whose De-

sign is Religion." Ultimately the views of Davenport prevailed, so that when the meeting was held on the 4th day of June, 1639, "to consult about settling civil government according to God, and about the nomination of persons that might be found, by consent of all, fittest in all respects for the foundation work of a church," the action was unanimous, Samuel Eaton being the only dissenter from the views of Davenport, and he, when intreated to give his arguments and reasons whereupon he dissented, refusing to do so, saying "that they might not rationally demand it, seeing he let the vote pass on freely and did not speak till after it was past, because he would not hinder what they agreed upon."

In requiring church membership as a qualification for suffrage, New Haven did not differ from Massachusetts; but she went further than Massachusetts, and incorporated the requirement into her fundamental and unchangeable law; so that, in respect to such requirement, she stood at the end of a list at the other end of which was Plymouth.

The Pilgrim Fathers did not require that a man should profess his faith in Christ before he was elected a free burgess. They conferred the right of suffrage on Miles Standish and others who were not members of their church as willingly as on their deacons. Connecticut stands next to Plymouth in the breadth of her liberality, having no law requiring as a condition of being elected a freeman of the colony, that a man shall be a church member, but exercising such care in the nomination of persons to be elected freemen, that the result was the same as if only church members were eligible. Massachusetts follows next after Connecticut; having at first a law excluding from the freedom of the colony those who were not members of some church, and retaining it till, by command of King Charles the Second, it was expunged from the statute book. After the law was changed, they took care, like the people of Connecticut, that none but satisfactory candidates should be proposed for elec-

tion. Furthest removed from the liberality of Plymouth was New Haven, which, under the leadership of Davenport, undertook to confine the administration of civil government to Christian men, not only for the time being, but for all time.

In this comparison we make no mention of Rhode Island, which was planted by another class of people; but only of the four colonies settled by men who, being ecclesiastically in sympathy, differed in opinion concerning the limitation of suffrage.

We have already related that in the meeting held on the 4th day of June, 1639, to "consult about settling civil government according to God, and about the nomination of persons that might be found by consent of all, fittest in all respect for the foundation work of a church," twelve men were chosen, and instructed to choose out of their own number seven "that shall be most approved of the major part, to begin the church." The seven who were chosen by the twelve were Theophilus Eaton, John Davenport, Robert Newman, Matthew Gilbert, Thomas Fugill, John Punderson, and Jeremiah Dixon. "By these seven persons, covenanting together, and then receiving others into their fellowship, the first Church of Christ in New Haven was gathered and constituted on the 22d of August, 1639." *

In modern times, a Congregational Church has a Confession of Faith as well as a Covenant. But the First Church of Christ in New Haven had at its institution no such formula as a Confession of Faith. It was constituted "by these seven persons covenanting together." Unquestionably they satisfied one another before they entered into covenant that their opinions were sufficiently accordant to justify them in taking such a step. But so far as appears, it never entered into their thought to require assent to any formula of belief as a condition of being admitted to the church. Mr. Davenport made a statement of his belief which he afterward sent to some friend in London, by whom it was printed in 1642.† The pamphlet is entitled, "The Profession of the Faith of that Reverend and Worthy Divine, Mr. J. D., sometimes preacher of Steven's, Coleman street, London. Made Publicly before the Congregation at his Admission into one of the Churches of God in New England." About the middle of the present century this confession of Davenport was reprinted at New Haven, by request of the church of which he had been pastor; and Dr. Leonard Bacon, in an "Editor's Preface," says of it: "There is no evidence that this confession was drawn up to be imposed on all candidates for admission to the Church, or to be used at all as a test of soundness in the faith. It is to be understood as the form in which John Davenport made

public profession of his own faith, when he and the six others who had been designated to that service, united in constituting the New Haven Church. The others may have adopted the same form, or they may have had each his own form of sound words. 'Few learned men (says Cotton Mather, *Magnalia*, book v, part 1, sec. 3) have been admitted as members of our churches, but what have, at their admission, entertained them with notable confessions of their own composing, insomuch that if the Protestants have been by the Papists called Confessionists, the Protestants of New England have, of all, given the most laudable occasion to be called so.'

The Church thus constituted was of the Congregational order, as distinguished from Independency on the one hand, and from Diocesan or Presbyterian combination on the other. It soon proceeded to the election of officers. John Davenport being chosen pastor, was solemnly inducted into office, Mr. Hooker and Mr. Stone, elders of the church in Hartford, being present to assist in the solemnity. The first deacons were Robert Newman and Matthew Gilbert. The theory of Congregationalism then in vogue required two other officers, a teacher and a ruling elder, who, with the pastor, would form a Presbytery within the Church. Such a board of elders would, according to the theory, originate all motions to be brought before the church for its determination. In some churches the function of the Presbytery was so magnified that the rank and file could not discuss any matter proposed, but only vote yes or no categorically. Mr. Stone, pastor at Hartford, so highly appreciated the office of an elder, that he defined Congregationalism as a "speaking aristocracy in the face of a silent democracy." Others, going to the opposite extreme, refused or neglected to fill the bench of elders, being satisfied when their church had a pastor, or had both a pastor and a teacher. Those who magnified the office of an elder were sometimes called Presbyterians by those who magnified the rights of the brotherhood; but they did not so denominate themselves, maintaining that theirs was the true Congregational way.

The Church at New Haven was at neither of the extremes. For about five years it left the offices of teacher and of ruling elder vacant, and then filled them by the election of the Reverend William Hooke as teacher, and Mr. Robert Newman, ruling elder. "The three elders, one of whom was to give attention chiefly to the administration of the order and government of the Church, while the others were to labor in word and doctrine, were all equally, and in the same sense elders or overseers of the flock of God. The one was a mere elder; but the others were elders called to the work of preaching. The distinction between pastor and teacher was theoretical, rather than of any practical importance. Both were in the highest sense, ministers of the gospel; as colleagues they preached by turns on the Lord's day and on all other public occasions; they had an equal share in the administration of discipline; and if Mr. Davenport was more venerated than Mr. Hooke, and had more influ-

* Bacon's Hist. Dis., p. 24. Dr. Bacon ascertains the date from the records of the First Church in Milford, which was gathered in New Haven, where its members still resided, and, as the local tradition says, on the same day with the New Haven Church. Mather Mag., book iii., ch. 6, records the tradition somewhat differently, giving to each church one of two consecutive days employed in the formalities of institution.

† It was probably printed for the purpose of proving that Congregationalists were orthodox; English Presbyterians being disposed to question it.

ence in the Church and in the community generally, it was because of the acknowledged personal superiority of the former in respect to age, and gifts, and learning, than because of any official disparity.

The Cambridge Platform, which was framed in 1648, and with which Mr. Davenport, in his writings on church government, fully agrees, says in defining the difference between pastors and teachers:

"The pastor's special work is to attend to exhortation, and therein to administer a word of wisdom; the teacher is to attend to doctrine, and therein to administer a word of knowledge; and either of them to administer the seals of that covenant unto the dispensation whereof they are alike called; and also to execute the censures, being but a kind of application of the word, the preaching of which, together with the application thereof, they are alike charged withal.

"The pastor and teacher gave themselves wholly to their ministry and their studies, and accordingly received a support from the people; they might properly be called clergymen. The ruling elder was not necessarily educated for the ministry; he might, without impropriety, pursue some secular calling, and though he fed the flock occasionally with a word of admonition, the ministry was not his profession. Inasmuch as he did not live by the ministry he was a layman.

"It being the custom then for a minister to preach at his own ordination, Mather relates that Mr. Hooke took for his text those words in the book of Judges: 'Go thou with Phurah thy servant,' and raised from them the doctrine that in great matters a little help is better than none, which he gave as the reason of his own being joined with so considerable a Gideon as Mr. Davenport."*

While Mr. Hooke resided at New Haven, one of his correspondents in England was his wife's near kinsman, Oliver Cromwell, and from that circumstance (says Bacon) as well as from the family alliance, it may be inferred that before he came to this country he was on terms of intimacy with that extraordinary man.

"And when at last his friend Cromwell had mounted to all but absolute power over the whole British empire; when his wife's brother, Edward Whalley, was one of the eight military chiefs who ruled the eight districts into which the Protector had divided the kingdom of England; when the fear of a Presbyterian hierarchy over the Churches of England had been taken away, and Congregational principles seemed likely to triumph—it is not strange that he felt himself drawn toward his native country. The New Haven Colony was at that time greatly depressed and the prospect of its growth was gloomy. Why should he remain here in the woods at this outpost of civilization, preaching to a feeble, disheartened company of exiles in a little meeting-house of fifty feet square—with only slender advantages for the education of his numerous family and with little prospect of accomplishing any great result—when Old England offered to talents like his, and to a man of his principles and connections, so wide a field of action? And besides, how much might he do for New England and

especially for his dear friends and flock in New Haven, if he were at the seat of empire, and at the ear of him who swayed the empire? Accordingly we find that in 1654, 'Mr. Hooke's wife was gone for England, and he knew not how God would dispose of her;' and in 1656, we find Mr. Hooke himself removing to England. We find him not long after his arrival there, writing to Governor Winthrop:

As touching myself, I am not yet settled, the Protector having engaged me to him not long after my landing, who hitherto hath well provided for me. His desire is that a church may be gathered in his family, to which purpose I have had speech with him several times; but though the thing be most desirable, I foresee great difficulties in sundry respects. I think to proceed as far as I may by any rule of God, and am altogether unwilling that this motion should fall in his heart. But my own weakness is discouragement enough, were there nothing else.

"Cromwell's desire to have a Congregational church in his own household at the royal palace of Whitehall, was at least so far carried into effect, that Mr. Hooke became the Protector's domestic Chaplain, in which office he was associated with no less a man than John Howe. He also had conferred upon him the mastership of the hospital called the Savoy in the City of Westminster, a place which in other times had been, and afterward became again, the Bishop of London's city residence—a place of some note in ecclesiastical history, as having received that Synod of Congregational Elders and Delegates which framed the Savoy Confession, and as having been also, after the Restoration, the scene of several of those conferences and debates between some of the dignitaries of the establishment and some leading Nonconformists, by which the court imposed upon the Puritans with hypocritical professions of candor, till it grew strong enough to throw off the disguise and show its hatred.

"In these circumstances, the late teacher of the church in New Haven might very reasonably feel that he had found a much more important field of usefulness than that which he had left behind. Here, indeed, his Sabbath auditory had included the great men of the jurisdiction, the honorable Governor, the Worshipful Deputy-Governor, the magistrates, the deputies; but there he preached to his Highness, the Lord Protector of the three nations, and to one and another of the men whose counsels and agency Cromwell employed in his most politic and energetic administration. Here he had preached with a little array of armed men, commanded by the valiant Captain Malbon, guarding the humble sanctuary against the savages; there he had before him those veteran chiefs whose energy had swept away the king 'and all his peerage,' and whose names were words of terror. Here he felt that he was but 'a little help' to 'so considerable a Gideon as Mr. Davenport;' there he was himself, both by station and by his popular talents, one of the most 'considerable' of the ministers in the metropolis of Protestant Christendom.

"But how imperfectly can we, in our shortsightedness, judge of the comparative importance of different stations and spheres of usefulness. In

*Bacon's Historical Discourses.

less than two years after Mr. Hooke's arrival in England, his great friend, the Protector, died, and immediately the pillars of that uncemented fabric of empire tottered. Within two years more—years of anxious excitement—Richard Cromwell had resigned the iron scepter, which no hand but his father's could wield; and treachery and dissimulation, taking advantage of dissensions among the true-hearted, had restored the monarchy in the person of the ever infamous King Charles the Second."

Reasons similar to those which drew Mr. Hooke back to the mother country, induced the ruling elder to return home when Puritanism had come into power in England. The church did not fill the vacancy created by his removal, and by the continuance of the vacancy to this day the office has become obsolete. Its function is, however, to some extent performed by a standing committee.

Samuel Eaton, though he came from England with Davenport, was never an officer in the New Haven Church. There is evidence that during the year between the arrival of the planters at Quinnipiac and the institution of the church, he had some share in the work of preaching; but in the year following the organization of the church, he returned to England expecting to bring back a company with him to commence a settlement at Branford. But before he was ready to return, affairs in England were so much more pleasant and promising for Puritans, that instead of leading a company to New England, he himself remained in his native land.

The preaching Elders of the Church were maintained from the treasury of *the church* and not of the town, the treasury being supplied by contributions, made every Lord's Day; but these contributions were, if not from the beginning, certainly very soon after the beginning, made in accordance with a pledge, which every inhabitant was required to give, that he would contribute a certain amount yearly for the maintenance of the ministry. The plan did not work smoothly, for on one occasion the Deacons came to the General Court with a complaint that "the wampum that is put into the church treasury is generally so bad that the Elders to whom they pay it cannot pay it away." The court, appointing a committee to inquire further concerning the matter, found that "the contributions for the church treasury are by degrees so much abated that they afford not any considerable maintenance to the teaching officers, and that much of the wampum brought in is such and so faulty, that the officers can hardly, or not at all, pass it away in any of their occasions." The voluntary principle was given up soon after the death of Mr. Street, when, the pulpit being supplied by ministers who were not officers of the church, and not so much beloved as Davenport, and Hooke, and Street, the voluntary plan was less efficient. In March, 1677, a proposition in writing from the church, was presented in town-meeting by Deacon Peck, upon which, "after debate, the town for the encouragement of those that preach the word of God unto us, according as had been propounded,

did by vote order and appoint, that for the ensuing year there shall be levied and paid from the inhabitants two rates and a half," that is, a tax of two and a half-pence in the pound.

Thus the support of the ministry was transferred from the church to the town, but not till the first planters had passed away. By them it seems to have been held as obligatory that the Elders of the Church should be supported out of the treasury of the church.

But though in the first generation the Elders were maintained by voluntary contributions to the church treasury, the meeting-house was owned by the proprietors of the plantation, and was used for meetings of the General Court as well as of the church. This twofold use of the edifice did not offend the religious sentiment of the people; for the Court was composed of church-members, who came together in a religious spirit to serve God in the business of the court as truly as they served him in the ordinances of the church. It was not a temporary expedient such as a people believing in a more thorough separation of Church and State, might adopt in a new plantation till they were able to provide more appropriately for each; but it was in its design a permanent arrangement, befitting a theocratic constitution of society.

Lechford, a Boston lawyer, who being disbarred for talking with a juryman out of court, returned to England, wrote a book, in which he described the manner in which the Bostonians worshiped God. As there was no great difference among the churches of New England in respect of the ritual of worship, we may take his relation as the best description, within our reach, of Divine Service in the church at New Haven:

Every Sabbath, or Lord's Day, they come together at Boston, by ringing of a bell about nine of the clock, or before. The pastor begins with solemn prayer, continuing about a quarter of an hour. The teacher then readeth and expoundeth a chapter. Then a psalm is sung; whichever one of the ruling elders dictates. After that the pastor preacheth a sermon and sometimes *ex tempore* exhorts. Then the teacher concludes with prayer and a blessing.

Once a month is a sacrament of the Lord's Supper, whereof notice is given usually a fortnight before, and then all others departing save the church, which is a great deal less in number than those that go away, they receive the sacrament; the ministers and ruling elders sitting at the table, the rest in their seats or upon forms. All cannot see the minister consecrating, unless they stand up and make a narrow shift. The one of the teaching elders prays before, and blesseth and consecrates the bread and wine according to the words of institution; the other prays after the receiving of all the members; and next communion they change turns; he that began at that, ends at this; and the ministers deliver the bread in a charger to some of the chief, and peradventure give to a few the bread into their hands, and they deliver the charger from one to another till all have eaten; in like manner the cup till all have drunk, goes from one to another. Then a psalm is sung and with a short blessing the congregation is dismissed. Any one, though not of the church, may, in Boston, come in and see the sacrament administered, if he will; but none of any church in the country may receive the sacrament there without leave of the congregation, for which purpose he comes to one of the ruling elders, who propounds his name to the congregation before they go to the sacrament.

About two in the afternoon they repair to the meeting-house again; and then the pastor begins as before noon, and, a psalm being sung, the teacher makes a sermon. He was

wont, when I came first, to read and expound a chapter also, before his sermon in the afternoon. After and before his sermon he prayeth.

After that ensues baptism, it there be any; which is done by either pastor or teacher, in the deacon's seat, the most eminent place in the church, next under the elders' seat. The pastor most commonly makes a speech or exhortation to the church and parents concerning baptism, and then prayeth before and after. It is done by washing or sprinkling. One of the parents being of the church, the child may be baptized, and the baptism is into the name of the Father, and of the Son, and of the Holy Ghost. No sureties are required.

Which ended, follows the contribution, one of the deacons saying: "Brethren of the congregation, now there is time left for contribution; wherefore as God hath prospered you, so freely offer." Upon some extraordinary occasions, as building or repairing of churches or meeting-houses, or other necessities, the ministers press a liberal contribution, with effectual exhortations out of Scripture. The magistrates and chief gentlemen first, and then the elders and all the congregation of men, and most of them that are not of the church, all single persons, widows and women in absence of their husbands, come up one after another one way, and bring their offerings to the deacon at his seat, and put it into a box of wood for the purpose, if it be money or papers; if it be any other chattel, they set it or lay it down before the deacons, and so pass another way to their seats again.

The sermons were much longer than would be endured at the present day, but were not regarded by the hearers as too long, such was the interest which the people felt in the exposition of the Scriptures, and so little else was there to occupy their intellectual and spiritual faculties. Long sermons, however, were not a peculiarity of New Haven or of New England. At that time the churches of the mother country were commonly supplied with hour-glasses, one hour being the ordinary measure of a sermon; but when an able preacher turned the glass to signify that he wished to speak longer, the congregation would give visible, if not audible, expression of their approval.

After the contribution, candidates were "propounded" for admission to the church, or, having been previously announced as candidates, were, on their assenting to the covenant of the church, received into its communion. If there were any matters of offense requiring censure they were then attended to, "sometimes till it be very late." "If they have time, after this is sung a psalm, and then the pastor concludeth with a prayer and blessing."

In the church at New Haven, it was the custom for the assembly to rise and stand while the preacher read the passage of Scripture which he had selected as a text for his sermon. But Hutchinson says that this was a peculiarity of that church, and quotes a letter from Hooker to Shepard, referring to the Sunday when the practice commenced in the afternoon, Mr. Davenport having advocated in his morning sermon such an expression of reverence for the word of God.

The church in New Haven, though not requiring that its members should give assent to any one formula of faith, approved of the confession published by the Assembly of Divines at Westminster, being represented in the General Synod at Cambridge in 1648, which thus recorded its testimony:

This synod, having perused and considered with much gladness of heart and thankfulness to God, the confession of

faith published of late by the reverend assembly in England, do judge it to be very holy, orthodox, and judicious in all matters of faith, and do therefore freely and fully consent thereunto, for the substance thereof. Only in those things which have respect to church government and discipline, we refer ourselves to the platform of church discipline agreed upon by this present assembly.

The Presbyterian party being at that time in the ascendant in England, the Synod adopted the Westminster Confession, instead of framing one for themselves, for the sake of vindicating in the mother country the orthodoxy of New England Congregationalism. They say in their preface:

We who are by nature Englishmen, do desire to hold forth the same doctrine of religion, especially in fundamentals, which we see and know to be held by the churches of England. By this our professed consent and free concurrence with them in all the doctrinals of religion, we hope it may appear to the world, that as we are a remnant of the people of the same nation with them, so we are professors of the same common faith, and fellow-heirs of the same common salvation.

If the Church of England had been at that time Episcopal, the Cambridge Synod would with equal willingness have adopted the doctrinal part of the Thirty-nine Articles. These articles they heartily received according to the interpretation commonly given to them in the reign of Elizabeth, in the first part of the reign of James I, and by the Calvinistic party in the Church of England subsequently. Both the first teacher and the first pastor of the New Haven Church retained the Calvinistic theology in which they had been indoctrinated at Oxford, and believed, as did their theological instructors at the university, that it was consistent with and embodied in the Thirty-nine Articles. After the restoration of the Thirty-nine Articles in the National Church of England, the churches of Connecticut publicly agreed with the dissenters in the mother country, in adopting them as a standard of orthodoxy. The Heads of Agreement which accompany the Saybrook platform say:

As to what appertains to soundness of judgment in matters of faith, we esteem it sufficient that a church acknowledge the Scriptures to be the word of God, the perfect and only rule of faith and practice, and own either the doctrinal part of those commonly called the Articles of the Church of England, or the confession, or catechisms, shorter or longer, compiled by the Assembly at Westminster, or the confession agreed on at the Savoy, to be agreeable to the said rule.

This declaration, though made after the first generation had passed away, would have been uttered by the fathers as willingly as by their children, if justified by an appropriate occasion.

The vacancy caused by the retirement of Mr. Hooke was filled by the election of Rev. Nicholas Street, who had been Mr. Hooke's colleague at Taunton in the colony of Plymouth, to succeed him in the office of teacher in the church at New Haven.

Mr. Street was born at Taunton, England, was educated at Oxford, and was doubtless recommended to the church at New Haven by his former colleague in the town named for his birth-place.

For eight or nine years he was associated here with Mr. Davenport. After the removal of his col-

league, he continued the only elder in the church till his death, on the 22d of April, 1674. Since that time there has been no distinction attempted in this church between the office of teacher and that of pastor.

When the colony of New Haven was absorbed into Connecticut, Mr. Davenport was so severely disappointed by the dissolution of the political fabric which he had devised and helped to build, that he was willing to leave the place where the timbers of the fabric were lying in shapeless and hopeless ruin. Concurrently with this change of feeling toward New Haven came an opportunity of removing to Boston.

As a natural result of the policy which Davenport favored, of confining political power to church-members, a party had come into being and grown to some strength, which advocated the broadening and smoothing of the way into the church. They demanded that all baptized persons not positively scandalous in their lives, should be recognized as church-members, and that their children in turn should be admitted to baptism.

Both the pastor and the teacher of the First Church in Boston were of this "half-way-covenant" party; and when by the death, first of Norton and then of Wilson, the eldership of that church was entirely vacant, many of its members felt that for such a church no young minister, and no minister educated in this country, could be a fit pastor. Mr. Davenport, as by far the most distinguished of the surviving fathers of New England, though he was known to be opposed to the half-way covenant, was invited to the pastorate, September 24, 1667; and a committee was appointed to convey letters to him and to his church. Against this movement, there was within the church which sent the invitation, a strong opposition. Their former ministers had favored the half-way-covenant; the church had been brought to adopt it in practice; its partisans were in the ascendant throughout the colony; a synod of churches had approved it. "The giving of this call to Davenport, the greatest of the 'Anti-Synodists,' was," says Dr. Bacon, "a triumph of the party which in that church had been in the minority; and such a triumph would naturally have a great effect on other churches, and on the politics of the colony, as affected by the chief ecclesiastical question of the day. Opposition on such grounds, though exhibited in the formal 'dissent' of 'thirty brethren,' among whom were many of the principal members 'of that eminent church,' had of course no effect to discourage so strenuous an opposer of the new practice from accepting the call.

"The messengers and letters from Boston found here a much more unwilling reception from the church than from the pastor. Mr. Davenport was beforehand inclined to a removal. The independent jurisdiction of his own colony had been extinguished. The principle, that the trust of government and of electing magistrates, should be committed to none but members of the churches,—for which he had so strenuously contended, and which

he regarded as the only full security for the peaceable enjoyment of the gospel with its ordinances—was here given up. 'In New Haven Colony,' as he expressed himself; Christ's interest is miserably lost! Besides, the great ecclesiastical controversy of the day was to be carried on and decided in Massachusetts; and there his personal influence would bear upon the controversy far more efficiently than if he continued here. Under the influence of such considerations, he determined on removing, notwithstanding his attachment to his people and their unwillingness to part with him.

"This church refused to accept his resignation, or in any way to consent to his removal. The utmost to which they could be brought by his persuasions, as well as by the entreaties of the church in Boston, was, that if he was determined to go, they would no longer oppose his determination, though they still refused to take the responsibility of consenting. Upon this, he considered himself at liberty to act according to his own judgment; and, in 1668, probably in the month of April, just thirty years after the commencement of his ministry here, he removed to Boston with his family. He, and his son, with their wives, were received into the church at Boston on the 11th day of October, and his ordination as pastor there—or, as we should say, his installation—took place on the 9th of December.

"His removal in such circumstances occasioned much difficulty. The minority of the church in Boston charged him and the other elders with equivocation, because they communicated to the church only those parts of the letters from New Haven which seemed to imply a dismissal; whereas it was maintained that, if the whole had been read, it would have appeared that there was no dismissal. Several letters were written, and messengers were sent from that church to this, in the hope of prevailing on this church to declare their owning of the letter sent from them to be a true dismission of Mr. Davenport. Of that correspondence nothing remains but a fragment of one of the letters from this church. That fragment is so full of reverent affection toward their pastor, even after he had torn himself away from them, and breathes so much of the Christian spirit, that it is well worthy of preservation:

Though you, say they, judge it the last expedient for your relief, and the remedy of some evils growing in the country, as also we might do the same if we had nothing before our eyes but his accomplishments and fitness for high service to God in his church; but being so much in the dark about his way in leaving this church and joining to yours, that we are not without doubts and fears of some uncomfortable issue, we therefore cannot clearly act in such a way as is expected and desired. We are of the same mind as when we returned an answer to your first letter, thus expressing ourselves: We see no cause nor call of God to resign our reverend pastor to the church of Boston, by any immediate act of ours, therefore not by a formal dismission under our hands. It is our great grief and sore affliction that we cannot do for him, whom we so highly esteem in love for his work's sake and profitable labors among us, what is desired, without wrong to our consciences. Anything that we have or are, beside our consciences, we are ready to lay down at his feet. Such is our honorable respect to him, our love to peace, our desire of your supply, that we shall go as far as we safely can in order to his and your satisfaction in this

matter, having before us for our warrant Acts xxi, 14. When he would not be persuaded, we ceased saying "The will of the Lord be done." Therefore, to suppress what we could say touching that passage in our first letter, whereof such hold hath been taken, and what we have said in our last letter to you, of our reverend pastor's making null the liberty before granted, which we doubt not, we are able clearly to demonstrate, yet if this will satisfy (but not otherwise), we are content to waive and bury in silence, and leave both yourselves and him to make what improvement you see cause (without any clog or impediment from us upon that account) of the liberty before mentioned. As he hath been a faithful laborer in God's vineyard at New Haven for many years, to the bringing home many souls to God, and building up of many others, so it is, and shall be, our prayer to God to lengthen his life and tranquillity in Boston, to double his spirit upon him, assist him in his work, and make him a blessed instrument of much good to yourselves and many others. The good Lord pardon, on all hands, what he hath seen amiss in these actings and motions, that no sinful malignity may obstruct or hinder God's blessing upon churches or church administrations. As himself and his son have desired, we do dismiss unto your holy fellowship Mr. John Davenport, Jr., and Mrs. Davenport, elder and younger, desiring you to receive them in the Lord as becometh saints, and imploring Almighty God for His blessing upon them from His holy ordinances, in their communion and walking with you. The God of all grace supply all your and our need, according to his riches in glory through Jesus Christ. Thus craving your prayers for us in our afflicted condition, we take our leave, and rest yours in the fellowship of the Gospel,

NICHOLAS STREET,

In the name and with the consent of the Church of Christ at New Haven.

"Mr. Davenport was at this time more than seventy years of age. What minister so far advanced in life would now be called from one church to another, because of the eminency of his qualifications for usefulness. When was there ever another such instance of competition and controversy between churches for the enjoyment of the ministry of one who, always an invalid, had numbered more than three-score years and ten? How rarely can you find a church who, when a minister has turned himself away from them, retain for him so strong and reverent an affection?

"Those in the church at Boston who had protested against the call given to Mr. Davenport, were inflexible in their opposition. Having applied in vain for a dismissal, they seceded and formed a new church, now known as the 'Old South Church in Boston.' A new impulse was thus given to the controversy then in progress. The two churches, the First and the South, had no mutual communion, and the whole colony of Massachusetts took sides with one or the other. The questions about the recommendations of the Synod had become involved with and, in a measure, superseded by questions about the conduct of Mr. Davenport and the old church on the one hand, and the proceedings of the new church and its adherents on the other. It is not strange then that under his short ministry in Boston, there were no large additions to the church. Nor did he succeed in arresting the progress of the innovation which he so greatly feared. The half-way covenant system prevailed in the churches of New England for more than a century."

Mr. Davenport's ministry in Boston was of short duration. He died March 11, 1670, less than two years after his removal to Boston, and was buried

in the Stone Chapel burial-ground, in the same tomb with his friend, John Cotton.

Immediately after Mr. Davenport's removal to Boston, the good people of New Haven proved that they were not in despair by resolving to erect a new meeting-house. After many delays, on the 3d of October, 1670, the committee appointed for the seating of the people in the new meeting-house, informed the town that they had prepared something that way for a present trial, which was now read to the town. On the 14th of November, the old meeting-house was ordered to be sold "to the town's best advantage."

In April, 1681, "there being a bell brought in a vessel into the harbor, it was spoken of, and generally it was desired it might be procured for the town; and for the present it was desired that Mr. Thomas Trowbridge would, if he can, prevail with Mr. Hodge, the owner of it, to leave it with him until the town hath had some further consideration about it." In August, "the owner of the bell had sent to have it sent to the Bay in Joseph Alsop's vessel"; "and it having lain so long, it would not be handsome for the town to put it off." Thereupon, "after a free and large debate," it was voted to purchase the bell for £17, the price asked. In April, 1682, a year after the bell had been first brought to the attention of the people, they were informed that it was now hanged in the turret, and in November they were told that the townsmen had agreed with George Pardee, for his son Joseph to ring the bell for the town's occasions on the Sabbaths and other meetings, as it was wont to be by the drum; and also to ring the bell at nine of the clock every night."

After the death of Mr. Street, the pulpit was supplied for several years by ministers who were not officers in the church, but either candidates or temporary supplies. It was while the pulpit was thus supplied that the support of the ministry was transferred to the town. "The change," says Dr. Bacon, "seems to indicate not only that the ministers then serving in the pulpit had a much lower place in the affections of the people than Mr. Davenport and his colleagues had possessed; but also that the power of religion itself in the community was declining. The change shows the growth of selfish and narrow feelings, and the decay of public spirit. It shows that one generation was passing away and that another was coming."

After a vacancy of about ten years, an opportunity seemed to open for the church to secure a worthy successor of its former officers. The royal governor of New Hampshire had made an order that the ministers within the province should admit all persons of suitable age and not vicious in their lives to the Lord's Supper, and their children to baptism; and that if any person should desire to have these sacraments administered according to the liturgy of the Church of England, his desire should be complied with. The minister who should refuse obedience to this order was to incur the same penalties as if he were in England, and a

John Davenport.

minister there of the Established Church. He then sent a written message to the Rev. Joshua Moody, pastor of the church in Portsmouth, stating that he and two of his friends intended to partake of the Lord's Supper the next Sunday, and requiring that it be administered to them according to the liturgy. Mr. Moody refusing to comply with the demand, was prosecuted, convicted, and imprisoned. For thirteen weeks he was in close confinement, and was then released under threat of further imprisonment if he should preach within the province of New Hampshire.

The church in New Haven hearing that "Mr. Moody was attainable if looked after," and considering him to be "a man, by report, singularly fit for the ministry," sent messengers to treat with him. But Mr. Moody declined to entertain the proposition, feeling himself bound to his former people, "and would try the providence of God, if he might not preach near them, and they have liberty to hear him." The messengers thus thwarted went beyond their commission, and at the advice of some ministers and other friends in Boston, applied to Mr. James Pierpont to come to New Haven, and preach as a candidate for the pastoral office. Mr. Pierpont was then about twenty-five years of age, and had graduated at Harvard College less than three years before. The result was that the young man came in August, and made so good an impression that "the ordination of Mr. Pierpont took place on the second day of July, 1685, after he had been with the people about eleven months as a candidate."

The town provided for the new minister a house-lot with such an amount of meadow and upland as belonged to such a lot by the customary proportion. The magistrates and townsmen were appointed a committee to obtain by free-will offerings, the means of building a house for the minister on the lot provided by the town. The committee were directed to plan the house according to the amount contributed, but to submit the plan to Mr. Pierpont for his approval. When finished, the house was one of the most commodious and stately dwellings in town.

About twelve years after the settlement of Mr. Pierpont, a further change was made in the mode of maintaining the ministry. The town had already taken the place of the church in collecting the funds, but as at first the amount depended on the liberality of the people, so under the second arrangement the amount depended on the proceeds of the rate levied. In 1697, a regular salary was proposed, and "after a long debate, the town by their vote granted to pay the Rev. Mr. James Pierpont annually, while he shall preach the word of God to us, the sum of £120 in grain and flesh," at fixed prices, "also to supply him with firewood annually." Mr. Pierpont seems to have been pleased with the change, but took care to stipulate that "the offering be brought into the house of God without lameness of reflections on the ministry in the respective years." Before, they had paid him what they chose to give, and their gifts measured their esteem and love. Now they had made

a contract with him, and he had a right to expect that they would fulfill their promises, and avoid criticism of what he gave in return.

Contemporaneously with this arrangement for the payment of a stated salary to the minister, the town began to agitate the proposition to build a new meeting-house. Soon after the ordination of Mr. Pierpont, some additional seats had been put in wherever space could be found for them; and there being still need of more, the galleries were brought forward so as to make room for a row of additional seats in front of each gallery. But now, not so much by any extraordinary influx of population as by the growth of children into adults, the meeting-house was too small. February 15, 1696-97, after some preliminary debate at a previous meeting, the town by their vote did declare that they would build a new meeting-house of stone and brick and leave it with a committee chosen by themselves to agree with a person or persons to build a meeting-house of sixty feet long, forty feet wide and twenty feet high, with brick and stone, provided they can have it completely finished for 500 pounds current money of Boston, to be paid in three years; the seats in the present meeting-house to be disposed of by the said committee, and, if need be, added above the 500 pounds."

About three weeks later, "the committee for the meeting-house informed the town that not any person doth yet appear to build the meeting-house."

Some months later at a town-meeting, "Lieut. Abram Dickerman, one of the townsmen, informed the town that the occasion of the town-meeting was principally to consider of either building a new or enlarging the old meeting-house; and, after much debate, the town by their vote declared that they would enlarge the old meeting-house, and by enlargement, by their vote, declare it to be an addition of sixteen or twenty feet on the side next to the burying-place, as shall be thought best by a committee that the town shall chose. The town by their vote did make choice of the civil authority, and the present townsmen, Mr. Thomas Trowbridge, Senior, and Mr. Richard Rosewell, as their committee, or the major part of them, to agree with workmen to enlarge the meeting-house."

The enlargement of the meeting-house seems to have produced an architectural effect analogous to that of enlarging an old garment with new cloth. The people's taste was offended when they saw that the windows in the addition were not of the same size as in the older part of the edifice, and that the new lumber with which it was covered, revealed the defects of clapboards which for thirty years had been exposed to the weather. The town "voted that the old meeting-house be new boarded and that the windows in the old house be enlarged like the windows in the new part of said house."

"The town by their vote desire and appoint the committee formerly chosen for the meeting-house to take the care of doing the outside work of the whole meeting-house. Also the inside work of the meeting-house; as making seats what is needful,

removing the pulpit, plastering the house, and what is needful about doors, and what else is needful. The form of the seats, both for workmanship and placing of them, as the committee hath formerly discoursed of, and was now declared to the town—which is to remove the pulpit back the full breadth of it, or thereabout, and the short seats on each side the pulpit, their length back into the new house, and make one long seat on each side, and one short seat on each side, and the remainder of the new house to be seated on seats placed facing into the house; and a door in the house where George Pardee now sitteth, and another door opposite to it on the other side, so a convenient alley across the house before the Deacons' seat; and the stairs up into the new gallery, behind the pulpit."

The internal arrangement thus ordered was afterward changed. "The town by their vote do now see cause to order that the doors into the new meeting-house be at the place where they were laid out by the carpenters, and an alley be left, next to the wall, to the stairs behind the pulpit."

The date of this last order is March 11, 1700, and as no further orders in regard to the alteration of the meeting-house are on record, we may believe that the carpenters finished their work and delivered over the house to the plasterers a few weeks afterwards.

During Mr. Pierpont's ministry, Yale College was founded; and to him, with the Rev. Samuel Andrew, of Milford, and the Rev. Samuel Russell, of Branford, more than to any other persons, is due the honor of being its founders. These three men, contriving the establishment of a college for Connecticut, were so wise and so magnanimous as not to connect the design at its first proposal with any particular location, though they would naturally prefer New Haven. With much deliberation among themselves and consultation with others, they designated ten ministers in various parts of the colony as trustees for founding the institution. Two of the three who had been most active in the preliminary work, viz., Mr. Pierpont and Mr. Andrew were of the ten. In 1700, the ten designated ministers met and formally organized themselves as a college, though they did not at that time locate the society. Corporate powers having been conferred by the Legislature in October, 1701, the corporation located the school in Saybrook.

During the ministry of Mr. Pierpont, a synod, or general council of the churches, was held at the College in Saybrook, for the purpose of forming a system that should better secure communion of churches than the simple Congregationalism which had come down from the fathers. Some ministers preferred a system more like Presbyterianism; some politicians wanted a way of bringing the churches into subjection to the civil power; all felt the need of more communion and mutual helpfulness. "Of the synod at Saybrook," says Dr. Bacon, "Mr. Pierpont was a leading member. 'The Articles for the Administration of Church Discipline,' which were adopted as the result of the synod, and which

constitute the so famous 'Saybrook Platform,' are said to have been drawn up by him. By the order of the Legislature, the ministers and delegates in each county, at the preliminary meeting at which their representatives were to be chosen for the General Council, 'were to consider and agree upon those methods and rules for the management of ecclesiastical discipline which by them should be judged conformable to the word of God;' and the duty of the General Council was to compare the results of the ministers of the several counties, and out of and from them to draw a form of ecclesiastical discipline." The Saybrook Platform was capable of being interpreted almost into Presbyterianism; and also capable, when taken in connection with the Heads of Agreement which accompanied the Articles, of preserving to the churches their Congregational liberties. The laity generally gave a Congregational meaning to the Articles, while some of the clergy were apt to make the consociation equivalent to a presbytery. For a century or more the Saybrook Platform was a peculiarity of the Congregationalism of Connecticut. At present little remains of it to distinguish the Congregationalism of Connecticut from that of the rest of New England.

Mr. Pierpont was thrice married. When he came to New Haven as a candidate, he was entertained, as the guest of the church, in the house of the widow of the only son of the first pastor of the church. Soon after his arrival, Deacon Peck, in behalf of the church, reported to the town that the church were well satisfied with this man, and were "desirous that the town would concur with them in encouraging him; and that there might be a maintenance provided, he being at Mrs. Davenport's to his content." Some six years after his settlement he was married to Abigail Davenport, the granddaughter of his predecessor in the pastoral office. The bride went to meeting on the Sunday after the wedding in her bridal dress, took cold, and in about three months died of consumption. Two years afterward he was married at Hartford to Sarah Haynes, a granddaughter of Governor Haynes. About two years after her marriage his second wife died, leaving him a daughter, to whom he had given the name of his first wife. This daughter of James and Sarah (Haynes) Pierpont became the wife of the Rev. Joseph Noyes, her father's successor in the pastorate. After another interval of two years Mr. Pierpont was married to Mary Hooker, a granddaughter of the first pastor in Hartford. By her he had several children, one of whom deserves mention, not only as the wife of that extraordinary man, Jonathan Edwards, but as the worthy consort of such a husband. It was Sarah Pierpont, then in her thirteenth year, whom Edwards describes in the following words, which he wrote upon a blank page of one of his books:

"They say there is a young lady in New Haven who is beloved of that Great Being who made and rules the world, and that there are certain seasons in which this Great Being, in some way or other, comes to her and fills her mind with exceeding sweet delight, and that she hardly cares for anything except to meditate on Him—that she expects to be received up where He is, to be raised up out of the world.

and caught up into heaven; being assured that He loves her too well to let her remain at a distance from Him always. There she is to dwell with Him and to be ravished with His love and delight forever. Therefore, if you present all the world before her, with the richest of its treasures, she disregards it, and cares not for it, and is unmindful of any path of affliction. She has a strange sweetness in her mind, and singular purity in her affections; is most just and conscientious in all her conduct; and you could not persuade her to do anything wrong and sinful, if you would give her all this world, lest she should offend this Great Being. She is of a wonderful sweetness, calmness, and universal benevolence of mind; especially after this Great God has manifested himself to her mind. She will sometimes go about from place to place, singing sweetly; and seems to be always full of joy and pleasure, and no one knows for what. She loves to be alone, walking in the fields and groves, and seems to have some one invisible always conversing with her.

In less than one year after the death of Mr. Pierpont, at "a meeting of the First Society"—for the town was now by the erection of new parishes in the outlying districts divided into several ecclesiastical societies—the inhabitants were called upon "to nominate a man to carry on the work of the ministry on probation." The people were divided in their preferences between two young men, both of whom had probably occupied the pulpit, but Mr. Joseph Noyes had a majority of votes. Having heard him for two months after this nomination, the society expressed their approbation of Mr. Noyes' labors so far "as they had experienced the same," and engaged to give him, while he should labor in the ministry among them, "one hundred and twenty pounds per annum in money, or in grain and flesh" at certain prices; and two hundred pounds in the same pay as a settlement. Then, the church having elected him to the office of pastor, he was ordained July 4, 1716. Mr. Noyes had spent the three years intervening between his graduation and his first appearance in the New Haven pulpit, as a tutor in the College at Saybrook. The College being removed to New Haven soon after his ordination, the collegians were an important addition to the audience to which he preached. From year to year a succession of men of superior intellect, including such as President Clap, Samuel Johnson, Jonathan Edwards, Eleazar Wheelock, Aaron Burr, and Joseph Bellamy, sat under his preaching. His ministry seems to have been prosperous for a score of years after his ordination; but afterward the church passed through a stormy period, in which it suffered many unpleasant experiences, even to schismatic division.

Spiritual religion had much declined in New England while the second and third generations were passing over the stage. The half-way covenant had gradually come into use, if not in every church, in nearly all; the church in New Haven falling into line when Pierpont came to it from eastern Massachusetts. Some of the churches adopting the belief that the Lord's Supper is a converting ordinance, admitted all who were of decent outward deportment and seekers after inward grace to full communion. The union of Church and State had subjected the churches to the civil power; and in Connecticut the Saybrook Platform had restricted the liberties of individuals and of individual churches, to the detriment of believers and of

churches as the instruments and organs of the Spirit of God.

This declension was so great, that when the reaction came, there came evils with it which balanced and neutralized a great part of the good which there was in the return to spirituality. "The year 1735," says Bacon, "is commonly regarded as the commencement of that great religious excitement and revival in New England which made the middle of the last century so memorable in the history of our churches." The revival began in Northampton under the ministry of Jonathan Edwards. But many other towns in Massachusetts and Connecticut witnessed in the same year phenomena such as Edwards describes as appearing in Northampton.

Presently a great and earnest concern about the great things of religion and the eternal world became universal in all parts of the town and among persons of all degrees and all ages. All talk but about spiritual and eternal things was soon thrown by; all the conversation in all companies was upon these things only, except so much as was necessary for people carrying on their ordinary secular business. The minds of people were wonderfully taken off from the world: it was treated among us as a thing of very little consequence. All would eagerly lay hold of opportunities for their souls, and were wont very often to meet together in private houses for religious purposes: and such meetings when appointed were generally thronged.

Mr. Edwards, who was a brother-in-law of Mr. Noyes, their wives being sisters, says in his narrative of the awakening in Northampton:

There was a considerable revival of religion last summer at New Haven—old town—as I was once and again informed by the Rev. Mr. Noyes, the minister there, and by others. And by a letter which I have very lately received from Mr. Noyes, and also by information we have had otherwise, this flourishing of religion still continues and has lately much increased. Mr. Noyes writes that many this summer have been added to the church, and particularly mentions several young persons that belong to the principal families in that town.

Thus far the revival had brought only unmingled joy to the ministers in general, and to Mr. Noyes in particular. But in 1740 came Whitefield to New England; and the great revival which accompanied and followed his preaching, occasioned trouble for conservative ministers. Born and reared in England, where many of the clergy had entered the ministry without professing to have experienced a change of heart, Mr. Whitefield felt at liberty to assume that the same state of things existed in New England, and to pronounce judgment against any minister who seemed to him to be in an unconverted state. Imitators of Mr. Whitefield assumed to themselves a similar authority of pronouncing judgment against ministers who did not approve of the new methods. This was one of the troubles of conservatives among the clergy. Another, was the intrusion into their parishes of itinerant preachers, who having no flocks of their own, or having left their own sheep without a shepherd, went wherever they could find any to listen to them. Another, was the springing up of lay exhorters, who usurped the functions of the ministry, and put themselves into competition with educated and ordained ministers. Still another, was the occurrence of bodily manifestations of spiritual experience, such as outcries and agitations, visions, trances and ecstasies, wherein women, and some-

times men, of nervous temperament, lost their strength and fell down on the floor, or on the ground.

These accompaniments of the revival divided the community, and especially the clergy, into three parties. One party opposed the whole movement. Another favored it as a whole, but endeavored to preserve it as pure as possible from ingredients which came not from the Spirit of God, but from human weakness or satanic malice. A third party, could see nothing but good in the work, and thought all who criticized or opposed it were children of "The Wicked One."

Mr. Noyes, though not opposed to revivals, as is evident from the way his brother-in-law writes of him in 1736, probably did not give Mr. Whitefield a warm welcome when he came the first time to New Haven. Whitefield having preached in Boston and vicinity with much acceptance, visited Mr. Edwards at Northampton, and stayed there several days. Thence he came to New Haven, where he was received as the guest of Mr. James Pierpont, a son of the pastor of the same name, and a brother-in-law of Mr. Edwards and of Mr. Noyes. Trumbull, who favored the side of Whitefield, says: "Several ministers waited on him, with whose pious conversation he was much refreshed," but does not mention Mr. Noyes.

Mr. Whitefield was followed in his itinerant evangelistic work by Gilbert Tennent and others, under whose preaching there was great activity of mind throughout the country on the subject of religion. Trumbull says that "Connecticut was more remarkably the seat of the work than any part of New England, or of the American colonies. In the years 1740, 1741 and 1742, it had pervaded, in a greater or less degree, every part of the colony. In most of the towns and societies it was very general and powerful." As the work proceeded, more and more that was objectionable appeared. Let us take New Haven as an example. When Mr. Whitefield came here in 1740, he was the guest of Mr. Pierpont rather than of Mr. Noyes; but it does not appear that Mr. Noyes actively used his influence against Mr. Whitefield, or that Mr. Whitefield in any respect, or in any degree, arrayed himself against Mr. Noyes. But in September, 1741, less than a year after Mr. Whitefield's visit, came the Rev. James Davenport to New Haven on a similar errand. He was a son of the Rev. John Davenport, of Stamford, and a great-grandson of the first pastor at New Haven. Dr. Bacon thus describes him and his method of doing the work of an evangelist: "This man, having been educated at Yale College, where he graduated in 1732, had been for several years settled in the pastoral office at Southold on Long Island, and had been esteemed a pious, sound and faithful minister. But in the general religious excitement of 1740, he was carried away by enthusiastic impulses, and without asking the approbation and consent of his people, set out upon an itinerancy among the churches, leaving his own particular charge unprovided for. Wherever he went he caused much excitement and

much mischief. His proceedings were constantly of the most extravagant character. Endowed with some sort of eloquence, speaking from a heart all on fire, and accustomed to yield himself without reserve to every enthusiastic impulse, he was able to produce a powerful effect upon minds prepared by constitution or by prejudice to sympathize with him. His preaching was with the greatest strength of voice, and with the most violent gesticulation. It consisted chiefly of lively appeals to the imagination and the nervous sensibilities; and in the mimicry or pantomime with which he described things absent or invisible, as if they were present to the senses, he appears to have been more daring, if not more powerful, than Whitefield himself. He would make nervous hearers feel as if he knew all the secret things of God, speaking of the nearness of the day of judgment like one from whom nothing was hidden. He would work upon their fancy till they saw, as with their eyes, the agony, and heard, as with their ears, the groans of Calvary, and felt as the Popish enthusiast feels when, under the spell of music, he looks upon the canvas alive with the agony of Jesus. He would so describe the surprise, consternation and despair of the damned, with looks and screams of horror, that those who were capable of being moved by such a representation, seemed to see the gate of hell set open, and felt, as it were, the hot and stifling breath of the pit, and the 'hell-flames flashing in their faces.' And if by such means he could cause any to scream out, he considered that as a sign of the special presence of the Holy Spirit, and redoubled his own exertions till shriek after shriek, bursting from one quarter and another in hideous discord, swelled the horror of the scene. In one instance it is recorded of him as follows—and this I suppose to be an exaggerated description of the manner in which he ordinarily proceeded at the close of his sermon, when he found sufficient encouragement in the state of his audience: 'After a short prayer, he called all the distressed persons (who were near twenty) into the foremost seats. Then he came out of the pulpit and stripped off his upper garments, and got up into the seats, and leaped up and down some time, and clapped his hands, and cried out in these words, 'The war goes on, the fight goes on, the Devil goes down, the Devil goes down!' and then betook himself to stamping and screaming most dreadfully.'

In 1740, Mr. Davenport became unduly excited, and exhibited, within his own parish, such symptoms of derangement as in these days would, doubtless, be regarded as justifying restraint. In 1741 he felt an impulse, which he regarded as a call from God, to leave his parish and go from place to place and preach the Gospel. Crossing the Sound, he commenced at Stonington, and with such success that "the first day he preached, he believed near a hundred were struck with deep distress almost in a moment, inquiring what they should do to be saved? Many of his opposers, among the rest, came trembling and asking forgiveness of God and him for all their hard speeches." Continuing his journey westward, he

tarried awhile in Saybrook and other places, making a great impression upon multitudes of the people, by reason of his intense earnestness, but denouncing those who thought his zeal the result of derangement, especially if they were ministers. As everywhere, there were earnest Christians at New Haven, who, not suspecting that his mind was unbalanced, gladly received a man so earnest in his piety and so magnetic in his preaching. The fact that he was descended from the first pastor of the church, and that his mother was of the New Haven family of Morris, may have added somewhat to the friendliness with which he was received. Though allowed to occupy Mr. Noyes' pulpit, he soon began to denounce the pastor. A contemporary letter to the *Boston Post-Boy*, probably written by President Clap, and cited in "Chauncey's Seasonable Thoughts," says :

Mr. Davenport, in almost every prayer, vents himself against the minister of the place, and often declares him to be an unconverted man; says that thousands are now cursing him in hell for being the instrument of their damnation. He charges all to pray for his destruction and confusion. He frequently calls him a hypocrite, a wolf in sheep's clothing, and a devil incarnate; and uses such vile and opprobrious language as that, had it been done by any other man, he would have been immediately sent to the workhouse. I think that few or none of his greatest admirers undertake peremptorily to justify these things; but they have conceived such an extraordinary opinion of his holiness and success, as that they seem to suppose that he has had some extraordinary assistance or commission to do that which may not be done by any other man.

A week later, another letter to the *Post-Boy* continues this account.

NEW HAVEN, September 21, 1741.—Sundry of the brethren of the church in New Haven, being offended at Mr. Davenport's publicly condemning their pastor, the Rev. Mr. Noyes, as an unconverted man; calling him a wolf in sheep's clothing, with many other like opprobrious expressions, being met together at the house of the Rev. Mr. Noyes, desired Mr. Davenport to give the reasons why he has thus reproached and scandalized their pastor, which he did, as follows, viz.:

1. That a woman came to Mr. Noyes under conviction, and said that she was the greatest sinner in the world, and that Mr. Noyes endeavored to abate her convictions; to which Mr. Noyes replied that he did not remember the instance, but supposed that it might be thus, viz.: That he might tell her that she was a very great sinner, and that she ought to be sensible of it, and more sensible of her own sins than of any other person's in the world, but that he did not suppose she was really the greatest sinner in the world. Upon this, Mr. Davenport declared that Mr. Noyes's saying so was an evidence to him that he was an unconverted man; and afterwards, explaining himself upon the word *evidence*, said that it gave him reason to believe it was so.

2. Another reason was, because Mr. Noyes assumed an honor to himself in the ministry which did not belong to him, because a woman told him that some years ago, she came to Mr. Noyes and brought a *relation*, wherein she mentioned the names of several ministers whom she supposed to have been instrumental of her conversion, and Mr. Noyes asked her if he had not also done something towards her conversion, and asked her why his name was not mentioned. Mr. Davenport also added that several other persons had told him that Mr. Noyes disliked their *relations* because there were so many names in them besides his; to which Mr. Noyes replied,

That he did not remember any such thing, and was confident that it was a misrepresentation.

3. Another reason was that Mr. Noyes was not a friend to this work going on among them; and that he did not countenance *itinerant* preachers, and that several persons had told him that they came to meeting with their affections

raised, and that Mr. Noyes' preaching deadened and discouraged them, and tended to stifle their convictions; to which Mr. Noyes replied, that his preaching and conduct in these things were publicly known, and that every one was capable of judging without his saying anything on the subject.

4. That Mr. Noyes, in private conversation with Mr. Davenport, had said to this effect, that he had been deeply sensible of the vileness and corruption of his own nature, and that every one that turned his thoughts inward might easily have such a sense, and that Mr. Noyes seemed to suppose that it was an easy thing; that Mr. Davenport thence concluded that he had never experienced it himself; to which Mr. Noyes replied,

That he at that time utterly refused to give Mr. Davenport any account of his experiences, but that they had some discourse upon some *doctrinal* points, but he could not think that Mr. Davenport could reasonably understand him to mean or intend that every natural man had a sense of the vileness and corruption of his nature, or that it was an easy thing to have it. Several things were said upon this head, which could not easily be minuted down, but on the whole, there seemed to be a misunderstanding between them.

Upon the whole, Mr. Davenport declared that these reasons were sufficient to justify him in censuring and condemning Mr. Noyes as he had done. Then he said he would make a sort of acknowledgment, and without any notice given, while divers in the room were talking loud and others smoking, and some with their hats on, he began a prayer; but there being so much noise in the room, he was hardly heard at first. Many kept on talking; others cried out "stop him;" the Rev. Mr. Noyes spoke once or twice, and said: "Mr. Davenport, I forbid your praying in my house without my leave;" but he persisted, and went on in the midst of the greatest noise, confusion, and consternation, and declared Mr. Noyes an unconverted man, and his people to be as sheep without a shepherd, and prayed that what he had now said might be a means of his and their conversion, "or else according to thy will let them be confounded;" and after that manner went on near a quarter of an hour. And when he had done, Mr. Noyes forbade him ever going into his pulpit any more; and some declared to Mr. Davenport that his praying in that manner was a-taking the name of God in vain, and so the assembly broke up in great consternation.

This is the truth according to the best of our remembrance; and the substance of the conference was minuted down at the time of it, and publicly read to Mr. Davenport and the rest, immediately after.

Subscribers.

"From this time," says Rev. Dr. Dutton, speaking of the conference on the 21st of September, "there began to be an *organized* opposition to Mr. Noyes, and parties began to be formed and to run high, which probably then and certainly ere long, took the forms, the one of hostility and the other of friendship to the revival, and the names of New and Old Lights; Mr. Noyes and his friends on the one side, and his opposers and their adherents on the other."

At the next society's meeting, which was on the 28th of December, about three months after Mr. Davenport's visit, the following memorial was presented, signed by thirty-eight men.

To the First Society in the Town of New Haven.

Whereas, We the subscribers, have by long and sorrowful experience, found that the preaching and conduct of the Rev. Mr. Noyes has been in great measure unprofitable to us, and that we have also reason to think that he differs from us in some points of faith, we desire (not, as we hope, out of any prejudice to the persons of Mr. Noyes and our brethren and friends of the society, to whom we heartily

wish all good) that they would allow us and others that may incline to join with us, to draw off from them in charity, wishing to be a distinct society, that we may put ourselves under the best advantage to worship God, under such means, as he in his good providence may allow, and we hope will bless, for our spiritual good and edification.

The signers of this petition were Gideon Andrews, Caleb Tuttle, Joseph Mix, Caleb Bradley, Joseph Burroughs, David Austin, Jacob Turner, Caleb Andrews, Enos Tuttle, Obadiah Munson, Stephen Johnson, Samuel Cook, Timothy Mix, Samuel Horton, Thomas Punderson, Jr., Joseph Sackett, Hezekiah Beecher, Joseph Mix, Jr., Enos Thompson, John Bull, Caleb Hotchkiss, Jr., Benjamin Woodin, Caleb Bull, Timothy Jones, Benjamin Wilmott, Daniel Turner, Stephen Austin, Thomas Wilmott, Abraham Thompson, Mercy Alling, Jabez Sherman, Amos Tuttle, Thomas Leek, Ezekiel Sanford, Timothy Alling, Amos Peck.

"To us at this day," says Dr. Bacon, "it seems perfectly obvious that the only wise or reasonable course in regard to such a memorial, and indeed the only course consistent with the principles of religious freedom, was either to take such measures as might conciliate the petitioners and overcome their prejudices; or, if that seemed impracticable, to grant them their request at once. The town, as experience soon proved, was large enough for two congregations. In Hartford there had been two churches, both recognized in law, for seventy years. A controversy not unlike that which was now breaking out here, had commenced in Guilford twelve years before, and had been adjusted, after several years of confusion, only by the interference of the Legislature to erect the minority into a new society. Yet in the face of the lessons taught by the experience of other places, the people here, when the question was proposed to the society whether they would do anything with respect to the memorial of the dissatisfied party, answered in the negative. Contention was now of course to be expected.

"The next step of the dissatisfied party was to prefer to the church, articles of complaint against the pastor, expecting, or at least demanding, that the charges should be investigated according to the strict Congregational discipline, either by the church itself or by a council agreed upon between the parties. In opposition to this demand, it was claimed that the Saybrook articles, which were a part of the ecclesiastical constitution of the colony and of this church, had provided a different and better way for investigating charges against a pastor. By that rule, the ministers of the county in their association were in the first instance to receive charges against a brother pastor, and, if they saw reason, were to direct to the calling of a council of the consociated churches of the county. But such was the standing of Mr. Noyes with the ministers and churches of the vicinity, that the complainants were unwilling to bring their cause before such a tribunal. The question was therefore raised whether the church had ever adopted the Saybrook articles as a rule of discipline; and though the former pastor of the church had been not only a leading member of the synod that framed the platform, but

even the principal author of that instrument; and though the church was present, by its pastor and delegate, in the council which had approved the platform and formed the consociation for the county, and had uniformly acted as one of the confederate churches of the county, it was now maintained by the complainants that, inasmuch as there was no written record of any action of the church formally acceding to the Saybrook continuation, it was still to be considered as under the old rule of strict Congregationalism. And when the church overruled their objection and adopted a vote declaring that in this church the Saybrook articles were to be observed, the ground of complaint was altered. They now professed to be the aggrieved party; they professed that they had always considered themselves as belonging to an unconsoiated church; and they insisted that Mr. Noyes and his friends had 'divested them of their ancient ecclesiastical privileges,' and by adopting the Saybrook platform, had formed themselves into another church than that with which they, the complainants, were in covenant.

"Accordingly, considering their relation as members of this church to be at an end, they proceeded, without delay, to take the benefit of the Act of Toleration, and to organize themselves as a religious congregation dissenting from the established worship of the colony.

"On Friday, the 7th of May, 1742, they were solemnly constituted a Congregational Church, by four ministers called for the purpose from the eastern district of Fairfield County, namely, Samuel Cooke, John Graham, Elisha Kent and Joseph Bellamy."

The number of persons uniting in the organization was forty-three—eighteen males and twenty-five females. But in a few weeks the number increased to between seventy and eighty.

Leaving for the present the history of the new church, we follow the history of that which remained, after the secession, as the First Church, or to use the full name by which it has chosen to be called, "The First Church of Christ in New Haven." But for seventeen years the history of the new church was very much mixed with that of the old, for the reason that its members and adherents belonged by law to the First Society. The Act of Toleration permitted them to worship by themselves, but they were still bound to pay taxes for the support of Mr. Noyes as if they had continued to attend upon his ministry, and they still had a right to vote in meetings of the society. Our narrative will first follow the history of the old church to the present day, and then return to the church which separated from it in 1742.

There was unquestionably a dissatisfaction with Mr. Noyes' preaching widely and deeply felt in his society; and this feeling was intensified by the contrast between his cold and dull discourses and the fervent and nervous appeals of the preachers whom the new church brought here to preach for a Sabbath or two in the private house of Mr. Timothy Jones. Mr. Noyes was charged by his opponents with heterodoxy; but this must have been but a partisan accusation. Nothing was heard of it till

the visit of Mr. Davenport, and Mr. Noyes ever professed allegiance to the Westminster standards. Such hard appellations as an Arminian, a Universalist, and even a Deist, were sometimes used in the warfare against him. Probably as the contest proceeded he did become less and less earnest in presenting and enforcing such doctrines as the entire sinfulness of man and the need of regeneration by the Spirit of God. Probably he did oppose what he considered the errors of the Revivalists by sedatives rather than by promoting a pure revival, but it is not established that he departed from the orthodoxy of his time.

Before the organization of the new church, the First Society had resolved, by a full vote, to proceed to the settlement of a colleague pastor, and had requested Mr. Noyes, Deacon Punderson and Captain John Munson to apply to the association at their next meeting for advice and direction in regard to the person that might be suitable to be called as assistant in the work of the ministry. The Separatists did not postpone their separation on account of this proposal, having probably no hope that either the association would recommend, or the old church would receive, a pastor satisfactory to those who were dissatisfied with Mr. Noyes. After the organization of the new church, the First Society continued to talk about a colleague, but nothing decisive was done till Mr. Noyes was fifteen years older than he was at the organization of the second church.

During these years the new church had prospered. They had built a meeting-house, settled a minister, and outgrown the extravagances which naturally resulted from the derangement of the man under whose leadership their secession commenced. Indeed, Mr. Davenport himself, some four years after his visit to New Haven, which precipitated, if it did not occasion, the schism in the church, emerged from his derangement, and bitterly repented of many things which he had done inconsistent, both with a sound mind and with the law of love.

Not only had the new church in New Haven prospered, but throughout the country the New Lights, as the party which favored the revival were called, had greatly increased in number. Yale College, whose President, and Fellows, and Faculty had been strongly opposed to the New Lights, was suffering in its interests from its connection with Mr. Noyes. His preaching had become devoid of interest to both the instructors and the students of the college; and as the New Lights were multiplied in the colony, many parents disliked to intrust their sons to the religious instruction of Mr. Noyes. President Clap, who had been in entire sympathy with Mr. Noyes in his opposition to the revival, became convinced that the welfare of the college required a different preacher for the students, and seeing no prospect of a successor or a colleague to Mr. Noyes, took the bold step of establishing separate worship in the college. The Rev. Naphtali Daggett was appointed Professor of Divinity, and the instructors and students assembled on the Lord's Day in the College Hall for worship, instead of going to the meeting-house of the First Society.

When Professor Daggett had preached in the College Hall about a year, the First Society, "with Mr. Noyes's good liking," made an effort to secure him as colleague pastor with Mr. Noyes, and thus bring back the college to their congregation. When that proposal had been declined, they requested that the professor would preach in their pulpit half the time. But the college corporation being unwilling to recede from the position they had taken, that worship ought to be maintained within a Christian college, there was no deliverance for the First Society out of their troubles by means of Professor Daggett. But the negotiation with so thorough a Calvinist shows that the old church, however opposed to what the New Lights called "the revival," had not departed from their ancient faith. Indeed in the course of this negotiation, they solemnly declared their adhesion to the Confession of Faith owned in the churches of the colony, and to the Westminster Assembly's catechism.

About fifteen years after the organization of the new church, and about six years after the installation of Rev. Mr. Bird as its pastor, it became evident that a majority of the voters in the First Society were New Lights. While they were still in a minority they had made strenuous endeavors to persuade the General Assembly of the colony to set them off as a distinct society, and when their increase threatened a possibility that they might soon outnumber their opponents, the Old Lights became willing to second their endeavors. With a view to a division into two societies, the society ordered that all the inhabitants have liberty to enter their names, declaring to which party they choose to belong, by the general distinction of "Mr. Noyes's party," and "Mr. Bird's party." But when by this enrollment it became evident that the New Lights were the majority, they appeared in a society meeting in sufficient numbers to rescind what had been done with a view to a division, and voted a call to Mr. Bird "to be the minister of this society," and an appointment of the New Light meeting-house to "be the place of public worship for the present."

The settlement of the Rev. Chancey Whittlesey as a colleague with Mr. Noyes so far restored power to the Old Lights, that they were able, in 1759, to secure the division which at first they would not allow and afterward could not obtain. In October of that year, by an act of the General Assembly, the adherents of the First Church were constituted the first society; and the adherents of the new church were incorporated as a new ecclesiastical society by the name of the White Haven Society. "The plate and all the property of the First Church remained undivided. The new brick meeting-house, erected partly by the funds of the church, and partly by donations from individuals was declared the property of the First Society. The old meeting-house, the bell, and all the property which had belonged to the society before the commencement of the difficulties, was declared to belong to the two societies in equal proportions."*

The mention of the church plate in the Act of the General Assembly, suggests an interesting incident

* Bacon's Historical Discourses.

which occurred during the ministry of Mr. Noyes. A merchant of New Haven, Mr. Jeremiah Atwater, purchased a keg of nails in Boston in which he found concealed some silver dollars. He wrote to the Boston merchant, acquainting him with the discovery, and inquiring how the money could be restored to the rightful owner. The merchant replied that the nails were imported with many other similar packages; that the keg had passed through many hands, and, having no distinguishing mark, could not be traced back; that as for himself he purchased the goods for nails and sold them for nails, and of course had no claim for the money; and that the present possessor must dispose of it as he saw fit. Mr. Atwater kept the money for the rightful owner till, a few days before his death, he made a will, in which he gave the money to the church of which he was a member. This traditional history, preserved in the family of his nephew and namesake, Jeremiah Atwater, Steward of Yale College, and by his children related to Rev. Dr. Bacon is confirmed by the following facts: That church now possesses and uses a baptismal basin of solid silver, 12 inches in diameter and 3 inches deep, weighing two pounds and one ounce avoirdupois, and bearing this inscription on its broad brim: "The gift of Mr. Jeremiah Atwater to the First Church of Christ in New Haven, A.D. 1735."

In the Probate Office of New Haven is recorded the last will and testament of Jeremiah Atwater, dated New Haven October 21, 1732. In this document he thus disposes of his property: I give and bequeath unto the First Church of Christ in New Haven the sum of fifty pounds, to be improved, for plate, or otherwise, as the Pastor and Deacons for the time being shall direct, as most useful and proper, for the use of said First Church forever. Item: ten pounds for the relief of the poor in fellowship with the church aforesaid, as the Pastor and Deacons aforesaid shall think proper. After a few other items he bequeaths all the residue of his estate to his dear-and-only child, Lydia Atwater, to her and her heirs forever. Mr. Atwater, died October 27, 1732, six days after the date of the will. The will was probated November 6, 1732. The interval of more than two years between his death and the date inscribed on the basin was the time during which the settlement of the estate and the fabrication of the plate were proceeding.*

Mr. Noyes died June 14, 1761, a little more than three years after the ordination of his colleague. His tomb, like that of Pierpont, is beneath the edifice where his successors in the pastorate preach the gospel to the descendants of his parishioners.

The Rev. Chauncey Whittlesey, a son of the second pastor of the church in Wallingford, was born October 28, 1717. He graduated at Yale College in 1738, and continued his studies as a resident graduate till he was appointed a tutor in 1739. He remained in this office for six years. President Stiles, who preached the sermon at his funeral, testifies of him:

He was an excellent classical scholar, well acquainted with the three learned languages—the Latin, Greek and Hebrew; but especially the Latin and Greek. He was well acquainted with geography, mathematics, natural philosophy and astronomy; with moral philosophy and history; and with the general cyclopedia of literature. He availed himself of the advantages of an academic life, and amassed, by laborious reading, a great treasure of wisdom; and for literature he was, in his day, oracular at college; for he taught with facility and success in every branch of knowledge. He had a very happy talent of instruction, and communicating the knowledge of the liberal arts and sciences.

About a year after his appointment as tutor, he was "approved" to preach as a candidate for the ministry, and during his connection with the college was often called to render occasional assistance to Mr. Noyes. His piety was too sober and his manner too calm to please the New Lights. David Brainerd made him famous by saying of him, "He has no more grace than this chair." Brainerd, entering college when Mr. Whittlesey commenced his work as tutor, was so modest and humble in his Freshman year that "on Lord's Day, July 6 (1640), being Sacrament Day, (he) found some divine life and spiritual refreshment in that holy ordinance," and "next Lord's Day, July 13, had some special sweetness in religion; and again, Lord's Day, July 20, (his) soul was in a sweet and precious frame" under the ministry of Mr. Noyes. Having in his Sophomore year grown more "cold and dull" in matters of religion by means of ambition in his studies, he was "much quickened" in the great and general awakening," which, beginning in January, 1741, spread itself over the College. But after the coming of James Davenport to New Haven in September of that year, Brainerd had the unhappiness, as President Edwards expresses it, "to have a tincture of that intemperate, indiscreet zeal, which was at that time too prevalent; and was led from his high opinion of others that he looked upon as better than himself into such errors as were really contrary to the habitual temper of his mind." It once happened that he and two or three of his intimate friends were in the hall together after Tutor Whittlesey "had engaged in prayer with the scholars, no other person now remaining in the hall but Brainerd and his companions. Mr. Whittlesey having been unusually pathological in his prayer, one of Brainerd's friends on this occasion asked him what he thought of Mr. Whittlesey. He made answer, 'He has no more grace than this chair.'"

One of the Freshman, happening at that time to be near the hall, though not in the room, overheard these words, and reported them to a woman in the town, who communicated them to the Rector of the college. For this offense, aggravated by going to the New Light meeting when forbidden by the Rector, and by saying that he wondered the Rector did not expect to fall down dead for fining the scholars who followed Mr. Tennent to Milford to hear him preach there, he was expelled from college.

"In 1745," says Dr. Bacon, "Mr. Whittlesey resigned his office in the college, and, for reasons which do not appear, relinquished his design of entering into the ministry, and settled in this place

* See an article on this subject by Rev. Dr. Bacon in the *Journal and Courier* of July 15, 1873.

as a merchant. He continued in business about ten years. During all that time he was an active member of this church and society. He was brought forward by his fellow citizens into political life. He represented this town in the General Assembly of the colony, and 'in a variety of public trusts he discharged himself with fidelity and growing influence.'

"At length, after the affairs of the society had arrived at the greatest perplexity, the members and partisans of the separating congregation having become a majority in all society meetings, and the efforts to obtain the services of the college Professor of Divinity as assistant minister having proved unsuccessful, the church, with entire unanimity, elected Mr. Whittlesey to be colleague pastor with Mr. Noyes. The concurrence of the society, as a legal body, was of course out of the question; for the church and those who adhered to the old pastor had already become a separate meeting, with a place of worship erected by themselves. Instead of this, the members of the congregation worshipping with the church united in a subscription to a paper expressing their preference of Mr. Whittlesey, and pledging him a support in case of his settlement as pastor of the church." Accordingly an ecclesiastical council was convened, by whom Mr. Whittlesey was "separated to the work of the gospel ministry, and inducted into the pastoral office in and over the First Church and Congregation of New Haven."

The place of worship of which Dr. Bacon speaks as erected by the church and its adherents, was the third meeting-house in which the church had worshiped. The first having been poorly built, gave place to the second in 1670, during the ministry of Mr. Street. The second house had a pyramidal roof, which, after 1680, was surmounted by a bell, the bell-ringer standing in the "alley," under the apex of the pyramid. In the course of its service of more than eighty years, it was not only supplied with additional seats and additions to its galleries, but, to meet the requirements of the town, which, though not growing rapidly, made some progress from one generation to another, was enlarged in 1699, by an addition "on the side next to the burying place."

The third edifice was not built by the ecclesiastical society within whose bounds it stood, but by the Church itself; which, in November, 1753, considering that a more decent and comfortable house to worship God in was needful, and the many public stations in this place make it more expedient, judged it is proper for them to promote the building said house." To this end they appointed a building committee, and voting to sell two parcels of land, appropriated the proceeds to the building of the new meeting-house. At subsequent meetings several other appropriations were made for finishing the edifice, the last of which was in June, 1756. At that time, "after prayer to the God of all wisdom, the Church observing the decayed state of the house they now worship in, and in consequence the necessity of finishing the brick house, and having the report of the committee for

building said house, judge it their duty to improve part of what their forefathers laid up for pious uses, for building an house for the Lord and accordingly" gave to that end six several pieces of land to be sold, "to finish the said brick house with, hoping it will prepare the same for our meeting in it next winter."

The brick meeting-house erected in the time of Mr. Noyes by the Church and owned by the Church, was, according to the measurement of Dr. Stiles, 72½ feet long, and 50 feet wide.* It stood a little east of where its successor was erected in 1812. Its longest dimension was a nearly north and south line; its pulpit was on its west side; its tower or steeple projected from the north end; there were three entrances, one through the tower, one at the south end, and one on the east side, where the steps encroached upon Temple street.

At the time of Mr. Whittlesey's ordination he was, says Dr. Bacon, "in the fortieth year of his age. His ministry, though begun so late in life, and in circumstances so inauspicious, was long, peaceful, and, for the age in which he labored, prosperous. The Church and congregation were perfectly united in him; and during the whole period of his ministry there appears to have been no division among them and no alienation of their affection from him."

Dr. Bacon, in explanation of his remark that Mr. Whittlesey's ministry was prosperous for the age in which he labored, alludes to three respects in which the age was unpropitious. One was the extravagances of the revival which had preceded. President Edwards says in a letter to a friend in Scotland in 1751:

There are undoubtedly very many instances in New England, in the whole, of the perseverance of such as were thought to have received the saving benefits of the late revival of religion, and of their continuing to walk in newness of life and as becomes saints—instances which are incontestable, and which men must be most blind not to see—but I believe the proportion here is not so great as in Scotland. I cannot say that the greater part of supposed converts give reason, by their conversation, to suppose that they are true converts. The proportion may perhaps be more truly represented by the proportion of the blossoms on a tree which abide and come to mature fruit, to the whole number of blossoms in the spring.

Such spurious experiences are exceedingly destructive to true religion, both in those who have been self-deceived and in those who have watched the process and seen the end.

Another respect in which Mr. Whittlesey's age was unpropitious to his work was the prevalence of church quarrels. The revival had resulted not only in the falling off of many blossoms, but in the division of churches, and the bitter alienation, one from another, of those who called themselves the servants of the same master. How bitter this alienation was in New Haven we shall have occasion to see when, going back to the place in our narrative where the second church broke off from the first, we follow another thread of the story.

Then, thirdly, Mr. Whittlesey's ministry was synchronous with the political and social agitations which preceded and accompanied the Revolution—

*Stiles' Literary Diary.

ary War. The public mind was excited for years by the passage of the Stamp Act, and the measures taken to prevent its operation. Jared Ingersoll, the Stamp-Master for Connecticut, was a leading member of Mr. Whittlesey's church. Then came the shock of arms and the division of the people into Whigs and Tories. Joshua Chandler, the Tory, was an active and influential member of Mr. Whittlesey's church. It is a wonder that the Church was not split into factions and the pastor involved in the social quarrels of the day. It was good success to pass safely through such a stormy period, even though there were few accessions to the church, and no unusual manifestations of interest in the things of the spirit.

But, notwithstanding all the disadvantages of his time of service, his ministry was not without fruit, two hundred and sixty being added to the church while he was pastor. He died July 24, 1787, in the seventieth year of his age and in the thirtieth year of his ministry. His grave, like those of Pierpont and Noyes, is beneath the present church edifice.

"After the death of the venerable Whittlesey," says Dr. Bacon, "the pulpit was supplied for a season, according to one of the most beautiful of the ecclesiastical usages of New England, by the neighboring pastors—each of the thirteen ministers who were present at the funeral volunteering to give one Sabbath's service for the benefit of the widow of their deceased brother and father. Immediately afterwards, the Rev. Dr. James Dana, of Wallingford, being at that time free from the labor of preaching in his own church, was called in to supply the vacant pulpit statedly. In January, 1789, the Church and society, with great unanimity, elected him their pastor; and on the 29th of April he was inducted into the pastoral office. Dr. Dana preached the sermon at his own installation, which, I believe, is the latest instance of that ancient usage in New England. Thus, in less than two years after the church's bereavement, another pastor was harmoniously settled."

Dr. Dana's health having failed some years before his removal from Wallingford, he had relinquished his salary and been released from the duties of his office without a dismissal from the office itself. Having now regained his health, he was willing, though more than fifty years old, to undertake a new pastorate. He had been, in his youth, a man of suspected orthodoxy. Naturally conservative, as he was known to be, the New Lights had opposed his settlement at Wallingford, thinking that he would set himself against what they regarded as a work of God. But as he advanced in the ministry, he advanced in the respect of ministers and churches. They were "constrained to recognize in him a man of great talents and learning; of great judgment and prudence in the management of affairs; of great fearlessness and conscientiousness in performing what he conceived to be his duty; and of eminent public usefulness." The honorary degree of Doctor of Divinity, bestowed upon him by the University of Edinburgh, did not diminish, and perhaps increased, the esteem in which he was held.

Besides, during Dr. Dana's residence in Wallingford, the distinction between "Old Light and New Light" had in some measure given place to the distinction between "old divinity and new divinity." The New Lights had generally gone with Bellamy, Hopkins, West and the younger Edwards for those "improvements," which distinguish New England theology from an older Calvinism. But some of them did not receive these "improvements" and "were willing to acknowledge Dana as orthodox in comparison with these inventors of new divinity, and to forget the heresy and schism of his youth for the sake of the strength with which he could lead them to war against such metaphysical giants as those of Bethlehem, and Stockbridge, and Newport." The Church in New Haven was well acquainted with Dr. Dana, having not only heard him as a candidate for more than a year, but often when he exchanged pulpits with Mr. Whittlesey; for, though eighteen years younger than his predecessor at New Haven, he was ordained in the same year with him, and they had been accustomed to frequent exchanges.

The two younger churches in New Haven were invited to the council called for the induction of Dr. Dana. During the calamities and terrors of the Revolutionary War the churches, which before had had no communion one with another, were drawn together by their common affliction. Dr. Stiles writes in his diary a few weeks after the British had invaded New Haven:

August 12, 1779, TUESDAY. Last week the ministers of the township of New Haven met voluntarily and agreed to propose to their churches a voluntary Fast, on account of the distressing calamities and peculiar danger of the seaports: proposing Thursday, 12th inst., as the day. This was laid before the churches and congregations last Lord's Day and approved. This day the nine churches in the several parishes in this town observed as a day of solemn fasting, prayer and humiliation. It was observed here with great decency and apparent solemnity, the militia attending divine service. I went to Mr. Edwards' meeting in the forenoon. Mr. Whittlesey's and Mr. Mather's agreed to meet together in Mr. Whittlesey's meeting-house, which they did. As Mr. Mather is in ill-health, it relieved him of one exercise. I attended Mr. Whittlesey's P. M., when he preached upon Isaiah xlviii, 9-11. The presence of God seemed to be with us all the day. Blessed be God that he has put it into the hearts of His people to seek to Him in the hour of distress; especially now that we are threatened with the return of the enemy to lay New Haven in ashes.

Perhaps from the time of this Fast in 1779—certainly for some years before the death of Mr. Whittlesey—there was so much of peace and love among the three Congregational churches within the limits of the First Society, that the monthly lecture preparatory to the Lord's Supper was preached at the three houses of worship in rotation as a united service. But the ministers of the two younger churches were so dissatisfied with Dr. Dana, when he was examined by the council, that they withdrew from this union in the preparatory lecture. In this withdrawal they had the sympathy and perhaps the advice of other new divinity ministers.

Dr. Dana's ministry in New Haven does not show large visible results. "The average annual addition to the number of communicants during his ministry of sixteen years and a half was only

between five and six: ninety-three in all." "Yet it deserves to be noticed," says Dr. Bacon," that the period of Dr. Dana's ministry in this church, especially the former part of it, was the period immediately following the Revolutionary War, when the disastrous and demoralizing influences of that long conflict were felt most powerfully in all the churches; and when the country in the joy of its new liberty, and in its sympathy with the hopes and horrors of the French Revolution, was continually blazing with intense excitement; the period in which the long darkness that ensued upon the extravagances of 1740 was just the deepest; the period in which the ministry of so gifted and evangelical a divine as the younger Edwards; came to an end in this very town for the want of success; the period just before the commencement of those great, successive, spreading, religious awakenings, which characterize" the early years of the nineteenth century.

"Dr. Dana, by his discretion and his dignified propriety of conduct; by his diligence and courage in visiting the sick, especially in times of pestilence, when some other ministers retreated from the danger; by the venerable beauty of all his public performances, particularly of his prayers; and by his unquestionable reputation for learning and wisdom; continued to hold the affections of the people much longer than most men could have done in similar circumstances." But when, in the winter of 1804-5, during the confinement of the pastor by illness, the people listened to the eloquence of Mr. Moses Stuart, impetuous by reason of his temperament, his youth, and his radical theology, they discovered, and especially the younger portion of them, that Dr. Dana was old and dull. Arrangements were therefore commenced for procuring Mr. Stuart as a colleague, and when he declined to accept such a position, the society signified by vote their will that "Dr. Dana retire from his pastoral labors." The right to do this they had reserved at the time of his settlement. Dr. Dana's relation to the church and society was consequently dissolved by an ecclesiastical council in December, 1805; and Mr. Stuart, being elected pastor of the church and invited to become the settled minister of the society, was ordained March 5, 1806.

With Mr. Stuart's induction there came a great change in the condition of the church and society. His sermons were fitted to awaken activity of the intellect and of the sensibilities in any congregation, but their effect was augmented by the long-continued attendance of the people on the sedative preaching of Dr. Dana. During his brief ministry 207 persons were added to the church.

Mr. Stuart, after having served the church as pastor a little less than four years, was dismissed at his own request, the church and society reluctantly consenting. Having been invited to the Professorship of Sacred Literature in the Theological Seminary at Andover, he considered himself called in the providence of God to relinquish the pastoral office, and to be employed in forming the minds and hearts of others for the service of the spiritual temple.

"For two years after the removal of Professor Stuart, the church was without a pastor. On the 8th of April, 1812, the vacancy was filled by the ordination of the Rev. Nathaniel W. Taylor. In this ordination Dr. Dana officiated as moderator of the ordaining council, joined in the laying on of the hands of the Presbytery, and in the name of the council gave the charge to the candidate. During the ministry of his immediate successor his stern and wounded feelings had forbidden him to unite with this church in public worship. Still more had he felt himself forbidden to sit under the preaching of the man for whom the Society had treated him, in his old age, with what he esteemed great disrespect. He had therefore withdrawn, and at the College Chapel had attended on the ministry of President Dwight. The effect of this had been in one important respect happy. Formerly he had entertained strong prejudices against the President, looking upon him as tinctured with the 'new divinity,' not only of his grandfather, the first Edwards, but also of his uncle and theological teacher, the second Edwards. But his six years' attendance on the preaching of the President, and especially his hearing that four years' course of sermons on the doctrines and duties of religion, which, since it was given to the public, has been read by so many thousands of intelligent men in all evangelical denominations with equal admiration and profit, went far to annihilate his prejudices. He is said to have acknowledged not only that he thought much better of Dr. Dwight than formerly, but also that the preaching of Dr. Dwight had led him to new views of some important subjects. Accordingly he saw with gratification the progress of measures for the settlement of one of Dr. Dwight's favorite pupils over what had once been his own beloved flock. Occasionally he came to the old meeting-house to join in the worship which he had formerly been accustomed to lead. The sight of his venerable form in the old place awakened old affections. The society expressed by vote their pleasure at seeing him, and their desire that he would attend there in future. The gentleman who was appointed to communicate to him this vote lately gave me some account of the interview. 'Dr. Dana,' said he, presenting a copy, 'I have a communication for you from the society.' 'Please to read it, sir,' said the old man in reply, putting the paper back into the hands of the other, and straightening himself up to a little more than his usual dignity. The vote was read distinctly, and with due emphasis. 'Please to read it again, sir,' said the doctor, still sitting in stiff and antique dignity, with his thin, ghastly countenance unmoved, as if he were something between a ghost and a monument. Again the communication was read, with earnest desire that it might make a favorable impression. 'It is well,' said the old man, and his voice quivered and broke as he uttered his reply, 'I know not but that I may say, Lord, now lettest thou thy servant depart in peace.' On the first Sabbath after Mr. Taylor's ordination, Dr. Dana, at the invitation of the young pastor, took his seat in the pulpit, and there he was seen

thenceforward every Sabbath till his last sickness. He died in August of that year at the age of 77."

Mr. Taylor's pastorate continued about ten years and a half, when like his predecessor, he was drawn away from his parish to fill the chair of a professor in a theological seminary. He was a popular and powerful preacher, a beloved and useful pastor while connected with the First Church in New Haven; but as a teacher of theology he exerted a wider influence than any pastor. The "improvements" distinguishing the New England theology from the old Calvinism, begun by President Jonathan Edwards, and promoted by his son of the same name, and his grandson, President Dwight, were still further advanced by Dr. Taylor, who was a pupil of Dwight's. Not only was Taylor himself a powerful preacher, but the young men whom he trained for the pulpit were able to make an impression upon the public mind greater than the preachers of the preceding generation. Dr. Taylor and his pupils were often misunderstood by those who had been trained in the "old school," and by some were thought to have fallen into dangerous error; but more and more the "natural ability" of man to do what God requires, which Taylor maintained, is assumed by preachers, and the assumption finds response in the conscience of their hearers.

The house of worship now occupied by the First Church in New Haven was built during the ministry of Dr. Taylor. The first mention of it on the records of the society is under the date of November 11, 1812, when William Leffingwell, Henry Daggett, Jr., William W. Woolsey, Isaac Mills, James Goodrich, Gad Peck, and Abraham Bradley, 3d, proposed to build a new meeting-house at their expense, reimbursing themselves by the sale of the pews. The proposition was accepted November 23, 1812. But when it was found that the house as located by the society's committee, under the direction and order of the County Court would cover some of the graves west of the old meeting-house, there was strong opposition to the location of the house. April 10, 1813, the society directed the contractors to proceed as had been ordered, "having due respect to the dead and a regard to decency in the manner of doing the business." Another meeting of the society was held May 3, 1813, "for the purpose of conciliating the differences now subsisting relative to the location of the meeting-house." The greatest opposition to the location came probably from those who had friends buried where a trench must be dug for the foundation of the new edifice; but some objected even to the erection of the house over the graves of their friends. Could this latter class have foreseen what a protection the church would become to the graves and monuments beneath it, they would have been content to see it erected. Some monuments and some human remains were, at that time removed with the consent of survivors, to the new cemetery, and thus the way prepared for the removal, some eight years afterward, of nearly everything which could remind one that there had once been a burial place on the green. The cost

of the new edifice was about \$34,000. It was dedicated December 27, 1814.

As it was necessary to demolish the old meeting-house before laying the foundation of the new, the First Society, in December, 1812, asked and received permission to use one of the two houses which the United Society had acquired by the union of the two societies of White Haven and Fair Haven. At first the use of the Fair Haven house was granted them, but soon afterward the United Society, having voted to build a new meeting-house, and to place it on the site of the Fair Haven house, both the First Society and the United Society used the White Haven or Blue Meeting-house; the United Society going in at 9 and 1 o'clock, and the First Society at 11 and 3. Mr. Charles Thompson, then a child, remembers that when Mr. Taylor was preaching one Sunday afternoon in the Old Blue Meeting-house there was an alarm of fire, which caused the men in the congregation to leave the house; and that after their retirement a woman called out, "Mr. Taylor, Mr. Taylor, where is the fire?"

Dr. Taylor having been dismissed in December, 1822, Rev. Leonard Bacon, previously ordained to the work of the ministry, was installed pastor March 9, 1825. He continued in that office till his death, December 24, 1881, though he was released from active duty in September, 1866, and was thenceforth designated as Pastor Emeritus.

LEONARD BACON

was born in Detroit, Mich., February 19, 1802, graduated at Yale College in 1820, and studied theology at Andover. His ministry is so recent that it does not yet need the pen of the historian. The church to which he had so long ministered, adopted and put on its record the following minute: "It having pleased God to remove out of this world the soul of Dr. Leonard Bacon, who for nearly fifty-seven years has been pastor of this church, the surviving members of the church desire to record, for the information of the generations to come, their veneration and love for their departed friend, and their gratitude to God for the natural and spiritual gifts which have rendered his ministry a benediction to our parents and to us;" and the Ecclesiastical Society connected with the church placed in the south wall of its house of worship a tablet bearing this inscription:

By the Grace of God,

LEONARD BACON,

a servant of Jesus Christ, and of all men for His sake, here preached the Gospel for fifty seven years. Fearing God, and having no fear beside, loving righteousness and hating iniquity, friend of liberty and law, helper of Christian missions, teacher of teachers, promoter of every good work, he blessed the city and the nation by ceaseless labors and a holy life, and departed peacefully into rest December 24, 1881, leaving the world better for his having lived in it.

The services Dr. Bacon rendered in many ways to the city of which he was so long an inhabitant, caused him to be regarded in his later years by the whole population of the city with somewhat of the

Leonard Bacon.

respect and affection he had received from his parishioners. The bell on the Town Hall aided the church bells of the city in voicing the common mourning at his burial. Belonging to a communion of churches which acknowledges no hierarchy, he was in every ecclesiastical assembly *facile princeps*. In all questions respecting the polity of his denomination in the past and in the present, he was "the Nestor of Congregationalism." His mind was constitutionally progressive, but so deeply rooted in the past by historical studies, that his progress was like the growth of a tree pushing its branches upward with vigor and safety proportionate to the depth of its roots. At an early stage of the battle against slavery, Dr. Bacon espoused the cause of freedom, and his pen continued to be active, both against slavery and those who, in destroying the cancer, would have destroyed the body which it imperiled, till slavery was abolished by Lincoln's proclamation of freedom. Lincoln once said to the Rev. Dr. Joseph P. Thompson that he received his first convictions of the enormity of slavery from the writings of Dr. Bacon.

The personal character of the man is thus depicted by the Rev. Dr. Richard S. Storrs, with whom he had been long associated in the conduct of the *Independent*:

He was a delightful man in social life, earnest in his convictions, catholic in his sympathies with whatever seemed to him true and good, affectionate in his feelings, and very fearless in the expression of his thought. He was a brilliant talker, with a great deal of wit and anecdote and historical reminiscence. He was one of the very ablest debaters among American clergymen, extremely clear and forcible in the expression of his views, and quick in repartee. He was a man of devout religious feeling, thoroughly sincere and earnest in his evangelical convictions. He was extremely appropriate and impressive in all public religious services, especially in prayer. He was a man of the utmost simplicity and truthfulness of character, thoroughly generous and sincere. His personal friends will miss him for his delightful personal qualities, his courage, his affectionate nature, his ardent Christian faith and hope, and his tender interest in whatever concerned them and their welfare.

Soon after the release of Dr. Bacon from active duty, the Rev. George Leon Walker was invited to supply the pulpit, and so acceptable were his services to the church and society, that they called him to the pastorate. He was installed November 18, 1868; but after four years of service he requested a dismission on account of ill health, and the church and society reluctantly yielded to his request.

The Rev. Frederick Alphonso Noble, D.D., was installed pastor November 3, 1875, and was dismissed April 30, 1879, that he might accept a call he had received to become the pastor of the Union Park Congregational Church, in Chicago, Illinois.

The Rev. Newman Smyth, D.D., the present pastor, was installed September 20, 1882.

We now return to the year 1742, when forty-three seceders from the First Church uttered and published the following declaration:

We, the subscribers, members of the said Church, firmly adhering to the Congregational principles and privileges on which the said Church was founded and hath stood unshaken from the beginning, through successive generations, until the twenty-fifth day of January last, being by the said

innovations hereunto necessitated, apprehend ourselves called of God, in company to vindicate our ancient rightful powers and privileges, and to put ourselves into a proper capacity for the enjoyment thereof upon the ancient footing; and for that purpose do now, under the conduct of Divine Providence, humbly sought by fasting and prayer, assume a church state of the gospel, on the ancient basis of that church, whereof we stood members in fact, as well as of right, until the unhappy period above mentioned, wherein the pastor, and a number of the brethren with him, went off from the ancient foundation as aforesaid.

The claim of the seceders was that they had a right to a mutual council, *i. e.* a council agreed on by the church and its aggrieved members. But Mr. Noyes told them that the church, having adopted the Saybrook Platform, belonged to the Consociation, and could have no council but the Consociation. The complainants did not wish to submit their case to the Consociation, for the ministers and churches belonging to it were known to be opposed to the revival. For the same reason Mr. Noyes and his friends insisted that no other council than the Consociation should investigate and decide the case. On the one side it was claimed that there was no record of a vote of the church adopting the Saybrook Platform; and on the other side the well-known facts were alleged that the former pastor of the church was a leading member of the synod that formed the platform, and indeed the author of that instrument; and that the church was present by its pastor and delegate in the council which had approved the platform and formed the Consociation for the county; and had uniformly sent delegates, from year to year, to the Consociation.

Neither party being convinced that the other had correctly judged the case, Mr. Noyes put the question to the church; but, as moderator, excluded the petitioners for a mutual council from voting. Of course under such ruling the church decided that it was consociated.

It was this vote, on the 25th of January, 1742, which the aggrieved members regarded as taking those who voted in the affirmative "off from the ancient foundation." Dr. Dutton, in his "History of the North Church," says: "The complainants then—considering their grievances greatly aggravate and declaring that Mr. Noyes and his friends, by voting in the Saybrook Platform, had divested them of their ancient ecclesiastical privileges, and formed themselves into another church than that with which they (the complainants) were in covenant—drew off, affirming that they were the church on the original foundation; and proceeded to take the benefit of the Act of Toleration, which allowed persons, on qualifying themselves by taking a prescribed oath before a magistrate, to organize themselves as a religious congregation dissenting from the established worship of the colony; though it did not free them from taxation by the society from which they dissented."

The new church, claiming to be on the ancient foundation from which Mr. Noyes and his friends had taken themselves off, strengthened their position by using the same Confession of Faith and Covenant which was in use in the old church. Dr. Dutton evidently regarded it as "the confes-

sion of faith and church covenant which had been used in the ancient church of New Haven from the beginning," and probably it was so regarded by the members of the new church. Actually the covenant was the same; but the ancient church at first had no form of confession, every individual at his admission satisfying the church as to his belief by means of such form of confession as he individually brought.

At the outset the new church had to struggle with great difficulties. "The Act of Toleration," says Dr. Dutton, "only gave them the liberty of worshiping by themselves—it did not exempt them from taxation for the support of Mr. Noyes, so that their pecuniary burden was great. This, however, was slight, compared with the violent opposition which they met from the opposers of the revival, the Old Lights, as they were called. These were very numerous and powerful in Connecticut, embracing many of the leading ministers, and generally the magistrates and principal gentlemen. They employed all their art and power to suppress the revival; to keep all ministers from abroad who favored it, out of the colony, and to confine all who favored it in the colony, to their own pulpits. The Old Light party was especially strong and active in New Haven County; and the powerful influence of the First Church and its pastor, and of the President and Corporation of the College, and of the Association of the County, leagued with the government of the commonwealth, was brought to bear upon this infant and feeble church.

"A short time—two or three weeks—after the church was formed, the Legislature of the colony, doubtless urged by ecclesiastical influence, especially from this county, passed a law which would prevent them from employing any minister without the consent of the pastor and the majority of the First Society. According to that law, if any *ordained or licensed* preacher should preach or exhort within the limits of any parish without the consent of the pastor and majority of that parish, if he was from without the colony, he was to be *arrested and carried out of the colony as a vagrant*. If he was from within the colony, he was to be deprived of his salary, and that without any trial, simply upon information, whether true or false, lodged by any person with the clerk of his parish.

"This law also provided that if any person *not licensed* to preach should *exhort* within the limits of any parish, without the consent of the pastor and majority of that parish, he might for every such offense be bound to keep the peace by any assistant or justice of the peace in the penal sum of one hundred pounds.

"For this law, the Association of New Haven County, in their meeting in September, 1742, expressed their thanks to the Legislature, and prayed that it might continue in force. Under this law, a minister as judicious and distinguished as Mr. Pomeroy, of Hebron, was twice arraigned before the Legislature of the colony; obliged to pay costs of prosecution; bound to keep the peace in a penal sum of fifty pounds; and deprived of his lawful salary for seven years. Under this law, Rev. Sam-

uel Finley, afterward President of Princeton College, and whose name is familiar to all who have read the eloquent contrast, by Dr. John Mason, between the death of David Hume and that of Samuel Finley, was arrested and carried out of Connecticut as a vagrant for preaching to a seceding church in Milford. He returned very soon and preached to this church; when he was again arrested and transported as a vagrant. He returned and preached again to this church, when the Legislature, on representation that he greatly disquieted and disturbed the people, passed an additional act, providing that every person transported under the former act should pay the costs of his transportation; and if he should return again and offend in the same way, that it should be the duty of any assistant or justice of the peace to bind him to peaceable behavior in the penal sum of one hundred pounds.

"The Association of New Haven County also took up the matter of Mr. Finley's preaching in Milford and New Haven, and formally resolved that no member of the Presbytery of New Brunswick (a New Light Presbytery) should be admitted into any of their pulpits till satisfaction had been made for Mr. Finley's preaching within their bounds.

"On the 18th of the next January, as we learn from the records of the County Court, the church applied to that Court through a committee, requesting that Mr. James Sprout, a preacher, might be permitted to take oaths and make subscription, according to the Act of Toleration, in order that he might be allowed to preach to them, and was refused. This seems to have been the only attempt to have a stated ministry, after the enactment of the above law, for five or six years. They knew, probably, that they should be refused the privilege of hearing any man of their choice.

"At the same session at which this extraordinary law was enacted, the Assembly advised the faculty of the college to take all proper care to prevent the students from imbibing any of the prevalent errors; and that those who would not be orderly should be expelled. Accordingly, the students were forbidden to attend the meetings of this church; and it was partly for his once disobeying this prohibition, in order to hear Rev. Gilbert Tennent, of New Jersey, that David Brainerd was expelled from college.

"In 1743 the Assembly, in order to suppress enthusiasm, as was said, repealed the Act of Toleration, of which the founders of this church had availed themselves when they seceded; so that thereafter no class of men could be permitted to separate from the established churches, and worship according to the dictate of their consciences, unless leave should be granted by special act of the Legislature; and moreover it was intimated in the Act of Repeal, that *Congregationalists or Presbyterians*, who should apply for such leave, would meet with no indulgence from the Assembly."

Besides persecution from the civil and ecclesiastical powers, the new church suffered from social

proscription. Some of its members were by birth, education, and wealth, equal to any of the Old Lights; but as such were few in number, they could not uphold one another so much as did the dominant party. In some cases families were divided between the parties, and the proverbial bitterness of a family quarrel was mingled with theological controversy. For example, the wife of the Rev. Mr. Noyes was a daughter of Rev. James Pierpont, a former pastor of the old church, and her brother, James Pierpont, was a leader in the secession. Dr. Dutton says, "The father of one of the deacons of this church was a deacon of the First Church. The child of the son died. The father, in a written note, declined to attend the funeral, because the son belonged to the New Light Church." Dr. Bacon used to relate with evident relish a traditional anecdote like this: A family living in the Yorkshire quarter of the town were walking across the Green on Sunday morning in procession, as was the habit, the parents in front, the children following, and the negro servants in the rear. As the procession reached the old meeting-house, it turned toward the door; but a daughter of the family who had recently married a "New Light" passed on with her husband toward the Blue Meeting-house. "Oh!" said an old negro in the rear, who had been long in the family, "Isn't it sad to see young mistress going after strange gods!" After the frame of the New Light Meeting-house was prepared to be raised, the long sticks of timber were cut in two in the night. They were replaced with others, over which the New Lights kept guard every night. The hostility between the two parties was kept alive and aggravated by the collection by force of law of the tax upon the seceders for the support of Mr. Noyes. Dr. Dutton says: "Many went to jail rather than pay it."

The new church began in 1744 to make preparations for building a meeting-house, but probably several years elapsed before it was completed. Meanwhile they met for worship at the house of Mr. Timothy Jones, on the northwest corner of State and Court streets. As might be expected, they were opposed in their efforts to build. They asked permission to place the house on the Green, and were refused. When they had acquired a site at the corner of Church and Elm, one of their members being fortunately the owner of the lot, the First Society, "entering upon the consideration of the separate party's raising a meeting-house on the corner of Mr. Joseph Burrough's home-lot, adjoining to the Market-place, voted that the same is very grievous to the said society, and that they esteem it very hurtful to the public peace of said society; and that Col. Joseph Whiting, Esq., Dr. John Hubbard, and Mr. Jonathan Mansfield be a committee from said society, immediately to represent to said separatists that their doings herein are unlawful and hurtful, and esteemed a public nuisance, and to desire them forthwith to desist their work." At the same meeting a committee was appointed to appeal to the Legislature, or to prosecute the offenders in the law. But, notwithstanding all the opposition which the New Lights encountered, the

house was at last completed. Its front was on Elm street. Some years afterward, at the expense of individuals wanting seats, it was enlarged by an addition built on the westerly side, the roof of the addition joining the old part at right angles. A steeple, sixteen feet square at the base, was also built in front of the new part. By this addition, the front of the building was changed from Elm to Church street; and the west front was brought, by means of the steeple, so far west as to encroach upon the street. From its color it was called, at least in its later days, the Blue Meeting-house.

In 1748 an attempt was made to secure a stated preacher. "In order the more effectually to provide for his support, as they could not yet hope to procure an incorporation from the Legislature, they formed a society by voluntary compact." Rev. John Curtiss was called to the pastoral office and work of the ministry, and he came and served them in that capacity for two years; but it does not appear that he was formally inducted into office. "On the 11th of March, 1751, the committee of the church, having heard that the Rev. Samuel Bird had been dismissed from the church in Dunstable, Mass., invited him, by advice of one of the council for his dismissal, to visit this church, which he did in the month of May following. Some time in the month of June, he was unanimously invited by the church, with the unanimous concurrence of the society, to become their pastor. He gave them encouragement that he would comply with their invitation, provided that their difficulties with the ancient church could be removed."

"The members of the new church, that there might be no obstacle on their part to a reconciliation, sent to Mr. Noyes a confession to be communicated to his church, acknowledging the informality of their secession and condemning that informality, together with whatever of heat and bitterness of spirit had appeared in any of them, and asking forgiveness therefor. It does not appear how the confession was received by the First Church. Probably they took no action upon it. But the council, which the new church called for the installation of Mr. Bird, were satisfied to proceed. From the time of his installation the new Church grew rapidly. When first instituted, the church suffered in the public estimation from the extravagances connected with it. It was organized the same year in which the crazy James Davenport preached in New Haven, and though the seceders never committed themselves to an approval of his eccentricities, they were compromised by their connection with a man whom the General Assembly of Connecticut, a few months afterwards, ordered to be sent to his home as "disturbed in the rational faculties of his mind, and therefore to be pitied and compassionated, and not to be treated as otherwise he might be," and whom being presented by the grand jury in Boston not long afterward for trial as a slanderer, the petit jury which tried him pronounced *not guilty* for the reason that he was at the time he uttered the slanderous words *non compos mentis*. Probably if Mr. Noyes had retired from

the pulpit at any time before the new meeting-house was built, and his successor had been an acceptable preacher, the seceders would have returned to the ancient church. But after the erection of the Blue Meeting-house and the settlement of Mr. Bird, whose "form and manner were commanding, his voice powerful, his elocution handsome and impressive, his sentiments evangelical," those in the First Society who preferred him constantly increased in number, and those who preferred Mr. Noyes decreased with equal rapidity; till Mr. Bird's adherents, having a majority, gave him a call to settle with them as the minister of the First Society, and at the same time voted that the Blue Meeting-house should be the place of worship for the First Society.

As the new congregation made progress in number and influence, it deviated from the peculiarities in which it had its origin, and came more into harmony with the type and tone of religion generally prevalent in the colony. In about nine years after the installation of Mr. Bird, the half-way covenant was adopted by the vote of "a great majority." Previously only those who professed to have experienced a change of heart were permitted to bring their children for baptism.

Mr. Bird was dismissed in 1767, on account of ill-health, and Mr. Jonathan Edwards, then a tutor at Princeton, was called to the pastorate in the course of the next year. He was ordained January 5, 1769, but not without a protest signed by sixty-eight persons. Mr. Edwards was strenuously opposed to the half-way covenant, and probably made its renunciation by the church a condition of his accepting the call. "For," says Dr. Dutton, "it appears from the church records, that after their presentation, and before his acceptance of their call, the church voted to *abolish the half-way covenant practice*." Before the end of the year those who had opposed the settlement of Mr. Edwards resolved unanimously to "go off and worship by themselves." They met in the State House till they could erect a house of worship. The house was finished in December, 1770. It stood on the ground now occupied by the North Church, and was called the Fair Haven Meeting-house. In June, 1771, a church was organized in the Fair Haven Society, and, as might be expected, adopted the half-way covenant.

Mr. Edwards continued to labor with unwearied diligence through the discouraging years of the Revolutionary War, and through equally discouraging years which followed, till 1795, when he was dismissed for the alleged reason that his society was unable to sustain him. The author of the memoir prefixed to the works of Dr. Edwards having mentioned the dissensions in the church and society at the beginning of his ministry, and the termination of that trouble by the formation of the Fair Haven Church, proceeds as follows: "After a time, however, and for several years previous to his dismissal, an uneasiness had arisen in the society from another cause. Several members of the church, of considerable influence, had adopted certain principles (by themselves deemed liberal, but

now understood to have been of the school of Dr. Priestly), on some of the most important doctrines of religion. These views were widely different from those of Dr. Edwards, and of the church at the time of his ordination, and widely different also from what had been professed by the very persons who held them in their original covenant with the church.

"This diversity of opinion was undoubtedly the *principal* cause of the separation between him and his people, though others of less moment, and arising from this, had also their influence. The *ostensible* reason, however, assigned by the society was that they were unable to support their minister. He was accordingly dismissed by an ecclesiastical council at the request both of the society and himself. All parties, however—the church, the society and the council—united in the most ample testimonials to his faithfulness and his abilities."

About eighteen months after Dr. Edwards' dismissal, his church and the church in the Fair Haven Society were united under the denomination of the Church of Christ in the United Societies of White Haven and Fair Haven. The name of the society was abbreviated in 1815, by an act of the Legislature, into the "The United Society," and the church was thereafter called the "Church in the United Society." Popularly its house of worship, erected in 1815, has been known as the North Church.

We must return now to the year 1771, and follow the history of the Fair Haven Church till, in 1795, its members came back to the fold from which they went out in 1769. From the time of their secession in September, 1769, till February, 1773, they had no settled minister. Their pulpit was supplied chiefly by Mr. Bird, who, with his family, worshiped with them, and had formerly sustained to most of them the relation of pastor. On the 3d of February, 1773, Mr. Allyn Mather was ordained as their minister. His health failing about eight years after his settlement, he went to Savannah, and there died in November, 1784. Mr. Samuel Austin was ordained pastor, November 9, 1786. The ordination sermon was preached by Dr. Edwards. "This," says Dr. Dutton, "is the first act of communion, so far as I can learn, between the Church of White Haven and its seceding daughter, the church in Fair Haven Society. The reason of the change is obvious. Mr. Austin, the pastor-elect, was a favorite pupil of Dr. Edwards, and fully adopted his sentiments both as to the half-way covenant and the new divinity." "Mr. Austin made a sort of compromise with those in the society who were in favor of the half-way covenant, which at that time was often made in similar circumstances. He consented that those who had already owned the half-way covenant might continue to have their children baptized; not by himself, but by some minister who had no conscientious scruples against the practice, with whom he would exchange, to afford an opportunity for the performance of the rite." But this compromise did not secure unanimity of satisfaction with him, and he escaped from the difficulties of his position by requesting a

dismissal, that he might accept a call from the First Church and Society in Worcester, Mass. After his retirement, which was in 1790, the pastorate was vacant till the church was reunited with the White Haven Church.

As the United Society came into possession, by means of the union, of two houses of worship, they occupied each on alternate months, and continued to do so till the Fair Haven Meeting-house was taken down, in order that the new North Church might be erected on the same site. In December, 1812, twenty members of the society offered terms for building a new meeting-house, which were accepted. The terms were, in substance, that the proposers should build the house at their own expense, and reimburse themselves by the sale of the two old meeting-houses, the land on which the White Haven house stood, and the pews in the new house, reserving one-eighth of the new house for the society. The whole expense of the house, including chandeliers, was \$32,724.58. The sale of the pews and other assets, after reserving an eighth of the pews, produced an excess over the costs of \$5,491.97, which was funded for the support of the gospel ministry in the society, but, unfortunately was lost by the failure of the Eagle Bank in 1824. The persons who generously made this proposal to build a meeting-house at their own risk, were Thomas Punderson, Increase Cook, Hervey Mulford, Timothy Dwight, Jun., Jared Bradley, James Henry, Abel Burritt, Jun., William Stanley, Leman Dunning, William H. Elliott, Hezekiah Howe, Ebenezer Johnson, Jun., William Dougal, Reuben Rice, Nathan Peck, Eleazar Foster, Charles Sherman, Samuel Punderson, Eli Hotchkiss, Luther Bradley. The house was planned entirely by Mr. Ebenezer Johnson, one of the twenty contractors.

The first pastor of the church in the united societies of White Haven and Fair Haven, the Rev. John Gemmil, was installed in November, 1798, and was dismissed in November, 1801, at his own request, but "to the great satisfaction of the society," as Dr. Dutton believed. He was "a man of brilliant talents and a popular speaker," but better fitted for some other calling than for the sacred office. We have had occasion to notice that after the installation of Dr. Dana in the First Church, the two younger churches refused to have fellowship with him. But May 12, 1798, the United Society voted that in case Mr. Gemmil should settle in this society as their minister, it shall be in his discretion to exchange with Dr. Dana, Dr. Dwight, or any of the neighboring ministers, at such times as he may think proper, and as he may find for the spiritual interest of this society. From the time of the above vote, the harmony and co-operation of the two churches on the Green increased, till, during the partially synchronous pastorates of Dr. Taylor and Mr. Merwin, they became almost like a collegiate church.

Mr. Samuel Merwin was ordained on the 13th of February, 1805, and dismissed at his own request on the 29th of December, 1831. During his ministry, over eight hundred were added to the church.

The Rev. Leicester A. Sawyer was installed on the 2d of June, 1835, and dismissed on the 20th of November, 1837.

Mr. Samuel William Southmayd Dutton was ordained pastor on the 26th of June, 1838, and died, much lamented, on the 26th of January, 1866.

Mr. Edward L. Clark was ordained pastor January 3, 1867, and was dismissed July 17, 1872, that he might accept a call to a Presbyterian church in the City of New York.

The Rev. Edward Hawes was installed September 17, 1873, and was dismissed April 1, 1884, at his own request, and with great regret on the part of his people, in order that the way might be prepared for a union of the church with the Third Congregational Church.

The Third Congregational Church, which was thus to be united with the Church in the United Society, was organized in 1826, and worshiped in the Orange Street Lecture-room, belonging to the First Society, till a house of worship, erected at the corner of Chapel and Union streets, with a view of providing especially for the eastern part of the city, was completed in January, 1829. The pulpit was supplied from 1826 to 1830 by the Rev. N. W. Taylor, D.D., Professor of Didactic Theology in the Theological Department of Yale College. The first pastor was the Rev. Charles A. Boardman, a man of popular talents, but without academic training. He was installed March 24, 1830, and was dismissed in September, 1832.

Mr. Elisha Lord Cleaveland was ordained in July, 1833. Under his ministry, the church and society removed from the house of worship they had occupied, surrendering the property to the stockholders who had advanced the funds requisite for its erection. For several years they worshiped at Saunders' Hall, at the corner of Chapel and Orange streets, until, with help from abroad, they built a church in Court street, now occupied as a Jewish Synagogue. Dr. Cleaveland being regarded by old school theologians as more orthodox than other New Haven pastors, his congregation naturally received important accessions of families removing to the city, who were recommended by their former pastors to attend his church. Thus it came to pass that a more elegant edifice, and in a better location, was required; and, with a great effort, the society built a stone church on Church street, between Chapel and Court streets. Dr. Cleaveland was highly esteemed as an able preacher by the whole community, and, during the remainder of his life his church had great prosperity; his congregation being little, if any, inferior in number, wealth and social position to the older churches. He died suddenly February 16, 1866, in the sixtieth year of his age and the thirty-third of his ministry.

After Dr. Cleaveland's death, the Rev. Daniel S. Gregory, since then President of Forest City University, was pastor of this church from January 10, 1867, till April 20, 1869.

Dr. Gregory was succeeded October, 1, 1869, by the Rev. David Murdock, who was dismissed May 15, 1874. The last pastor of the Third Congrega-

tional Church and Society was the Rev. Stephen R. Dennen, D. D., who was installed April 28, 1875.

He resigned in order that the church might unite with the church in the United Society, and was dismissed simultaneously with Dr. Hawes. The two churches, being previously united as one church, commenced to worship together in April, 1884. For a few weeks the congregation occupied the two houses alternately, but with the intention of making the North Church its permanent home. The name of the church, constituted by the union of these two churches, is the United Church, and the name of the society is the same as one of the two societies had borne before the union, viz., The United Society. The reason for their union was, that a cordon of new Congregational churches surrounding the city, at a distance from the center, had drawn away many families, which in the olden time would have come to the Green as their place of worship, and it was thought to be an unwise stewardship to continue to support so many churches on the original nine squares in the center of the city.

When the Third Congregational Church and Society left the house which they had erected at the corner of Chapel and Union streets, some of the congregation remained, believing that a church was needed in that part of the city, and that with a pastor sympathizing with the other pastors of the city, it could be sustained. A new organization was formed, called the Chapel Street Church. Mr. John O. Colton was ordained pastor in November, 1839, but his health failed almost immediately, and he died in April, 1840.

Mr. Joseph P. Thompson was ordained pastor in October, 1840, and under his ministry the church and congregation greatly increased. With reluctance, his people consented to his dismission, when he was called to the Broadway Tabernacle Church in New York in 1845. He was succeeded by the Rev. Leverett Griggs, who was installed in August 1845, and was dismissed in September, 1847. The Rev. William T. Eustis was installed in March, 1848. During his administration, which continued till 1869, the house of worship was enlarged by an addition to the rear end. Afterwards, in consequence of the growth of the city eastward, the site, which in Dr. Cleaveland's day had been thought by some too remote from the center, became too noisy for a place of worship, and the question began to be agitated of building another house in some more quiet location. Mr. Eustis's foresight of the difficulty of securing unanimity in the choice of a new location, and his reluctance to become a partisan in the strife which might ensue, probably influenced him to accept a call to the Memorial Church in Springfield, Mass. The church, soon after his dismission, built a new house of worship on the corner of Orange and Wall streets, and when it removed to the new house changed its name to the Church of the Redeemer. The Rev. John E. Todd was installed pastor before the removal, and has continued in

office till the present time. The church has greatly prospered under his ministry.

In the order of age, the next of the Congregational churches after the Third Church is the Temple Street Church. In the olden time people of color sat by themselves in a corner of the meeting-house. Those of them who became communicants were sometimes enrolled on the catalogue as having a surname, but more frequently without. Among those who were in full communion with the First Church at the time of Mr. Whittlesey's ordination were Pero, Sabina, and Dinah. Among those admitted under his ministry were Phyllis and Pompey. The Second Church had on its list within three months after its organization, the names of Phyllis, servant to James Pierpont; Abigail (Indian); Cuff, servant of Stephen Munson; Ruth, servant of Mr. Mather; Thomas, servant of Mr. Prout; Sanorus, servant of Mr. Mather; and Jane, servant of Mr. Mather.

In 1829, some of the colored people preferring to have a congregation of their own, the Temple street Church was organized, and has continued to the present time with fluctuating prosperity. Its pulpit was supplied from 1829 to 1834 by the Rev. Simeon S. Jocelyn. He has had many successors, but it would be difficult and perhaps impossible to make a complete list. One of the longest pastorates was that of the Rev. Amos G. Beman. The present pastor, the Rev. Albert P. Miller, was installed June 18, 1885. Since his installation, the house of worship in Temple street has been sold, and another has been bought in Dixwell avenue, a large part of the congregation residing in the northwest part of the city.

The First Congregational Church in Fair Haven was organized in 1830. It should not be confounded with the church in the Fair Haven Society, which lost that name by its union with the church in White Haven Society in 1795. The First Congregational Church in Fair Haven derives its name from the village of Fair Haven, in which it was organized before the City of New Haven extended its limits to include the village of Fair Haven. Its first house of worship was the building on Grand street now used as a public school. It was dedicated June 23, 1830, the same day on which the church was organized. The number of original members was 53, of whom thirty were from the church in East Haven, and twenty-three from the North Church in New Haven. Eighteen more were soon after added from the North Church. Its second house of worship, which it still occupies, was dedicated April 20, 1854. The growth of the church was so vigorous, that, besides building a large house for itself, it sent out a colony of 119 members to form the Second Congregational Church in Fair Haven; the history of which, as it is outside of the city, though now within the town of New Haven, does not come within the requirements of our title-page. It may be of use, however, to say that a small number of seceders from the Second Church in Fair Haven formed the Center Church in Fair Haven, which, under the ministry of the

Rev. William B. Lee, had a brief existence and then expired. The pastors of the First Church have been the Rev. John Mitchell, from 1830 to 1836; the Rev. B. L. Swan, from 1836 to 1845; and the Rev. Burdett Hart, who having served from 1846 to 1860, was dismissed on account of failing health, but after several years of rest, returned to his former charge, and, being reinstalled, is now the pastor of the church in which he was ordained in his youth. During the absence of Mr. Hart, the Rev. George De F. Folsom and the Rev. Henry T. Staats were successively pastors of this church.

The College street Congregational Church was formed in 1831. For two years it worshiped in the Orange street Lecture-room; then for three years in a large hall in Exchange Building. A house of worship having been erected in Church street, the church commenced to occupy it in September, 1836. This house being found less convenient and pleasant than had been expected, it was sold in 1848, and another was erected in College street. Previously to its removal to College street, its sittings were free. For the first six years after its organization it had no pastor. The Rev. Henry G. Ludlow was installed in 1837, and was dismissed in 1842. The Rev. Edward Strong was ordained in 1842, and was dismissed in 1862. The Rev. O. T. Lanphear was installed in 1864, and was dismissed in 1867. The Rev. James W. Hubbell was installed in 1869, and was dismissed in 1876. The Rev. William W. McLane D.D. was installed February 13, 1884.

The Congregational Church in Westville was formed in 1832, but as Westville, though in the town of New Haven, is not within the limits of the city, the title of our book does not require us to relate its history.

For a similar reason we may pass by the Second Church in Fair Haven; which by a recent change of town boundaries, is included in the town, but is not in the city.

The Davenport Congregational Church originated in a mission work of the Center Church, which was begun in Wallace street, and thence transferred to a chapel which the Center Church erected for it in Franklin street. This chapel being destroyed by fire May 1, 1864, another was built on Greene street, and occupied till 1874, when the present house of worship was completed. The pastors of this church have been the Rev. Edward E. Atwater, under whose ministry the church was gathered; the Rev. John W. Partridge, whose failing health obliged him to retire after a short pastorate, and the Rev. Isaac C. Meserve, who was installed May 1, 1874, and is still the useful and beloved shepherd of this flock.

The Howard Avenue Church was organized in 1865, by persons who seceded from a church, since defunct, because its minister and some persons who controlled its property were in sympathy with the rebellion against the United States. Its first pastor

was the Rev. Orlando H. White, under whose ministry the church edifice was erected. The Rev. C. H. Williams, as acting pastor, succeeded Dr. White, but was not installed. The Rev. C. W. Park was installed in 1884, and dismissed in 1885. The Rev. William James Mutch was installed in December of the latter year.

The South Congregational Church, built in Columbus avenue, chiefly at the expense of Gerard Hallock, of the New York *Journal of Commerce*, was diverted from the Congregational denomination by the dissensions of the war, and soon after Mr. Hallock's death was purchased by Roman Catholics, by whom it is called the Church of the Sacred Heart.

The Dwight place Church succeeded to the Howe street Church, which, beginning in a room prepared for it in Park street, was at first called the Park street Church, and afterward, having built a church at the corner of Howe and Martin streets, changed its name to that of Howe street Church. The Rev. Leicester A. Sawyer, who had been pastor of the North Church, was the first pastor of the Park street Church. His successors in the office were the Rev. Abraham C. Baldwin, 1842-45; the Rev. William De Loss Love, 1848-52; the Rev. S. Hale Higgins, 1852-55; the Rev. David H. Hamilton, 1855-58; the Rev. John S. C. Abbott, 1861-66; the Rev. George B. Beecher, 1866-68. When the house for the Dwight place Church was finished in 1870, a new organization was effected which succeeded to the Howe street Church, inheriting its property and furnishing its congregation with a new home. The Rev. George B. Newcomb was the first minister of the Dwight place Church. He preached in Howe street when the new edifice was commenced, and in the new house, at the corner of Chapel street and Dwight place, for several years after its completion; but was not installed. The Rev. Thomas R. Bacon was installed pastor December 8, 1880, and was dismissed December 31, 1884. The Rev. J. E. Twitchell is now the acting pastor of this church.

The Taylor Church, now worshipping on Dixwell avenue, at the corner of Division street, originated in a mission, and has been fostered by the Center Church. It is in a prosperous condition, and promises to become in every respect a self-sustaining institution. Several different ministers have been acting or installed pastors of this church. Mr. Henry L. Hutchins was ordained pastor May 27, 1873, and was dismissed January 1, 1880. His successors have been: the Rev. Newton I. Jones, 1881-83; the Rev. Daniel W. Clark, 1883-85; the Rev. John Allender, 1885.

The Humphrey street Church originated in a mission of the Center Church, as did the Davenport at an earlier date. Situated in a part of the city destitute of church accommodation, the chapel was soon filled with those who were capable of managing their own affairs, and a church and

society were organized. The first pastor was the Rev. R. G. S. McNeill, who was ordained to the office in 1870, and dismissed January 1, 1872. He was succeeded by the Rev. R. P. Hibbard, who was installed March 30, 1876, and dismissed

which was to have been covered by the disbanded church.

EPISCOPAL CHURCHES.

There are no records to indicate the exact time when the oldest parish in New Haven, of the Protestant Episcopal Church, was organized. When the Rector of Yale College and one of its tutors, and two of the Congregational pastors in the neighborhood of New Haven declared for Episcopacy in 1722, there was neither any Episcopal Church in New Haven, nor any clergyman of the Church of England resident in the town. The movement of these gentlemen originated in their own studies, and not in any effort of Episcopalians to draw them away from the ecclesiastical order in which they had been educated. The College had received from England generous gifts of books, which so far as they were theological or ecclesiastical, were, with few exceptions, written by divines of the Church of England. Those who read them perceived and appreciated the culture of the authors, so much the more by reason of its superiority to any they had seen at home. New England was too new and raw at that time to produce elegant literature, and these books drew those who studied them into admiring and loving concord with the writers. But the movement was among scholars, and not among the people. Other Congregational ministers were more or less interested in it, but drew back when they found what sacrifices they must make if they stepped down and off from the Saybrook Platform, as by law established. These accessions of clergymen to the Episcopal Church adding to the number of missionaries employed in the colony of Connecticut by "The Society for Propagating the Gospel in Foreign Parts," resulted in later years in the growth of Episcopacy among the people. It was about thirty years after Rector Cutler was "excused from all further services as Rector of Yale College," when in July, 1752, Samuel Mix, of New Haven, executed a deed, conveying to Enos Alling and Isaac Doolittle a certain piece of land "for the building of a house of public worship, agreeable and according to the establishment of the Church of England."

The history of the Protestant Episcopal Church in New Haven may be considered as commencing with the purchase by Messrs. Alling and Doolittle of the aforesaid land; for, though Trinity Parish was not yet organized, the land was designed for its benefit, and was purchased in anticipation of its organization. Missionaries from "The Society for Propagating the Gospel in Foreign Parts" had indeed sometimes conducted public worship according to the ritual of the Church of England, and one unsuccessful attempt had been made to secure the erection of a church.

In March, 1736, the Rev. Jonathan Arnold, who, having been previously the Congregational pastor in West Haven, received Episcopal ordination in England in the year just mentioned, procured a written conveyance of a piece of land from Will-

Humphrey Street Congregational Church.

March 31, 1879, to accept a call to the New England Church in Brooklyn, N. Y. The Rev. John A. Hanna was installed November 19, 1879, and was removed by death July 30, 1880. The Rev. S. H. Bray has been for several years acting pastor. During his ministry the society has erected a new and commodious church on the north side of Humphrey street, which was dedicated January 18, 1883.

Besides the churches which have been mentioned as becoming defunct by transmigration into some other church—as, for example, the South into the Howard avenue, and the Howe street into the Dwight place—the Wooster place Congregational Church should be mentioned in any catalogue of the Congregational churches in New Haven which claims to be complete. The edifice, now popularly called the Wooster Place Baptist Church, owned and occupied by the First Baptist Church, was built by Mr. Chauncey Jerome, then a prosperous manufacturer, for a Congregational church, and when completed it was occupied for a short time by a church organized for that purpose. But pecuniary reverses thwarted Mr. Jerome's benevolent intentions, and the church was disbanded. The Davenport Church occupies the territory

iam Grigson, of the City of London, in trust for the "building and erecting a church thereupon for the worship and service of Almighty God according to the practice of the Church of England, and a parsonage or dwelling-house for the incumbent of the said intended church for the time being, and also for a churchyard to be taken thereout for the poor, and the residue thereof to be esteemed and used as Glebe Land by the minister of the said intended church for the time being, forever." It is said that when Mr. Arnold went in the autumn of 1738 to take possession and make improvement of this land, "he was opposed by a great number of people, being resolute that no church should be built there, who in a riotous and tumultuous manner, being (as we have good reason to believe) put upon it by some in authority and of the chief men in the town, beat his cattle and abused his servants, threatening both his and their lives to that degree that he was obliged to quit the field."

The land which William Grigson conveyed to Mr. Arnold, he claimed as an heir of his great-grandfather, Thomas Grigson, or, as the ancestor wrote it, Gregson, one of the original planters of New Haven. It had been for more than forty years in the possession of other descendants of Thomas Gregson, he having several daughters who remained in New Haven when their brother, the father of William Grigson, of London, removed to England. These descendants of Thomas Gregson, who were in possession of the land, and claimed exclusive ownership, resisted Mr. Arnold's attempt to take possession. If it was generally known that he intended to build upon it an Episcopal Church, it is not at all unlikely that the crowd which gathered around the contestants made such demonstrations that their sympathies were with those who had been for a long time in possession, as Mr. Arnold would consider "riotous and tumultuous." The case was never brought into a court of law, probably because the conveyance from William Grigson to Jonathan Arnold was legally invalid for want of the acknowledgment of the grantor.

The land which Mr. Arnold claimed and attempted to take possession of, afterward became the property of Trinity Church by purchase from those who derived their title from the daughters of Thomas Gregson. Having thus acquired possession and the inchoation of a title, the parish prudently obliterated whatever defect there might be in their title, by procuring a quit claim deed, properly executed and *acknowledged*, from William Gregson, of Exeter, England, the son of the William Grigson, of London, who had thirty-two years before executed, but not acknowledged, a conveyance of similar purport.

At the time when Mr. Arnold attempted to secure "the glebe land" for the erection of a church, "the members of the Church of England were very few in New Haven. According to the best information that can be obtained, there was then but one churchman in the town."

In relating the history of Trinity Church, we shall avoid ourselves of a valuable paper, read to the

New Haven Colony Historical Society, March 30, 1863, by Frederick Crosswell, Esq., to whom we are indebted for the citation in the preceding paragraph.

"The exact time of the organization of the parish of Trinity Church has not been ascertained. But the churchmen of New Haven had become sufficiently numerous in 1752 to contemplate at that time the building of a house of worship. On the 28th day of July in that year, Samuel Mix executed a deed, conveying for the consideration of £200, old tenor, to Enos Alling and Isaac Doolittle, for the building of a house of public worship, agreeable and according to the establishment of the Church of England, a certain piece of land containing twenty square rods, being four rods wide, fronting westerly on what is now called Church street, and being five rods deep.

"Thus far a remarkable fatality seems to have attended the conveyances of land for the benefit of the Episcopal Church. This deed, like that of William Grigson, was not acknowledged by the grantor, who died shortly after its execution. But upon the petition of the grantees to the General Assembly, at the October session of 1756, that body confirmed their title to the land by a *resolve* 'That the petitioners have liberty to record said deed in the Records of the town of New Haven, and the same being so recorded, shall and may be used and improved as the deed of said Mix for the passing of the estate in said lands as fully and effectually to all intents and purposes as if the same had been acknowledged by the said Mix.' The land conveyed by this deed is that upon which the first house of worship of Trinity Church was built. The edifice was completed in 1753. Stiles mentions it in his 'Itinerary' and states its dimensions as being 58 by 38 feet, according to the measurement made by him in 1760. From the same source it appears that the churchmen then residing in New Haven had increased to the number of twenty-four families, comprising eighty-seven souls."

The first minister of the Church of England who resided in New Haven was Ebenezer Punderson, a native of New Haven, and a graduate of Yale College in the class of 1726. He was settled over the Second Congregational Church in Groton, as pastor, from January, 1728, to February, 1734. Soon afterward he conformed to the Church of England, and became an itinerant missionary in Connecticut. In 1753 he was, at his own request, appointed to reside in his native town, and officiate in the church which had been erected, in some considerable degree, by his own benefactions, he having given the greatest part of the timber. In 1762 he received an invitation from the vestry of the church in Rye to become their Rector, and as the church in New Haven was declining under his ministrations, he accepted the call. He died at Rye, September 22, 1764, at 60 years of age. Dr. Samuel Johnson, upon whose advice the Propagation Society seemed to have very much depended, wrote to the Society in December, 1762:

You have herewith a letter from the Church-wardens and Vestrymen of Rye, praying that Mr. Punderson may be ap-

pointed their missionary, which also I earnestly desire, as they are (after much contention) happily united in him, and his removal from New Haven is rendered highly expedient by an unhappy controversy about a house with a dissenter of some note there, by whom he has been very injuriously treated, whereby his life has been most uncomfortable and the Church has much suffered, but I hope it may soon be provided with some other worthy incumbent not liable to the like difficulties. The clergy thought it advisable, though he continues this winter in New Haven, that he should as frequently as might be visit the people at Rye.

In a letter of earlier date to the Archbishop of Canterbury, he had written:

Mr. Punderson seems a very honest and laborious man; yet the Church at New Haven appears uneasy and rather declining under his ministry, occasioned, I believe, partly by his want of politeness, and partly by his being absent so much, having five or six places under his care. I wish he was again at Groton, and some politer person in his place.

The Propagation Society, ignorant that the Church at Rye had invited Mr. Punderson to become their Rector, had appointed the Rev. Solomon Palmer, of Litchfield, to the same post. To alleviate the disappointment of the latter gentleman, it was arranged that he should remove to New Haven, and become the successor of Mr. Punderson. In his report of June 8, 1763, after mentioning that the people had purchased a glebe near the church, and were completing a house for his accommodation, he adds:

They have engaged to give me an annuity of £30, which is as much as they are at present able to do, being in number but sixty families, and more than half of them in low circumstances; yet, after all, though New Haven is a pleasant situation and would be quite agreeable to me, I should, upon my own account, be content to go to Rye; and if, all things considered, the Society shall order me there, I shall be well suited. But then I should be concerned for the Church in New Haven, which in the latter part of Mr. Punderson's time there was really in a pining and languishing state; and should he return to them again—though he obtains a good character, and is really a valuable man—I fear he would have the mortification of seeing it expire in his hands.

Some months later, he wrote again from New Haven, and referring to the embarrassments which had grown out of the action of the people at Rye, he said:

As matters now stand, and as Mr. Punderson's return would certainly prove fatal to this church, which was even panting for breath, and just ready to expire when he left it, I shall be well pleased, with the society's approbation and consent, to succeed him, though Rye would have suited me better.

"The exchange of places between the two gentlemen," says Dr. Beardsley, "proved beneficial to the interests of the church. As vigor is added to the tree by transplanting it into a newer and stronger soil, so years and influence are sometimes added to the life of a clergyman by changing his associations and permitting him to breathe in a different atmosphere. Mr. Punderson was eminently blessed in his ministry at Rye, and we leave Mr. Palmer in New Haven at the close of the year 1763 engaged in the zealous discharge of his pastoral office, and toiling successfully to bring back the scattered members of the church." *

"Mr. Palmer was born at Branford; graduated at Yale College at 1729; was settled over a Congrega-

tional church in Cornwall, where he remained till 1754, at which time he conformed to the Church of England. He died in Litchfield, November 2, 1771, having returned from New Haven to the place of his former residence and labor, for the reason that he could not support his large family in the expensive town of New Haven on his salary."

Rev. Bela Hubbard, the successor of Mr. Palmer, commenced his ministry in New Haven in 1767. He was a native of Guilford, a graduate of Yale College in the Class of 1758, and had officiated three or four years in his native town before he came to reside in New Haven. Up to the commencement of his incumbency, no light is thrown upon the history of Trinity Church from its own records. Mr. Hubbard kept a register, in which is written with his own hand, on the first page, "Trinity Church, New Haven, *Notitia Parochialis*, A.D. 1767. Bela Hubbard, Missionary." This opening sentence shows that the parish had been organized, though no previous record of the event is extant. There is little of general interest in the volume; its contents consisting mainly of the records of marriages, baptisms and funerals, from which he made his periodical reports to the society of which he was a missionary. His relation to that society as their minister continued till 1785, when Trinity parish assumed his entire support. But, though residing at New Haven, he had the care also of Christ Church, West Haven, and, as appears from this "Notitia," his field of labor extended far beyond these two parishes. Services are recorded by him which were performed in Amity, Bethany, Branford, East Haven, Fairfield, Farmington, Foxon, Guilford, Hamden, Killingworth, Milford, New Haven, North Guilford, Stratford, Saybrook, Stratfield, Woodbury and West Haven.

Mr. Hubbard wrote to the society, whose commission he held, in April, 1772:

I am pleased and happy in my situation, kindly treated and respected by my own people and the dissenters in this growing and populous town, many of whom occasionally attend our services on Sundays; and I have the happiness to see the greatest unanimity reigning among us and the denominations with whom we live. My congregation in something less than five years, has increased one-third in number. The souls, white and black, belonging to the church in New Haven are 503, and in my church in West Haven there are 220.

The first record of the choice of officers of Trinity Parish found in the "Notitia" is in the following words:

"At a meeting of Vestry of Trinity Church, New Haven, on Easter Monday, April 16, 1770.

"Chosen: Mr. Isaac Doolittle and
 "Capt. Stephen Mansfield,
 " *Church Wardens.*
 "Mr. Enos Alling,
 " *Clerk.*
 "Capt. Christopher Kilby,
 "Capt. Abiathar Camp,
 "Mr. John Miles,
 " *Vestrymen.*
 "James Powers,
 " *Sexton.*"

* History of the Episcopal Church in Connecticut. Vol. I, p. 202.

But a list of officers at an earlier date is found in the quit-claim deed, in which Enos Alling conveys to the parish the glebe land which he had purchased of some of the heirs of Thomas Gregson. The deed is dated October 31, 1765, and conveys the land to Timothy Bonticou and Isaac Doolittle, Churchwardens, and Christopher Kilby and Stephen Mansfield, Vestrymen of Trinity Church. This was two years before Dr. Hubbard removed to New Haven.

The "Notitia" records the annual election of Wardens, Vestrymen, etc., on Easter Monday of each succeeding year till 1777, but has no account of their proceedings, or those of the parish. The first record of the parish as a society is dated Easter Monday, March 31, 1777, and is commenced in these words: "The parishioners of Trinity Church convened at the usual place, and chose Enos Alling, Esq., and Mr. Isaac Doolittle, Church Wardens for the year ensuing; Messrs. Charles Prindle, Benjamin Sanford, Daniel Bonticou, Ebenezer Chittenden and Samuel Nesbit, Vestrymen."

Timothy Bonticou, Enos Alling and Isaac Doolittle, the first three Wardens of Trinity Church, deserve especial mention as early and prominent advocates of Episcopacy.

Timothy Bonticou, the son of a French Huguenot refugee, was born in New York City June 17, 1693, and was baptized in the French Church on the 2d of July. In his boyhood he went to France, where he acquired the trade of a silversmith. It is not known when he returned to America, but his wife died in New Haven November 5, 1735, at the age of thirty-three years. He again married September 29, 1736, Mary Goodrich, of Wethersfield. Before the organization of Trinity Church he was a registered communicant in the Episcopal Church at Stratford, and from 1741 to 1748 was a resident there. There is no record that shows him to have been an owner of real estate in Stratford, and it is believed that he removed thither from New Haven on account of greater convenience in the enjoyment of his church privileges. In 1748 he was again a resident in New Haven, and perhaps the only Episcopalian in the town, for Henry Caner, who came here from Boston in 1717 to build the first college edifice, died in 1731. Converts from the "Standing Order" were ready to join with him soon after his return to New Haven in instituting Trinity Church, of which he was probably the first Warden. In the new church edifice he owned and occupied a large square pew, prominently located.

"At the time of the British invasion of New Haven, Mr. Bonticou was an old man eighty-six years of age, a resident of the household of his son Peter, on the corner of Wooster and Olive streets. On this occasion he was the victim of outrage by the British troops. A mob of soldiers visited the house and the old gentleman was robbed of his silver knee and shoe buckles, his daughter-in-law, the wife of Captain Peter, being ordered to pull them off. Personal violence was offered; and on an attempt by the soldiers to bayonet him, she inter-

posed herself between them and saved his life. Infuriated at being baffled in their murderous design, they were ripe for any degree of iniquity, and the daughter of Captain Peter, unfortunately presenting herself at this juncture, she was seized by the soldiers, and her abduction attempted; but her mother, with great tact and courage, interfered, and while entertaining the soldiers with food and drink, secretly sent for assistance; which speedily arrived in the form of a guard of soldiers, obtained through the efforts of an influential Royalist neighbor. This put a stop to their outrageous conduct, but they had well-nigh succeeded in their designs on old Timothy, for he was found by the guard with a rope around his neck, the other end thrown over a beam of the house, and the mob evincing a diabolical disposition to pull him up, which was prevented by the officer in charge.*

Timothy Bonticou, or else his son, Captain Peter Bonticou, built the large house, afterward known as the DeForest House, on the corner of Wooster and Olive streets. His home-lot, extending through to Chapel street, included the ground on which St. Paul's Church stands. Another son, Dr. Daniel Bonticou, graduated at Yale College in 1757, studied medicine in France, and commenced practice in New Haven in 1771. He was a vestryman of Trinity Church in 1774-75 and 1777-78.

Enos Alling was a native of New Haven; became a communicant in the Church in the First Society, August 19, 1741, under the ministry of the Rev. Mr. Noyes, and was one of the seceders who were organized in 1742 as the Church in the White Haven Society. He graduated at Yale College in the class of 1746. Soon after his graduation he engaged in commercial pursuits in his native town.

As early as 1752, as appears from the occurrence of his name with that of Isaac Doolittle in the conveyance from Samuel Mix, he was known and trusted as an Episcopalian. From that time till his death, which occurred September 11, 1779, he was an earnest friend and servant of his church. The earliest record shows him to have been Parish Clerk in 1770, and the Rector had chosen him to the same office at the annual meeting of the parish on Easter Monday next preceeding his death. As Clerk of the Parish, his duty was to lead the responses of the congregation and to designate the psalms and hymns to be sung. Being the Clerk of the Parish, and withal a man of liberal education, he probably officiated as lay-reader in the frequent absences of the minister. "It is the occasion of much regret," says Mr. Croswell in the paper which supplies most of our material, "that so little has been preserved concerning the personal history of Enos Alling, whose zeal in the cause of the Episcopal Church obtained for him among his contemporaries the honorary title of 'Bishop' Alling; by which name he is better remembered, and is more frequently mentioned even now, than by his baptismal one. He left no lineal descendants, which may perhaps account for the absence of more per-

* Bonticou Genealogy. By John E. Morris, Hartford, 1888. But a friend suggests that Timothy Bonticou lived in Milford.

fect memorials of him than can now be obtained." He was a member of the Society for the Propagation of the Gospel, having been elected on the nomination of the Rev. Solomon Palmer, who recommended him as worthy of this honor, "both for his liberal education and affluent circumstances," adding: "He is truly catholic in his temper; has been the greatest benefactor to this church (New Haven); and would, I doubt not, do all he could for the interests of the society and the furtherance of their pious and charitable designs; and as he is childless, though a married man, would at least leave them a legacy." Mr. Alling died September 11, 1779, in the sixty-first year of his age. His first wife, Phebe, daughter of Joseph Whiting, died December 23, 1751. His second wife was Hannah, daughter of Captain Samuel Miles. After the death of Mr. Alling she became the wife of Hon. Jared Ingersoll. She died December 3, 1786, in the fifty-fourth year of her age, the wife of Captain Joseph Bradley, to whom she had been married in April of that year.

In the volume of "Notitia" is a record of the death of Isaac Doolittle, February 13, 1800, age 78. Mr. Doolittle was an enterprising citizen of New Haven. He was a native of Wallingford, but came here to reside at a very early age. The church of which he was so long a member was the object of his warm, zealous and earnest attachment. His contributions of the means necessary for building the first house of worship were more liberal than those of any of his contemporaries.

He was by trade a brass-founder, and a maker of brass-wheel clocks, such as in the olden time stood in the hall or parlor of an aristocratic mansion. He was also engaged in the business of casting bells. In 1774, he advertises that, having erected a suitable building and prepared an apparatus convenient for bell-founding, and having had good success in his first attempt, he intends to carry on that business, and will supply any that please to employ him with any size bell commonly used in this or the neighboring provinces on reasonable terms. His residence was on the south side of Chapel street, between High and York streets, and his bell foundry was on the same street between Park and Howe streets, at the place where Dr. Henry Bronson now resides. During the Revolutionary War, he, in company with Jeremiah Atwater and Elijah Thompson, made large quantities of gunpowder at their powder-mill in Westville. Unlike most of his brethren in his church, he was a Whig, entering into the contest with Great Britain as ardently as he did into the attempt to establish an Episcopal Church in New Haven. In 1778 he was not re-elected a churchwarden; and from that time till 1783 he was passed by at the annual election. The tradition is, that this neglect of one who had been so early and so strong a friend of the church was occasioned by his zeal for the war; but as the church was dependent on the mother country, perhaps its action was prompted by prudence more than by unfriendly feelings towards Mr. Doolittle.

The antagonism between Whig and Tory prob-

ably made more trouble for the Episcopal parish in New Haven than for any other of the ecclesiastical organizations. The little society of Sandemanians seem to have been unanimously Tories, and whatever trouble they had with the civil authority, or with the committee of inspection, they had none with one another. So far as appears, both the "New Light" societies enjoyed a similar unanimity on the other side of the dividing line, there being no Tories in the White Haven or in the Fair Haven Society. They were all zealous in patriotism as they were in religion. In the First Society there was a division of feeling, a few of its members being active Tories, and many more being ready in the first years of the war to submit to King George whenever their more enterprising and, according to their judgment, rash countrymen should become convinced that the rebellion must be unsuccessful. In the Episcopal Society there was a similar division of feeling, but the proportion of Tories was much greater, both of such as were active and of such as avoided overt demonstration. The loyalty of Dr. Hubbard to King George was well known, but he was so discreet and inoffensive that perhaps the most serious consequence of his loyalty which he suffered was the censure of the committee appointed to inquire and report the reasons why he, with others, remained in the town when it was invaded by the British. In other towns some of the Episcopal missionaries were subjected to indignities from mobs, and to constraint from the civil authorities, the measure of punishment or of discipline depending somewhat on the amount of provocation they gave, and somewhat on the subjective condition of those who administered it. Dr. Hubbard's position must have been a delicate one when a warden of his church was manufacturing powder for the rebels, and the persons in London who remitted the Rector's salary, required him to pray that God would strengthen the King to "vanquish and overcome all his enemies." After the Declaration of Independence, the performance of divine service according to the ritual of the English Church, which before had been only an offense to individual Whigs, became an act of disloyalty to the United States, and very few clergymen continued to use the prayers for the King and Royal Family according to the Liturgy. A convention of the clergy was held at New Haven, July 23, 1776, at which, after deliberation, it was resolved to suspend the public exercise of their ministerial functions. There is nothing in his "Notitia" to prove that Dr. Hubbard acted in accordance with this resolve or to indicate when he resumed his ministrations. But President Stiles has supplied in his diary the information which the Rector failed to give. He writes under the date of 1778, December 20, Lord's Day:

In July, 1776, immediately upon the Declaration of Independence, the Episcopal clergy left in New England met, and decided to shut up the churches, that is, to cease the Liturgy and preaching; and only occasionally on Lord's Day, at church or elsewhere, the minister was to read some printed sermon and the Lord's prayer, because they might not pray for the King, and they might not pray for Congress. Mr. Beach and Mr. Newton, however, upheld the Liturgy

and kept up public preaching and service, praying also for the King. All the rest ceased. Correspondingly with them, all the few clergy of Massachusetts and Providence ceased service except Mr. Parker, of Boston. In general, all the churches from Maryland to Nova Scotia have been shut up, while those of the Southern States have been kept open, particularly in Virginia, whose assembly expunged from the Liturgy prayers for the King, and substituted a form or collect for public authority.

This fall the Bishop of London has sent over to all the clergy to open their churches, set up divine service, and use the Liturgy as usual, omitting, however, the prayers for the King and the Royal Family. This day, Mr. Hubbard opened for the first time his church in New Haven.

The Rector at New London being inflexible in his loyalty, would not open his church even upon the Bishop's order, and the parish, longing for the resumption of public worship, "voted that the Wardens call on some reverend gentleman to officiate in the Church of St. James after the manner of the Rev. Mr. Jarvis or Mr. Hubbard."

The termination of Mr. Hubbard's relation to the Propagation Society was not voluntary on his part or that of his parish, as may be seen from the following extract from a letter of the Society's Secretary in reply to one from the Right Rev. Samuel Seabury, who had just been consecrated in Scotland, in which the Bishop solicited for himself and his clergy the continuance of the Society's benefactions:

I am directed by the Society to express their approbation of your service as their missionary and to acquaint you that they cannot, consistently with their charter, employ any missionaries except in the plantations, colonies and factories belonging to the Kingdom of Great Britain; your case is, of course, comprehended under that general rule.

In the year preceding that in which Dr. Hubbard ceased to be a missionary of the Propagation Society and began to receive a full support from the parishes of which he was the Rector, an organ was placed in Trinity Church, and at a vestry meeting held December 29, 1784, it was

"Voted, That those persons who have been benefactors to the church by contributing for an organ, should, as a tribute of gratitude for their liberality, have their names, with the respective sums of their subscriptions, recorded in this book."

At the annual parish meeting, Easter Monday, March 28, 1785, it was

"Voted, That the wardens and vestrymen are the Society's committee according to law, and as such they have been held and regarded ever since—their powers and functions being the same as those of such committees of the other ecclesiastical societies.* It was also voted that there be no further burials under the body of the church, except those families some members of which have already been buried there—by which is understood the heads of those families and their children—only excepting any person leaving a legacy of thirty pounds and particularly desiring that liberty."

At the regular annual meeting in 1787, Moses Bates was appointed organist, and was allowed to occupy the house in which he then lived, without

being required to pay rent, as a compensation for his services. At the vestry meeting March 31, 1788, Moses Bates was reappointed organist, with the additional office of *Sexton*, and for his services was to have his house rent free as before. At the same meeting it was voted that for the convenience of describing the lots and boundaries of the church lands, the street beginning in Chapel street, between the houses of Robert Fairchild and Abel Buel, be called and known by the name of Gregson street, and that the street beginning in Church street, running between the house of Levi Hubbard and the house at present leased to Moses Bates, westerly until it meets Gregson street, be called and known by the name of School alley." But it was a long time before the new name of Gregson street displaced the older name of Toddy alley, which seems to have been for some reason strongly fixed in the popular mind.

At a special parish meeting November 17, 1788, "a proposition was received from Messrs. William McCracken and Josiah Burr to build an addition of twenty-feet to the rear of the church, and to make such alterations in the position of the pulpit, reading desk and chancel as the proposed addition might make proper, and to have the whole finished in two years, without expense to the church, provided the parish would secure to them and their heirs the possession of all the new pews in the space created by the proposed addition and alterations, to be built and placed under the direction of a committee to be appointed by the parish for the purpose." This offer was accepted by the parish, and a committee was appointed to "negotiate an exchange with Richard Cutler for land on the east end of the church lot belonging to him, for so much of land on the north side of said church lot as may be necessary for extending the rear of the church twenty feet."

Some time in 1793, a bell was procured and hung in the belfry. It was the Puritan custom to ring a bell at 9 o'clock in the evening; but Saturday was an exception, because as holy time had begun at sunset, there was no need to notify the people to cease from their labors and pleasures.

The Episcopal Church having now a bell of its own, some over-zealous partisan disturbed the quiet of the town by ringing the bell on Saturday evening, and a week later repeated the offense. At a meeting of the vestry, September 26, 1793, the following record was made: "It being reported that, without any order or direction of the Wardens and Vestrymen of said Church, the bell has been rung on the two preceding Saturday nights by some person unknown, therefore,

"Voted, That in our opinion the ringing of the bell at the above-mentioned time was very improper and irregular, and that we do not countenance the same; and that no person in future be permitted to ring the said bell on Saturday or any other nights, unless ordered by the Society at large."

"At the annual meeting, April 20, 1794, the Wardens were authorized to have the church painted, and to borrow a sum not exceeding £50 to pay for it. And at a vestry meeting in the same year, Mr.

* In 1877 an Act of the Legislature was procured, enacting that the Ecclesiastical Societies of the Protestant Episcopal Church in Connecticut shall be known as Parishes as well as Ecclesiastical Societies, and that such parishes shall conduct their affairs according to the constitution, canons and regulations of the said Protestant Episcopal Church.

Salter, an organist from England, was engaged to play the organ for six months, to be paid at the rate of twenty guineas per annum. Mr. Salter remained for many years in the situation to which he was at this time appointed. He lived to quite an advanced age, and became wholly blind before he died. By the exercise of his talents he supported his family in a respectable manner; and it is no disparagement to his successors to say that none of them have surpassed him in skillful execution and tasteful performance upon an instrument which is better adapted than any other to the purposes of public worship."

"At the annual meeting in 1795, a committee was raised to inquire into the expediency and probable cost of building a gallery in the church; but as the estimated cost was over £100, the consideration of the subject was postponed, for the reason that the town had been put to great expense in consequence of the sickness that had prevailed the previous year."

"A vote was passed at the annual meeting in 1797, that ten dollars be paid out of the Society's treasury toward the public wells and pumps in this city." At a parish meeting November 27th in the same year, it was voted "That there be a contribution every Sabbath, after church at night, for the benefit of the poor of the Parish, the contributions to continue through the winter." "The custom begun at this time has been continued," says Mr. Croswell, "in Trinity Church to this day; but the collections in late years have been made monthly during the winter, instead of weekly, as then." A similar custom in the Center Church is probably of equal antiquity.

In the course of the same year (1797) after various conferences, estimates, and votes on the subject, a contract was made for building side galleries in the church, and the Wardens and Vestrymen were authorized to borrow six hundred dollars on the credit of the parish to meet the expense.

In 1804, Mr. Hubbard was made a Doctor of Divinity by the Corporation of Yale College.

At a vestry meeting October 20, 1806, there was a vote authorizing the erection of a stove in the church, under the direction of the Wardens and Vestrymen, provided it should be done free of expense to the Society.

In the course of 1807, at the request of Dr. Hubbard, the parish secured the services of Rev. Salmon Wheaton as an assistant minister, the Rector's salary being reduced from \$700 to \$650. Mr. Wheaton's engagement ended about October 20, 1810, and he was paid at the rate of \$200 per annum. At a special parish meeting June 9, 1811, the Wardens and Vestrymen, as the Society's Committee, were authorized to extend a call to the Rev. Henry Whitlock, of Norwalk, to be the assistant minister of the Parish, with a salary of \$800 a year. The call was accepted, and Mr. Whitlock commenced his duties soon afterward.

In the "Register," is recorded the death of Ebenezer Chittenden, May 11, 1812, at the age of 86. Mr. Chittenden had been one of the earliest wardens of the church, having been first chosen in 1779,

to fill the vacancy caused by the death of Enos Alling. He was also appointed Parish Clerk by Mr. Hubbard in 1791, which office he continued to hold until the time of his death, when it expired with him.* The year 1812 was also made memorable in the annals of Trinity Church by the death of its Rector. Dr. Hubbard died on the 6th day of December, 1812, in the seventy-third year of his age, and the forty-fifth of his ministration to Trinity Church as missionary and rector. An obituary notice says of him:

Dr. Hubbard possessed great vivacity of intellect and genuine goodness of heart. His education, his sentiments, and his manners were liberal. His conversation and deportment were easy and unaffected—courteous and kind. With habits strongly social, he was an excellent companion, a warm friend, a kind brother, a tender parent, and an affectionate husband.

His wife was Grace (Dunbar) Hill, of Fairfield. In a private letter, his grandson, Rev. T. C. Pitkin, D.D., writes, "He was used to say that though he could not subscribe to the five points of Calvinism as a whole, yet he had always held—turning toward his wife—to irresistible Grace."

The subject of building a new church to supersede the old edifice erected in 1753, was first discussed at the annual meeting in 1810, and Elias Shipman, John H. Jacobs and John Hunt, Jr., were appointed a committee "to set a subscription on foot to ascertain the minds of the members of the Society." In December, 1812, application was made to the town for permission to build on the Green, and the town gave its consent. The cornerstone was laid with appropriate solemnities, May 17, 1814; the Rev. Samuel F. Jarvis, of New York, officiating in the absence of the Rev. Henry Whitlock, who, by the death of Dr. Hubbard, had become rector of the parish.

Declining health obliged Mr. Whitlock not long afterward to resign his office, and the Rev. Harry Croswell, being invited to become the rector, commenced his service on the 1st of January, 1815. Having done duty for more than a year in the old wooden edifice on Church street, he was publicly instituted February 22, 1816, on the day after the new edifice, now known as Trinity Church, was consecrated.

Dr. Croswell, after forty years of service, thus addresses his parishioners: "We look back, of course, to comparatively small beginnings. The church in which I commenced the duties of my rectorship, on the 1st of January, 1815, was a comfortable wooden edifice, erected, before the Revolution, on the east side of Church street. But two rectors had preceded me in this cure, the venerable Bela Hubbard, D.D., who had been a missionary, before the Revolution, in the employ of the Society for the Propagation of the Gospel, and the Rev. Henry Whitlock, who had resigned the cure on account of declining health. The parish consisted at this time of about one hundred and thirty families; but as this was the only church-edifice, with the exception of those at East Haven and West Haven, within a distance of several miles, the congregation was

* Mr. Chittenden was the maker of the two earliest fire-engines in the city. See Chapter on the Fire Department.

gathered not only from the Episcopal families residing in the compact part of the town, but from among the sparse settlements in the neighborhood. In that church we continued to worship until the month of February in the ensuing year, when this building, then in progress of erection, was finished, and consecrated by the name of Trinity Church."

For thirteen years after his settlement, Dr. Crosswell continued to discharge the entire duties of the parish, with only occasional and transient aid. But in the year 1828 it was deemed expedient to procure assistance; and the number of families having increased to about five hundred, it was soon perceived that the congregation required increased accommodations. This led to the adoption of measures for erecting a chapel of ease; and in the spring of 1829 the corner-stone was laid for such a chapel (now St. Paul's Church), which was finished and consecrated in the spring of 1830. From that time till 1845, divine service was performed both in Trinity Church and in the Chapel of Ease, Dr. Crosswell sharing the duties of the cure with his assistant, and alternating between the church and chapel. The following clergymen were from time to time elected by the parish as assistants to Dr. Crosswell, and are designated in the records by diverse titles, such as assistant minister, assistant rector, or associate rector, viz.: Rev. Francis L. Hawks, D.D., 1828-29; Rev. John S. Stone, D.D., 1830-32; Rev. William Lucas, 1832-33; Rev. W. L. Keese, 1833-35; Rev. L. T. Bennett, 1835-40; Rev. W. F. Morgan, D.D., 1841-44; Rev. J. H. Nichols, 1841-46; Rev. T. C. Pitkin, D.D., 1847-56; Rev. S. Benedict, 1856-58.

The first named of these assistants resigned in 1829, before the completion of the chapel, and the Rev. J. H. Nichols was still in office when St. Paul's became a separate parish. As early as 1843 some desire was manifested for a separation of St. Paul's from Trinity Church. At the Easter meeting in that year a committee was appointed to take the matter into consideration, and that committee reported, at the Easter meeting in 1844, that if there was a general desire for such a separation it would be expedient that such a separation take place, and in such event there would be no insuperable legal difficulty. Two weeks later, at an adjourned meeting, the following resolution, offered by Nathan Smith, was passed by a vote of 37 in the affirmative and 32 in the negative.

"Resolved, That the future prosperity of the Parish of Trinity Church would be promoted by a dissolution of the connection which at present exists between Trinity Church and St. Paul's Chapel, provided that the dissolution can be legally effected."

The vote, though so far from being unanimous, availed to secure a separation; the venerable Rector of Trinity doing duty at St. Paul's as a chapel of ease for the last time on the 27th of April, 1845. So rapidly did St. Paul's grow that some thought there was room for still another new parish, and St. Thomas was organized in 1848, Trinity contributing about thirty families toward the commencement of its congregation. In 1853, chiefly by the liberality of a single family in Trinity Church, a

mission chapel was erected on land at the corner of Elm and Park streets, and consecrated in January, 1854, by the name of Christ Church. By the same name it became an organized parish in 1856.

The interval between Dr. Crosswell's retirement from St. Paul's and his death, was about thirteen years. In the course of that time he had as his associates the Rev. Messrs. Nichols, Pitkin, and Benedict. He died March 13, 1858, in the eightieth year of his age and the forty-fourth year of his ministry. Commencing in New Haven in a small wooden edifice, he had removed to a building of stone which was then "the largest Gothic structure in New England, if not in the country," and had lived to see it so crowded that more than one edifice of large dimensions was needed to receive the overflow.

In 1859, the Rev. Edwin Harwood was elected rector of Trinity Church, and remains in the office to this day. For almost a quarter of a century he had only occasional and temporary assistance; but in 1883, the Rev. Harry P. Nichols was elected assistant minister. In 1884, the parish having obtained permission from the city to extend its church westward, built a spacious chancel at an expense, including the cost of the additional pews which the new arrangement permitted, of \$23,000.

This relation of the history of Trinity Church must not come to an end without mention of a charitable foundation presented to the parish by Mr. Joseph E. Sheffield in his life time. It comprises three departments: a parochial school, a home for aged women, and a free chapel. The buildings for the three departments are grouped together on a lot in George street. There is a resident minister who regularly performs divine service in the chapel.

St. Luke's Church is a parish of the Protestant Episcopal Church, organized by and for persons of color belonging to that communion. As its organization dates from 1844, and St. Paul's from 1845, it is next in age to Trinity. Divine service was celebrated in the chapel of Trinity parish till the present house of worship in Park street was purchased.

The following clergymen have been rectors of the parish by election, and several others have officiated for long periods. Rev. Worthington Stokes; Rev. Theodore Hawley, who is now Bishop of Hayti; Rev. Wm. F. Floyd; Rev. Alfred C. Brown, who is still in office.

The first rector of St. Paul's Church was the Rev. Samuel Cooke. Elected July 22, 1845, he commenced duty in November of that year. The church edifice was closed in August and reopened in January 1846, having been meanwhile internally renovated and enlarged by the addition of a chancel extending to the south line of the lot. Mr. Cooke was formally instituted January 14, 1846, after the reopening of the church. On the last day of November, 1850, he sent in his resignation, and on the first Sunday in January, 1851, preached his last sermon as Rector of St. Paul's, having accepted an invitation to become rector of St. Bartholomew's,

New York. During his incumbency a new organ was placed in the church, which is still in use, and is regarded as a superior instrument. The Rev. A. N. Littlejohn was elected rector, June 16, 1851. In the first year of his ministry in St. Paul's, a work of church extension was begun which finally resulted in the organization of two independent parishes, St. John's Church and the Church of the Ascension. A voluntary association was formed for the prosecution of city mission work, which in 1854 was incorporated by the name of the Missionary and Benevolent Society of St. Paul's Church. Meanwhile the Rev. Frederick Sill was employed as a missionary, and a chapel was built on the corner of Eld and State streets. This mission prospered so rapidly, that the worshippers at the chapel expressed, in the spring of 1857, an earnest desire to organize a new parish, to be called St. John's Church. Their request was acceded to; a parochial organization was instituted; and the parish was represented in Convention in June, 1857.

The Missionary Society being thus relieved from the support of St. John's, turned their attention to a new field, building a house of worship on Davenport avenue, corner of Ward street, which they called St. Paul's Chapel. In creating these two new congregations, many families were detailed from St. Paul's as helpers in the work. But it was found to be a healthy process which took away members, but not life, while it added both members and life to the new congregations. St. Paul's had never been more prosperous and strong than while giving so many of her own people to other congregations. Dr. Littlejohn resigned in February, 1860, to accept a call to the Church of the Holy Trinity, Brooklyn, N. Y.

The Rev. Edward L. Drown was invited to the rectorship in June, 1860, and commenced duty in September of that year. On Ascension Day, 1868, a new parish was organized, to which the chapel in Davenport avenue was transferred, with promise of aid for four years. The new parish was called the Church of the Ascension. Mr. Drown resigning in 1868, was succeeded by the Rev. Francis Lobdell, who preached his first sermon as rector September 1, 1869, and was instituted on the 29th of the same month. At the annual meeting of the parish in 1873, a vote was passed authorizing the vestry to renovate the church and enlarge the chancel, providing no debt should be incurred in so doing. The previous purchase of the house and lot next south of the church, for a rectory, having made it possible to extend the church in that direction, this opportunity was improved to build a larger and more churchly chancel, extending outward in depth about twenty feet, and upward to the full height of the ceiling. At the same time a new building on the east side of the church was erected for meetings of the vestry and of the parish, and the whole interior of the edifice was renovated. These improvements exceeded in cost the amount expended by Trinity Parish in purchasing the land and erecting upon it St. Paul's Chapel of Ease. Mr. Lobdell, having been invited to the rectorship of St. Andrew's, New York, re-

signed his charge of St. Paul's in 1879, and the present Rector, the Rev. Edwin S. Lines, succeeded him, commencing work in October of the same year.

St. Thomas' Church was organized in 1848, less than three years after the separation of St. Paul's from Trinity. Their first service was held in the Orange Street Lecture-room on Easter Sunday, April 23, 1848, and there they continued to worship till a temporary chapel of brick was erected in Elm street. This was opened for divine service August 12, 1849. The records of the parish and of the vestry for the year 1853, detail the successive steps that were taken to enter upon the erection of a larger building in its place. The last religious services were held in the temporary structure Sunday, March 12, 1854, and soon the walls were leveled with the ground and the trenches were dug for the foundations of the present edifice. The corner-stone was laid April 24, 1854. A large upper room received the congregation while the building was in progress of erection; and when the year came round they returned to consecrate at Easter the edifice of stone which we now know as St. Thomas' Church. The Rev. E. Edwards Beardsley, D.D., was elected rector of St. Thomas' at the commencement of its existence as a parish, and has remained in the office till the present time.

Christ Church was organized, as has been already told, in 1856. It continued to worship in the chapel at the corner of Elm and Park till August 14, 1859. The building was removed across Elm street, and added as a transept to a new building already in progress of construction. The first service in the new edifice was held on the 6th of January, 1860. The Rev. Joseph Brewster was rector from July 1, 1856, to January 17, 1882. His successor was the Rev. William G. Spencer, D.D., who resigned his office on Easter Monday, 1884. The Rev. E. J. Van Deerlin is now the rector of this parish.

St. John's Church originated in a mission chapel belonging to St. Paul's. Since its organization as a parish the following clergymen have been its rectors: Rev. John T. Huntington, Rev. Benjamin W. Stone, Rev. Richard Whittingham, Rev. C. H. B. Tremaine, Rev. Stewart Means.

The Church of the Ascension, originating like St. John's, in a mission chapel belonging to St. Paul's, continued to worship in the building it received from the mother church till July 12, 1883, when its present substantial edifice of stone was consecrated. It has enjoyed since its parish organization was perfected the services of the following rectors: Rev. Charles T. Kellogg, Rev. Elisha S. Thomas, Rev. Arthur Mason, Rev. William W. Andrews, Rev. Edward W. Babcock, Rev. C. E. Woodcock.

Grace Church, Blatchley avenue, corner of Exchange street, was organized April 10, 1871, to provide for the requirements of the rapidly growing village of Fair Haven, now comprehended within

the city limits. Its rectors have been Rev. John W. Leek, Rev. Peter A. Jay, Rev. John H. Fitzgerald, Rev. Herbert N. Denslow, Rev. Elihu T. Sanford.

There are, in addition to those mentioned above, two parishes of the Protestant Episcopal Church whose houses of worship are within the limits of the town, but outside of the limits of the city, viz., St. James', Westville, and St. James', Fair Haven East.

SANDEMANIAN CHURCH.

A Sandemanian Church was in existence at New Haven when the Revolutionary War commenced. The Sandemanians are, or were, a sect of Christians which originated in Scotland by secession from the Established Church, or from one of the Presbyterian sects which had already seceded. They were at first called Glassites, from the Rev. John Glass, a native of Dundee, who was the leader of the schism. The Rev. Robert Sandeman was his son-in-law. He was born in Perth in 1723, and, after officiating as a minister in Scotland for about twenty years, joined a party of emigrants and settled in Danbury, Conn., where he died in 1771. Under his influence churches were gathered in the principal cities in Scotland, in some cities of England, and in several towns of Massachusetts and Connecticut in New England. Most of these churches, probably all in America but one, have died out.

The peculiarities of the Sandemanians are their construction of the word "faith," which they interpret as simple assent to the teaching and divinity of Christ; rejection of all mystical or double sense from the Scriptures; prohibition of all games of chance; a weekly love feast, being the dinner eaten by all the church together every Sunday; the kiss of brotherhood, which passes from one member to another at their solemn meetings; strict abstinence from all blood and things strangled; plurality of elders, two at least being required for all acts of discipline and all administration of ritual; denial that college training is a necessary prerequisite to the eldership; the absence of prayer at funerals. Their religious services are mostly confined to the reading and explanation of Scriptures; and where there is no house expressly set apart for worship, the meetings are held in the houses of the brethren, where, indeed, all are at home at all times.

A correspondent in Danbury writes, under date of September 8, 1884, concerning the Sandemanians in that town: "They have a Church of five or six members (one male), and hold regular services in their own meeting-house and have their love feasts in their Sabbath-house adjoining. It amounts to a regular dinner together, the family who rent their Sabbath-house preparing the dinner for them. Formerly, some of the first families of the place belonged to them; but their children, when of age, have gradually left them, until now only a very few remain. There is no Elder of the Church resident, and so they cannot have the Lord's Supper administered, which is a great grief to them. Now and then there is a funeral in some one of

their families, the mode of conducting it being as follows: The friends and neighbors meet at the house at the appointed time, sit for half an hour or more in silence, then quietly form the procession to the cemetery. There is no religious service."

Richard Woodhull was an important and influential member of the Sandemanian Church in New Haven. He was descended from Richard Woodhull, one of the first settlers of Brookhaven, Long Island, then under the jurisdiction of Connecticut. That he had qualifications for leadership appears in his having graduated at Yale College in 1752, and filled the office of a tutor in that institution from 1756 to 1761, and again from 1763 to 1765. He was afterward an attorney and a merchant in New Haven, where he died in 1797, the same year in which the Sandemanian house of worship in Gregson street passed into the possession of the Methodists. Almost all which is now known of the Sandemanians in New Haven comes to us through the record of the civil authorities in regard to the adhesion of the people of this sect to the Tory side, in the strife of the Revolutionary War. The town voted, November 6, 1775, that every person who looks upon himself bound, either in conscience or choice, to give intelligence to our enemies of our situation, or otherwise take an active part against us, or yield obedience to any command of his Majesty, King George III, so far as to take up arms against this town or the United Colonies, every such person be desired peaceably to depart from the town. A committee of fifteen was then appointed and desired to call before them "tomorrow, or as soon as may be," every person suspected of harboring the sentiments above mentioned. Mr. Woodhull and his associates in the Church, for the vote seems to have been passed with reference to the Sandemanians, when examined, gave an answer which did not satisfy themselves when they had had time for reflection, and they sent to the committee a note in which they acknowledged that their answer aforesaid should have been plain and simple, and they should have made answer that "we hold ourselves bound in conscience to yield obedience to the commands of his Majesty, King George III, so far as to take up arms against New Haven or the United Colonies; and avoiding to give a plain answer to so plain a question at a time when the town and country were disavowing their allegiance to the King, and were going into open rebellion against God and the King, was evidence to them that they were influenced in the first answer by fear of man and not of God."

The result of these proceedings seems to have been that the Sandemanians remained in town. The Whigs probably did not feel justified in obliging them to leave, upon a mere statement of their conscientious convictions, as long as they were careful to avoid overt acts of hostility. But in 1777, one of their company was, for some reason which does not appear, imprisoned. Some of the principal Whigs, one of whom was at that time Chairman of the Board of Selectmen, who were also the Committee of Inspection, in an interview with one of the Sandemanians, requested a statement of their

belief touching loyalty to the King, and received the following declaration in reply:

NEW HAVEN, September 14, 1777.

To Messrs. Samuel Bishop, David Austin, and Timothy Jones, Jr.

GENTLEMEN, Your desire having been signified to us by Mr. Chamberlain, that we would make a declaration of what we profess touching that subjection which we are bound by the word of God to yield to the higher powers, do say: we are bound to hearken to that word: "Be not afraid of them who kill the body, and after that have no more that they can do, but I will forewarn you whom you shall fear; fear Him, who after he hath killed hath power to cast into hell; yea I say unto you, fear Him." His word and authority obliges us to be subject to the higher powers—the powers that be—which are ordained of God; to be subject to the King as supreme; and to governors, as those who are sent by him for the punishment of evil-doers and the praise of them who do well; to fear the Lord and the King, and not meddle with them who are given to change. These and such like words, by which we must be judged at the last day, bind our consciences to be faithful and loyal subjects to our Sovereign King George the Third, whom God preserve, to whose government we are heartily attached; to give no countenance, aid or assistance to any design formed against this government, but to conduct as loyal subjects; to obey his laws, his commands, and those of subordinate rulers in all things wherein they do not interfere with the commands of our Maker, in which case we ought to obey God rather than man. That as according to the Scriptures, the kingdoms of this world are to be defended by the sword, a command from the Sovereign to his faithful subjects to assist in the defense of his government at the peril of their lives, when they are in a situation that admits of it, is a lawful command; and even in the situation in which we now are, we are bound to a dutiful, loyal, obedient conduct, such as our situation will admit of; and though we earnestly wish to live in peace, and have no inclination to bear arms or become soldiers in a lawful war, yet the exhortation of John the Baptist, and the case of Cornelius oblige us to conclude that the soldiers' calling is a lawful one for Christians as well as other men.

This faith respecting the commands of the Lord touching subjection we have heretofore possessed when it appeared to us that we were, in the course of Providence, called to speak of it, and for this we have suffered; neither can we conceal, or dissemble, or soften the commands before mentioned without being ashamed of Christ and his words before men, and incurring that much-to-be-dreaded consequence, *the Son of Man's being ashamed of us before his Father and before his angels*. We hold ourselves equally obliged, if it be possible, as much as in us lieth, to live peaceably with all men; to do good to all men as we have opportunity; to be inoffensive among our neighbors; to love and pray for our enemies; never to avenge ourselves, nor to bear ill-will to any man; to be no busy-bodies in other men's matters, but with quietness to work and eat our own bread. How far our conduct has corresponded to this we must appeal to our neighbors. Suffering for these sentiments, it must appear to our consciences that we suffer for the word of God and the testimony of Jesus Christ; this we ought to esteem a great honor, of which we were never worthy. Our consciences do not condemn us as suffering for evil doing, or as having done anything against men that will acquit them in the righteous judgment of God for bringing such sufferings upon us.

If we are to be deprived of that liberty which we have in nowise forfeited, happy shall we be if it be given to us from above to suffer with patience. We are able to get a subsistence in this place in our lawful callings without being a burden to our neighbors; if we are removed or confined, this is taken from us; we would be glad, therefore, to be permitted to continue here if we may live in quiet and unmolested. We wish not to be sent into the country, or to be separated to prevent our assembling on the first day of the week, to continue steadfastly in the Apostle's doctrine and fellowship, and the breaking of bread and the prayers. But if we are not to be permitted the free exercise of the Christian profession in this place, as Christians may lawfully wish to enjoy the protection

and blessings of government, that merciful ordinance of God—and as the Lord has, in his tender mercy, permitted His disciples to flee from persecutions, saying: "If they persecute you in one city, flee ye to another"—our wish is that we may be suffered peaceably to retire, with our families, to some convenient place more immediately under the King's protection, that we may seek some place where we may sojourn in peace and worship God according to His word; and that this may be allowed in such a way that we may not be molested by the people in departing. And we wish that our dear brother, Oliver Burr, suffering in prison for hearkening to that command of the Lord which requires us to do good to all men as we have opportunity, may be suffered to go with us, with his family.

We are, Gentlemen, your well-wishers,

JOSEPH PYNCHON,
THEOPHILUS CHAMBERLAIN,
BENJAMIN SMITH,
WILLIAM RICHMOND,
DANIEL HUMPHRIES,
TILUS SMITH,
RICHARD WOODHULL,
THOMAS GOLD.

METHODIST CHURCHES.

The history of Methodism in Connecticut dates from 1789. According to the testimony of the Rev. Abel Stevens, in his "Memorials of Methodism," the Rev. Messrs. Cook and Black had preached in Connecticut a year or two previous. But they were only travelers passing through the State. The Rev. Jesse Lee spent three months in 1789, visiting one town after another, wherever the voice of God's providence seemed to call him. New Haven was one of the places where he tarried to preach. His first sermon in this town was delivered on the 21st of June, in the State House, at 5 o'clock on a Sabbath afternoon. He was invited to take tea with a Mr. Jones, and afterward "put up at Parmalee's Tavern." Four weeks later he was again in New Haven, and preached in one of the meeting-houses, the Rev. Jonathan Edwards being among his hearers. This time he was entertained at the house of David Beecher, the father of the Rev. Dr. Lyman Beecher. In 1790 he made another preaching tour in New England, spending much time in Connecticut.

A communication in the *Connecticut Journal* of March 31, 1790, from a conservative New Havener probably reveals the feeling with which most of the town-born regarded a Methodist preacher.

MESSRS. GREEN,—I would beg leave through the channel of your paper to ask the serious citizens of New Haven whether it is consistent with reason or the word of God to give encouragement to the itinerant preacher who frequently holds forth in this city? No reflection is intended either upon his principles or abilities. The poorest talents, if rightly improved, are not to be despised. And in this land of freedom every one has his full liberty to think for himself and publish his thoughts on religion or any other subject, provided he does it in a proper manner.

For his errors, if he has any, he is answerable to God alone. Men are not to be blamed for entertaining different sentiments. Yet they may be blamable for attempting an undue mode of propagating them. Though all denominations are and ought to be equally protected, most certainly the Pharisaic rage of compassing sea and land to make proselytes ought to be discountenanced by every lover of order and propriety. Religious societies are apt enough to disagree. The friends of religion, therefore, should not unnecessarily multiply the occasions of disagreement. While they encourage freedom of inquiry on religious subjects, while they cultivate, and by their own example recommend,

a spirit of true candor and catholicism, they ought to frown upon those who, under pretense of spreading a favorite system of doctrines, run about from town to town preaching wherever they can find hearers, poisoning the minds of the vulgar by their intemperate harangues and thus sowing the seeds of discord and faction. Such conduct cannot proceed from the mild temper of the Gospel. The man who purposely promotes a difference of sentiments, merely to excite divisions and separations, to draw off a party of followers and obtain employment or fame for himself at the expense of the community, is, in plain English, a villain, though he wear a face as solemn as Sunday and pretend to as much sanctity as ever an apostle possessed.

I am far from charging the preacher referred to with so foul an intention. On the contrary, I hope he is honest. No man should be condemned without proof. However, let me ask the candid readers and believers of the Bible if his crowding into the congregations of other pastors without an invitation or recommendation, without producing any credentials of character, or any testimonials of a regular admission into the sacred office, and especially his offering his service gratis, are not Scriptural marks of a "wolf in sheep's clothing." False teachers have been frequent in the Church from the days of our Saviour down to the present time, and we are warned to beware of them. We are told that "He who entereth not by the door into the sheepfold, but climbeth up some other way, the same is a thief and a robber," instead of the true shepherd. Does he who is not regularly introduced according to the order of the Gospel, but creeps in unawares and intrudes himself as a busy-body in other men's matters—does he, I ask, enter by the door? Does he not rather climb up some other way? Let candor decide.

St. Paul directs us to mark them who cause divisions and offenses, and to avoid them, for they serve not the Lord Christ Jesus; but with good words and fair speeches deceive the hearts of the simple. A common artifice of such deceivers is to demand no reward for their labor at first; although as soon as they have once gained a sufficient party they generally find it written that the laborer is worthy of his hire. Though that kind of preaching which can be had for nothing is commonly known to be good for nothing, yet this is a bait often used to catch the selfish and unwary. Men of small abilities, but high pretensions, are sometimes able by such insinuations to collect a number of disciples from the lower ranks of people, and occasion much mischief.

A zealous profession in a stranger is not indeed always the badge of a hypocrite or a pretender; neither is it by any means an infallible proof of sincerity. For vice very often appears dressed in the lovely garb of virtue. The worst of sinners may for a while assume the appearance of saints. Even Satan himself, to serve a turn, is sometimes transformed into an angel of light, and to carry on the deception more effectually, can quote texts of Scripture as fluently as any itinerant pedlar of peculiar tenets. Perhaps, however, these itinerants are really zealous and conscientious. I believe many of them are. But is it a breach of Christian charity to suppose that their zeal is not according to knowledge and that their conscience is sometimes, at least, misinformed? This city is furnished with preachers of various denominations, eminent in their several ways for learning, eloquence and piety. We have as numerous a clergy as we are willing to support in a proper style. Why then, in the name of common sense, shall we indulge a silly itch of hearing strangers, whose characters and designs are unknown, and who may insensibly divide us more than we are already? I am informed that some who lately attended one of the itinerant's 5 o'clock meetings, disgusted with the dullness and extravagance of his performance, left him in the midst of his sermon. Perhaps they had sufficient provocation for such a piece of rudeness. But it would be more decent and conformable to the solemnity of the Sabbath to tarry at home, in the humble opinion of

A CITIZEN.

The same year Jesse Lee was appointed Elder of a Conference which covered a large part of New England, and included New Haven among its circuits. The published minutes report New Haven in 1790, with a membership of nine persons, and under the pastoral care of the Rev. John

Lee; "but," says the Rev. George W. Woodruff, in a Historical Sermon which he preached in 1859, "from all I can learn, these nine members were probably persons living in the region round about, since I can find no record of any Methodists in the City till two years afterward." The name of New Haven now disappears from the official record and does not reappear until 1811. In 1792, this city was included in the Middletown circuit, and had for its preachers the Rev. Richard Swain and the Rev. Aaron Hunt; who gave such attention to the work as could be given by them to one of perhaps thirty preaching places, usually preaching once in two or three weeks in such private houses as could be obtained for that use. In this year, Samuel Pool and his wife removed from Farmington to New Haven, and were the first Methodists resident in New Haven. They opened their dwelling in the new township as a regular preaching place to the Methodist circuit riders. In 1793, William Thatcher, who had been converted to God in Baltimore in the year 1790, and had become a member of the Methodist Episcopal Church in that city, came and settled in New Haven. Marrying a daughter of Mr. Israel Munson, he and his wife commenced housekeeping in York street, and the Methodist preaching place was soon after transferred from the new township to the house of Mr. Thatcher. "The first fruit of Methodism unto God in New Haven was Anna, the wife of William Thatcher, which happy event took place about the close of the year 1794." In the early part of 1795, the Rev. Daniel Ostrander formed the first Methodist class in New Haven. It consisted of Samuel Pool and Martha, his wife, William Thatcher and Anna, his wife, and Anna Mix. In 1797, the little society purchased, for \$90, the Sandemanian Meeting-house in Gregson street. For ten years this was their place of worship. Here they prayed and preached, and sometimes fought for the right to do so. Lewd fellows of the baser sort gave them much annoyance in their meetings. On one occasion, soon after the society had taken possession of the little sanctuary, some rowdies, offended because they could not have their own way in Toddy alley, determined to put an end to the Methodist meetings by demolishing their house. At eleven o'clock at night, the leader of the gang obtaining entrance to the building, began to hew down the pulpit with a broad ax, intending that the first blow should be a signal for the crowd outside to tear off the siding; but the brethren, getting some word of their design, were waiting in darkness and silence. No sooner had the leader struck the pulpit than a muscular Methodist, who perhaps before his conversion had been an amateur pugilist, knocked him on the head with a hickory cudgel, and thus arrested the further progress of the intended demolition. On the following day the aggressors were brought before a court of justice and fined. The prompt action of the Methodists, supported by the civil authority, was a lesson in behavior to their previously untutored antagonists. After worshiping several years in Gregson street, the society desired larger accommodations, but could find no one

willing to sell them ground on which to build a house. The Methodists were themselves noisy, and their meetings attracted antagonists who were not only noisy, but disorderly and violent. No place for a new church would have been obtained had not a lover of fair play, on whom rested no suspicion of Methodism, purchased a piece of ground on his own account and sold it to the Methodists. The lot thus purchased is on the east side of Temple street, and has been successively occupied by the Methodists, by the Temple street Congregational Church, and by a synagogue of Russian Jews. Here a church, forty by thirty feet, was erected, which was the place of worship for the Methodists of New Haven from 1807 to 1822. It was erected, but not finished. It was inclosed and occupied, but stood through the whole period of fifteen years with unplastered walls. It had a scanty gallery, a very plain pulpit and the cheapest sittings. What was worse than all else, it was burdened with a debt of three or four hundred dollars.

Until 1813 New Haven was only a part of a circuit; but on the 23d of December in that year, under the superintendence of the Rev. N. Bangs, Presiding Elder of the Rhinebeck District, New Haven was set off as an independent station. The first stationed preacher in New Haven was the Rev. Gad Smith. He was appointed to this new station at the Conference in 1814. The Rev. Truman Bishop was the preacher in 1815 and 1816. The Rev. Thomas Thorp succeeded him in 1817. The preacher in 1818 and 1819 was the Rev. Elijah Hebard, so strict a disciplinarian, that at the commencement of his ministry he reduced the number of the society to seventy-one, of whom thirty-six were white and thirty-five were colored persons. That the discipline which reduced the society to so small a number was strict, may be inferred from the fact that one sister was removed from fellowship for conformity to the world in wearing a Leghorn bonnet. But at the end of his second year, Mr. Hebard carried to the Conference the names of one hundred and fifty-eight members, all good and true. In 1820, the Rev. William Thatcher, one of the original members of the society in New Haven, having become a preacher, was stationed in New Haven and remained two years. It was during his pastorate that the society began and completed a new house of worship on the Green. By a vote of the town in July, 1820, the Methodist society were authorized to build a new church on the northwest corner of the Upper Green, in a line with the North Church and twenty feet from College street, provided it should be built of solid materials. On the 15th of May, 1821, the corner-stone was laid, and the work went on with such rapidity that the roof was nearly completed by the 3d of September. On the evening of that day the memorable September Gale demolished the building. And being solicited and obtained from abroad, it was immediately rebuilt, and was dedicated May 23, 1822.

The following certificate was furnished to Rev. Mr. Thatcher when he set out on a journey to solicit aid in rebuilding the house:

NEW HAVEN, September 26, 1821.

The Methodist society which appeals to the benevolence of a Christian people, is respectable for numbers and character. Its public services have been edifying and, as we trust, conducive to the great ends of Christian worship and communion. While with very laudable exertions they were building a new church, they met the disaster which has impelled them to seek relief. We commend them to the confidence and aid of those to whom they may address themselves through their pastor, the Rev. William Thatcher.

OLIV. WOLCOTT,
JONATHAN INGERSOLL, *Lieutenant-Governor.*
ISAAC GILBERT,
R. I. INGERSOLL,
LENT BISHOP,
JOHN ROWE,

Selectmen of New Haven.

ELIZUR GOODRICH, *Mayor of the City.*
ABRAHAM BISHOP, *Collector of New Haven.*
WM. BRISTOL, *Judge of the Superior Court.*

The size of the house was 80 by 68 feet. Hundreds of town-born men remember it, for the reason that they attended the Lancasterian School kept in its basement story by Mr. John E. Lovell. The building being very plain, and not at all ornamental to the Green, the city offered in 1848 to give the society five thousand dollars if they would remove it from the public square and build another church elsewhere. To this gift from the public treasury the sum of about three thousand dollars was added by donors not belonging to the Methodist congregation, Yale College contributing five hundred dollars.

The Methodists willingly consented to the arrangement, and built upon the northeast corner of Elm and College streets the commodious edifice now known as the First Methodist Church, at a cost of about \$30,000 for the house and lot.

The preachers in charge while the society worshipped on the Green were Rev. William Thatcher, 1820-22; Rev. Samuel Luckey, 1822-24; Rev. F. Washburn, 1824-25; Rev. Heman Bangs, 1825-27; Rev. T. Spicer, 1827-29; Rev. James Young, 1829-31; Rev. Noah Levings, 1831-33; Rev. William Thatcher, 1833-34; Rev. Robert Seney, 1834-35; Rev. Heman Bangs, 1835-37; Rev. E. E. Griswold, 1837-39; Rev. O. V. Amerman, 1839-40; Rev. G. L. Stillman, 1840-41; Rev. Joseph Law, 1841-43; Rev. Francis Hodgson, 1843-45; Rev. A. M. Osborn, 1845-46; Rev. Daniel Curry, 1846-48; Rev. James Floy, 1848-50.

During the administration of Rev. Dr. Floy, the edifice now occupied by the First Methodist Society, on the corner of Elm and College streets, was erected, and in 1850 Rev. W. H. Norris was appointed pastor of the congregation. He remained from 1850 to 1852.

His successors have been Rev. J. H. Mitchell, 1852-54; Rev. J. Kenneday, 1854-56; Rev. M. L. Scudder, 1856-58; Rev. L. S. Weed, 1858-60; Rev. J. Kenneday, 1860-62; Rev. B. H. Nadal, 1862-64; Rev. T. H. Burch, 1864-67; Rev. C. Fletcher, 1867-69; Rev. W. F. Watkins, 1869-70; Rev. G. W. Woodruff, 1870-73; Rev. J. W. Beach, 1873-75; Rev. L. S. Weed, 1875-78; Rev. B. M. Adams, 1878-81; Rev. C. H. Buck, 1881-84; Rev. D. A. Goodsell, 1884.

The East Pearl Street Methodist Episcopal Church originated in a "class of twelve persons, of which Ammi Mallory was leader" 1831-32.

The first house of worship (a building 24 by 32,) still standing on Exchange street was dedicated January 30, 1833. The ecclesiastical society was organized according to the requirements of the laws of Connecticut, April 25, 1833. A second church edifice was built in 1835. The corner-stone of the present church edifice, the third, was laid April 25, 1871, by Rev. Moses L. Scudder, D.D., and the house was dedicated by Bishop Simpson, May 13, 1873. The pastors have been Rev. Noah Levings; Rev. Th. Bambridge, 1832-33; Rev. Luman Andrus, 1833-34; Rev. Hart F. Pease, 1834-35; Rev. Oliver V. Ammerman, 1835-36; Rev. Hart F. Pease, 1836-38; Rev. John M. Pease, 1838-40; Rev. Edward S. Stout, 1840-41; Rev. J. Burton Beach, 1841-43; Rev. Ira Abbott, 1843-45; Rev. Henry D. Lathom, 1845-46; Rev. Samuel W. Law, 1846-48; Rev. Charles F. Mallory, 1848-50; Rev. George A. Hubbell, 1850-52; Rev. George C. Creevy, 1852-54; Rev. Timothy C. Young, 1854-55; Rev. S. J. Stebbins, 1855-56; Rev. Friend W. Smith, 1856-58; Rev. J. W. Home, 1858-60; Rev. W. H. Gilder, 1860-61; Rev. John W. Leek, 1861-63; Rev. George Stillman, 1863-65; Rev. R. H. Loomis, 1865-68; Rev. W. F. Collins, 1868-70; Rev. A. S. Graves, 1870-72; Rev. George A. Hubbell, 1872-73; Rev. C. W. Gallagher, 1873-76; Rev. R. H. Loomis, 1876-79; Rev. G. A. Parkington, 1879-81; Rev. S. M. Hammond, 1881-84; Rev. E. Cunningham, 1884.

The St. John street Methodist Episcopal Church was organized in 1840. For several years it worshipped in a hall prepared for it in an edifice known by the name of Mix's Museum, situated on the east side of Olive street, where Court street was afterward cut through to Wooster square. Its present edifice in St. John street was erected in 1845.

The preachers in charge of it have been Rev. Mr. Wymond, 1840-42; Rev. W. W. Brewer, 1842-44; Rev. Heman Bangs, 1844-46; Rev. Heman Bangs, Supernumerary, Rev. M. C. White, Assistant, 1846-47; Rev. J. Law, 1847-48; Rev. F. W. Smith, 1848-50; Rev. J. E. Searles, 1850-52; Rev. J. G. Smith, 1852-54; Rev. Morris Hill, 1854-56; Rev. J. Pegg, Jr., 1856-58; Rev. G. W. Woodruff, 1858-60; Rev. Benjamin Pillsbury, 1860-62; Rev. Thomas J. Osborn, 1862-64; Rev. C. E. Glover, 1864-67; Rev. Arza Hill, 1867-70; Rev. S. H. Bray, 1870-73; Rev. C. H. Buck, 1873-75; Rev. C. S. Wing, 1876-79; Rev. J. W. Barnhart, 1879-81; Rev. C. E. Harris, 1881-84; Rev. A. H. Wyatt, 1884-.

The George street Methodist Episcopal Church is on the south side of that street, and between State and Meadow. Its house of worship was erected in 1853, but has since been enlarged to accommodate an increasing congregation.

Its preachers in charge have been Rev. J. E. Searles, who gathered a congregation in Brewster's

Hall as a missionary under the patronage of a society of ladies; Rev. William C. Hoyt, 1854-56; Rev. William F. Collins, 1856-58; Rev. C. B. Ford, 1858-60; Rev. A. S. Francis, 1860-62; Rev. J. Simmons, 1862-64; Rev. J. E. Searles, 1864-67; Rev. John Pegg, 1867-69; Rev. Joseph Pullman, 1869-71; Rev. Samuel H. Smith, 1871-73; Rev. William T. Hill, 1873-74; Rev. George L. Taylor, 1874-76; Rev. George A. Parkington, 1876-79; Rev. William H. McAllister, 1879-81.

Mr. McAllister removed from the city before his second year expired, and Rev. William R. Webster filled the unexpired term; Rev. William P. Corbet, 1881-83; Rev. C. B. Ford, 1883-85.

The Howard avenue Methodist Episcopal Church was organized in 1872. Its pastors have been: Rev. Perry Chandler, 1872-74; Rev. Nathan Hubbell, 1874-77; Rev. W. W. Elder, 1877-78; Rev. S. W. Tolles, 1878-81; Rev. Smith A. Sands, 1881-83; Rev. A. H. Mead, commencing in 1883, is still in charge.

The Summerfield Methodist Episcopal Church is on Dixwell avenue, corner of Henry street. It began as a mission in a carriage-shop at Newhallville in 1871. The present edifice was erected in 1875, under the ministry of the Rev. Nathan Hubbell. The Rev. Perry Chandler was the first regular Conference minister, and he continued in charge till 1874; the Rev. Nathan Hubbell, 1874-77; the Rev. W. W. Elder, 1877-78; the Rev. Smith W. Toles, 1878-81; the Rev. H. M. Livingston, 1881-83; the Rev. W. R. Rogers, 1883.

Trinity Methodist Episcopal Church was constituted in 1882, by the union of two churches, one of which worshipped in Chapel street, corner of Day, and the other in Davenport avenue. The building in Chapel street was sold to Emmanuel Baptist Church, and the congregation united with the congregation in Wesley Chapel, Davenport avenue. Measures were immediately taken to procure a site for a new house of worship, suitably located, to accommodate all the members of the conjoined congregation. A lot on the corner of Dwight and George streets was purchased, and the commodious edifice which the Church now occupies was erected at a cost of about \$50,000. It was dedicated February 18, 1883. The Rev. D. A. Goodsell was pastor 1881-84, the Rev. J. O. Peck, 1884.

German Methodist Episcopal Church—After the George street Church had ceased to be a mission, the Ladies' Missionary Society turned their attention to the Germans, and by praiseworthy exertions assisted in sustaining German preaching in the city for several years. Out of these exertions grew a German Methodist Society, whose house is on the north side of George street.

There are in the City of New Haven three congregations of colored people who call themselves

Methodists. It is much to be regretted that they are not consolidated into one.

There is also a Methodist Episcopal Church in Westville; but as it is outside of the city limits, our plan does not require us to enumerate it among the churches of the city.

BAPTIST CHURCHES.

The First Baptist Church in New Haven was organized October 30, 1816, with twelve members. The public services of institution, the Rev. Elisha Cushman preaching the sermon, were held in the old Episcopal Church, which stood on the east side of Church street, near the Cutler Corner. The first place of stated public worship was a lodge room in the house of Amos Doolittle, located on the west side of College street, a little north of Elm street. The second was the new township Academy, at the corner of Chapel and Academy streets. The first pastor, the Rev. Henry Lines, resigning in 1821, was succeeded by the Rev. Benjamin M. Hill, who commencing his work in April of that year, was formally instituted as pastor in July next following. The Academy being too small for the increasing congregation, the State House on the Green, standing between Center Church and Trinity Church, but much nearer to the latter than to the former, was secured. The congregation still continuing to increase, it was thought best to devise ways and means for erecting a house of worship. The first step taken was to petition the town for permission to build on the Green. The town voted that the Baptist Society might build on the southwest corner of the public square. But, although it does not appear on the Town Record that there was any opposition in the meeting, many citizens were in heart opposed to the proposal, having already repented of giving a similar permission to the Methodists. To avoid possible litigation and conciliate the public mind, the plan of building on the Green was abandoned, and a lot on the south side of Chapel street, between Union and Olive streets, was purchased. The corner-stone was laid September 23, 1822, and a rejoicing congregation assembled at its dedication July 27, 1824. It was built of East Rock stone and coated with stucco. Its dimensions were 50 feet in width and 60 feet in length.

Mr. Hill, having resigned the pastorate, was followed by the Rev. John Pratt. Mr. Pratt was ordained May 12, 1830, and, after a brief pastorate of only about one year, was succeeded by the Rev. Elisha Cushman, who remained here three years. The Rev. Rollin H. Neale, afterward a pastor in Boston, took the charge of this church in May, 1834, and, like his predecessor, continued here three years. During his ministry a baptistry was placed in front of the pulpit, and the edifice was enlarged by the addition of 23 feet to its length. The Rev. Thomas C. Teasdale became pastor in April, 1840, about three years after Dr. Neale's removal, and remained nearly five years. During his ministry large numbers were added to the church, mainly as the result of special efforts, in

which he was assisted by Elder Knapp and other revival preachers. But there was much difference of feeling, interruption of concord, and scattering of the congregation when Mr. Teasdale's pastorate came to an end.

In 1842 a second Baptist Church was formed, forty-nine members taking letters for that purpose. Their meetings were at first held in the Orange Street Lecture-room, and subsequently in the building called the Temple, on a corner of Orange and Court streets. In 1845 they erected a house of worship on the corner of Academy and Greene streets. In 1856 they purchased the spacious and elegant edifice which had recently been erected in Wooster place, for the Congregationalists, by Mr. Jerome. Soon afterward it was thought desirable, if not necessary, that the two Baptist churches should be united in one, and, accordingly, the property was conveyed to the First Baptist Society, and the two churches were united into one, which is sometimes called the First Baptist Church and sometimes, from the location of its house of worship, the Wooster Place Baptist Church. By this union the Second Church lost its organic life, being merged in the older and stronger church which came to unite with it.

Returning now to the history of the First Church as it was after the departure of Mr. Teasdale, we find them inviting Mr. S. Dryden Phelps, then a student in the Theological Department of Yale College, to supply the pulpit, and inviting him after he had supplied the pulpit for about a year, to become their pastor. Accepting the call, he was ordained January 21, 1846. In 1850 the interior of the church was remodeled and beautified, the pulpit being changed from the end nearest the street to the rear end of the building. In 1854 a chapel was erected in the rear. It was in 1865 that the union of the two churches above mentioned took place, Dr. Phelps becoming the pastor of the church and congregation formed by the union. In 1873 Dr. Phelps resigned his pastorate and has since been employed in editorial and other literary work.

The pastors subsequent to him have been: Rev. T. Harwood Pattison; Rev. J. M. Stifler, D.D.; Rev. W. H. Butrick, who is now the pastor.

The Calvary Baptist Church began its history as a mission or branch of the First Church. A small building in Dwight street was purchased and fitted up for a Sunday-school in 1865. It was soon overcrowded, was enlarged, and was again filled with pupils.

About this time Mr. John M. Davies removed hither from New York, became interested in the affairs of the denomination, and was desirous of promoting such a co-operation by the churches as would strengthen the cause. In connection with Rev. B. M. Hill, who had been pastor of the First Church in its infancy, he held such consultation with the churches as resulted favorably to the main object in view. The First and Second Churches were consolidated; the house of worship of the Second Church was transferred to the First Church; that of the First Church was sold, and

with the avails of the sale all the financial obligations of the two churches were cancelled, and by voluntary subscriptions their beautiful house of worship was thoroughly repaired and improved, with no debt remaining.

Immediately after the consummation of this union, a movement was commenced for carrying out other contemplated objects. Meetings were held by members of the church and its friends, in which the subject of church extension was fully discussed and concert of action was decided on. An organization called the Baptist Association, was formed, and a committee was appointed to co-operate with it. After some delay, a suitable building lot was secured at the corner of Chapel and York streets, at a cost of \$19,000, which was about double the amount originally proposed for that purpose. It was transferred to the association in the month of January, 1867.

In the preamble to the Articles of Association, it was declared that, "Regarding a debt upon a church as an unmitigated evil, it is the fixed purpose of this association to conduct the business in hand so that, when the house is completed, it shall be fully paid for before passing it over to the church (hereafter to be formed) for public service." This provision, though admitted as a good and necessary one, and unanimously adopted, caused many long and tedious delays.

To insure more vigorous action, a meeting was held March 16, 1868, when an executive committee of fifteen members was elected, with power to fill vacancies in their own number, to make contracts, raise funds, provide a pastor, and to act in all things necessary to the consummation of the object in view.

A delay of more than a year now occurred in obtaining the necessary subscriptions, but finally ground was broken for the foundation September 29, 1869. The corner-stone was laid on the 30th of November following, by Rev. B. M. Hill, who had performed the same ceremony, about forty-eight years previously, at the foundation of the First Baptist Church. The building was ready for its internal finish in the course of the next summer, when the original plan of preparing a room for public worship was commenced, and would have been followed to an early completion, but for the standing obstacle, the lack of funds as required by the constitution. Notwithstanding the delay, the basement-room was ready on May 14, 1871; and on that day it was opened for public worship, and occupied by a happy company of brethren and sisters from the First Church and its Dwight street branch, and numerous others, who filled it to its utmost capacity. The preacher was Rev. C. E. Smith, who ultimately became pastor of the church.

The monetary embarrassment having been overcome about the time when the basement was finished, work on the main audience-room was commenced and carried forward so that it was ready for use in the following August. A church of 101 members, dismissed by letter from the First Church, was formed August 7, 1871, and the Rev. C. E. Smith became its pastor.

The entire cost of the lot, building and organ was about \$100,000. The furnishing was generously given by Mr. Davies, at a cost of \$8,500 more. The main audience-room was used for the first time in a dedication service, November 22, 1871.

In March, 1882, a fire originating in the edifice destroyed its interior. The damage was appraised at \$24,800 on the building, \$4,000 on the organ, and \$2,500 on the furniture. In repairing the damage, \$7,000 more than the sum received from the insurance companies was expended, and this amount was subscribed by the congregation on the day when the restored building was first occupied for worship.

German Baptist Church.—In 1865, twenty-four members were dismissed from the First Baptist Church to form a church of Germans. The church thus originated has grown to be an active and influential body, with a neat house of worship of its own. It is at the corner of George and Broad streets. The Rev. William Appel is the present pastor.

The Grand street Baptist Church was organized October 24, 1871. Rev. W. C. Walker, missionary of the Connecticut Baptist Convention, was largely instrumental in effecting it. The church depended upon "supplies" for preaching until the Rev. S. M. Whiting became pastor. He entered on his labors July 7, 1872, and his resignation took effect June 30, 1876. He was succeeded by the Rev. A. H. Ball, who was pastor from September 1, 1876, to June 10, 1883. The Rev. T. E. Busfield was ordained September 12, 1883. The house of worship, on the corner of Grand and Poplar streets, cost, including the lot, about \$15,000. It was dedicated December 29, 1874.

Emmanuel Baptist Church.—When Trinity Methodist Episcopal Church was formed by the consolidation of two small churches, the edifice at the corner of Chapel and Day streets, in which one of the two had worshiped, was purchased by a Baptist society of people of color, and denominated Emmanuel Baptist Church. The parish was not a new organization when it began to worship in Chapel street, but removed thither from Webster street. The Rev. James G. Ross was the pastor at the time of the removal.

UNIVERSALIST CHURCHES.

The First Universalist Society erected a church in 1850 on the corner of State and Court streets. When the First Baptist Society removed from Chapel street to Wooster place, their house in Chapel street was purchased by the Universalist Society and occupied by them as their place of worship for several years. Afterward they erected a new house of worship, with a parsonage attached, in Orange street near the Church of the Redeemer, and called it the Church of the Messiah.

The Second Universalist Church, having previously worshiped in a hall, purchased, in 1883, a

chapel in Davenport avenue which had been the home of one of the two congregations which united to form Trinity Methodist Episcopal Church. The Rev. Phebe A. Hanaford is pastor.

SECOND ADVENT CHURCH.

There is a house of worship on Beers street, corner of Elm, called Beers Street Christian Chapel. It is occupied by a church which makes prominent among its articles of faith the speedy second advent of Christ.

LUTHERAN CHURCHES.

The German Evangelical Lutheran Trinity Church was organized on the 19th of December, 1865, and purchased its present place of worship in 1871. It is in Wooster street, corner of Brewery, in the same building in which the pastor resides. The Rev. C. H. Siebke has been pastor of this church from its beginning to the present time. A second German Lutheran Church was organized in May, 1885. It has hitherto worshiped in Bethany Chapel in Oak street.

Swedish Lutheran Church.—A Lutheran Church in which the worship is conducted in the Swedish language meet in a chapel in Humphrey street. Its name is Swedish Bethesda Evangelical Lutheran Church. Its pastor is the Rev. J. O. Sanstrom.

PRESBYTERIAN CHURCH.

There is so close a resemblance between Presbyterianism and Congregationalism that Presbyterians residing in New Haven have usually been content to worship with and become members of Congregational Churches. During the year 1885, however, a second attempt has been made to establish a Presbyterian Church; the first having been made when the South Congregational Church was rent by the dissensions consequent on the War of the Rebellion. It worships at present in the lecture-room of the edifice vacated by the late Third Congregational Church, and is under the pastoral care of the Rev. J. G. Rodger.

ROMAN CATHOLIC CHURCHES.

The troubles of the Revolution in France induced a considerable emigration of Frenchmen to America, and in 1796 there were so many Roman Catholic Frenchmen in Connecticut that a priest came to administer to them the rites of their church. The announcement of his intention to reside in New Haven was published in the *Connecticut Journal*, and a copy of it may be seen in the chapter on the periodical press. But for the restoration of tranquillity in France, the Roman Catholic Church might have acquired at that time a permanent home in our city. The construction of the Farmington Canal, a generation later, brought Irish laborers to this neighborhood, and from the time of their arrival occasional missionary visits were made by

clergymen of the Roman Catholic Church. The Rev. James Fitton is believed to be the first priest who regularly ministered to the Catholics of New Haven. In 1834, their first ecclesiastical edifice was erected on the corner of Davenport avenue and York street. A parish had previously been organized and temporary accommodations obtained over a bakery at the corner of Wooster and Chestnut streets. The new edifice, named Christ Church, was consecrated in May, 1834, by Bishop Fenwick, of Boston, to whose diocese it belonged. During the services the organ gallery fell, and a convert to the Roman Catholic Church, by the name of Hardyear, belonging in Derby, and his grandson, a boy of about twelve years, were both killed. This building was destroyed by fire in the year 1848. The parish of Christ Church immediately purchased an edifice in Church street which had been vacated by a Protestant congregation, now known as the College street Congregational Church, and, giving it the name of St. Mary's Church, occupied it as their place of worship.

St. Mary's Church, having worshiped for several years in Church street, removed to the large and beautiful edifice which the parish erected and is now occupying, on Hillhouse avenue. The parish priests have been: Rev. James McDermott, 1832-40; Rev. William Willey, 1840; Rev. James Smith, 1840-48; Rev. Philip O'Reilly, 1848-51; Rev. Edward J. O'Brien, 1851; Rev. Patrick A. Murphy; Rev. P. P. Lawlor; Rev. M. J. Daly; Rev. T. E. Whalen (Assistant Pastor). This parish has recently been placed under the care of the Order of Dominicans.

St. Patrick's Church is a large stone edifice situated on the corner of Grand and Wallace streets. The parish to which it belongs was organized in 1850, and in 1853 the edifice was completed and consecrated by Archbishop Bedini, the Pope's Nuncio.

Its parish priests have been: Rev. Mathew Hart, 1850; Very Rev. James Lynch, 1876; Rev. Jeremiah S. Fitzpatrick, 1876; Rev. John Russell, 1883.

St. John's Church was built on the site of the original Christ Church, and was consecrated in 1858. The parish priests have been: Rev. John Smith; Rev. Hugh Carmody, D. D.; Rev. John Cooney.

Under Father Smith's administration the school-house adjoining the church was erected. The parochial residence on Davenport avenue and St. Elizabeth's Convent were erected during Dr. Carmody's administration. St. Elizabeth's Convent cost \$30,000, and has accommodation for 600 pupils. St. John's Church numbers about 3,500 members, and represents one of the most valuable church properties in the city.

St. Francis' Church, on Ferry street, Fair Haven, is next in the age of its organization, to St. John's.

The site on which St. Francis' Church stands was purchased by the late Rev. Mathew Hart, then pastor of St. Patrick's Church, in 1864. In

1867 the church was commenced by the late Rev. P. A. Gaynor, the first pastor. The corner-stone was laid May, 1868, and the edifice was open for divine service October 1, 1868, though far from being finished. The pastor died May 29th in the following year.

On the 6th of June, 1869, the present pastor, the Rev. Patrick Mulholland, was appointed by Bishop McFarland to take charge of the parish. Since that time a parochial residence has been built, the heavy debt on the church almost paid, a twenty thousand dollar school-house built and furnished, and the valuable property, corner of Ferry and Chatham streets, lately owned by S. N. English, secured for a convent, and a school erected thereon. The parish has increased wonderfully in fifteen years in numbers and strength. Eight hundred children are in daily attendance at the parish schools, and the congregation is contemplating the erection of another school building the coming year. "At present," says the pastor, "there is not room for all the Catholic children who are anxious to come to our schools."

Church of the Sacred Heart.—The edifice of the Church of the Sacred Heart was erected in 1851–52 for a Protestant congregation. In 1875 it was purchased by the Catholics.

The pastors have been: Rev. Stephen P. Sheffrey; Rev. J. A. Mulcahey; Rev. Michael McCune.

St. Boniface Church (German).—This church was organized September 20, 1868. Services were held in various halls until 1873, when the present church edifice on George street was erected at a cost of \$7,500. The first pastor was the Rev. Henry Windelsmidt. He was succeeded in 1872 by the present pastor, the Rev. Joseph A. Schaele. The parsonage adjoining the church was erected in 1883, at a cost of \$3,800. This church numbers about 500 parishioners.

HEBREW SYNAGOGUES.

Before the incorporation of the city, a few Hebrew families had resided for a time in New Haven. The first of them, says Prof. Dexter, appeared here in 1772. Before the end of the century they had disappeared, preferring to reside in New York or in Newport, where they had synagogues. About 1840 some Hebrews came to New Haven, and in 1842 they bought land for a cemetery between the city and the village of Westville. They then numbered about 15 families and were mostly from Bavaria. Their first place of worship was in the Simpson Block, corner of State and Chapel streets. In 1849 they elected Samuel Zunder their first rabbi, and he remained with them two years. In 1856 they bought the edifice in Court street, which had been vacated by the Third Congregational Society, and converted it into a synagogue. They numbered at that time about 50 families. Another congregation was formed in 1857; the first consisting of those who call themselves Reformed Hebrews and admit that they have deviated somewhat from the customs and opinions of their fathers, and the second consisting of those who claim to be orthodox, and to adhere to the ancient traditions of their race. The proper name of the congregation in Court street is Mishkan-Israel. The second worships in William street under the name of Beni Shulem. Both these congregations consist of German Hebrews. In 1881 a congregation of Russian Hebrews was gathered. They are said to adhere to "orthodoxy" more tenaciously than either of the German congregations. They have purchased the house in Temple street vacated in 1885 by the Temple street Congregational Church, who removed to Dixwell avenue.

The entire Hebrew population of the city now amounts to 850 families.*

* The editor is indebted to Mr. Maier Zunder for information concerning the advent and increase of the Hebrews.

CHAPTER VII.

SCHOOLS.

THE first planters of New Haven brought with them an excellent schoolmaster. Ezekiel Cheever, born in London, January 25, 1615, was twenty-three years of age when he first saw Quinpiac. Though so young, he was one of the twelve chosen for the foundation-work of the Church and State, and as soon as civil authority was instituted, was chosen a member of the court for the plantation. In 1646 he was one of the deputies to the General Court of Jurisdiction. Dissenting from the judgment of the church and its elders in regard to some cases of discipline, he commented on their action with such severity that he was himself censured in 1649. Soon after this, and probably on account of it, he removed to Massa-

chusetts, and became in the course of his long life schoolmaster at Ipswich, Charlestown and Boston, successively. According to Mather, he "died in Boston, August 21, 1708, in the ninety-fourth year of his age, after he had been a skillful, painful, faithful schoolmaster for seventy years." President Stiles mentions two aged clergymen of his acquaintance, who had been pupils of Cheever, one of whom said that "he wore a long white beard terminating in a point; that when he stroked his beard to the point, it was a sign to the boys to stand clear." Cheever, though never ordained to the ministry, occasionally preached when he was at New Haven, and was an author both in the field of education and the field of theology, hav-

ing written "*A Short Introduction to the Latin Tongue*," which he called an "Accidence," and a book on the millennium, under the title, "*Scripture Prophecies Explained*." The "Accidence" passed through more than twenty editions; the twentieth being dated Salem, 1785, and a subsequent edition having the imprint, "Boston, 1838." Michael Wigglesworth, whose "*Day of Doom*" passed through even more editions than the "Accidence," became a pupil of Cheever in the summer of 1639, being then in the eighth year of his age. He says, in his "Autobiography," "I was sent to school to Mr. Ezekiel Cheever, who at that time taught school in his own house; and under him in a year or two I profited so much, through the blessing of God, that I began to make Latin and to get on apace."

The town record, as redacted by the committee of revision after the impeachment of Fugill, gives the following minute concerning Mr. Cheever's school:

For the better training of youth in this town, that through God's blessing they may be fitted for public service hereafter, either in church or commonweal, it is ordered that a free school be set up, and the magistrates, with the teaching elders, are entreated to consider what rules and orders are meet to be observed, and what allowance may be convenient for the schoolmaster's care and pains, which shall be paid out of the town's stock. According to which order £20 a year was paid to Mr. Ezekiel Cheever, the present schoolmaster, for two or three years at first; but that not proving a competent maintenance, in August, 1644, it was enlarged to £30 a year and so continueth.

The end chiefly in view in providing a school at the public expense seems to have been to qualify persons for public stations in the succeeding generation. The planters had not conceived the idea prevalent among their posterity, that it is the duty of the State to provide schools for all the children within its domain. Mr. Cheever's school was for boys only, and for such boys only as were to be taught to "make Latin." The General Court defined the work they expected of his successor "that his work should be to perfect male children in the English after they can read in their Testament or Bible, and to learn them to write, and to bring them on to Latin, as they are capable and desire to proceed therein." So far as appears, no provision was made at the public expense for the instruction of girls, or of such boys as were not sufficiently advanced to enter the town school. Much to the annoyance of the teacher, such boys were sometimes sent by parents who wished to avoid the expense of a private school. But the teacher was authorized to "send back such scholars as he sees do not answer the first agreement with him; and the parents of such children were desired not to send them."

After the removal of Mr. Cheever from New Haven, no teacher could be immediately obtained to whom the town was willing to pay so large a salary as he had received. Mr. Jeanes, one of the proprietors of the town, was willing to teach, but as he was not a thorough Latin scholar, some doubted the expediency of paying him a salary. "Much debate was about it, but nothing was ordered in it at present; only it was propounded to him, that if

the town would allow him £10 a year, whether he would not go on to teach and take the rest, of the parents of the children, by the quarter; but he returned no answer." On further reflection, Mr. Jeanes concluded to accept the town's offer; so that about two months afterward the town "ordered that he should have £10 for this year." In 1651, a worthy successor to Mr. Cheever was obtained in Mr. John Hanford, afterward settled in the ministry at Norwalk. After about eight months, Mr. Hanford removed to Norwalk, having reserved to himself in his first agreement with the town, the right to do so. In 1653, "the Governor acquainted the town that Mr. Bowers, whom they sent for to keep school, is now come, and that it had been difficult to find a place for his abode; but now Thomas Kimberly's house is agreed upon, and he intends to begin his work next fifth day, if the town please; with which the town was satisfied, and declared that they would allow him as they did Mr. Hanford—that is, twenty pounds a year, and pay for his diet and chamber; and they expected from him that work which Mr. Hanford was to do; and some who had spoken with him, declared that upon these conditions he was content."

Mr. Bowers continued to teach the town school for about seven years. He was at first troubled, as Mr. Hanford had been, with so many children sent to him to learn their letters and to spell, that others, for whom the school was chiefly intended, "as Latin scholars," were neglected. The town, hearing of this, charged two of the selectmen (as such officers are now called, or townsmen, as they were then denominated) to send all such children home, and desired the schoolmaster not to receive any more such. He does not appear to have been hindered in his usefulness, after his first year, by this or any other difficulty, till the last year of his service. He then informed the court, April 23, 1660, "that the number of scholars at present was but eighteen, and they are so unconstant that many times there are but six or eight. He desired to know the town's mind, whether they would have a school or no school; for he could not satisfy himself to go on thus. The reason of it was inquired after, but not fully discovered. But that the school might be settled in some better way for the furtherance of learning, it was referred to the consideration of the court, elders, and townsmen, who are desired to prepare it for the next meeting of the town." At the next meeting "the Governor declared that the business of the school had also been considered by the committee, but was left to be further considered when it appears what will be done by the jurisdiction general Court concerning a colony school." The institution of a colony school at New Haven, a few months later, put an end to the town school, absorbing into itself all the boys in the plantation whose parents wished them to "make Latin."

The town school being chiefly intended for "Latin scholars," and ability to read in the Testament being required for admission, parents were obliged to provide as they could for the instruction

of their daughters and younger sons. There are indications on the records that private schools were sometimes kept by persons resident in the plantation, for instruction in English branches. So early as February, 1646, "Mr. Pearce desired the plantation to take notice, that if any will send their children to him, he will instruct them in writing or arithmetic." There may have been what the English of the olden time call "Dame schools," in which the teacher was of the gentler sex, but there are no traces of them on the records.

Though making no provision of schools for teaching children the first rudiments of learning, the law of the New Haven Colony, even in its earliest years, required parents to take care that all their children, male and female, should be taught to read. The statute is as follows:

It is ordered, that the deputies for the particular court in each plantation within this jurisdiction for the time being, or where there are no such deputies, the constable or other officer or officers in public trust, shall, from time to time, have a vigilant eye over their brethren and neighbors within the limits of the said plantation, that all parents and masters do duly endeavor, either by their own ability and labor, or by improving such schoolmaster or other help and means as the plantation doth afford or the family may conveniently provide, that all their children and apprentices, as they grow capable, may, through God's blessing, attain at least so much as to be able duly to read the Scriptures and other good and profitable printed books in the English tongue, being their native language; and in some competent measure to understand the main grounds and principles of Christian religion necessary to salvation.

As the colony grew in years it required of boys a greater minimum of scholarship; for we find the following minute recorded by the General Court in 1660: "To the printed law concerning the education of children, it is now added that the sons of all the inhabitants within the jurisdiction shall, (under the same penalty), be learned to write a legible hand so soon as they are capable of it." The reader should take notice, however, that the earlier order refers to all children and apprentices, and the later to boys only. The standard to which Mr. Davenport would have brought the people by moral suasion, if not by authority of law, was even higher than that enforced by the court; for, when he delivered up all his power and interest as a trustee of Mr. Hopkins's bequest in aid of a college, he embraced the opportunity to express his desire "that parents will keep such of their sons constantly to learning in the schools, whom they intend to train up for public serviceableness; and that *all their sons* may learn, at the least, to write and cast up accounts competently, and may make some entrance into the Latin tongue." As this communication was made at the meeting when the order was passed requiring that boys should be taught to write, it would seem that the freemen were moved by Mr. Davenport's communication to pass the order, but did not think it expedient to require arithmetic and Latin.

It was designed from the beginning that "a small college should be settled at New Haven," and at several times motion was made for the accomplishment of the plan. The time was not ripe,

however, for setting up a college and these endeavors produced no substantial fruit, except a bequest in aid of the intended college, which Edward Hopkins, formerly Governor of Connecticut, but at this time resident in England, made at the solicitation of Mr. Davenport. In May, 1659, Mr. Hopkins being now deceased, the General Court of the jurisdiction took action for establishing a grammar school for the colony, being probably stimulated thereto by the desire to secure Mr. Hopkins' bequest for such an institution of learning as it was possible for them to establish, since they could not compass a college. More than a year elapsed however, before the colony school went into operation. Meantime, Mr. Davenport, having agreed with the other surviving trustees of Mr. Hopkins, what part of the bequest for the furtherance of learning in New England should inure to the benefit of New Haven, transferred to the Court of Magistrates his rights as a trustee to receive and manage this part of the bequest. From the colony records we extract the following:

At a meeting of the committee for the school, June 28, 1660, there were present the Governor, the Deputy-Governor, Mr. Treat, Mr. Davenport, Mr. Street. It was agreed that Mr. Peck, now at Guilford, should be schoolmaster, and that it should begin in October next, when his half-year expires there; he is to keep the school, to teach the scholars Latin, Greek and Hebrew, and fit them for the college; and for the salary, he knows the allowance from the colony is £40 a year; and for further treaties, they must leave it to New Haven, where the school is; and for further orders concerning the school and well carrying it on, the elders will consider of some against the court of magistrates in October next, when things, as there is cause, may be further considered. Mr. Crane and Mr. Pierson came after the business was concluded, and what is above written was read to them, and they fully approved of it; and after that, being read to Mr. Gilbert, he approved of it also.

At a town-meeting in New Haven, July 25th of the same year, the Governor communicated the action of the committee as above, "and further informed that upon the 11th of July, Mr. Peck coming over, himself with such of the court and townsmen as could be got together, had a treaty with him; who propounded that unto the £40 per annum allowed by the jurisdiction, £10 per year (be added), with a comfortable house for his dwelling, and a school-house, and the benefit of such scholars as are not of the jurisdiction, and such part of the accommodations belonging to the house lately purchased of Mr. Kitchel (at a moderate price), as he shall desire, with some liberty of commonage; all which the town now consented to, and by vote determined to allow to Mr. Peck, which the Governor now promised to give him information of."

According to the arrangement thus made, the colony school went into operation in the autumn of 1660. At the General Court held in May of the following year, there were (says the Record) sundry propositions presented by Mr. Peck, schoolmaster, to this court, as followeth:

First.—That the master shall be assisted with the power and counsel of any of the honored magistrates or reverend elders, as he finds need or the case may require,

Second.—That *rectores scholæ* be now appointed and established.

Third.—What is it that the jurisdiction expects from the master? Whether anything besides instruction in the languages and oratory?

Fourth.—That two indifferent men be appointed to prove and send to the master such scholars as be fitted for his tuition.

Fifth.—That two men be appointed to take care of the school, to repair, and supply necessaries, as the case may require.

Sixth.—Whether the master shall have liberty to be at neighbors' meetings once every week?

Seventh.—Whether it may not be permitted that the school may begin but at eight of the clock all the winter half year?

Eighth.—That the master shall have liberty to use any books that do or shall belong to the school.

Ninth.—That the master shall have liberty to receive into and instruct in the school, scholars sent from other places out of this jurisdiction, and that he shall receive the benefit of them, over and above what the jurisdiction doth pay him.

Tenth.—That the master may have a settled habitation, not at his own charge.

Eleventh.—That he shall have a week's vacation in the year to improve as the case may require.

Twelfth.—That his person and estate shall be rate-free in every plantation of this jurisdiction.

Thirteenth.—That half the year's payment shall be made to, and accounts cleared with, the master within the compass of every half year.

Fourteenth.—That £40 per annum be paid to the schoolmaster by the jurisdiction treasurer and that £10 per annum be paid to him by New Haven treasurer.

Fifteenth.—That the major part of the foresaid payments shall be made to the schoolmaster in these particulars as followeth, viz., 30 bushels of wheat, 2 barrels of pork, and 2 barrels of beef, 40 bushels of Indian corn, 30 bushels of pease, 2 firkins of butter, 100 pounds of flax, 30 bushels of oats.

Lastly.—That the honored Court would be pleased to consider of and settle these things this court time, and to confirm the consequent of them; the want of which things, especially some of them, doth hold the master under discouragement and unsettlement; yet these things being suitably considered and confirmed, if it please the honored Court, further to improve him who at present is schoolmaster, although unworthy of any such respect, and weak for such a work, yet his real intention is to give up himself to the work of a grammar school, as it shall please God to give opportunity and assistance.

The Court, considering of these things, did grant as followeth; viz., to the second, they did desire and appoint Mr. John Davenport, Sen., Mr. Street, and Mr. Pierson, to take care and trust upon them; to the third, they declared that besides that which he expressed, they expected he would teach them to write so far as was necessary to his work; to the fourth, they declared that they left it to those before mentioned; to the eighth, they declared that he should have the use of those books, provided a list of them be taken; the ninth, they left to the committee of the school; and the rest they granted in general, except the pork and butter, and for that they did order that he should have one barrel of pork and one firkin of butter, provided by the jurisdiction treasurer, though it be with some loss to the jurisdiction, and that he should have wheat for the other barrel of pork. This being done, Mr. Peck seemed to be very well satisfied.

The school thus established continued only about two years, being discontinued partly on account of the paucity of scholars and partly on account of the poverty of the colony. The vote to discontinue is thus recorded:

At a General Court held at New Haven, for the jurisdiction, November 5, 1662, it was propounded as a thing left to be issued at the next General Court after May last, by the committee for the school, whether they would continue the colony school or lay it down. The business being debated, it came to this conclusion, that, considering the distraction of the time, that the end is not attained for which it was settled no way proportionable to the charges expended, and that the colony is in expectation of unavoidable necessary

charges to be expended, did conclude to lay it down, and the charges to cease when this half-year is up at the end of this month.

How far the school came short of attaining the end for which it was established, may be seen in the light of some remarks made by Mr. Davenport in a town-meeting held the preceding August:

Mr. Davenport further propounded to the town something about the colony school, and informed them that the committee for the school made it a great objection against the keeping of it up, that this town did not send scholars to it, only five or six; now, therefore, if you would not have that benefit taken away, you should send your children to it constantly, and not take them off so often; and further said that he was in the school, and it grieved him to see how few scholars were there.

The colony school being discontinued, the town of New Haven negotiated with George Pardee, one of their own people, to teach the children "English and to carry them on in Latin so far as he could. The business was debated, and some expressed themselves to this purpose that it is scarce known in any place to have a free school for teaching English and writing, but yet showed themselves willing to have something allowed by the public, and the rest by the parents and masters of such that went to the school; and in the issue twenty pounds was propounded and put to vote, and by vote concluded to be allowed to George Pardee for this year out of the town treasury, and the rest to be paid by those that sent scholars to the school, as he and they could agree. This, George Pardee agreed to, to make trial for one year. He was also advised to be careful to instruct the youth in point of manners, there being a great fault in that respect, as some expressed."

Soon after the absorption of the colony of New Haven into Connecticut, the town of New Haven, stimulated by its desire to secure to itself that part of Governor Hopkins' bequest, which, by agreement among the trustees, was in the power of Mr. Davenport, established "a grammar or collegiate school," and invited Mr. Samuel Street to be the schoolmaster. The town appropriated £30 per annum, and the Hopkins estate in the hands of Mr. Davenport yielded by this time £10 more.

A few months afterward Mr. Davenport came into the town meeting, and desired to speak something concerning the school, and first propounded to the town whether they would send their children to school, to be taught for the fitting them for the service of God in church and commonwealth. If they would, then he said that the grant of that part of Mr. Hopkins' estate formerly made to this town stands good; but if not, then it is void, because it attains not the end of the donor. Therefore he desired they would express themselves. Upon which Roger Alling declared his purpose of bringing up one of his sons to learning; also Henry Glover, one of William Russell's, John Winston, Mr. Hodson, Thomas Trowbridge, David Atwater, Thomas Mix; and Mr. Augur said that he intended to send for a kinsman from England. Mr. Samuel Street declared that there were eight at present in Latin, and three more would come in in summer, and two more before next winter. Upon which Mr. Davenport seemed to be satisfied, but yet declared that he must always reserve a negative voice, that nothing be done contrary to the true intent of the donor, and that it be improved only for that use; and therefore, while it can be so improved here, it shall be settled here, but if New Haven will neglect their own good therein, he must improve it otherwise unto that end that may answer the will of the dead.

As this declaration of Mr. Davenport was made in February, 1668, and he removed to Boston some two or three months afterward, having in the previous September received a call to the pastorate of the First Church there, it may be inferred that the people of New Haven had some reason at that time to apprehend that they might lose the benefit of the Hopkins bequest. On the 18th of April, however, Mr. Davenport executed a deed of trust, in which he conveyed, with certain reservations and conditions, unto "William Jones, assistant of the colony of Connecticut, the Rev. Mr. Nicholas Street, teacher of the Church of Christ at New Haven, Mr. Matthew Gilbert, Mr. John Davenport, Jun., and James Bishop, commissioned magistrates, Deacons William Peck and Roger Alling, and to their successors," his interest in the Hopkins bequest.

The Hopkins Grammar School thus established, has, with some intermissions which occurred very early in its history, afforded to the boys of New Haven, from that time to the present day, opportunity to be taught "for the fitting them for the service of God in church and commonwealth." It opens its doors so indiscriminately to the children of all classes of people, Christian, Jewish and Pagan, that the following action of the town may perhaps awaken the risibles of the reader:

At a town-meeting in New Haven, December 9, 1728.

Resolved, That the land lying in the Governor's Quarter in New Haven, called the Oystershell Field, be put into the hand of the school committee in New Haven, commonly known by the name of Hopkins Committee, as they now be or hereafter shall be, according to their constitution or custom; by them to be improved for the upholding and maintaining a grammar school in the first parish in this town, for the educating of children of Congregational or Presbyterian parents only, and no other use whatsoever forever hereafter; and if it shall hereafter be thought most advantageous to make sale of the lands commonly called the Oystershell Field as aforesaid, and the major part of proprietors in this town shall agree thereto, the money thereby produced shall be past into the hands of said committee to be improved as afore-said, and to no other use whatsoever.

New Haven, by its submission to Connecticut, came under school laws which differed from those which had before been in force. The General Court of Connecticut, as early as 1644,

Ordered, That every township within this jurisdiction, after the Lord hath increased them to the number of fifty householders, shall then forthwith appoint one within their town to teach all such children as shall resort to him, to write and read, whose wages shall be paid either by the parents or masters of such children, or by the inhabitants in general by way of supply, as the major part of those who order the prudentials of the town shall appoint: Provided that those who send their children be not oppressed by more than they can have them taught for in other towns. And it is further ordered, that where any town shall increase to the number of one hundred families or householders, they shall set up a grammar school, the masters thereof being able to instruct youth so far as they may be fitted for the university, and if any town neglect the performance hereof above one year, then every such town shall pay five pounds *per annum* to the next such school till they shall perform such order.

Under this law New Haven was complained of, in 1676, for not having a Grammar School.

The facts in the case were that Mr. Samuel Street having taught the Hopkins Grammar School for several years, removed to Wallingford in 1673, and

the School Committee neglected to provide another schoolmaster till "at a town-meeting, the 18th of December, 1676, the County Marshal acquainted the town that he had a warrant to summon the town to the County Court, for not having a Grammar School; and therefore desired the town to appoint some person or persons to appear the next session of the said Court to answer the complaint."

The good people of New Haven, who in former days, when independent of Connecticut, had under Mr. Davenport's influence always been zealous for the maintenance of a Latin school, were surprised to find that they were living under laws which required them to support such a school, and that by their neglect to find a successor to Mr. Street they were law-breakers. At a subsequent town-meeting, July 31, 1677, the provisions of the law and the present state of things in regard to a school in New Haven were unfolded by Mr. Jones:

When the town now being informed in the state of things about the school, they fell into a loving debate to promote the business that a school according to law might be set up; and therefore it was desired that parents, or such as have children, would be careful to send their children to the school, and so continue them at it, that they may attain to some proficiency, whereby they may come to be fit for service to God in church and commonwealth, and pressed with the custom of our predecessors, and the common practice of the English nation, to bring up their children to learning. So after there had been a large debate of things, the town proceeded to vote and ordered as followeth:

That according to the order of the General Court, there shall be a Grammar School forthwith set up, and that they will allow the sum of twenty pounds *per annum* to be paid out of the town treasury for the encouragement and toward the maintenance of the Schoolmaster; and did leave it with the Committee for the School to provide a sufficient Schoolmaster, who shall not only teach the grammar and the languages, but also perfect the youth in reading English, they being entered in the Primer, and to teach to write a legible hand.

The reader will see in the statute already cited that Connecticut provided in the very beginning of its colonial existence not only grammar schools for training up youth to occupy eminent positions, but schools in which reading and writing were taught. But such primary schools did not customarily furnish instruction without expense to the parents of the scholars, as is sometimes asserted by modern advocates of free schools. The law required that there should be schools for teaching English, and in this respect differed from the New Haven law, but permitted local option as to the payment of the teachers' wages; and in most cases he received a very small, if any part of his stipend, from a tax on the grand list.

After the union of the two colonies, the school laws received from time to time, modifications, but none which would materially affect the condition of the schools in New Haven. Early in the eighteenth century seven townships in Litchfield County belonging to the colony were sold and the money distributed to the towns, to be improved and secured forever to the use of the schools in the several towns. During the last decade of the same century, three millions of the three and a half millions of acres of land in the northern counties of Ohio, which Connecticut had reserved when she

ceded to the United States all her right and title to the public lands, were sold, and the proceeds were invested in a School Fund, the annual revenue from which kept the illiteracy of Connecticut at a very low rate for half a century without heavy taxation for schools.

But the common schools of New Haven, during the first half of the nineteenth century, attempted nothing more than to teach the rudiments of learning. Until 1822, they were, with few exceptions, taught by women, and in many cases, if not usually, in an apartment in a dwelling-house. The scholars, especially those of the male sex, were very young; private schools being the principal provision for the instruction of the rising generation. To the support of such common schools, the School Society devoted its dividend from the State school fund, its income from its local school fund, the proceeds of tuition money, and any tax which its inhabitants might levy upon themselves. Such a tax was seldom levied, however, for any other than extraordinary expenses. In sparsely-settled towns, school-houses were necessary, and these were, of course, paid for by local taxation. But this expense was avoidable in a town where a woman could be hired to teach school in a chamber in her father's house, accessible to all the children in the district; and the number of weeks during which the school continued was carefully adjusted to the revenue of the school from school funds and tuition money.

The common school was "common" in the sense that it was provided by the public and for the public; but it was not a free school in the modern usage of that word. "The committee" had power to remit the charge for tuition in case of inability to pay; but the common school, like the private school, required tuition money of parents who had estates. Private schools, though demanding a larger payment, were usually so much superior in quality, that in New Haven, and probably in other large towns, the common school was left by prosperous families to those less fortunate.

In 1822, a Lancasterian School was opened in the basement of the Methodist Church, which had just been built on the northwest corner of the Green. The teacher, Mr. John E. Lovel, had been a pupil of Lancaster himself, and commenced his career in New Haven very soon after attaining his majority. While the school remained in the basement of the Methodist Church it was a school for boys only. In 1827 the School Society erected a new school-house for the Lancasterian School on a lot offered by Mr. Titus Street for that purpose. The building was so constructed as to accommodate a school in two departments, male and female. Very soon after the removal of the school to the new building, Mr. Lovel left it to accept a very eligible position at Amherst, Mass., as a teacher of elocution. But after an absence of two years and a half, he was persuaded to return to New Haven and resume his former situation, for which no one was so well qualified as he. He remained so long that when he retired he had spent more than thirty years in the school. Town-born citizens remember the dramatic "exhibitions," with which,

at the end of the school year, his skill in teaching the art of elocution was illustrated.

The peculiarity of the Lancasterian system consisted in its employment of the older pupils of a school as teachers of the younger. In New Haven the Lancasterian system under Mr. Lovel's administration was universally considered for many years as a success, and the school as a great advance on any which had preceded it in New Haven. Visitors wondered at the beautiful specimens of penmanship and map-drawing which were shown them, and at the rapidity with which the pupils solved problems in mental arithmetic. But, notwithstanding its success, the Lancasterian system was forced to give place to the system of graded schools, which other cities had been trying, while New Haven was boasting of Lovel's School.

The new system was introduced into New Haven in 1853. In that year the Webster School Building at the corner of George and York streets, having been enlarged for the purpose, was opened as a well-organized and well-graded school, designed to be a model for the entire city. Two years later, the Eaton School was opened, and soon rivaled the Webster. There being no local boundaries to the different schools, these two schools drew to themselves the children of such parents in all parts of the city as appreciated the advantages of the graded system, and thus, having the advantage of choice scholars as well as choice teachers, were conspicuously excellent schools. The evident success of the new system caused it to be adopted for the whole city; and one new building after another has been erected with the design of supplying the entire city with schools equally as good as the Webster and the Eaton. The system of graded schools thus superseded the Lancasterian system; which, in a comparison of the two, had nothing to commend it but its cheapness.

A high school was necessary to the completeness of the plan; and, after a few years of experiment in a hall hired for the purpose, the Hillhouse High School was erected at the corner of Orange and Wall streets, on the site of the Hillhouse School, which was demolished for that purpose. The name of Hillhouse was transferred, however, to the new edifice. The High School Building contains a spacious apartment for the meetings of the Board of Education, which are held regularly on the first and third Friday evenings of each month, and at such other times as the exigencies of the service may require. Here also is the desk of the Secretary of the Board, where he may be found every school day in the year at appointed office hours. The office of the Superintendent of Schools is in a room adjoining that of the Secretary, and is connected by telephone with all the public schools of the city.

The town of New Haven is by State legislation divided into two school districts, viz., the City and Westville. Until recently the City District was bounded by the boundaries of the city; but the annexation of a part of East Haven to the town of New Haven in 1881 added to the City District, as defined by the Legislature of the State, two

school districts of East Haven. The City District is, for convenience, divided into eight sub-districts, having local boundaries. In each of these sub-districts is a large building with twelve or more rooms containing schools of twelve grades. In most cases this central building is supplemented with smaller houses, furnishing additional rooms for the lower grades of the school. Each sub-district being thus provided with its own schools, scholars cannot be sent to schools out of the sub-district in which they reside, except for special reasons and in consistence with the general good.

INTRODUCTION OF MUSIC AS A REGULAR BRANCH OF STUDY IN THE PUBLIC SCHOOLS.

In the fall of 1864 the following petition was presented to the school authorities:

To the New Haven Board of Education.

The undersigned, conscious of the great and growing influence of music in every condition of life, but more especially amongst the young; fully realizing the great advantages to be derived from a theoretical knowledge of music, as also the great disadvantages arising from the ordinary rote practice in singing which our children are daily receiving, to the utter neglect of that elementary study which after years may render impracticable;

Believing that in order to insure the successful introduction of congregational singing in our churches we must first instruct our children in the theory of music;

Convinced that the time has arrived when the masses should be educated to read music, and when an elementary knowledge of the science may no longer be regarded as an accomplishment;

And being anxious, also, that the interest accorded to this subject in the public schools of all our principal cities outside of Connecticut should likewise be felt in our own community;

We, your petitioners, would therefore respectfully recommend that the elements of vocal music be at once introduced as a branch of regular study in the public schools of New Haven, and that a competent teacher be employed at a liberal salary, who shall give his whole time to the prosecution of this work.

Edward Downes,	

In accordance with the objects of this petition, Mr. Benjamin Jepson received the appointment of vocal instructor, and commenced his duties January 3, 1865, in room 8 of what is now known as the Cedar street Training School.

On the morning of July 20, 1866, a "Public Rehearsal" of school children took place at Music Hall. We quote from a morning paper:

His Honor Mayor Sperry presided, and made a short opening address, as also did Mr. Parish, Superintendent of Schools. Then followed a series of exercises which were delightful to all spectators, and which exhibited the musical proficiency of the scholars in a manner highly gratifying to all friends of progress, and complimentary to Mr. Jepson, the musical instructor.

Little folks, hardly a knee high, displayed a knowledge of the notes perfectly surprising, and read them from a staff on the blackboard with the greatest ease.

Hon. J. F. Babcock, James Brewster, Rev. Drs. Bacon, Carmody and others, delivered short addresses, complimentary to the work.

The year following, a second public rehearsal took place, since which time there has been no apparent question in the public mind in reference to the utility of music as a regular branch of instruction,

Within the past twenty years the citizens of New Haven have had many opportunities to witness the progress of music in the schools; but, perhaps, the most notable occasion was the centennial celebration of July 4, 1876. In the afternoon of that day 2,800 scholars, representing every school district, including the Hillhouse High School, took part in the following programme of thirteen pieces. The correspondence explains itself.

FOURTH OF JULY CONCERT.

Invitation of Fourth of July Committee.

NEW HAVEN, May 20, 1876.

Professor B. JEPSON.

SIR, A committee of the Court of Common Council, empowered to make arrangements for an appropriate celebration of the Centennial Anniversary of the Declaration of Independence, to take place on the public Green of our city, desirous of making that occasion one not only of interest to all the adult people of the city, but one which the rising generation in our midst will carry pleasing recollections of for many years to come, wish to add to the other features of the celebration an open-air concert to be given under your direction, by such of the children attending the public schools as may be invited by you to join in the performance of so patriotic a work.

The committee have therefore voted to cordially invite you to engage to arrange for such a concert to be given on the Green, and to embrace in its selections songs of a patriotic and national character. The committee would be highly gratified to receive your assent to such a proposition, and they are confident the public will derive great pleasure from the carrying out of such a programme.

In behalf of the committee,

HENRY G. LEWIS,
Chairman.

To His Honor the Mayor, H. G. LEWIS.

DEAR SIR,—Your communication honoring me with an invitation to direct an open-air concert on the Fourth of July, 1876, has been received and duly considered. In reply, I will say that I hesitate only in view of the limited time left for preparation. With the approval, however, of the Board of Education, and with the co-operation of the parents of such children as may be selected to take part, as also the assistance of such voluntary aid as I may receive in carrying out the details, I shall be pleased to undertake the enterprise.

Respectfully yours, etc.,

B. JEPSON.

NEW HAVEN, May 26, 1876.

Vote of the Board of Education.

"Whereas, The city authorities of New Haven have invited Mr. Jepson, teacher of music in New Haven public schools, to assemble the pupils on the Green, the 4th of July next, to take part in the exercises celebrating the Centennial Anniversary of our National Independence; it is therefore resolved that the Board assure the city authorities of their hearty co-operation in properly celebrating the occasion, and hereby direct the Committee on Schools to afford Mr. Jepson all necessary facilities for preparing pupils in our schools for their part in the celebration."

The above resolution was unanimously passed by the Board of Education at a special meeting held Monday evening, May 29, 1876.

HORACE DAY,
Secretary.

GRAND CENTENNIAL CONCERT

Under the Direction of Professor B. Jepson,

GIVEN WITH A CHORUS OF 2,800 SINGERS.

The Programme.

1. The Glorious Fourth of July, Unison Chorus by all the schools.
2. Red, White, and Blue, Full Chorus with Solo, by the scholars of Woolsey School.

3. Rally Round the Flag, Full Chorus with Solo, by the scholars of Dwight School.
4. Union Dixie, Full Chorus with Solo, by the scholars of Washington School.
5. Hail Columbia, Unison Chorus by all the schools.
Selection of Music by the Teutonia Maennerchor.
6. Watch on the Rhine (words written for the occasion) Full Chorus with Solo, by the scholars of Eaton School.
7. Russian National Hymn (American words), Full Chorus with Solo, by the scholars of Webster School.
8. Beautiful Flag, Full Chorus with Solo, by the scholars of Skinner School.
6. My Country 'tis of Thee, Unison Chorus by all the schools.
10. Yankee Doodle, Full Chorus with Solo, by the scholars of Hamilton School.
11. Glory Hallelujah (words written for the occasion), Full Chorus with Solo, by the scholars of Wooster School.
Selection of Music by the Teutoni Maennerchor.
12. Star Spangled Banner, Solo, Duet, and Chorus—with Solo by the class of '76, Duet by the scholars of the High School, and full Chorus by all the schools.
Original Characteristic Song by Bro. Jonathan.
13. Old Hundredth, with "Praise God from whom all blessings flow," by all the schools and assembled people.

Let all who sing watch the Conductor's Baton

The schools will rendezvous at points adjacent to the High School, and proceed by a short march to the Green, under the direction of J. D. Whitmore, Chief Marshal, as follows:

	Scholars.	Principals.
High School.....	170....	T. W. T. Curtis.
Webster School.....	316....	J. G. Lewis.
Eaton School.....	316....	J. Gile.
Wooster School.....	316....	R. H. Park.
Dwight School.....	316....	L. L. Camp.
Skinner School.....	316....	H. C. Davis.
Washington School.....	316....	G. R. Burton.
Woolsey School.....	316....	M. Pitman.
Hamilton School.....	316....	Rev. M. Hart.

A terrace platform, fifteen steps high, was erected in the shade at the southern end of the lower green, extending from Temple street to the Church street entrance.

The children were costumed in the national colors, and were so arranged on the platform as to represent the stars and stripes of a huge American flag. It was said that the music and words of the grand chorus were distinctly heard one mile from the Green. The spectacle was certainly one never to be forgotten by the 50,000 people who witnessed it. Mr. Jepson was the recipient of engrossed resolutions of thanks from the boards of Aldermen and Councilmen.

The Centennial of the town of New Haven was duly celebrated on July 4, 1884. On this occasion the pupils of Hillhouse High School filled the entire space in the galleries of Center Church, and under the direction of their Instructor with organ accompaniment by Mr. Harry Earle, interspersed the centennial exercises with choice selections of music.

On the 4th of July, 1855 (ten years prior to his engagement in the schools), Mr. Jepson gave a patriotic concert, the first of its kind in New Haven, from the State House steps. Six hundred boys and girls in the costumes of "ye olden times" took part, and thousands of people were entertained. Six years later on the 4th of July, 1861, and while the reverberations from Fort Sumpter were yet echoing

though the land, he organized a patriotic demonstration on a much larger scale. Hundreds of children, many of whom are now influential citizens in the varied walks of life, took part, and marched in procession from the Old Wigwam on Olive street up Chapel street to the Green. The streets were lined with people who crowded to witness the mimic representation of the Boston Tea Party, Daughters of Columbia, Goddess of Liberty, Flower Girls, Soldiers, Sailors, Fireman, etc.

Arriving at the North Portico of the State House they found a vast concourse of people in waiting. In connection with the musical programme, addresses were made by the War Governor William A. Buckingham, Ex-Governor Dutton, Judge E. K. Foster, Professor Daniel C. Gilman, John G. North, Esq., and others.

Beginning with the two highest rooms of six school buildings viz.: High School (Old Lancasterian), Eaton, Wooster, Webster, Washington (now Cedar street), and Dwight, Mr. Jepson's labors have been gradually extended to 36 buildings, with an aggregate of 237 rooms, being an increase of about twenty fold during his twenty years of service.

In 1865 each class in music consisted of one room, and received from Mr. Jepson two thirty-five minute lessons per week.

In 1885 each class, with two or three exceptions, consists of two rooms, and receives from the vocal Instructor a twenty minute lesson once in two weeks

A majority of the teachers having received musical instruction in all the various grades from room one to the High School, they are required to give fifteen minutes daily drill in the absence of the Vocal Instructor. Mr. Jepson is thus enabled to enlarge his sphere of labors and to supervise an ever-increasing number of pupils and schools.

As an indication of musical progress we quote the following selections from the Hillhouse High School graduating programmes of the last fifteen years:

Gently Fall the Dews of Eve.....Il Guirmento.
Prayer from "Moses in Egypt".....Rossini.
Lift Thine Eyes ("Elijah").....Mendelssohn.
Protect Us Thro' the Coming Night.....Curschman.
Let the People Praise Thee ("Eli").....Costa.
Gloria (12th mass).....Mozart.
Blue Danube Waltz (Vocal—ladies' voices).....Strauss.
On the Sea.....Mendelssohn.
The Heavens are Telling ("Creation").....Haydn.
Phantom Chorus ("La Sonnambula").....Bellini.
See, the Conquering Hero Comes ("Joshua").....Handel.
Come, Gentle Spring ("Seasons").....Haydn.
Row Us Swift ("Ladies' voices").....Campagna.
Grand Solfeggio.....Handel.
Chorus of the Priests of Dagon ("Samson").....Handel.
The Curfew Bell.....Anderton.
Grand Solfeggio—Arranged from.....Auber.
The Soldiers' Chorus ("Faust").....Gounod.
Achieved is the Glorious Work ("Creation").....Haydn.
Awake! the Night is Beaming ("Elisire d'Amore")Donizetti.
On this Day of Joy ("La Pepré Sicilian Vespers").....Verdi.
I Waited for the Lord ("Hymn of Praise").....Mendelssohn.
Now Tramp o'er Moss and Fell.....Bishop.
Tune your Harps ("Judas Maccabeus").....Handel.
A Spring Song.....Pinsuti.
Mighty Jehovah.....Bellini.
Gipsy Life.....Schuman.
As the Hart Pants.....Mendelssohn.
Hail Bright Abode (Tannhauser March).....Wagner.

Happy and Light ("Bohemian Girl").....Balfe.
The Marvelous Work ("Creation").....Haydn.
Jack and Gill (Humorous Glee).....Caldicott.
Festival Hymn.....Dudley Buck.
Inflammatus ("Stabat Mater").....Rossini.
Damascus Triumphal March ("Naaman").....Costa.
Awake, Sweet Music ("Les Huguenots").....Meyerbeer.
Great and Marvelous (Mass).....Farmer.
Rataplan Chorus ("La Forza del Destino").....Verdi.
Humpty Dumpty (Humorous Glee).....Caldicott.
On to Glory ("Lucia di Lammermoor").....Donizetti.
He Watcheth over Israel ("Elijah").....Mendelssohn.
Bridal Chorus ("Lohengrin").....Wagner.
Fixed in his Everlasting Seat ("Samson").....Handel.
O, for the Wings of a Dove.....Mendelssohn.
Little Jack Horner (Humorous Glee).....Caldicott.
Morning is Breaking ("La Fille du Regiment").....Donizetti.
Thanks be to God ("Elijah").....Mendelssohn.
Joy in Spring.....Joachim Raff.
Kyrie (Third Mass in D).....Haydn.
The House that Jack Built (Humorous).....Caldicott.
Brightly the Morning ("Euryanthe").....Von Weber.
Arion Waltz (Vocal).....Vogel.
Hallelujah Chorus (Messiah).....Handel.

The Board of Education for the year ending August 31, 1885, consisted of Philip Pond, Thomas O'Brien, Horace H. Strong, Harmanus M. Welch, Maier Zunder, Henry F. Peck, Francis E. Harrison, Joseph D. Plunkett, Thomas G. Bennett.

COMMITTEES OF THE BOARD.—Finance: Harmanus M. Welch, Philip Pond, Thomas G. Bennett. Schools: Maier Zunder, Joseph D. Plunkett, Francis E. Harrison. School Buildings: Henry F. Peck, Thomas O'Brien, Horace H. Strong.

Superintendent of Public Schools, Samuel T. Dutton; Secretary of the Board, Horace Day; Treasurer, Harmanus M. Welch; Collector, Theodore A. Tuttle; Auditors, Richard F. Lyon, Francis G. Anthony.

The schools under the charge of the Board are:

The High School, in the Hillhouse High School Building, corner of Orange and Wall streets. T. W. T. Curtis, Principal; James D. Whitmore, Sub-Master; Isaac Thomas, Classical Teacher; E. Theo. Liefeld, German Teacher; and eleven female teachers.

WEBSTER DISTRICT.

Webster School, corner of York and George streets, has twelve rooms. John G. Lewis, Principal, and thirteen female teachers.

Oak Street School, corner of Greenwood, has four rooms and four female teachers.

Davenport Avenue School, corner of Asylum, has four rooms and four female teachers.

Whiting Street School. Ungraded. Henry W. Loomis, Teacher.

EATON DISTRICT.

Eaton School, Jefferson street, has sixteen rooms and seventeen female teachers. Albert B. Fifield, Principal.

WOOSTER DISTRICT.

Wooster School, corner of Wooster and Wallace streets, has twelve rooms and thirteen female teachers. Frederick E. Bangs, Principal.

Hamilton street School, 155 Hamilton street and 156 Wallace, has sixteen rooms and eighteen female teachers.

Fair street School has four rooms and four female teachers.

Woodward School, Annex, has two rooms and two female teachers.

German-English School, 285 Wooster street, has three rooms and three teachers.

DWIGHT DISTRICT.

Dwight School, Martin street, corner of Gill, has twelve rooms and thirteen female teachers. Lev-
erett L. Camp, Principal.

Orchard street School has four rooms and four female teachers.

New Haven Orphan Asylum School has three rooms and three female teachers.

WINCHESTER DISTRICT.

Winchester School, Shelton avenue, corner of Division, has twelve rooms and twelve female teachers. George B. Hurd, Principal.

Dixwell avenue School has seven room and seven female teachers.

Goffe street School has three rooms and three female teachers.

SKINNER DISTRICT.

Skinner School, State street, corner of Summer, has twelve rooms and thirteen female teachers. Joseph R. French, Principal.

Edwards street School has eight rooms and eight female teachers.

Humphrey street School has four rooms and four female teachers.

St. Francis Orphan Asylum School has three rooms and three female teachers.

WASHINGTON DISTRICT.

Washington School, Howard avenue, corner of Putnam, has twelve rooms and thirteen female teachers. George R. Burton, Principal.

West street School has four rooms and four female teachers.

Carlisle street School has four rooms and four female teachers.

Greenwich avenue School has four rooms and four female teachers.

Hallock street School has eight rooms and eight female teachers.

Welch Training School, Congress avenue, corner of Vernon street, has ten rooms and twenty or more female teachers, several of whom are employed as substitutes in other schools.

Cedar street Training School has eight rooms and fourteen female teachers.

WOOLSEY DISTRICT.

Woolsey School, Woolsey street, corner of Poplar, has twelve rooms and fourteen female teachers. Mark Pitman, Principal.

Grand street School has seven rooms and seven female teachers.

Grand street Ungraded School. Henry A. Loveland, Teacher.

Lloyd street School has four rooms and four female teachers.

Ferry street School has four rooms and four female teachers.

Centre street School has two rooms and two female teachers.

Quinnipiac street School has two rooms and two female teachers.

The above enumeration includes a High School; Graded Schools, in each of which are twelve grades, from primary to the twelfth, out of which pupils pass into the High School; a German-English School, into which children of German parents, who are not sufficiently acquainted with the English language to enter the regular schools, are received; Ungraded Schools, to which are transferred pupils who are habitually insubordinate, or whose attendance is irregular, either from necessity or truancy; and Training Schools, in which graduates of the New Haven High School or of some other school of high grade are taught the art of teaching. Besides the schools enumerated, the Board of Education provides Evening Schools, in different parts of the city, in which illiterate young men, who work during the day, may in some measure obviate their illiteracy by a wise use of winter evenings. During the winter of 1883-84 there were six evening schools in different parts of the city, most of them continuing for 76 nights. Eleven teachers were employed, all of whom were men. The total number of pupils registered was 519, and the number in average attendance was 209.

The whole number of teachers in the school-year 1883-84, including teachers of evening schools, was 274; of whom 29 were males and 245 females. The whole number of pupils registered during the year was 13,320. Average number registered, 10,177. Average number in daily attendance, 9,549.

The following real estate owned by the district is estimated as nearly as possible at its original cost:

Webster School, lot and building.....	\$23,000 00
Eaton School, lot and building.....	40,300 00
High School, lot, building and furniture	125,000 00
Dwight School, lot and building.....	27,000 00
Dixwell School, lot and buildings.....	8,500 00
Cedar Street School, lot and building.....	7,000 00
Whiting street School, lot and buildings.....	2,000 00
Wooster School, lot and building.....	25,000 00
Fair street School, lot and building.....	12,400 00
Skinner School, lot and building.....	46,000 00
Washington School, lot, building and furniture	49,000 00
Edwards street School, lot, building and furniture.....	28,600 00
Oak street School, lot, building and furniture..	15,200 00
Carlisle street School, lot, building and furniture	7,000 00
Grand street School, lot, building and furniture	22,000 00
Winchester School, lot, building and furniture..	26,000 00
Woolsey School, lot, building and furniture....	45,000 00
West street School, lot, building and furniture.	18,200 00
Greenwich avenue School, lot, building and furniture	10,350 00

Humphrey street School, lot, building and furniture	14,350 00
Hallock street School, lot, building and furniture	14,800 00
Lloyd street School, lot, building and furniture	11,300 00
Ferry street School, lot, building and furniture	22,500 00
Woodward School, lot, building and furniture.	8,000 00
Quinnipiac street School, lot and building....	3,700 00
Center street School, lot building and furniture	2,000 00
Orchard street School, lot and building.....	16,800 00
Welch School, lot, building and furniture.....	60,200 00

\$712,400 00

The following table shows the growth of the school system of New Haven in fifteen years:

Year.	No. School-houses Owned or Rented.	No. School-rooms Occupied.	No. Teachers, excluding Evng. School.	No. Pupils.
1870	21	121	148	5,818
1871	22	125	155	6,060
1872	25	150	182	7,101
1873	24	155	189	7,208
1874	26	159	194	7,532
1875	25	163	200	7,595
1876	24	158	199	7,428
1877	24	165	204	7,866
1878	26	169	206	7,890
1879	25	174	214	8,165
1880	26	184	225	8,356
1881	29	192	230	8,879
1882	34	203	252	9,392
1883	36	217	261	9,638
1884	37	239	263	10,177

And the following table exhibits a comparative statement of the current annual expenses, the cost per scholar as based on the average number registered, and an approximate statement of the expenses for building and for improvements on the school property:

Year.	Ordinary Expenses.	Average Number Registered.	Cost per Scholar.	Expenses for Building and for Improvements on Property.
1870.....	\$115,736 26	5,818	\$19 89	\$13,734 78
1871.....	117,998 08	6,060	19 47	28,666 48
1872.....	134,874 63	7,101	18 99	118,074 03
1873.....	145,100 31	7,208	20 13	33,119 60
1874.....	159,930 07	7,532	21 23	55,405 05
1875.....	165,333 31	7,595	21 77	2,332 37
1876.....	162,045 35	7,428	21 81	6,839 41
1877.....	176,779 12	7,866	22 51	29,637 26
1878.....	173,059 27	7,890	21 93	28,427 66
1879.....	165,270 19	8,165	20 94	3,703 88

1881.....	175,678 36	8,879	19 79	17,965 60
1882.....	182,605 83	9,393	19 44	21,987 57
1883.....	202,360 13	9,638	21 00	58,683 57
1884.....	211,226 26	10,177	20 75	44,672 82

Not long before the introduction of the system of graded schools, a change was made in the mode of supporting schools, more important, perhaps, than it seemed to the careless observer. Until 1848, a term fee of a fraction of a dollar for each child had been demanded quarterly in all cases where the parents were able to pay; and poverty had seldom been pleaded as an excuse for non-payment. But as a statute of the State provided that "no children shall be denied the privilege of attending school in any school district on account of the inability of their parents" to pay tuition money, some parents resisted the demand in 1848, and many more in 1849. In such conditions, it was impracticable to draw a line between those who must pay and those who might properly avail themselves of the statutory exemption, and no attempt has been made since 1849 to collect tuition money. In this way the principle was established in practice that the State will provide for all children—the children of the rich, as well as of the poor—schools in which tuition is entirely gratuitous.

The money for the ordinary expenses of the public schools in New Haven now comes (1) from the State School Fund; (2) from the Town Deposit Fund; and (3) from school taxation, which, that it may be more equitable, is levied partly by the State,

partly by the town, and partly by the School Society, the more wealthy parts of the town and of the State being thus obliged to help the poorer. The extraordinary expenses are, of course, met by taxation within the School Society. The principle is now firmly established in practice, that common or public schools are free schools, in the sense that no tuition money is to be demanded.

Of the masters of private schools in New Haven during the eighteenth century very little is known. On the Wadsworth map of 1748, the house of Samuel Mix, schoolmaster, is shown as standing where the Battell Chapel now is, at the corner of College and Elm streets. Mr. Mix graduated at Yale College in 1720, and probably inherited this house from his father, as on the map of 1724 it is inscribed Samuel Mix, seaman. In this house the schoolmaster dwelt, and doubtless kept his school, till death removed him. His widow married William Greenough, and continued to reside in this house, which came to be known as the Greenough House. A writer in the *Connecticut Herald* of September 25, 1835, speaks of the building as being at that time in progress of demolition, and says: "One of Mr. Mix's daughters (Elizabeth) married the late Colonel Jonathan Fitch, and the other, Mr. Richard Woodhull, whose daughter married Jehu Brainerd, Esq., nearly forty years ago. James Hillhouse purchased of the heirs of Samuel Mix the above house and land for the use of Yale College." As the Hopkins Grammar School was free to the sons of New Haven families, it is reasonable to believe that Mr. Mix did not prepare boys for college, and as co-education was not yet in vogue, it is improbable that his was a school wherein boys and girls studied and recited together.

The map of 1748 shows the house of Moses Mansfield, schoolmaster, on the home lot at the corner of Church and Elm streets, which had descended to him from the first of his family name in New Haven. Nothing is known to the writer, of schools in New Haven from the time of Samuel Mix and Moses Mansfield to the close of the Revolutionary War. In the autumn of 1783 a school for girls only, was established by Abel Morse. He was a book-seller, and advertised "Webster's New Spelling Book" in the same column with his school. It appears from the advertisement that he was the proprietor, and not the teacher, of the school.

A SCHOOL FOR YOUNG LADIES.—Gentlemen and Ladies are hereby informed that a School is opened in New Haven for the Instruction of Young Misses in the following branches of Female Education, viz.: Reading, Writing, Arithmetic, English Grammar, Geography, Composition, and the different branches of Needle-Work. Said School will be taught by a Gentleman and Lady well qualified to instruct in the various branches above mentioned. Should the Subscriber meet the approbation of the Public in his expensive undertaking, they may expect that said school will be furnished with a suitable Library and other Accommodations, which may render the School profitable and respectable. For further particulars relative to said school, please to inquire of the Public's very humble servant,

NEW HAVEN, October 13, 1783.

ABEL MORSE.

In December another advertisement appears as follows:

The School lately opened in New Haven for the instruction of Young Misses, having succeeded beyond the most

sanguine expectation of the Subscriber, the customers to said School, and the public are hereby informed that he is encouraged to prosecute the plan he has adopted, and proposes to furnish the school with a useful library and every other accommodation which may render it advantageous to its members. Board and lodgings will be provided for Young Misses, who will be under the immediate inspection of their Governess; and the pay made easy by the public's friend and humble servant,

ABEL MORSE.

N. B. An evening school is opened by the Master of the Young Misses, to instruct young ladies in writing, arithmetic, geography, composition, etc.

The master of the young misses here mentioned was doubtless Mr. Jedidiah Morse, afterward the Rev. Dr. Morse, pastor of a church in Charlestown, Mass., and "the father of American Geography." He was graduated at Yale College in 1783, about a month before the first appearance of the above advertisement. In 1784 he issued a small 18mo Geography, which he had prepared for the use of his pupils. It was the first work of the kind published in America. This was followed by larger works, in the form of systems of geography, and gazetteers, containing full descriptions of the country, from materials obtained by traveling, and extensive correspondence. Jeremy Belknap, the historian of New Hampshire, Thomas Hutchins, Ebenezer Hazard, and others, who had contemplated the same task, gracefully yielded their pretensions in his favor, even contributing to his use the materials they had gathered; and for thirty years he remained without any important competitor in this department of science. From his school he retired in 1785, was a tutor in college for about a year, and in the autumn of 1786 resigned his tutorship, to travel through the States as far as Georgia, collecting material for a new edition of his Geography. On retiring from his school he recommends his successors, Messrs. Barnabas Bidwell and Jonathan Leavitt, "as gentlemen in every respect qualified to instruct young ladies in the above branches of education."

In 1799, Mr. Jared Mansfield was a schoolmaster in New Haven. His advertisement may be found in the *Connecticut Journal* of May 19th of that year:

The subscriber, having resumed the business of instruction, informs the public that he is now ready for the reception of scholars at the place of his residence; where, besides reading, writing, arithmetic, and the Latin and Greek languages, the following useful branches of learning will be taught, viz.: book-keeping according to the Italian form; navigation according to a new and much improved plan of his own, whereby the whole may be learnt in a quarter of the time usually appropriated to it, together with the method of finding the latitude by observations before noon or afternoon, and the longitude by lunar distances; the doctrine of chances, including annuities, reversions and survivorships, a branch of learning very necessary to all who have any connection with assurances, lotteries, or tontines; mensuration, surveying and gauging, or any other branch of the mathematics, from Pike's Arithmetic to Newton's Principia, inclusive.

NEW HAVEN, May 19, 1799.

JARED MANSFIELD.

Jared Mansfield, LL. D., was born in New Haven in 1759, and graduated at Yale College in 1777. From the tenor of his advertisement, it would seem that he had taught school in New Haven previous to 1790, and that now, at the age of thirty-one years, he resumes his former employ-

ment. He remained in New Haven several years, and then removed to Philadelphia, where he had charge of a Quaker Grammar School. He was afterward Professor of Natural and Experimental Philosophy in the United States Military Academy at West Point. He published, in 1802, "Essays: Mathematical and Physical." His death occurred in New Haven, February 3, 1830.

In the course of the same year in which Mr. Mansfield resumed his occupation of teaching, there were at least three other private schools advertised. As if these four schoolmasters could not sufficiently compete with one another, a plan was adopted by the citizens for establishing an institution similar to the present grade system of the public schools. It was brought to the attention of the people by Abraham Bishop, who afterward, under the administration of Jefferson, was Collector of the Port of New Haven. In a series of six articles which appeared in the *Connecticut Journal* between March 10 and April 7, 1790, Mr. Bishop explains and advocates his plan. It was put into operation, but doubtless without the advantage of such a building as the plan postulates. It cannot have continued many years, as measures were taken before the nineteenth century dawned, to build the Union School, which is to be presently described. Perhaps, however, the Union School may be considered as a modification of Mr. Bishop's system.

The plan which he proposed is thus expounded in the *Journal*:

CITY SCHOOLS.

NEW HAVEN, February 28, 1790.

At a meeting of a number of the inhabitants of this city, at the Dwelling-House of Mr. Abraham Bishop, in consequence of the following subscription, viz.:

NEW HAVEN, February 22, 1790.

The subscribers, impressed with the sense of the importance of establishing a regular system for the instruction of children in this city, do hereby manifest our desire that a plan may be pointed out and formed for that purpose—and do engage to afford our influence to such a one as shall promise to effect so desirable an object.

Signed by the Clergy, the Magistrates, Lawyers,

Merchants, and many of the other citizens.

Timothy Jones, Esq., *Moderator*.

Voted, That a general plan for the schooling of children in this city would be beneficial, and proceed to appoint a Committee of seventeen gentlemen to examine a plan which Mr. Bishop should propose, and to make report to them on March 7th.

At an adjourned meeting on the evening of March 7th, was presented the following Report, viz.:

NEW HAVEN, March 6, 1790.

The committee appointed by a number of the respectable inhabitants of this city to take into consideration a system, or regular plan for the schooling and instruction of children, beg leave to report, that having convened and attended on the business of their appointment, the following plan of the establishment of a general school for the more regular schooling and instruction of children was submitted to their consideration by Mr. Bishop, viz.:

1. Convenient accommodation shall be provided for the instruction of as many of the children of the inhabitants of this city, and of those from other places, as may apply.

2. Suitable masters shall be provided to instruct in the different branches, viz., spelling, reading, writing, speaking, arithmetic, English grammar, reading select authors, composition, geography and ethics; as also the Greek and Latin

languages, so far as to fit them for admission into Yale College or any other university.

3. Each scholar shall, in proper rotation, be instructed in those several branches by the masters particularly employed for that purpose, and each master shall be confined to the province of instruction best suited to his abilities.

4. There shall be one apartment particularly appropriated to instruct the scholars in spelling, reading, speaking English, grammar and geography; another to instruct in writing and arithmetic; another for the Latin and Greek languages. In each apartment a principal master, with as many assistants as the number may require.

5. The school for boys shall commence, every day, precisely at 9 o'clock A.M. and end at 12, and precisely at 2 P.M. and end at 5.

6. The reading and writing scholars shall be formed into four distinct classes, the first to consist of beginners or spellers, the other three to be arranged by the master, according to the progress and proficiency of the scholars, and no one to be promoted to a higher class unless he be at the head of the lower.

7. From 9 o'clock A.M. till half past 10, and from 2 P.M. till half-past 3, the first and second classes of reading and writing scholars shall be employed in the writing apartment, and the third and fourth classes shall in the meantime be employed in the reading apartment; then, upon the ringing of a bell, all the scholars shall quit their apartments and change—the 3d and 4th classes to the writing apartment, and the 1st and 2d to the reading apartment till school be dismissed.

8. On the forenoon of every Saturday, instead of this order, all the reading and writing scholars will attend together in the reading apartment, to receive instruction in composition, reading select authors and ethics, at which time the gallery will be open to accommodate the parents and such spectators as may wish to attend for the purpose of seeing the order of the school and the proficiency of the scholars.

9. On Saturday forenoon of each week, the Greek and Latin scholars shall attend the writing apartment to receive instruction in writing and arithmetic.

10. The boys and girls shall not be instructed together, but a different school will be opened from the first of April to the first of December, annually, and through the year, if necessary, for the instruction of girls in as many of the specified branches as may be judged expedient, and under such regulations as the visitors shall appoint.

11. Besides the schools already pointed out, there will be another provided to instruct small children, both boys and girls, till they are qualified to enter the reading and writing apartments.

12. The price of instruction shall not exceed 10s. per quarter for the last mentioned scholars; shall not exceed 15s. for the reading and writing scholars; and for the scholars in Greek and Latin, or the higher branches, not to exceed 20s.

13. No scholar will be received for a term less than one quarter.

14. No scholar shall be dismissed from said school for a fault without the consent of his parent or guardian, except such dismissal be made by the advice and in the presence of three or more visitors.

15. The ministers of the four ecclesiastical societies in said city, for the time being, shall be visitors of said school, with whom shall be associated sixteen laymen, chosen from each of said societies, by such of the promoters of this institution as shall convene at their next meeting.

16. When any vacancy shall happen by the death or resignation of any of the visitors, his place shall be supplied by one chosen by the remaining visitors from the same society to which such person belonged.

17. Such of the visitors as can attend shall, at least once in every quarter, and oftener if they think proper, visit said school, and see that this plan be carried into effect according to its true intent and meaning.

18. Such alterations and amendments shall, from time to time, by and with the advice and consent of the visitors, be made to this plan as may, from observation and experience, be found necessary or beneficial.

Which plan, having been taken into consideration, is approved and submitted by your obedient humble servants.

Signed, per order, STEPHEN BALL, *Chairman*.

Which report, having been read and duly considered, was unanimously adopted, and the following visitors appointed:

First Society.

Hon. Charles Chauncey,
Doctor Eneas Munson,
Thomas Howell, Esq.,
Hon. James Hillhouse.

Second Society.

Timothy Jones, Esq.,
David Austin, Esq.,
Hon. Pierpont Edwards,
William Hillhouse, Esq.

Fair Haven.

Henry Daggett, Esq.,
Doctor Levi Ives,
Mark Leavenworth, Esq.,
David Daggett, Esq.

Episcopalian.

Jonathan Ingersoll, Esq.
John Heyleger, Esq.,
Mr. Elias Shipman,
Mr. Isaac Beers.

Attest, TIMO. JONES, Moderator.

This plan will be put into operation early in April.

This was followed on March 17th by the following notice:

NEW HAVEN, MARCH 17, 1790.

AMERICAN ACADEMY.

This will in future be denominated

ORLEANS ACADEMY,

to distinguish it from other American institutions.

It will consist of an association of schools, in which, under competent masters, the youth of both sexes shall be instructed in various useful branches of education.

The city schools form an important part of the academy. In addition to the plan published in the last paper, it may be proper to add that the regular quarters will commence with the quarters of the year, vacations to be appointed by the visitors. The public celebration of the academy will be annually in the middle of October, and the quarterly exhibitions in the middle of the winter, spring and summer quarters. Though scholars may be entered on any day of the year, the quarter bills will be made out on the 1st of December, March, June and September. It is requested that parents who design their children for the academy this spring, would enter them soon, as all the schools will be organized upon a new and most regular plan early in April.

ABRAHAM BISHOP, *Director*.

On Thursday evening of next week, at the Brick Meeting-house in this city, the scholars of Orleans Academy will exhibit some pieces of oratory. The occasion will be opened with a Lecture on School Education, and closed with an Oration by Mr. Bishop.

The bell will give notice of the hour. A general attendance of the inhabitants of the city is most respectfully requested.

Appended to Mr. Bishop's communication of April 7th is the following notice:

The Sandeman Meeting-house is now open for the reception of young misses, and of boys under six years of age, to be instructed by the Masters of this Academy. Applications made to Mr. Bishop or Mr. Russ will be received with attention. A woman will be employed constantly in this school to teach needlework.

On the 3d of May appears this announcement:

ORLEANS ACADEMY,

NEW HAVEN, May 30, 1790.

Complete provision is now made for the reception of scholars of both sexes. Boarding and Lodging will be provided for those coming from abroad. Every facility in point of payment will be adopted; and every possible attention given to orders on the subject of instruction. In the Misses' School is employed a Mistress very capable of teaching needlework of every kind. The school for instruction in the Greek and Latin languages will in future be kept under the particular influence and appointment of

JERE. ATWATER,
JONAT. FITCH,
ENEAS MUNSON,
TIMO. JONES,
THOMAS HOWELL,
HON. C. CHAUNCEY, and
SAM. BISHOP, Esq.,

Members of Hopkins Committee.

This school is kept by particular permission at the Academy, and is free to the inhabitants of New Haven as formerly. In the city schools the new arrangement has taken place, and there is room for the admission of thirty scholars in addition to the present number.

A. BISHOP, *Director*.

The Orleans Academy seems to have been a failure. Nothing is seen of it in the *Connecticut Journal* after its commencement in the spring of 1790. In the autumn of that year, Mr. Russ advertises his school for young misses and boys in the Sandeman Meeting-house as if it were an independent institution. Meantime, Mr. Mansfield had successfully resumed his old occupation as a school-master in New Haven, and Abijah Hart, having in March issued a prospectus for a new school to commence on the first Monday of April, gave notice in November of the same year that he had employed an instructor and provided accommodations for another school additional to that which he taught in person. From the prospectus which he issued in March, it may be seen what sort of a school it was which he taught:

SCHOOL.

By particular desire, a school will be opened on the first Monday in April next, at the house of Mr. John Cook, in Chapel street, where will be taught, reading, writing, arithmetic, or any branch in the mathematics, book-keeping, geography, etc. The school will open for young Misses at 7 o'clock and continue until 9 A. M., and at half-past 4 and continue until 7 o'clock P. M., and for boys the usual school hours. Proper attention will be paid to the manners and morals of children.

The character and abilities of the subscriber may be learned of Hon. Judge Chauncey, Captain Burritt, and others who have been his employers the winter past in this city; or in the City of Middletown, of many gentlemen who for many years past have committed their children to the care of

ABIJAH HART.

N. B.—The school will not exceed twenty scholars of each sex.

NEW HAVEN, March 23, 1790.

The next movement toward a larger school than those established by individuals was commenced in 1799. A joint-stock company was formed in November of that year, which, by its trustees, purchased a lot on the east side of Little Orange street, and built a school-house. The General Assembly, at its October session, upon the application of Elias Beers, Stephen Alling, and Jeremiah Townsend, Jr., incorporated the company; and the trustees quit-claimed the property to the proprietors of Union School in New Haven. Some features of the Orleans Academy reappear in the Union School. Probably it did not teach Latin and Greek, as the Hopkins School was free to all the inhabitants of New Haven; and it does not appear that the Hopkins School had any organic connection with the Union School, as it had with the Orleans Academy. But the Union School was divided, as the English department of the Orleans Academy had been, into four classes. Fortunately a printed catalogue of the School for the year 1804 has been preserved, and we transcribe it for the benefit of our readers, who may find in it the names of their grandfathers and grandmothers.

CATALOGUE

Of the Members of Union School in New Haven,
November, 1804.

MASTERS INSTRUCTED BY MR. DANIEL CROCKER.

First Class.

Roger S. Baldwin, New Haven; John Barker, New Haven; Isaac Beers, New Haven; Horace Bragg, New Haven; Henry Crocker, New Haven; Charles Crocker, New Haven; John Daggett, New Haven; Henry Daggett, New Haven; William A. Green, New Haven; Samuel B. Phelps, New Haven; Nathan S. Read, New Haven; George I. Tomlinson, New Haven; William Townsend, New Haven; Daniel Trowbridge, New Haven; Robert Trowbridge, New Haven; William Ward, New Haven.

Second Class.

William Alling, New Haven; Ebenezer Barney, New Haven; James Conner, St. Croix; William Forbes, New Haven; John B. Hotchkiss, New Haven; John Howell, New Haven; Alfred Hubbard, New Haven; Theodosius Hunt, New Haven; James Lyman, New Haven; Thomas Morrell, Long Island; Riley Nott, New Haven; Henry Oaks, New Haven; Thomas R. Totten, New Haven; Richard Trowbridge, New Haven; Timothy Trowbridge, New Haven; Winston Trowbridge, New Haven.

Third Class.

Wyllis Benedict, New Haven; William Bills, New Haven; William W. Bromham, New Haven; George L. Butler, New Haven; Joseph Darling, New Haven; Eli Downs, New Haven; Jotham Fenn, New Haven; Harry Harrison, New Haven; William Ingersoll, New Haven; David Norie, New Haven; James Peck, New Haven; Isaac Smith, New Haven; Charles Tomlinson, New Haven; Elias S. Townsend, New Haven; John Ward, New Haven; Francis Watlington, New Haven.

Fourth Class.

James W. Atwater, New Haven; William Atwater, New Haven; George Atwater, New Haven; Samuel Austin, New Haven; Horace Beers, New Haven; Simcon B. Chapman, New Haven; George Cook, New Haven; William L. Cook, New Haven; William Howard, New Haven; Charles Ingersoll, New Haven; Edward Isaacs, New Haven; George Isaacs, New Haven; William Miles, New Haven; Charles Nicol, New Haven; Benjamin Prescott, New Haven; Thomas Watlington, St. Croix.

MISSSES INSTRUCTED BY MISS EUNICE HALL.

First Class.

Henrietta Austin, New Haven; Mary Bacon, Roxbury; Rebecca Baldwin, New Haven; Elizabeth Beers, New Haven; Laura Boardman, Wethersfield; Maria Booth, New Milford; Lydia Brintnal, New Haven; Grace Burr, New Haven; Julia Canfield, Sharon; Wealthy Chittendon, New Haven; Grace Daggett, New Haven; Jane Gibbs, Sharon; Maria Gould, Cornwall; Rebecca Hine, New Milford; Mary Isaacs, New Haven; Maria Lane, New Milford; Emily Webster, New Haven.

Second Class.

Charlotte Beers, New Haven; Eliza Cummings, New Haven; Mary Daggett, New Haven; Lucy Green, New Haven; Maria Hunt, New Haven; Mary Ingersoll, New Haven; Eliza Isaacs, New Haven; Nancy Kirby, New Haven; Fanny Lines, New Haven; Cynthia Lyman, Northampton; Cornelia Norton, Salisbury; Rebecca Prescott, New Haven; Hannah Prescott, New Haven; Grace Thompson, New Haven; Mary Totten, New Haven.

Third Class.

Jennet Alling, New Haven; Caroline Beers, New Haven; Susan Bills, New Haven; Mary Bradley, New Haven; Nancy Hayes, New Haven; Mehitable Hughes, New Haven; Charlotte Isaacs, New Haven; Eliza McCrackan, New Haven; Eliza Mills, Huntington; Caroline Mills, New Haven; Augusta Nicoll, New Haven; Rebecca Peck, New Haven; Sophia Staples, Canterbury; Julia Tuttle, New Haven; Mary Watlington, St. Croix; Harriet Webster, New Haven; Mary Wyllis, Bath.

Fourth Class.

Julia Atwater, New Haven; Eliza Barnes, New Haven; Mary Bragg, New Haven; Catherine Brown, New Haven; Louisa Huggins, New Haven; Adeline Lewis, New Haven; Nancy Miller, New Haven; Eliza Mills, New Haven; Amelia Phelps, New Haven; Caroline Shipman, New Haven; Jane Tomlinson, New Haven; Jane Wall, Savannah; Adah Ward, New Haven; Mary Whittlesey, New Haven; Eliza Woodworth, Troy, N.Y.

It in no way appears how far the two sexes were educated together in the Union School. The building was of two stories; and probably the boys and the girls were in different apartments. Neither does it appear whether the proprietors exercised any supervision or established any rules for the guidance of the teachers. Probably the school was a private enterprise, for which the joint-stock company provided apartments more commodious than could otherwise have been found.

Not many years after the Union School had furnished these accommodations in Orange street, the New Township Academy was erected, at the corner of Chapel and Academy streets, by an association organized for the purpose of providing a school in that part of the city. In this building a school was kept, with many interruptions till, in 1831, the land, with the building, was sold to Mr. Joseph Barber, who erected the dwelling-house now standing thereon occupied by the family of the late Mr. Charles Mullock. William Mix, Beriah Bradley, and Charles Bostwick were a committee duly authorized by a vote of the proprietors of New Township Academy to convey the property to Mr. Barber. The building was removed to the corner of Wooster and East streets, where it still stands.

The Rev. Claudius Herrick retiring from the pastorate of the Congregational Church in Woodbridge, Connecticut, in 1806, established in New Haven, soon after, a school for young ladies, in the house in which about sixty years before Samuel Mix had lived and taught. Mr. Herrick died in 1831 having kept school in this ancient and venerable mansion for about a quarter of a century. Tradition represents him as singularly Christ-like in his character. In an obituary notice of him it is said that "of the sixteen or eighteen hundred young ladies who have been under his instruction, it is believed that as many as one-third of the whole number have united themselves to the Great Head of the Church by a living faith; and to most of these he was immediately or remotely the instrument of their conversion." *The Religious Intelligencer*, in its notice of his funeral, says: "Many of our most respectable ladies who had at different times been pupils of the deceased, followed as mourners, and the long and solemn procession was composed principally of females." Albums of the young ladies who attended Mr. Herrick's school are still extant, preserving the gushing effusions of young gentlemen who are now venerable octogenarians.

The Rev. John M. Garfield established a school for young ladies some ten or twelve years before the death of Mr. Herrick. It was kept first in the

building erected by the proprietors of the Union School, and afterward in a house on the east side of State street, between Chapel and Court streets.

The same number of the *Religious Intelligencer* which announces the decease of Mr. Herrick contains an advertisement that Miss Sarah Hotchkiss would continue the school which he taught. It is as follows:

SCHOOL FOR YOUNG LADIES.—Miss S. Hotchkiss, of this city, proposes to resume, the 6th of June next, the School for Young Ladies kept by the late Mr. Herrick; to instruct in all the branches of education which he taught, with the addition of languages, should it be desired. Miss Hotchkiss will secure the assistance of gentlemen of the first character as scholars and instructors; and from our knowledge of the attainments, experience and character of Miss Hotchkiss, we have entire confidence in her as qualified to conduct an institution of this kind with respectability, efficiency and success.

SIMEON BALDWIN,
DAVID DAGGETT,
JEREMIAH DAY,
SAMUEL MERWIN,
ELEAZAR T. FITCH.

Miss Hotchkiss' school was on the south side of Elm street, between High and York streets. Since the time of Miss Hotchkiss there have been many schools for young ladies in New Haven, of which Grove Hall, in Grove street, corner of Whitney avenue, maintained itself in existence and in reputation for the longest period. Successive generations of young ladies resorted to it, and not less than fifty classes in College felt a tender interest in "The Nunnery."

Parallel with the schools for young ladies which have been mentioned, and with many others of shorter duration, were private schools for boys. Rev. Sereno E. Dwight retiring from the pastorate of the Park street Church in Boston, and associating with himself his brother, Henry Dwight, opened a boarding-school, about the year 1830, in the Pavilion, which had been a quiet sea-side hotel, in East Water street. The school was called Dwight's Gymnasium, and was professedly conducted in imitation of schools of that name in Germany. It was for a time popular and prosperous, but did not long continue.

At an earlier date than the Gymnasium, Mr. Charles Barney taught a day school in Elm street. Mr. William Jarman taught a day school in Orange street, on the first floor of a building whose second story was used by the First Church as a chapel, and called the Orange street Lecture-room. About the same time Leonard A. Daggett taught a school in the Glebe Building. Amos Smith had a private school in Crown street a little west of College street; removed to the corner of Chapel and Howe streets, and thence, many years later, to Howard avenue. From Howard avenue he removed to the center of Orange, where he taught a family boarding-school for several years. Returning to another house on Howard avenue, he continued to teach till the infirmities of age were so great that he relinquished the occupation.

In 1885 the private schools for young ladies and misses include the West End Institute, a boarding and day school for young ladies, under the su-

perintendence of Mrs. Sarah L. Cady; Young Ladies' Boarding and Day School, 33 Wall street, Misses Nott, Principals; Misses Bangs' school, 136 Sherman avenue; Miss Eliza P. Hall, 95 Orange street; Miss Mary E. Bradley's school, 81 Wall street; Young Ladies' Day School, 57 Elm street, Misses Orton and Nichols, Principals.

WEST END INSTITUTE.

West End Institute, a boarding and day school for young ladies and misses, situated on Howe street, was established by Mrs. Sarah L. Cady in 1870. With the assistance of her two daughters, Mrs. Cady has imparted to the Institute a high reputation and it is to-day of its kind the leading school of the city.

The building is situated so as to be on all sides open to the light; every room in turn receives the sun and it bears throughout a bright and cheerful aspect.

An air of ease and refinement pervades it and surrounds its inmates with influences of culture and comfort.

Upon the right of the lower hall is the main school-room, neatly fitted with desks and apparatus, and an organ to accompany morning and evening devotions. Across the hall are three separate class rooms. Upon the second floor is the kindergarten division, also bright and cheerful. As we advance along the hallway, sounds of guitar float out sweetly from the adjoining room; a passing look discovers a music pupil at her lesson.

Upon the other side, the young ladies' rooms are tastefully furnished and adorned and open through porticos upon the common hall. A second floor above is arranged in similar manner, and in equal style for comfort and convenience. On this floor is the studio and art room, amply furnished with appliances and well lighted from the north and by skylight. The Institute is furnished with an excellent historical and reference library, and has other necessary apparatus for illustration and technical needs. The entire house is adorned by original drawings and paintings, made by Miss C. E. Cady, who has charge of the Art department. Miss Cady has studied in Paris, and at the Yale Art School and follows its methods of teaching.

The course of instruction consists of four grades and departments: the Institute, Intermediate, Primary and Kindergarten. The Institute department comprises a four years course, at the regular completion of which graduates receives a diploma. The studies are the usual branches of a liberal education, ranging through mathematics, science, language, philosophy and art. The other departments are, each in turn, made tributary to the Institute. A preparatory course for entrance to Vassar, Smith or Wellesley College is specially provided; also an optional course of eclectic studies may be pursued, in special cases, under the approval of parents and guardians. Students may enter in advance the second, third and fourth years of the Institute course upon certificates of qualifications brought from other schools. Special lessons

are given in Elocution, and Shakespeare is used as the text book for the reading classes.

The modern languages are very thoroughly taught. French, under a native teacher, is made the language of the family, being used in daily conversation among the pupils. Music is under the charge of an accomplished professor. Art instruction is given in free hand drawing, in crayon and in casts from the antique, as preparatory to oil painting. Attention is given to decorative art and the entire school is taught in pencil drawing. Lectures upon art history are combined with technical instruction, and are amply illustrated by specimens from the most celebrated masters.

The corps of teachers comprises from nine to eleven in the various departments, the whole being under the direct supervision of the principal.

The health of the school has always been excellent and is cared for by regular open-air exercise, thorough ventilation and an observance of sanitary regulations and adaptations.

The Institute is governed by such usages as promote good breeding, kindly feeling and order. The young ladies attend lectures and concerts at intervals, under the care of the teachers. Attendance at church is required in accordance with Christian usage. Pupils come from all parts of the Union, averaging yearly, inclusive of day scholars, not less than sixty.

The school opens in September and closes in June, with a vacation of two weeks at Christmas.

Mrs. Cady refers, by permission, to those, who have personal knowledge of the Institute, among whom are Rev. Theodore D. Woolsey, D.D., LL.D.; Prof. Cyrus Northrop, President of the University of Minnesota; Ex-Governor Bigelow; Ex-Governor Andrews; and many professors of Yale, whose children have been pupils; and others of prominence, among whom are Senator Dawes and Rev. Dr. Buckingham of Massachusetts.

Mrs. Sarah L. Cady, the principal, is a Massachusetts lady, whose ancestors originated in Connecticut. James Ensign, on the paternal side, emigrating from England in 1636.

She is descended from Datus Ensign, who married Lucretia Seymour, of Hartford, Conn., and on the maternal side, from Dr. Samuel Cobb, of Tolland, Conn., a well-known physician of his time, representing the town eight times at the General Assembly of Connecticut. He was also a Justice of the Peace and an acting Magistrate and was so esteemed by the town of Tolland that upon his death, it voted him a monument, which marks his resting place in the old graveyard of that town.

The largest school for boys is the Collegiate and Commercial Institute, Wooster place, of which the late General William H. Russell was the founder.

Mr. Joseph Giles' school for boys is kept in the Insurance Building.

In the Insurance Building is also a Business College, in which instruction is given in all branches of knowledge needful for an accountant. Mr. R. C. Loveridge is the President. There is

Wm. V. Russell

another Business College at 48 Church street, of which Mr. F. A. Cargill is the President.

There is a School of Phonography at 811 Chapel street, of which Mr. F. H. Cogswell is the Principal; another at 87 Church street, of which Mr. W. H. Brown is the Principal; and still another at 49 Church street, of which Mr. J. F. Gaffey is the Principal.

WILLIAM HUNTINGTON RUSSELL

Was born in Middletown, Connecticut, August 12, 1809. His first ancestor of the name in this country was William Russell, who came to New Haven from England in 1639. He was a prominent citizen of the place, and lived here until his death. His son, the Rev. Noadiah Russell, was minister at Middletown, where many of his descendants still live. He was a distinguished clergyman and one of the founders of Yale College. William H. Russell was in the sixth generation from the first settler; he received his early education at Captain Partridge's Military Academy, Middletown, where the training gave him that military cast which was so marked a characteristic of his life, and which was directly and indirectly to contribute so much to the service of the country. He was graduated at Yale College in 1833, and was the valedictorian of his class. His influence in the college has been perpetuated in a senior society, known as the Skull and Bones, of which he was the founder. In 1836 he established the school in New Haven with which his name was so long identified, and which is now known as "The Collegiate and Commercial Institute." He early introduced into the school the military drill and discipline which afterwards made it famous. At a time when most men regarded such training as useless because of the great improbability that we should become involved in any war of importance, he clearly saw its value, both as useful discipline and as a preparation for war. At the outbreak of the Rebellion, the value and truth of his views was made evident. Boys from the school were employed to drill the volunteer troops of Connecticut, before they left for the seat of war, and more than three hundred men who had been pupils of General Russell entered the army as officers. At the beginning of the war, Governor Buckingham, of Connecticut, turned to General Russell, as the person best fitted by his knowledge of military affairs, to undertake the work of organizing the militia of the State of Connecticut, and he held the office of Major-General for several years. He gave much thought and work to the subject, and the result is seen in the present system. The work was of the highest importance during the war, for the military preparation of the volunteer troops was included in it.

Unquestionably, General Russell's greatest service was in the impression which he made by his character and influence upon the scholars who were

committed to his charge. His personality was a very remarkable one, and fitted him to train youth for an upright, independent, and conscientious manhood. The testimony of his pupils to the value of his example and influence is remarkable. Under him, they learned habits of order and industry which were lifelong, and his peculiarly kind and firm discipline was successful in teaching manliness to many unpromising boys.

Politically, General Russell was an independent thinker, and did not permit party ties to bind him, but from the time of its formation he commonly acted with the Republican party. He had certain well-defined views upon matters of public policy, and he was guided by them in all his political action. He was a strong abolitionist. He was a personal friend of John Brown, and in the will which Brown made before going to Kansas in 1857 William H. Russell is named as one of the trustees. He represented New Haven in the Legislature in 1846 and 1847, and was once narrowly defeated when he ran as candidate for Mayor. He was appointed Collector of Internal Revenue for the second district of Connecticut in 1868, and held the office until it was abolished by the consolidation of districts. He was always active in politics, and took a vigorous part in the presidential campaign of 1884, when he acted with the Independent Republicans.

He was married August 19, 1836, at Clinton, N. Y., to Mary Elizabeth, daughter of Prof. Thomas Hubbard of Yale College. He had eleven children, of whom six survived him.

General Russell's chosen work was to train young men to a useful manhood, but this work he understood in a very large sense. His mind was one of remarkable keenness and fertility, and his sympathies were broad. He took the strongest and most active interest in all the questions of the day, whether they were political, social, or religious, and he brought the best he could find anywhere to help him in his educational work. He understood the duties of a citizen in a very profound sense, and thought of them as peculiarly sacred and binding. It was this that gave him the great influence which he exerted in New Haven, and which was always found on the side of what was right rather than on the side of what might be considered expedient. He was uncompromising in his dislike for anything which was mean or which bore the semblance of trickery. His independence and honesty of purpose always compelled the respect even of those who differed with him. There was no citizen of New Haven, of his generation, who was regarded with more reverence for his perfect uprightness than General Russell. He died May 19, 1885, at his home. His funeral was largely attended by his former pupils, more than 4,000 of whom were living at the time of his death. He added luster to New Haven as a center of sound education, and his memory will always be honored by those who knew him as a teacher or as a fellow citizen.

CHAPTER VIII.

YALE COLLEGE.

By WILLIAM L. KINGSLEY, Editor of *The Yale Book*.

THE colonists who came from England to New Haven in 1638, came under the inspiration of an idea. They had been induced to seek a home for themselves in the American wilderness by the Rev. John Davenport, who had conceived the idea of laying the foundation of a new and independent Christian State, which should rest on the sure foundations of religion and universal education. They had accepted his ideas, and had left England with the design of here making them a reality. According to Mr. Davenport's plan, not only were the whole body of the children of each successive generation to be taught the rudiments of education, but there was to be a classical school and a college.

On the arrival of the colonists they began at once to carry out the proposed educational system. Within the first year a free school was set up at the public expense "for the better training of youth in this town that, through God's blessing, they may be fitted for public service hereafter, either in church or commonwealth." But the inevitable embarrassments attending a new settlement obliged them to postpone the immediate setting up of a college. This they were the more willing to do, as they found that there was such an institution already in successful operation in Massachusetts. With no narrow spirit they turned at once to this, and made liberal contributions to its treasury. However, in 1647, the tenth year after their arrival, some steps were taken, under the lead of Mr. Davenport, towards founding a college. Land was formally set apart, by the authorities of the colony, for its support. A desirable lot on the public square was offered by Lieutenant-Governor Goodyear; but in consequence of the failure of the commercial plans of the colonists, they were unable to proceed further. During the next few years new attempts were made on various occasions, but they all proved unsuccessful.

At last, in 1660, in consequence of a bequest of Governor Hopkins, obtained through the efforts of Mr. Davenport, it was thought that the favorable time had arrived. Again arrangements were made for the establishment of a college. After a time, instruction was actually commenced. But new difficulties arose. The colony of Connecticut interfered to prevent their obtaining the avails of the bequest of Governor Hopkins, and a part of it had to be sacrificed. The spirit of the New Haven people was broken by the annexation of their colony to Connecticut, which was brought about contrary to their wishes by means of the charter which Governor Winthrop obtained from Charles II. Nor was this all. About this time the fierce Indian war began, which is known as King Philip's War. Then came the alarm consequent upon the arbitrary measures of Sir Edmund Andros; and afterwards,

as English colonists, they were drawn into the vortex of the great European war waged by William III against Louis XIV, and exposed to the incursion of the Canadians and Indians from Quebec and Montreal. The college was indeed set up, and instruction was commenced; but in the general depression which settled down upon the people, it never in reality rose above the grade of a grammar school; but as the "Hopkins Grammar School" it continued to live, and has survived to this day as one of the most important educational institutions of the country.

Towards the close of the century, the prospects of the people of New England brightened. The long war in which England had been opposed to France, had ended with the Peace of Ryswick in 1697. The frontiers were no longer exposed to hostile incursions. With peace returned a measure of prosperity.

At this time the successor of the Rev. John Davenport in the church in New Haven was the Rev. James Pierpont, a man of far-reaching views. He had married the granddaughter of Mr. Davenport, and had thus become acquainted with, and especially interested in, the hopes and plans of that remarkable man. He was settled among a people of unusual intelligence. The town was a small one, numbering scarcely more than five hundred people, but it had a distinctive character. The tradition was still cherished that their fathers had intended from the first that New Haven should be a college town. The importance of the higher education was fully appreciated. The Hopkins Grammar School was instructing young men in the rudiments of a classical education, who were obliged to go to the distant college in Massachusetts to complete their studies. So great was the love of learning among the people of New Haven, that it appeared that one in thirty of all the students who up to this time had graduated at Harvard College had come from this remote town. It was felt to be something of a hardship that their young men should be obliged to go so far from home for an education.

Under the influence of all these considerations, Mr. Pierpont was led to revive the idea of Mr. Davenport of founding a college. On broaching the subject to the neighboring ministers in the old New Haven jurisdiction, he found that they were in full sympathy. There were now frequent meetings and consultations. It was felt that, in carrying out so important an undertaking, it was advisable to interest the whole colony in the project. The co-operation of other prominent men, who lived at a distance, was accordingly invited. But now, when it was known that a college was talked of, the proposition was made that it should be established by a synod of the churches, and be called

the "School of the Churches." This was the plan of those who were desirous of having an ecclesiastical establishment in the colony. These persons seem to have been influenced by the consideration that if a college was set up by a synod, it would help on the plan which appeared so desirable to them. But the original projectors of the college in New Haven were opposed to an ecclesiastical establishment; and, in accordance with their views, it was finally resolved that the college should be founded by a number of ministers selected to act as trustees. Ten were selected: seven who were from New Haven or its neighborhood, and three who were from more remote parts of the colony.

At a meeting of the trustees in New Haven, some time in the year 1700, it was agreed that the next meeting should be in Branford, a village seven miles from New Haven, and that they would attend the meeting prepared to become the legal founders of the college by making a donation of books. At the appointed time it was found that a sufficient number had assembled in Branford to enable them to carry out their design, and they accordingly proceeded to found the college by the formality of presenting a number of books with the declaration, "I give these books for the founding of a college." The question now arose whether it was not advisable to procure a charter from the Legislature. There were some grave objections. It was understood that it was considered in England that the granting of a charter was a part of the royal prerogative. The charter of Harvard College had some time before been taken away; and though several attempts had been made to procure a new charter from the king, the friends of the college had been hitherto unsuccessful. At last the trustees, after due deliberation, thought it "safe and best" to apply for a charter; probably on the supposition that what they did would not be noticed by the government in England. Accordingly, for fear of attracting attention, in the draft of their charter which they submitted to the Legislature they assumed a very humble position. The new institution was not called a college, but a "collegiate school." Its presiding officer was designated a "Rector," although the same officer at Harvard was called a "President." Its fellows were described as "tutors" or "ushers." Its degrees were spoken of as "licenses." The charter was granted by the Connecticut Legislature October 9, 1701.

At the first meeting of the trustees, which was at Saybrook, November 11, 1701, the course of study was determined upon, and, to propitiate the people of the towns on the Connecticut River, the location of the college was fixed in Saybrook, "as the most convenient place at present, unless upon further consideration they should alter their minds." The Rev. Abraham Pierson, who had a high reputation as a scholar, and who was the author of a treatise on Natural Philosophy, was elected rector. He was the minister of the town of Kenilworth, ten miles to the west of Saybrook; and it was understood that, till other arrangements could be made, he was to give instruction to the students at his own house. Before the close of the academic

year eight young men were admitted to the college, and put into classes "according to the proficiency they had antecedently made." The first Commencement was held at Saybrook September 13, 1702.

But scarcely had the college been established, when the state of public affairs became such as to threaten its destruction. In May, 1702, war was declared by England against France, and the war of the Spanish Succession began. The whole frontier of New England was once more exposed to an attack from Canada. Connecticut was obliged to send troops in every direction. All business was at an end. The colony was taxed for men and money to the utmost of its ability. The royal governors of New York and Massachusetts took occasion to use their influence in England to deprive the colony of its charter. It was a time of deep despondency. Yet the trustees managed to keep the college alive, and year after year instruction went on at Kenilworth, and five successive Commencements were held in Saybrook, when, in March, 1707, the death of Rector Pierson exposed the institution to new dangers.

The war which began in 1702 was, at the time of the death of Rector Pierson, still going on, and the general depression which had settled down upon this colony was such that it was impossible to raise funds to support a resident rector in Saybrook. Accordingly, the Rev. Samuel Andrew, the minister in Milford, one of the trustees, was chosen rector *pro tempore*, and the Senior class came to him in Milford, where he superintended their studies. The other classes were left for years almost entirely to the care of two tutors in Saybrook.

It was a time of deep discouragement. In four consecutive years degrees were conferred on only ten students. Yet the history of the college acquires an interest during this period on account of the efforts of those who were desirous of setting up an ecclesiastical establishment in Connecticut, and requiring of the officers of the college a subscription to a prescribed confession of faith. Through the influence of Governor Saltonstall, a synod was summoned by the Legislature to meet at Saybrook the day after the college commencement in 1708. This synod was to some extent under the influence of those trustees of the college from the neighborhood of New Haven who did not look with favor upon the proposed religious establishment. However, a general plan of ecclesiastical government was agreed upon, which is known as the Saybrook Platform. The Legislature at once established it as the constitution of the churches of the colony, and the trustees of the college required that henceforth all the officers should give their assent to it. But the action of the synod is supposed to have been somewhat modified by the New Haven divines, who were among its members; and the subsequent interpretation put upon the Platform was still further modified by the opinions which they afterwards expressed; so that, although the officers of the college were required for more than a hundred years to give their assent to it, the consolida-

tion of the churches of the colony was never secured in any such way as to interfere with their historic independence.

In April, 1713, the Tory party in England having come into power as the party of peace, a treaty was concluded at Utrecht with the ministers of Louis XIV. At once brighter days were seen to dawn. The college began to revive. About this time Sir John Davie made a gift of 170 volumes to the library. Not long after, Jeremiah Dummer, Esq., the agent of the colony in England, sent 800 volumes which he had collected.

But now the institution sustained a great loss by the death, November 11, 1714, of the Rev. James Pierpont, to whom is due the honor of being its founder, and who had ever held the chief place in its counsels, and had never ceased to labor for its welfare. One of the last acts of his life was an effort to secure for it a benefaction from a son of one of the original settlers of New Haven, Governor Elihu Yale, who had accumulated a large estate in India and was then residing in England.

After the death of Mr. Pierpont the affairs of the college fell into a very unsatisfactory condition. The students made great complaints that there were no proper accommodations for them in Saybrook, and that the instruction given by the tutors was very inadequate. Their dissatisfaction is supposed to have been encouraged, from interested motives, by persons residing in the northern part of the colony, in the hope that if the college was removed from Saybrook it might be secured for Hartford or Wethersfield. It had begun to be seen that the college was destined to be of advantage to the place where it should be located. The expressions of dissatisfaction among the students proceeded to such lengths, that at last the trustees, in the summer of 1716, allowed them to go to other places for instruction till Commencement. Upon this the larger part of them went to Wethersfield, and put themselves under Mr. Elisha Williams. A petition from Hartford was now presented to the Legislature that the college might be removed to that town, for the reason that it was "more in the center of the colony," and that the greater number of scholars was from its neighborhood. New Haven began also to assert its claims, and had this advantage over Hartford, that a majority of the trustees were from its neighborhood. At the Commencement in 1716, which was the last Commencement held in Saybrook, the only tutor still connected with the college resigned, and the institution was left without a single permanent officer. The trustees now discussed the question whether it was best to remove the college from Saybrook, and to what place; but, being unable to come to any decision, they adjourned to meet the following month in New Haven. At this meeting it was decided to remove the college to New Haven.

Accordingly instruction was commenced in New Haven at the beginning of the academic year, 1716-17. This was the signal for the commencement of an intense excitement which spread throughout the whole colony. The students who had been at Wethersfield under Mr. Elisha Williams

refused to go to New Haven; and, remaining at Wethersfield, formed the nucleus of a rival college. Complaint was made to the Legislature that the resolution to fix the college at New Haven had not received a majority of the votes of the trustees, as one of those who had voted in the affirmative was not legally qualified. The Legislature, however, refused to interfere. Accordingly the first Commencement was celebrated in New Haven in 1717; and, shortly after, the trustees began to erect a college hall. The excitement now redoubled; and, in October, the Hartford party again attempted to persuade the Legislature to interfere. Under their influence the lower house even proceeded to vote that in their opinion it was best that the college should be located in Middletown. So great was the excitement, that the college would have been hopelessly ruined, had it not been for Governor Saltonstall, through whose influence the Legislature, after "great throes and pangs and controversy and mighty strugglings," fixed the college in New Haven, and passed the following vote, namely: "That, under the present circumstances of the affairs of the collegiate school, the Reverend trustees be advised to proceed * * * and finish the house which they have built in New Haven for the entertainment of the scholars belonging to the collegiate school;" and to soothe the people of Hartford for their disappointment, they ordered that a house for the General Court should be built at the public expense in that town.

Meanwhile the trustees of the college had been much encouraged by receiving several valuable donations, and among them one from Governor Elihu Yale, which was the largest which they had ever received from any one individual. By means of this they were able to complete the College Hall before the Commencement of 1718. This Commencement was a memorable occasion, and was celebrated in a style which far surpassed anything known before in the history of the college. In gratitude to Governor Yale, the new building just completed was called Yale College, and was opened with appropriate ceremonies. This building, which stood on the southeastern corner of the present Green, was of wood, was one hundred and seventy feet long, twenty-two feet wide, and three stories high, with dormer-windows. Besides chambers for students, it contained a dining-hall, library, and kitchen.

The rival college at Wethersfield still maintained itself, and celebrated on the same day a Commencement, at which degrees were conferred by one of the Hartford trustees. But the long disagreement was now drawing to a close. The Legislature recommended that the scholars who had "performed their exercises at Wethersfield should receive degrees at New Haven without further examination;" and ordered that the students at Wethersfield should go down to New Haven. The trustees at New Haven showed every disposition to do all that they could to reconcile the Hartford party, and at last the college was established securely in New Haven.

But the difficulties in which the college had become involved were by no means over. The

Wethersfield students had come to New Haven, in accordance with the order of the Legislature, but they proved "a very vicious and turbulent set of fellows." They made all the mischief they could.

There was a difficulty also about obtaining the library. Lieutenant David Buckingham, in whose charge it had been left, refused to give it up. Governor Saltonstall and the Council repaired to Saybrook, and were at last obliged to call upon the sheriff of the county to take possession of the college property. But the excitement was such, in the town, that the sheriff was resisted in the execution of his duty; and, in order to carry the books out of town, it became necessary "to impress men, carts, and oxen." Even then a mob collected in the night and took off the wheels from the carts, and broke down the bridges on the road to New Haven, so that before the library reached its destination, two hundred and fifty volumes and many valuable papers were lost.

Meanwhile at the college the Wethersfield students were in open rebellion. They complained of the "insufficiency" of the instruction of Tutor Johnson, and at last, early in 1719, they all left New Haven in a body and went back to Wethersfield.

The disorders at the college had now gone so far that it was felt to be very important that its government should no longer be left to the tutors; and that the services of some person of character and experience should be at once secured, who should reside at the college as a permanent rector. The Rev. Timothy Cutler, of Stratford, was accordingly elected, and entered immediately upon the discharge of the duties of the office. Rector Cutler was a man of high attainments as a scholar, and at the same time of commanding presence and of great dignity, and the students were speedily brought under suitable subordination.

The college now seemed to be in a very prosperous condition, when, in the summer of 1722, a rumor began to gain currency that Rector Cutler, Tutor Browne, and some of the neighboring clergymen had made an important change in their religious views. This rumor at last attracted so much attention, that, on the day after Commencement, the trustees, "with no other expectation than that these gentlemen might clear themselves of every unfavorable suspicion," invited Rector Cutler and his friends, whose names the rumor had associated with him, to meet them in the college library. There, it appeared, from a paper that was presented, that some of them entertained doubts as to the validity of their ordination, and others of them were fully persuaded as to its invalidity. They said that this change in their views had come about as the result of their reading the books which had been lately sent over from England. They had been led to examine the points of difference between the Church of England and the Congregational churches of the colony, and some of them had come to the determination to apply for episcopal orders. This announcement was received with the utmost astonishment. Governor Saltonstall, in order, if possible, to stop the movement, proposed

that the matter should be discussed at a subsequent meeting. But the result of the discussion was what might have been expected. Each party claimed to have been victorious in the debate. However, some of the gentlemen were led to give up their intention of leaving the communion of the Congregational churches; but Rector Cutler, Tutor Browne, the Rev. Samuel Johnson of West Haven, and the Rev. James Wetmore of North Haven, remained unconvinced; and shortly after sailed for England, where they were ordained by the Bishop of Norwich. The trustees thereupon voted that, "in faithfulness to the trust reposed in them," they would "excuse the Rev. Mr. Cutler from all further service as Rector of Yale College," and that they would "accept the resignation which Mr. Browne hath made of his office as tutor." They also voted, that in future all the officers of the college, in addition to declaring their assent to the Saybrook Platform, "should give satisfaction of the soundness of their faith in opposition to Arminian and prelatical corruptions." Notwithstanding this course, which the trustees felt obliged to take, it is said that none of these gentlemen ever showed subsequently any hostility to the college, and that some of them gave it signal evidence of abiding attachment.

The trustees found some difficulty in filling the place thus made vacant, and for four years there was no resident rector. At last, in 1726, the Rev. Elisha Williams was elected to that office. He was the same gentleman who had, ten years before, been at the head of the rival college at Wethersfield; and his election may be taken as a proof that the old jealousies between the towns on the Connecticut River and those on the Sound were now extinguished. Henceforth, the whole colony was to be united in taking an interest and pride in the college at New Haven.

Rector Williams was a man who was endowed with great personal magnetism. He had great influence with the students by his peculiarly genial manner, and soon succeeded in repressing the disorders which had begun to prevail in the college during the interval when it had been left to the care of the tutors. He enlarged the curriculum of the academic studies. He paid especial attention to rhetoric and oratory, and labored to cultivate among the students a taste for general literature.

While he was rector, in 1732, a gift was received from the Rev. George Berkeley, the famous Dean of Derry, of a valuable collection of books and a farm of ninety-six acres of land situated in Newport, Rhode Island. The memory of this gift, which connected the institution in its early history with a European scholar of world-wide reputation, and one so honored for his accomplishments and his many virtues, has always been cherished with interest by the alumni of the college. About the time he had been made Dean of Derry he had come unexpectedly into possession of a fortune of £4,000, and immediately determined to carry out a plan which he had been for some time revolving in his mind for the benefit of the red men in

America. He had conceived the idea of founding a college in the "Isles of Bermuda," where young native Indians might be trained to be missionaries among their own people. And now, with money at his command, he began to carry out his plan with all the enthusiasm which characterized him. By the magnetism of his eloquence, he not only gained the sympathy and assistance of his friends, but he obtained a royal charter for his college, and a promise of a government grant of £20,000. Without waiting till the money should be placed in his hands, he set sail for America and landed at Newport. Here he determined to wait for the promised grant. He bought a farm, built a house, occupied himself in literary labors, wrote the "Minute Philosopher" and "Alciphron;" but still no tidings of the promised government grant. Nearly three years had passed, when one of his friends sought an interview with Sir Robert Walpole, to ascertain when the money might be looked for, and received the characteristic reply: "If you put the question to me as minister, I assure you the money shall be paid as soon as suits the public convenience, but if you ask me as a friend whether Mr. Berkeley shall continue in America, expecting the payment of £20,000, I advise him by all means to return home to England, and to give up his expectation." It was evident that the favorite scheme on which he had expended so many years of his life had failed, and Berkeley at once acted upon the advice of the prime minister. But during his residence at Newport, he had made the acquaintance of the Rev. Jared Eliot, one of the trustees of the college, and also of the Rev. Samuel Johnson, the Episcopal missionary in Stratford, and through their representations had formed such a favorable opinion of the college at New Haven, that, after his return to England, in consequence of some suggestion from the latter gentlemen, he conveyed to the trustees a deed of his Newport farm. He also, with the assistance of some of his friends whom he interested in the college, sent over a collection of a thousand volumes for the library, valued at £500; "the finest collection of books," according to President Clap, "which had ever been brought to America at one time." The rents of the farm were appropriated to the foundation of three scholarships, which now for nearly one hundred and fifty years have been held by a succession of some of the best classical scholars among the alumni.

During the whole term of office of Rector Williams, the college made gratifying and constant progress; but, in consequence of ill-health, he felt at last constrained to resign, which he did at the commencement of 1739. President Clap says of him, in the quaint language of the times, "he was a man of splendor." After his resignation he lived sixteen years, in which he held many of the highest offices within the gift of the people of Connecticut.

The trustees, on the resignation of Rector Williams, esteemed themselves fortunate in being able to secure, as his successor, the Rev. Thomas Clap,

of Windham, one of the most learned men in the colony. It was known that he had, in addition, uncommon qualifications for the transaction of business. He was installed in April, 1740. This accession marks the commencement of a new era in the history of the college. At once, with a clear comprehension of what was needed, he proceeded to put everything in connection with the institution into the highest state of efficiency. Additions were made to the curriculum of studies, to keep the college abreast with what were thought to be the demands of the age. A part of the time which had been given to Logic was now given to Natural Philosophy and Mathematics. The students received instructions in Conic Sections and Fluxions, in Surveying, Navigation, and the Calculation of Eclipses. They were exercised in "disputations," which were beforehand supervised and corrected by the tutors; and, in order to awaken an interest among them in the questions of the day, the Rector began to give "public lectures upon all those subjects which are necessary to be understood to qualify young gentlemen for the various stations and employments of life." At the same time, Rector Clap undertook a revision of the laws. He made a new arrangement of the books belonging to the college, and prepared a catalogue, that the library might be made of greater practical value. He induced the Legislature to increase their annual subsidy, so that an additional tutor might be employed; and henceforth there was a tutor for each one of the lower classes, while the Rector took charge himself of the Senior class.

But he had hardly entered, in this energetic way, upon the duties of his office, when the college was exposed to danger from an unexpected source. The year had not gone by, when all New England was stirred by the preaching of the celebrated English evangelist, Whitefield. Owing to a variety of causes, there had long been a great declension in religion. There was much outward respect manifested for its ordinances, but it was the common complaint that religion itself had lost its hold on the people. Now, under the preaching of Jonathan Edwards, and more especially of Whitefield, there was a wonderful reaction against the dead formalism which had reigned for so many years. What followed is known as the "Great Awakening." Whitefield passed through the length and breadth of New England during the summer and autumn of 1740, and wherever he went his labors were attended with marvellous results. But, unfortunately, after he left the country he was followed by a crowd of imitators. These self-appointed preachers intruded themselves as a matter of right into the established churches, and did not hesitate to take upon themselves the duties of the settled ministers. They made their own appointments, and adopted their own measures. To a great extent they professed to be governed by supernatural impulses; and, by noise and excited rhapsody, they sought to incite to the utmost the religious enthusiasm of the people. They denounced all who opposed them as "unconverted;" and their course was marked everywhere by

divisions in the churches and the setting up of separate religious assemblies. Their followers, with marked exceptions, were principally among the less educated and more excitable portion of the community. To these "New Lights," as they were called, the greater part of the clergymen of the colony, together with those who by position had been heretofore looked upon as the leaders in the church and in society, strenuously opposed themselves. They in turn were known as "Old Lights;" and, having a decided majority in the Legislature, proceeded in 1742, and again in 1743, to pass stringent laws for the repression of the disorderly practices which had become so common, and for the prevention of divisions in the churches. Rector Clap was not a man to remain neutral or inactive at such a crisis. Eminently conservative as he was, he took sides with the "Old Lights." It was not long, as might have been expected, before the excitement which was manifesting itself everywhere in the colony spread to the college. There had been a division in the parish church in New Haven, very soon after Whitefield had preached in the town, and a separate service had been set up, which the students began to attend. Rector Clap at once forbade their leaving the regularly appointed place of worship, and threatened with expulsion any one who, in accordance with the growing habit of the times, should speak disparagingly of the religious character of the officers of the college. It was for disobedience of this law that, in the winter of 1741-42, David Brainerd, now known as one of the most prominent of American Christians in the eighteenth century, was expelled. He had attended the "separate" church in New Haven, and had also been overheard to say, in the college hall, one evening after supper, to two or three friends, that one of the tutors, who had just conducted evening prayer, "had no more grace" than the chair near which he stood. It was for disobedience of this same law that John and Ebenezer Cleaveland were also expelled in 1745. They had attended, with their parents, while at home, in vacation, one of the irregular "separate" meetings which had been established in their native town.

The expulsion of David Brainerd and the Cleavelands was considered a very severe and arbitrary proceeding by the "New Lights." It created great excitement among them, and brought down upon the college the enmity of this growing party. But this thorough identification of Rector Clap with the "Old Lights" was attended also with some advantages. He was considered, henceforth, one of the pillars of the party which now held the political power in the Legislature, and they could refuse him nothing. It was owing to the popularity which he thus acquired, that in 1745 he was able to procure from the Legislature a new charter for the college, so ample in its provisions that every power and privilege are granted which will ever be needed in the future. It was at this time, also, that the name of Yale, which before had strictly belonged only to the college building, was now unambiguously given to the institution.

Nor was the new charter the only advantage which the college derived from Rector Clap's connection with the "Old Light" party. It was the influence which he had with the leaders of the party which enabled him to induce the Legislature to assist in building a new dormitory, which was then very much needed. The times were very unpropitious. The war which had begun in 1739, and was not concluded till the peace of Aix-la-Chapelle, in 1748, had borne very hard on the colony, so that it was deeply in debt. But the Legislature, besides other assistance, gave over £1,000 for the new building, and it was, in consequence, on its completion named with appropriate solemnities, "Connecticut Hall." It is the oldest of the buildings now standing upon the college green; the one which is popularly known as South Middle.

The institution was now eminently prosperous. The number of the students had very much increased, and there is evidence of a vigorous intellectual life among them. It was about this time, in 1753, that the Linonian Society was founded by the undergraduates among themselves for purposes of debate and the cultivation of literary studies—a society which for more than a century exerted a marked influence upon the college.

It was about the same time also that one of the tutors, Mr. Ezra Stiles, afterwards the president of the college, began to make experiments with an electrical machine which had been presented to the college by Benjamin Franklin in 1749. They are supposed to have been the earliest experiments of the kind made in New England.

Meanwhile an important change in the feelings of President Clap was becoming manifest. He had, at the beginning of the "Great Awakening," thrown himself with all his characteristic ardor into the ranks of the "Old Lights," in order to suppress what he considered fanaticism. But in the progress of time the "New Light" preachers had in good measure cleared themselves of the dangerous irregularities which had at first marked their course; and, on the other hand, among the "Old Lights" there had been developed a laxity of opinion, and even a positive hostility to what had ever been considered in New England to be religious truth, which excited his alarm. They seemed to be drifting into all sorts of latitudinarian views; while the "New Lights" stood firm for the old doctrines of Calvinism, which, in his opinion, were the foundation of a correct theology. As far back as 1746 he had begun to show dissatisfaction with the preaching of Mr. Noyes, the "Old Light" minister, whose church the students attended. At that time he induced the corporation to pass a vote to the effect that they would provide a preacher for the academic body as soon as they could procure a support for him; and to this end they set apart a small donation, which they had just received from the Hon. Philip Livingston, as the commencement of a fund for the maintenance of a Professor of Divinity. Nothing more was done for six years, till 1752. President Clap had then become still further alarmed on account of the

theological errors which were everywhere rife, and still more dissatisfied with the preaching of Mr. Noyes. This alarm was shared by many of the friends of the college, and the parents of the students began to express their dissatisfaction that their sons should be obliged to sit under such unedifying preaching. Accordingly, in 1753 he withdrew the students from the parish church and commenced public worship on Sunday on college ground.

This was not all. He felt it to be so important, in fidelity to the trust committed to him, to secure the college as a bulwark for orthodoxy in all time to come, that he induced the corporation to require of every officer of the college a subscription to a confession of faith more strict than that required by their act of 1722. This excited at once the indignation of his former friends in the "Old Light" party, who were bitterly opposed to all authoritative formulas of doctrine; and a war of pamphlets commenced which lasted for years. The "Old Lights" were still more exasperated in 1755, when the Rev. Naphthali Daggett was secured as a Professor of Divinity, and a college church was formally established. But the enemies of the president were unable to interpose any obstacle to prevent him from carrying out all his plans, for they were no longer in a majority in the Legislature. The "New Lights," who had at first suffered persecution by reason of the severe ecclesiastical laws passed by the Legislature in 1742 and in 1743, had reaped this benefit—that they had obtained, first, the sympathy, and then the co-operation, of the large class of persons who, in consequence of the growing antagonism of the colonies and the government in England, were demanding "liberty." The "New Lights" were now, accordingly, in the majority in the Legislature, as they were also among the ministers in the colony and in the corporation of the college. So, notwithstanding the enmity of the "Old Lights," and the war of pamphlets, which continued to be waged with increasing bitterness, the college was never in so prosperous a condition. In 1757 President Clap was able to build a house for the Professor of Divinity.

In 1761 the number of students had become so large, that it was felt that it was very important that another building should be provided which could be used as a chapel, and furnish accommodation for the library. The times, however, were more unpropitious than ever. It was near the close of the Seven Years' War. The colony was almost bankrupt. Connecticut had expended £400,000 in the contest, besides all the losses experienced by individual citizens. Yet President Clap, by means of his popularity with the "New Lights," was able to induce the Legislature to assist in the erection of a commodious chapel, which in 1763 was opened for use with suitable formalities.

Still his enemies did not desist. In 1763 they made an attempt to persuade the Legislature to interfere with the government of the college against the consent of the corporation. It was claimed that great abuses existed. The case was argued for the petitioners by two of the most experienced

attorneys in the colony, and it was thought that at last the downfall of the president was certain. But, to the dismay of his opposers, he proved himself to be fully equal to the emergency. Their action only gave him an opportunity of displaying his learning and his fearless and self-reliant character in a way which has excited the admiration of every succeeding generation. He proved to the satisfaction of the Legislature that they had no power of visitation or of interference with the concerns of the college.

President Clap had now completely triumphed in what was the great contest of his life; but it is a question whether the very completeness of his success was not a disadvantage to the college in the end. He had proved that the corporation was independent of the Legislature; but the effect throughout the colony was to increase the number of those who looked upon the institution with suspicion. And now the students were encouraged by persons outside of the college to acts of insubordination, and it became more and more difficult to maintain order. Two of the tutors also adopted the theological views of the Rev. Robert Sandeman, which were at that time spreading in Connecticut, and President Clap insisted that they should resign, in accordance with the test laws of 1753. The new tutors who replaced them found their position so uncomfortable that they resigned in the summer of 1766, and the college was at last in a state of anarchy. The enemies of the president had at last triumphed in their turn, and at the ensuing Commencement he felt obliged to offer his resignation. He did not long survive. In less than four months, after a short illness, he died, January 7, 1767, in the sixty-fourth year of his age. Thus ended, after the labors of twenty-seven years, the academic services of one whose reputation will be ever dear to the alumni of Yale. His lot was cast in troubled times. It was well for the college that during so stormy a period its presiding officer was a man of such fearlessness, such energy and decision, and such single-hearted devotion to its interests.

On the resignation of President Clap some difficulty was experienced in finding a successor. Professor Daggett was accordingly elected president *pro tempore*, with the understanding that the greater part of his time was to be occupied with the duties of his professorship. The period of eleven years—1766 to 1777—in which he acted as president was one of intense political excitement. It will be forever memorable for the opening scenes of the American Revolution. Yet, notwithstanding the distraction of the times, everything went on prosperously at the college; owing in great measure to the fact that there was during the whole period a succession of remarkably able tutors, to whom the oversight of the students was principally intrusted. In 1771, however, the corporation founded a professorship of Natural Philosophy, and placed the Rev. Nehemiah Strong in the new chair.

It is interesting to see, during Dr. Daggett's presidency, how the college, in common with all the other institutions of the country, was affected by the democratic tendencies of the times. One

Wm. Hiles

result was the establishment by the undergraduates of a new debating society among themselves. The Linonian Society was judged to be too aristocratic. Originally no Freshman could be a member. The "Brothers in Unity" was accordingly set up as a rival. Prominent among its founders was David Humphreys, afterwards ambassador of the United States in Spain. Another result of the democratic tendencies of the times was the publication of the laws of the college in English, in conformity with a suggestion from the Legislature. And a still more noticeable result was the alphabetical arrangement of the names of the students in the catalogue, instead of their being placed in accordance with the supposed respectability of their parents.

But the most important event in the history of the college during the presidency of Dr. Daggett, was the growth among the students of a taste for literature. In 1771 John Trumbull and Timothy Dwight were elected tutors. Even before they had entered college they were familiar with the English classics. While undergraduates they had paid special attention to literary studies, and had exercised themselves in original poetical composition. In the first year of their tutorship, Dwight, at the age of nineteen, commenced "The Conquest of Canaan;" and Trumbull published the first book of a poem which he called the "Progress of Dullness," which was a satire written with a view to expose the absurdities then prevalent in the system of instruction in the college. He claimed that the learned languages, mathematics, logic, and scholastic divinity received altogether a disproportionate amount of the time of the students, while the pursuit of literature, of equal importance, was considered idle and worthless. In the course of the two years that he was tutor he continued his attack upon what he considered the absurdities then prevalent in respect to education, adding two new books to the "Progress of Dullness." He then commenced the practice of the profession of the law in New Haven; was, not long after, made treasurer of the college; and began the first part of "MacFingal," which is said to have rapidly passed through thirty editions. There can be no doubt that to the inspiring influence and example of these two men is to be ascribed the commencement of an attention to English literature and rhetoric and oratory among the students. It is said that Mr. Dwight addressed to the Seniors at this time, at their request, a series of lectures on style and composition, similar in plan to the lectures of Blair, which had not then come before the public.

At last, with the breaking out of hostilities between the colonists and the English government, the college became involved in difficulties. Some of the students left to join the army. In the spring of 1777 Dr. Daggett resigned the office of president; and as it was found to be impossible to provide food for the students in New Haven, the trustees made arrangements for the residence of the Freshmen class in Farmington, and of the Sophomores and Seniors in Glastonbury, under their respective tutors. The Seniors were instructed by Tutor Dwight at Wethersfield; and in July they

were dismissed without the usual public Commencement exercises.

The prospects of the college were never more gloomy than at the time of the resignation of Dr. Daggett. In addition to the discouragements already described, the public attention was absorbed by the necessity of repelling a hostile invasion from Canada. General Burgoyne, with a large British force, was aiming to secure command of the Hudson, and thus to cut off New England from New York and the other States to the south. So serious was the danger, that Connecticut, with a population of only 200,000, had that year twenty-two full regiments at the front. But even this absorption of the public attention was not the only source of discouragement to the friends of the college. There was throughout the State a great deal of positive hostility to the institution. Many influential men, to whom it ought naturally to have been able to look for support, were alienated from it on account of the religious test laws of President Clap; while others were jealous of it because he had so triumphantly vindicated its independence of any control by the Legislature. It was fortunate, therefore, that at this critical period the corporation, at their meeting in September, 1777, were able to unite their votes on one of the alumni of the college in whom were combined so many of those qualities which were needed at this time in a pre-siding officer. They made choice of the Rev. Ezra Stiles, D.D., of Newport, R. I.

EZRA STILES

was a New Haven man by birth, and was imbued with all the traditions of the place. Soon after his graduation he had received an appointment as tutor, and had held that position for over six years. During that period he had acquired a high reputation as a college officer. In 1755 he had been called to be pastor of a Congregational church in Newport, where he had become known as the most learned man in America. He was at this time in Portsmouth, New Hampshire, preaching on a temporary engagement, as Newport had become the theatre of military operations, and he had been obliged, with most of his parishioners, to leave the town.

The good policy of the choice thus made by the corporation was at once apparent, in the satisfaction manifested even by many of those who had been the bitter enemies of President Clap. Dr. Stiles was known to be neither a religious nor an ecclesiastical partisan. He was attached to the traditional forms of church organization which had become common in New England from the first; but he cherished kindly feeling for all who gave evidence of Christian character, however much they might differ from him in their scheme of faith. He was also strongly opposed to the imposition of creeds. Accordingly he did not accept the office tendered to him till after he had visited New Haven, and in a conference with the corporation obtained from them a promise to repeal the religious

test act of 1753. He also obtained from them a promise to assist him in an effort to secure, as soon as possible, permanent professors for the college. In addition, he called upon several prominent gentlemen of the town, and satisfied himself that if he came to New Haven he should obtain their co-operation and support.

Everything having been thus arranged to meet his views, he was formally inaugurated president of the college in July, 1778. The number of undergraduates at that time was one hundred and thirty-two; and the instructors, besides the president, were a Professor of Divinity, a Professor of Mathematics and Natural Philosophy, and three tutors.

The new president set himself to work with all his characteristic enthusiasm. But the War of the Revolution went on, and the unfortunate state of the country for the next six years effectually prevented his carrying out the enlarged views which he had entertained when he accepted the office. Just a year after his inauguration New Haven was visited by a detachment of three thousand British troops under Major-General Tryon, and for some hours the town was given up to the ravages of an intoxicated soldiery. It is said the college buildings were only saved from being burned by the intercession of a Tory officer in the expedition who had received his education in the institution. As might have been expected, the students rendered important assistance in the attempt which was made to prevent the enemy from entering the town. One of the most interesting incidents of the day, also, was the appearance of ex-President Daggett on the scene of action. He was assigned a position on the hill which overlooks the road by which the troops were expected to pass. As the enemy advanced, he was directed to retire to the north, and, as he "turned down the hill to gain a little covert of bushes," he was fired upon by the advance-guard of the British, at a distance of "little more than twenty rods." Gaining the covert at which he had aimed, he imprudently returned the fire. The rage of the soldiers who were just at hand was such, that his excuse for firing that it was in "the exercise of war" had, as might be expected, no effect, and his petitions for quarter, although they availed to save his life, did not protect him from brutal indignities and injuries.

In 1783 the War of the Revolution came to a close; but the difficulties under which the college labored were by no means at an end. The institution was still very unpopular in the State. The repeal by the corporation of the religious test law of 1753 had allayed the hostility of some of those who had become disaffected; but the success of President Clap in asserting the independence of the college of all State control had sown the seeds of discontent and jealousy, which had now ripened and borne fruit. Reports were everywhere in circulation that the affairs of the college were poorly managed. Complaints were made that it was controlled by a board of trustees composed entirely of clergymen; and that the course of instruction was arranged, in the spirit of bigotry, with special reference to the education of those who were to become

clergymen. So strong was the opposition to the college, that it was even proposed to establish a rival institution.

President Stiles had labored from the first to allay this feeling of hostility. Additional funds were absolutely necessary to enable him to carry out his views with regard to the improvement of the college. But as long as there was such a want of confidence in its management among the leading men in the State and in the Legislature, it was idle to expect any assistance from the public treasury. He had, accordingly, repeated conferences with individuals, and with committees of the Legislature, in which he sought to allay their prejudices and to excite their interest in the college. But during nearly the whole term of his presidency he was unsuccessful. At last, however, his long-continued efforts were crowned with success. In May, 1792, a committee of the Legislature, after a conference with the corporation, and a full examination of the condition of the college, made a favorable report, in which they commended in high terms the efficiency with which all the interests of the institution were administered. In connection with this report a plan which had been prepared by the treasurer of the college, Hon. James Hillhouse, was submitted to the Legislature, which was at once adopted. According to this plan, the balances of certain taxes, not yet collected, which were not needed for the original object for which they were imposed, were to be paid into the hands of commissioners and applied to the improvement of the college; and the trustees of the college, in compensation for what was thus done by the State, were to receive into the corporation the Governor, the Lieutenant-Governor, and "six senior assistants in the council of the State for the time being," who were to constitute, with the President and fellows, and their successors, one corporation.

It was in this way that President Stiles succeeded at last in bringing to an end the long estrangement which had existed between the college and the Legislature. A part of the funds thus secured were at once appropriated to the proper endowment of the professorship of Mathematics and Natural Philosophy; and in December, 1794, Mr. Josiah Meigs was inducted into the chair. A new dormitory, which was much needed, was also commenced, and was finished in July, 1794, and received the name of "Union Hall," in commemoration of the "union," now so happily completed, of civilians with the old Board of Trustees. But it was not permitted to President Stiles to carry out further the plan which he had proposed to himself when he accepted the presidency. In less than a year from the completion of the building now called "South College" he was seized with a malignant fever, and died after an illness of only four days, on the 12th of May, 1795, at the age of sixty-eight.

The college, during his administration, had been, on the whole, very prosperous, notwithstanding the difficulties with which it had to contend in consequence of the War of the Revolution, and the depression of business which lasted many years after

peace was secured. But the special claim of President Stiles on the gratitude of the alumni, is his success in bringing the college back into the line of its traditions, and to its historic place in harmony with the Legislature and with all classes of people in the State. It ought also to be stated that his character as a scholar gave the college reputation and dignity at home and abroad. He was an ardent patriot during the Revolutionary War. He took special interest in contemporary history; and the voluminous journals in which he wrote extended accounts of current events, and which are now in the possession of the college, have been a treasure-house from which subsequent historians of the period in which he lived have drawn valuable material. He was ardently attached to the college. He was a truly academic man, thoroughly imbued with the spirit of the place, and disposed to maintain all its traditions. No officer of the institution ever labored with more zeal for its prosperity.

When the corporation met, after the death of Dr. Stiles, they at once proceeded to the choice of the Rev. Timothy Dwight, D. D., as president.

TIMOTHY DWIGHT

was the grandson of the Rev. Jonathan Edwards, the most illustrious graduate of the college. He had filled the office of tutor with distinguished honor for six years, from 1771 to 1777. He was now pastor of the church in Greenfield Hill, in which town he had established a school of a high standard, which had been in successful operation for several years.

On entering upon the duties of his office, he assumed an amount of labor of which few men would have been capable. The Rev. Dr. Sprague says of him: "He continued, through his whole presidential life, to discharge the appropriate duties of four distinct offices, each of which might have furnished ample employment for an individual." A great variety of public duties unconnected with the college were also intrusted to him, and the admirable manner in which he acquitted himself in all spread his reputation widely through the country, and gave an importance and a character to the institution over which he presided which it had never enjoyed before.

President Dwight came to the presidency at a fortunate moment. The ill-will which had been felt towards it by so many persons in the State, ever since the days of President Clap, had in a measure been removed by the politic course pursued by President Stiles. It had just received a considerable addition to its funds; by no means all it needed, but sufficient to revive the hopes of its friends. The country, too, was just beginning to recover from the prostration which had affected all business operations during the Revolutionary War, and a new era of material prosperity was just about to dawn.

The college, however, though it had been in existence nearly a century, and was one of the most considerable institutions of learning in the country, was still little more than a collegiate school. Its

corps of instructors, besides the president, consisted only of a single professor and three tutors. The instruction, as it would be regarded at the present time, was very meager and defective. The number of the students had fallen off, so that there were little more than a hundred in attendance. The buildings, with the exception of the new dormitory just finished, were in a dilapidated condition; and the funds, notwithstanding the recent addition made to them, did not yield a sufficient sum to meet the general expenses of the college; so that the institution was still dependent in great measure on the fees which the students paid for tuition.

Limited as were the resources which Dr. Dwight had at command when he came to New Haven, he early conceived the idea, and began intelligently to plan to make of the institution which had been placed under his care a true university, where every branch of knowledge should be taught and studied. For some years he was not able to begin to carry his plans into execution. The want of sufficient funds proved an obstacle in his way, as it had been before in the way of his predecessor. But at last this difficulty was in part removed, and he was able to make a commencement. The first need of the college, that which had been so strenuously insisted upon by President Stiles, was a corps of permanent instructors. President Dwight proposed, instead of calling men to be professors who had already achieved distinction in other spheres of labor, to select from the recent graduates of the college those who gave promise of unusual ability, and to place them in the different chairs of instruction. It seemed to him that, in the existing state of the country, it was the best thing that could be done for the cause of education, to induce such young men, before they had entered upon the practice of any other profession, to direct their attention early to the business of instruction in a single branch of knowledge as the occupation of their lives. In this way they would be led to make higher attainments themselves, and to render more valuable service to the institution with which the interests of their whole career would be from the first identified.

In accordance with this plan, early in the present century he had the satisfaction of being able to establish in the college, as his permanent assistants in the work of instruction, three of the recent graduates of the college, whom he had selected as best fitted for the work he proposed for them. These three young men, who were for more than half a century associated with one another in the service of the college, were Jeremiah Day, Benjamin Silliman, and James L. Kingsley.

Mr. Day became Professor of Mathematics and Natural Philosophy, and entered upon the duties of his office in 1803. At that time the great want of the country in the pure mathematics was adequate text-books. Accordingly Professor Day set himself to work to supply this want, and in a few years brought out a series of mathematical works which were everywhere received with eagerness. For a period of fifty years they held their place in most of the higher institutions of learning in the country, with little diminution of their popularity.

The value of what their author did, by means of them, for the college and for the cause of education, while holding the position of professor from 1803 to 1817, the time when he succeeded Dr. Dwight, was not surpassed by anything in science or literature which he did subsequently during his long term of office as president.

Mr. Silliman was induced by Dr. Dwight, just as he was about to enter upon the practice of the profession of the law, to take the new chair of chemistry, mineralogy, and geology which had been founded by the corporation. At the time little was known of either of these sciences, and there were no text-books. After two years spent in study, he gave his first course of lectures in 1804; and it thus fell to him to introduce the students who came under his teaching to a field of knowledge which was before entirely unknown. By his labors, continued for over sixty years, in the service of the college; by the *American Journal of Science and Art* which he established; and by his brilliant public lectures in many of the larger cities, he will always be remembered as the pioneer who did more than any one else in his day to awaken for science a general interest throughout the whole country.

Mr. Kingsley was appointed to the Professorship of Languages in 1805. Professor Thatcher says that he brought to this office "a love of thorough, substantial learning, united with a habit of great accuracy and exactness in its acquisition, a genuine appetite for the *nutrimentum spiritus*, which eminently fitted him for an academic life." According to the same authority, "he was destined to accomplish as great a work, so far as the literary advancement of the institution is concerned, as has been accomplished by any other person who has ever been connected with it." From the first, his influence was directed to the introduction of improvements in the method of teaching, and in attempts to advance the standard of scholarship. Through a long life he was known as the advocate of thorough work in all departments of instruction; and if the college gained during all that period any distinction for its determined and persistent hostility to all shams in education, and its earnest efforts in behalf of what is exact and elegant in scholarship, to no one person is the honor more properly due than to him.

Thus these three men were not only superior, each in his own department, but through the whole life of President Dwight they ever remained in cordial sympathy with him in all his views respecting education, and gave him their hearty support. After his death, for more than a quarter of a century, they continued to work together harmoniously for the advancement of a true learning. In this way, by their united labors, they built up still higher the reputation of the college, which President Dwight had extended throughout the whole country. Students resorted to New Haven from every State in the Union, and the college became a truly national institution.

The broad views of President Dwight were also manifested in the plans which he adopted for the

material development of the college. On coming to New Haven, one of the first things which he accomplished was the purchase of the whole front of what is now the college square, that there might be ample room for the erection of new buildings, when in the progress of time they should be needed. In 1800, the number of undergraduates having nearly doubled in the five years which had elapsed since he became president, he secured the erection of a new dormitory, now known as North Middle; and of a building to be used for recitation-rooms and other public purposes, to which the name was given of the "Lyceum." A new house was also

President Dwight's House, 1795.

provided for the use of the president; and all the older buildings were put in thorough repair. The library was also enlarged. Additions were made to the philosophical apparatus and to the chemical apparatus. A collection of mineralogical specimens was purchased; and in 1810 Colonel George Gibbs, of Rhode Island, was induced to place on exhibition in one of the college halls a very valuable collection of minerals which he had brought from Europe.

The laws of the college were also revised; and the system of pecuniary fines, on which dependence had been placed in earlier times for securing good order among the students was abolished. The Freshmen were at the same time relieved from the necessity of going on errands, and of rendering other menial services at the bidding of the members of the two upper classes.

Dr. Dwight's efforts for the religious welfare of the students are also deserving of special mention. At the time of his entering upon the duties of his office the whole country was infected with a spirit of unbelief in the divine authority of the Christian religion, which was the result in great measure of the wide-spread introduction of the contemporary literature of France at the time of the Revolutionary War. The bold and fearless manner in which he invited the students to state to him their doubts, and the triumphant manner in which he refuted the common infidel arguments of the time, forms one of the most interesting episodes of his presidency. It was also at this time, in connection with his efforts, that those seasons of religious interest

Jeremiah Day

commenced among the students which have been one of the marked features in the history of the college ever since the commencement of the century.

But the views of Dr. Dwight extended beyond the enlargement of the curriculum of study in the institution as already organized. He contemplated the establishment, in connection with it, of professional schools with distinct faculties of instruction. From the foundation of the college, one of the special objects kept in view has been the training of "suitable youth" for the work of the ministry. From the time of the appointment of a Professor of Divinity, in 1755, there had been a class of resident graduates who had remained in New Haven for the purpose of pursuing regular theological study under his direction. The teaching of these students had been a part of the recognized special duty of Professor Daggett and Professor Wales. Dr. Dwight, holding as he did the office of Professor of Divinity in connection with that of president, continued to give instruction of this kind. But he early saw the importance of having a separate school, in which a more thorough and systematic course of theological instruction might be given. He made public announcement that, as soon as possible, he should attempt to carry out this original design of the founders of the college by establishing such a school. The want of funds prevented him from seeing his plans realized during his life; but he induced one of his sons to set apart a sum of money for the purpose, which in 1824 became the nucleus of the foundation of the "Theological Department of the College," which was then formally established.

A medical school, also, with an able corps of instructors, he had the pleasure of seeing in active operation as the result of his labors. The first course of lectures was given in 1813, and the school at once took a high rank.

It was a part of his plan also, to make provision for the study of the law. In 1801 a professorship of law was established, and the Hon. Elizur Goodrich was elected to fill the chair. He was expected, however, to read lectures, for the benefit only of the undergraduates, on the leading principles of the science. It does not seem to have been intended at this time to establish a separate department for the purpose of qualifying students for the bar. There was a law school of high character already established in the State, in the town of Litchfield, and in full operation under the charge of Judge Reeve. In process of time, however, the action taken in 1801 was supplemented by the foundation of a distinct department of the college for professional study in legal science.

It was in the midst of efforts for developing and carrying out plans of this far-reaching character that Dr. Dwight was seized, in 1816, with a disease from which he partially recovered, but which, after a few months, resulted in the termination of his life, January 11, 1817, in the sixty-fifth year of his age, while he was still in the maturity of his powers.

As president of the college, Dr. Dwight will always be remembered by the alumni as the organizer

under whose wise guidance the institution, which at the time of his coming to New Haven was little more than a collegiate school, began to be developed into a true university. He will be remembered, also, for the remarkable power which he had of inspiring those who came under his instruction to all noble endeavor. Those of their number who survive—few indeed they are!—still speak of him not only with warm affection, but with an enthusiasm which is revealed at once in the eye and in the voice. After the lapse of more than half a century since his death, the institution whose interests he administered so successfully, still owes much of its renown to the association of his name with its history. The limits of this sketch do not permit us to speak of him except as president of the college. But he was more than this. As a man, as a citizen, as a scholar, as a theologian, as a benefactor of his own and succeeding generations, he is to be ranked among the foremost men of the century in which he lived.

JEREMIAH DAY

was born August 3, 1773; he died August 22, 1867, or at the age of over ninety-four years. On his graduation, in 1795, at the instance of Dr. Dwight, he took charge of the large and flourishing academy at Greenfield Hill, which Dr. Dwight had just left to assume the office of President of the College. Here he spent nearly one year, when he received an invitation to a tutorship in Williams College, which he accepted. After two years of service there, he removed to take the same position in Yale College. In this office he served three years, receiving in the meanwhile license to preach from the Association of New Haven West in 1800. On the Sunday before the Fourth of July, in 1801, after having preached twice in West Haven, he suffered a slight hemorrhage, which was followed by such debilitation that under medical advice, from apprehension of tuberculous consumption supervening, he went for trial of a warmer climate to Bermuda, where he remained till the following April. He then returned, without indication of any improvement in health, and spent the following year in his father's house in New Preston, having abandoned all expectation of recovery. Under judicious medical treatment, however, he regained his health to such a degree, that, in the summer term of 1803, he ventured to assume the duties of the Professorship of Mathematics and Natural Philosophy in Yale College, to which he had been appointed just after his departure to Bermuda two years before. On the 11th of February, 1817, about one month after the death of Dr. Dwight, he was elected by the Corporation to the Presidency of the College, and on the 23d of July following, he was inaugurated in that office and ordained to the ministry of the Gospel. This office he held till 1846, when after having held it for nearly thirty years, and at the age of 73, he tendered his resignation. This step, he had prepared to take at the age of 70, but he delayed in deference to the urgent solicitation of his colleagues.

He was at once elected as a member of the Corporation of the College, and in this office, and also as a member of the Prudential Committee, he continued in efficient service of the institution, till, on the 11th of June, 1867, a little over two months before his death, he asked permission to resign the position he had held in the board for fifty years. The resignation was accepted by the Corporation at the following Commencement in July in resolutions, in which with expressions of sorrow, they recognized "the goodness of God in giving this college for the space of seventy years, first as tutor and professor, then as president, and for just half a century as a member of this corporation, the services and counsels of a man, such as President Day; so pure, so calm, so wise, so universally beloved and honored."

It was understood, on the death of President Dwight, that it had been his wish that Professor Jeremiah Day should be his successor. But it was found that this gentleman was very reluctant to assume the responsibilities of the office; and he was only led finally to consent to undertake them by the urgent solicitations of his colleagues, and with the understanding that he was to be relieved of some part of the various duties that had been discharged by Dr. Dwight. Accordingly, having been ordained to the ministry of the gospel, July 23, 1817, he was, on the same day, inaugurated president of the college. It was not long, also, before the corporation, in accordance with his wishes, proceeded to elect two new professors, to fill the chairs of Divinity and of Rhetoric and Oratory. For the first, they made choice of Mr. Eleazar T. Fitch, and for the second, the Rev. Chauncey A. Goodrich; both of the class of 1810. They also elected Mr. Alexander M. Fisher to the chair of Mathematics and Natural Philosophy, which had now become vacant by the elevation of Professor Day to the presidency.

A new era now commenced in the history of the college. For more than a hundred years the government and administration of discipline had been almost entirely in the hands of the President. Even Dr. Dwight had depended, for the preservation of order among the students, for the most part upon his own views of what was advisable, and upon his personal influence and powers of persuasion. It was more in accordance with the character of Dr. Day to consult the other officers of the institution. It was his desire to have all questions with regard to the policy to be pursued discussed and decided in a meeting of the whole faculty of instructors. It seemed to him that such a course would be attended with manifest advantages. Greater harmony would be thus secured among the different officers; and all would be more likely to feel an individual responsibility to assist in carrying out measures which had been adopted after they had themselves been personally consulted, and had an opportunity of expressing freely their opinion and casting their vote. Accordingly, from this time the responsibility for the government of the college rested with the faculty. Henceforth it was understood that no important action of any kind was ever to be taken,

even by the corporation, without the recommendation or assent of the corps of instructors; in particular, that no professor or other officer was to be appointed without the consent of those who were devoting their lives to the daily instruction and government, and with whom any new officer would be associated.

In other respects the administration of the college under President Day was, in general, in accordance with the views of President Dwight, and in the line of the traditions of the institution from the beginning. An effort was made, however, at once to introduce more of regularity and system into every department, and special pains was taken to raise the standard of scholarship among the students. To this end more prolonged and careful work was required of them than ever before in the preparation of daily appointed tasks. These efforts of the faculty for the improvement of the college afforded great satisfaction to its friends, and the institution gave evidence of greater prosperity than ever before. The number of students so increased that it became necessary to build immediately a new Commons Hall in 1819; and an additional dormitory, which was completed in 1821, and which from its location in reference to those erected before, was called North College.

It was not long before the corporation was encouraged to make an effort to carry out the design of Dr. Dwight of establishing a separate department of the college for special theological instruction. In 1822 fifteen students, who were about to graduate, presented a petition that they might be organized as a theological class. Professor Fitch warmly supported their petition, stating that it was a part of his duty as Professor of Divinity to give instruction to graduate students who were preparing for the ministry; but that the demands of theological education were now so much greater than formerly, that it was impossible for him, while discharging his other duties, to give students that superintendence which they needed. He urged, therefore, upon the corporation, and upon his colleagues, the importance of making at once more ample provision for theological instruction. The subject received immediate attention. The fact was recognized that one of the prominent objects of the founders of the college had been to provide for the education of ministers; and that the corporation, in fidelity to the trust committed to them, ought not to neglect to provide for proper theological instruction. It was seen, if a foundation for an additional professorship could be secured, that, with the help of the officers already connected with the college, an able corps of instructors could at once be arranged for a separate theological department. An appeal was accordingly made for the endowment of a professorship of Didactic Theology. This appeal received an immediate response from the friends of the college. Mr. Timothy Dwight, the son of Dr. Dwight, made a subscription towards it of \$5,000, and the required sum was soon made up; and the Rev. Nathaniel W. Taylor, who had been pastor of the First Church in New Haven for ten years, was chosen to fill the chair. At first assistance was

given by some of the academical professors; but in 1826 arrangements were made to secure, as Professor of Sacred Literature, Mr. Josiah W. Gibbs, who had been already for two years giving instruction in Hebrew and Greek. Professor Goodrich was from the first closely identified with the department; but it was not until 1839 that he became formally connected with it as Professor of the Pastoral Charge.

The influence of the body of enthusiastic students who were now attracted by the reputation of Dr. Taylor, had its effect upon the whole college community. The corporation were encouraged to take measures for replacing the old chapel, which had long been found to be insufficient in its accommodations, by a new edifice, which was so constructed as to provide not only a large room for the college library, but also study-rooms for the use of the theological students. The old chapel was remodeled so as to furnish recitation-rooms and rooms for the libraries belonging to the different societies. There were now three of these large debating societies. In 1819 some difficulty had arisen in the Linonian Society, in which was a large number of students from the Southern States, with regard to the election of a president. The candidate of the "Southern party" being defeated, the Southern students in "Linonia" and "The Brothers" withdrew, and formed a society of the same general character, to which they gave the name of "Callopee."

About this time also a marked improvement in the literary taste of the students was brought about by the formation of a society called the "Chi Delta Theta," which was composed of about a third of the members of the Senior class, who were admitted annually by election, and thus honorably distinguished as having displayed special literary ability. The society owed its existence to the efforts of Professor Kingsley, who was for many years its president, and regularly attended its meetings.

In 1825, through the exertions of Professor Silliman, funds were raised for the purchase of the "Gibbs Cabinet of Minerals," which had been deposited in the college some years before, and which was found to be of great value in creating an interest among the students in scientific study.

In 1826 the Hon. David Daggett, a judge of the Superior Court of the State, was appointed Professor of Law. He was at that time associated with Samuel J. Hitchcock, Esq., an eminent counselor-at-law, in the conduct of a private school in New Haven, which had been commenced some years before by Seth P. Staples, Esq. From this time may be dated the practical commencement of a new department of the college for instruction in law. The connection, as Dr. Woolsey says, was at first "somewhat vague," but the names of the professors and students, and the prospectus of the curriculum of studies pursued, appeared henceforth in the official catalogues of the institution.

The years from 1817, when President Day entered upon the duties of his office, to 1831 will ever be memorable in the history of the college. It has already been said that, early in this period,

persistent and systematic efforts were commenced to raise the standard of scholarship among the students. Every year was marked by the introduction of improved methods of recitation and instruction. It was a time when complaints were becoming general throughout the country of the unprofitable nature of the usual college studies. Many of the so-called reformers in education were decrying in newspapers and in pamphlets the study of the "dead languages." Demands were being made that the course of study should be altered to suit what was called "the practical wants of the time." Such pressure was brought to bear upon some of the younger and weaker institutions of learning, that there was danger of their yielding to the clamor. In such a state of public feeling it is not surprising that there was a class of students within the college walls who were led to look with great dissatisfaction upon the attempts which were making to exact from them day by day more and more of the laborious study which we have described. A feeling of antagonism also to the faculty began to gain currency among them. This feeling went so far that on two occasions there was a combination among the students to resist the government of the college. The first was in 1828, known as the "Bread and Butter Rebellion," the immediate cause of which was a complaint of the food furnished in the college commons; and the second, in 1830, known as the "Conic Sections Rebellion," which was a refusal by a part of the Sophomore class to recite in the manner prescribed by college rules. It was owing to the firmness of President Day, and his colleagues in the faculty, in this crisis, that the question was decided that the authorities of the college were not to be overawed by any combination of students, however large, and that the traditions of the institution were to be maintained, that the college was a seat of learning where the highest practical attainment in all liberal studies was to be sought. President Day gave expression to the views which were held by all his colleagues with regard to the character of the education to be given in the college in a report which he made to the corporation on the subject. He stated that the object of the system of instruction in the college is "to lay the foundation of a superior education. It is not to give a partial education, consisting of a few branches only, nor, on the other hand, to give a superficial education, containing a little of almost everything, nor to finish the details of either a professional or practical education; but to commence a thorough course, and to carry it as far as the time of the student's residence will allow."

The enthusiasm which was manifested by the students in the theological department of the college, during all this period, deserves special mention. Dr. Sturtevant, the President of Illinois College, who was one of their number, says: "A more fervent faith in the truth and certain triumph of the Gospel has seldom existed in modern times than in the young men under Dr. Taylor's instruction. Those who distrusted Dr. Taylor's teachings feared that he was undermining fundamental Chris-

tianity. The impression he made on his pupils was exactly the reverse of this. The enlightened and thoughtful that were feeling the influence of his teaching found themselves happily relieved from many philosophical difficulties with which the Gospel had before seemed to them embarrassed and impeded. They were raised to a fervent and undoubting faith—which they had not before experienced—in its truth, its capability of being successfully defended, and its power to overcome and save our country and the world." This was at a time when the interest of Christian people in the Eastern States was especially awakened to the importance of missionary operations in the new States of the West. Nowhere was greater zeal felt for this object than among the theological students of the college. In 1828 an association was formed among them, consisting of fourteen members, who proposed to establish themselves near one another in the State of Illinois, that they might have the benefit in their new homes of mutual co-operation and assistance in laying the foundations of civilization. One of the results accomplished by this "Illinois Association," as it was called, was the foundation of Illinois College. In addition they founded churches; they advocated popular education; they exerted no small influence in bringing into being the public-school system of the State. The results of their labors at the West can hardly be too highly estimated. But the influence of this "Illinois Association" was long felt, also, among the students of the Theological School. During the whole life of Dr. Taylor a large proportion of every class, moved by the example of these pioneers in home missions, continued to follow in the path which they had marked out. These students, with the other alumni of the college who had established themselves throughout the States of the Northwest, make a constituency whose enthusiastic and grateful loyalty to their Alma Mater has helped to make Yale a truly national institution of learning.

In 1831 it was found that the financial condition of the college was truly alarming. As has been shown, the institution with all its departments, had been making gratifying progress. But its permanent productive funds were less than \$20,000, and now, for some years, the college, owing in great measure to its very prosperity, had been running in debt. It was felt to be important that an effort should be made to raise at once the sum of \$100,000, the interest of which might be applied to the general expenses of the institution; and in course of two or three years this sum was obtained.

Now commenced a new era in the history of the college. In 1831, Mr. Theodore D. Woolsey, of the class of 1820, who had been spending three years in Europe—from 1827 to 1830—engaged in various studies, was appointed Professor of the Greek language. Under his teaching a fresh interest was awakened among the students in classical literature. In the same year an arrangement was made by the corporation with Colonel John Trumbull for the purchase of his series of historical paintings, illustrative of the American Revolution; and a suitable building, called the Trumbull Gal-

lery, was erected, where they were deposited, together with the other art collections of the college. In 1836 a building was erected for the accommodation of the theological students. In 1843 Mr. Edward E. Salisbury, an eminent Oriental scholar, was appointed to the chair of Arabic and Sanscrit. In 1844 a building was erected for the library. In the same year, Professor Thomas A. Thacher, who had been appointed assistant-professor of Latin in 1842, returned from Germany, where he had been pursuing his studies for two years, and introduced some marked changes in the method of conducting the recitations in his department.

The whole period of fifteen years, from 1831 to 1846—the year in which Dr. Day resigned the presidency—was a brilliant period in the history of the college. Never before had the students as a body manifested such an interest in study, such *esprit de corps*, such pride in the ability and reputation of their instructors, such affection for their Alma Mater. It was a period marked also by a great degree of literary activity among the students themselves. Magazines of various names were published by them; the best known of which, the *Yale Literary Magazine*, was commenced in 1836, and edited by a committee of the Senior class. It still survives having completed its fifty-first year. The three great debating societies were maintained with great enthusiasm. Various elective societies were formed; prominent among which were the associations known as "Skull and Bones," and "Scroll and Key." Boating began, also, to attract attention, and the first boat club was formed in 1843.

Dr. Day resigned in 1846, after having been president for a longer period than any of his predecessors. He had conferred degrees on thirty successive classes. Professor Kingsley says: "Yale College is thought to have been particularly fortunate in its presidents, and it may be said with truth that it has at no time flourished more than under the administration of President Day."

THEODORE D. WOOLSEY.

On the resignation of Dr. Day, the corporation proceeded at once to make choice of Professor Theodore D. Woolsey to be his successor; but it was only with difficulty that he was persuaded to accept the office that was tendered to him. He yielded, however, at last to the solicitations of the friends of the college, and was inaugurated October 21, 1846.

The feeling was very general that President Woolsey was eminently fitted for the position which he was now called upon to fill. After his graduation in 1820 he had first pursued in Philadelphia a course of study in legal science. He had then studied theology for a time at Princeton. The years 1825 and 1826 he had spent in the service of his Alma Mater as a tutor; and had then passed three years in Europe for the purpose of prosecuting his studies still further in various directions. In 1831 he had been appointed to the chair of the Greek Language and Literature, in which he had won distinction as a ripe and finished scholar, and done

good service, not only to the college, but to the cause of classical education throughout the country, by the publication of carefully prepared editions of the works of some of the best writers of the Greek language which had not before been generally accessible.

The anticipations of what would be accomplished by President Woolsey in behalf of the college were fully realized. Its affairs were administered by him for twenty-five years—from 1846 to 1871—with distinguished ability. The period was one of uniform prosperity, and marked by the steady growth of the institution in all its departments.

On entering upon the duties of his position, he assumed at once, in accordance with the custom followed by his predecessors, a prominent part in the instruction of the Senior class. He introduced some important changes in the studies of that year, and made it one of the most laborious and one of the most profitable of the whole college course. The Seniors were carried, under his special direction, through a severe course of study in history, philosophy, and political science; but one of the special advantages which they obtained from being under his immediate instruction was a higher conception of the nature of true scholarship. In fact, one of the things which particularly distinguished his administration, was the advantage to the whole college community of his example as a laborious and conscientious scholar. At the time of his resignation in 1871, a writer in the *Nation* said: "The atmosphere of his presence was a place where superficial acquisitions, conceit of knowledge, and the mere ability to use the tongue glibly when there is nothing valuable to communicate, could not flourish."

One of the methods which he adopted for the purpose of raising the standard of scholarship in the college, which proved very effective, was the introduction, at the end of the Sophomore and of the Senior year, of examinations on the studies of the two preceding years, which were known as the Sophomore and Senior "Biennials." These were in addition to the usual examinations at the close of the college terms, were conducted with great strictness, and became a very marked feature in the college life. He also commenced a system according to which "scholarships" were to be conferred upon those persons in each Freshman class who showed special ability. The emoluments of these scholarships were to be held during the four years of the undergraduate course. Four of these scholarships he founded himself by the gift of a sum of money.

Besides the older officers of the faculty, who still remained for some years at their posts, a number of new professors were appointed from time to time during the administration of President Woolsey, to assist in giving completeness to the work of instruction; and efforts were made to bring the whole body of students under the influences which proceed from a broader culture than any to which they had been subjected before.

The whole period of the administration of President Woolsey was distinguished not only by the

great prosperity of the academical department of the college, but especially by the addition of new departments of instruction, and the expansion of those already established. For some years before he became president he had himself, with others of the faculty, been in the habit of encouraging graduate students to remain in New Haven for the purpose of prosecuting their studies further than they had as yet been able to do as undergraduates. There had been besides, from time to time, students who had entered the laboratory of the elder Professor Silliman, for the purpose of studying chemistry under his direction. In 1842 Professor Silliman, Jr., opened a private school in the laboratory of his father for the instruction of students of this latter class. One of the students of this school, Mr. John P. Norton, had afterwards gone to Europe for the purpose of continuing his chemical studies in Edinburgh and other cities. In 1846 he had returned to this country, and it seemed desirable to secure his services as a teacher of those students who desired special instruction in the applications of chemistry to agriculture. Professor Silliman accordingly proposed to the corporation that a new department of the college should be established for the purpose of giving instruction in the physical sciences; and that Mr. Silliman, Jr., and Mr. John P. Norton should be assigned to it as professors. The plan of the proposed department was, however, so extended by the corporation as to embrace instruction for graduate students in all descriptions of knowledge not already taught in the existing professional schools, and in 1847 "the Department of Philosophy and the Arts" was organized in two sections, one a "School of Applied Chemistry," and the other a school for advanced instruction in philosophy, philology, and mathematics. The "School of Applied Chemistry" was from the first very successful; although in 1849 Professor Silliman, Jr., received an appointment as professor in the Medical College of Louisville, Kentucky; and in 1852 a great loss was sustained by the death of Professor John P. Norton. The school was, however, reorganized under Professors W. A. Norton and John A. Porter. Several new professors were appointed, and in 1854 it received the name of "The Yale Scientific School." In 1860 Mr. Joseph E. Sheffield, who had already assisted it by liberal gifts, provided it with a building and a permanent fund. In recognition of his bounty the corporation at this time gave his name to the school, and it was again reorganized on a more liberal scale. A greater degree of uniformity was now given to the pursuits of the students by arrangements which assigned three years of regular and systematic study to every candidate for a degree; the whole body of students being required to unite in the same studies during the first year of their connection with it. So it came about that this school, which owed its origin to an effort that was put forth in the first place to provide instruction for graduate students, now included not only instruction for them, but also an undergraduate department, which was co-ordinate with the academical department. Mr. Sheffield meanwhile continued his liberal gifts to the

school from time to time, providing still another building, furnishing apparatus and books, and assisting in defraying even current expenses, till his gifts have now exceeded \$350,000.

The expansion of the Theological Department has been scarcely less remarkable. A crisis occurred in its history between 1858 and 1861. In this period all the original professors of the school were removed by death; but as the result of efforts which were made the school was reorganized, a new corps of professors was secured, new buildings were erected at the cost of nearly \$300,000, and the number of students was increased to over a hundred.

The Law Department was also reorganized. The system of law training was enlarged and broadened to a greater degree than ever before. Dr. Woolsey said in 1874: "It is believed that nowhere in the United States are the subsidiary branches of knowledge, of which the special pleader or the drawer of legal formulas can afford to be ignorant, but which, when known, broaden and elevate legal study, bringing it out of the dull routine and dryness of common practice as well as supplying food for thought—I say that nowhere in the United States are these hand-maids to a finished legal education brought more effectually into the service of legal studies, and made more useful than in the Yale Law School, in the latest stage of its development."

The Medical Department, also, as the other professors were removed by death, was supplied with a new corps of instructors.

In 1866 still another department was added to the college, which received the name of the "Yale School of the Fine Arts." At this time Mr. Augustus R. Street, of New Haven, presented to the corporation, for the use of the school, a large and commodious building on the College Green, which he had erected at an expense of about \$200,000. The facilities which this department offers to special art students, with its professors and its art collections, are unsurpassed for system and variety by any art school in the country.

During the same year, Mr. George Peabody, of London, gave \$150,000 for founding "in connection with Yale College" a Museum of Natural History, especially of the departments of Zoölogy, Geology, and Mineralogy, which added still another institution to the group of institutions which had now clustered around the original college.

In 1870 the Hon. O. F. Winchester purchased a tract of land for astronomical purposes, and commenced a foundation for the Winchester Observatory.

During the administration of President Woolsey several important buildings were also erected for the academical department, which were so arranged around the College Green as to form the commencement of a large quadrangle, which it is expected will in time embrace the whole college square. In 1853 Alumni Hall was built. In 1870 a dormitory was erected at an expense of \$125,000, which was called Farnam Hall, in honor of the Hon. Henry Farnam, a generous contributor to

the fund for its erection, and in other ways a liberal benefactor of the college. In 1871 another dormitory was built, at an expense of \$130,000, by Mr. Bradford M. C. Durfee, and named by the corporation Durfee College. In 1869 a large gymnasium was built on Library street, at a cost of about \$13,000.

With the increase of the number of the departments connected with college, and the number of students, there was a corresponding increase in the number of subjects of general interest to the whole academic body; but the number of these subjects is so large that it is impossible within these limits even to mention them. It may be stated, however, that it was during the period of the administration of President Woolsey that the first intercollegiate boat-race occurred. It was between crews composed of the students of Harvard and Yale, and was rowed on Lake Winnipiseogee. It resulted in the victory of the Harvard crew; but in subsequent years the rewards of victory were not very unequally divided between the two colleges. From the time of the first race, however, is to be dated a great increase in the attention given by the students not only to boating, but also to ball-playing, and to all athletic games.

In 1861 commenced the great Civil War, which for four years absorbed the thoughts of the whole nation. Among no class of persons was greater sympathy felt in the efforts which were put forth to maintain the national existence than among the alumni of the college. The names of seven hundred and fifty-eight of them, graduates and undergraduates, were enrolled in the armies of the Union, of whom one hundred and six laid down their lives in the service of their country.

President Woolsey resigned the office which he had held for twenty-five years, in 1871. His last service to the college as president was to secure a change in its charter. This charter had been so amended in 1818, by an act of the Legislature, that the places of the "six senior assistants," who, according to the act of 1792, were to become *ex officio* members of the corporation, were now filled by "six senior senators." But for many years these "six senior senators" had rarely attended the meetings of the corporation, and had shown little interest in their proceedings. Accordingly, in 1866, President Woolsey proposed, in an article published in the *New Englander*, another change; according to which the Legislature should relinquish its right to be thus represented in the corporation, in favor of six graduates who should be elected by their fellow-graduates. This proposition of President Woolsey was taken up in 1871 by Governor Marshall Jewell, and the change recommended to the consideration of the Legislature. It at once received their sanction, and was accepted by the corporation of the college. The arrangement for the terms of office of these six members was so made that there is every year an election of one graduate who is to serve for six years.

These representative graduates at the present time (1886) are Hon. William M. Evarts, Chief Justice

Noah Porter.

Morrison R. Waite, Hon. Frederick J. Kingsbury, Hon. William Walter Phelps, Mr. William W. Farnam and Mr. Thomas G. Bennett.

NOAH PORTER,

who succeeded Dr. Woolsey, in the presidency, was graduated in the class of 1831. He had all his life been intimately acquainted with the history of the college, and was in full sympathy with its traditions. At the time that he was elected president he had filled the chair of Metaphysics and Moral Philosophy for twenty-five years. He had during the whole period of his life been known as a voluminous writer, especially on philosophical and literary subjects. He was the author of several volumes, prominent among which was a treatise on the "Human Intellect." He was also the principal editor of Webster's Unabridged Dictionary, which was published in 1864. His election was a guaranty that the college was still to maintain its conservative attitude in respect to all the educational questions which were attracting attention; that it was still to maintain its character as a bulwark of the Christian religion and of all sound learning. He was inaugurated October 11, 1871.

The College enjoyed unprecedented prosperity during the presidency of Dr. Porter. Large additions were made to the corps of instructors, who at the time of his resignation numbered considerably over one hundred. Additional buildings were erected, at a cost of over half a million of dollars—the Battell Chapel, West Divinity Hall, Peabody Museum, North Sheffield Hall, the Observatory, the Sloan Laboratory, Marquand Chapel, Lawrance Hall, and Dwight Hall.

The number of students in attendance in 1885-86 was as follows: Department of theology, 110; department of medicine, 28; department of law, 62; department of philosophy and the arts (graduate instruction, 42; undergraduate academical department, 563; Sheffield Scientific School, 251; School of the Fine Arts, 48), 904; deduct for names inserted twice, 28. Total, 1,076.

Over 13,500 degrees have been conferred by the corporation since the foundation of the college, of which about 1,000 have been *pro honoris causa*. There have been, besides, several thousand students in the academical department who received no degree. The students of the law department before 1843, and of the theological department before 1867, are not included in the catalogue of the Alumni, as till those years degrees were not conferred in law or theology.

According to the report of the Treasurer in 1884, the invested funds were \$1,833,983.47. The annual income from tuition was \$138,815.43. The number of volumes in the several libraries which are open to the students is about 150,000.

It is not proposed to give a particular account of the events which took place during the presidency of Dr. Porter. Mention should be made, however, of the action of the Corporation in the first year of his administration, when recognizing that the College already comprised all the

courses of instruction which are usually found in an institution of the highest rank, they formally organized the University, with the departments of theology, medicine, law, and philosophy and the arts; which last was made to consist of four sections, viz.: (1) for graduates; (2) for academical undergraduates; (3) for undergraduates of the Sheffield Scientific School; (4) for students of the fine arts; each section having a separate organization. In the section for graduates, or those who have already taken a bachelor's degree, there are forty instructors, and the course of instruction occupies two years. In the section for academical undergraduates, there are thirty-two instructors, and the instruction occupies four years. In the Sheffield Scientific School there are three instructors and the course occupies three years. The Street School of the Fine Arts, which is open both to young women and young men, has seven instructors. The course occupies three years. The Faculty of Theology consists of seven instructors, and there are besides eight special lecturers. The course of instruction occupies three years; an additional course for two years is also arranged for graduates. The Faculty of Medicine consists of eight professors and nine special lecturers. The course is arranged for three years. The Faculty of Law consists of six professors and ten special lecturers. The course occupies two years, with a graduate course of two additional years for those who have taken the degree of Bachelor of Arts. The department of astronomy was enlarged in its organization in 1871, when, to the former facilities for instruction in the science, were added ample means of original investigation and research. At present there is a corps of eight astronomers connected with the observatory.

So at last the ancient institution of learning, which, as we have shown, owes its origin to the efforts of the first minister of New Haven, John Davenport, and of his successor in the First Church, James Pierpont, and which was constituted a "collegiate school" by the Legislature of Connecticut in 1701, has become in reality a University. The dream of the exiled Puritan minister of St. Stephen's, Colman Street (London), of planting a "Christian state" in the New World, which should be adorned with all the institutions demanded by the highest civilization—the dream which two hundred and forty years before had roused his enthusiasm in Amsterdam—is fully realized. John Davenport was only the pioneer who prepared the way for those who came after him; but as long as the College stands it will stand as the monument of his far-reaching views and of his heroic courage.

In May, 1886, while these pages were passing through the press, Dr. Porter resigned his office, and the Corporation at once elected as his successor Professor Timothy Dwight, a grandson of the Dr. Timothy Dwight who was President of the College from 1795 to 1817, and whose services in its behalf were conspicuous. It is expected that the inauguration will take place during the coming

Commencement week (1886). Professor Timothy Dwight graduated in the class of 1849, and, after having been a tutor for two years in the academical department, was elected in 1858 Buckingham Professor of Sacred Literature in the Theological Department. The devotion which he has always shown to the interests of the college, his high attainments as a scholar, his reputation as a teacher, and the marked success which has attended his efforts for the advancement of the interests of the Theological Seminary, awaken high hopes for the results of his administration.

BIOGRAPHIES.

PROFESSOR WILLIAM A. NORTON.

No institution connected with Yale College has won a more general and cordial appreciation from the surrounding community than the Sheffield Scientific School, and it is safe to say that the verdict of popular approval must be ascribed no more to the character of the department as a practical training school, than to the fidelity, eminent worth, and liberal, far-seeing views of the men who have graced its chairs of instruction. One of these honored mentors, whose mature years were all devoted to the service of the Sheffield School, and whose memory is fresh in the hearts of a generation of its graduates, was William Augustus Norton.

He was born in East Bloomfield, N. Y., on the 25th of October, 1810. When about seventeen years of age he entered the U. S. Military Academy at West Point, from whence he graduated with high honors.

In 1831 he was commissioned Second Lieutenant of the Fourth Artillery, and was assigned to duty as Acting Assistant-Professor of Natural Philosophy in the Military Academy. This position he occupied for two years, with the exception of a few months, when he served with his regiment in the "Black Hawk War." Resigning his commission in 1833, he abandoned forever the military life, and devoted himself to the study of natural science and to a scholastic career. He was immediately appointed Professor of Natural Philosophy and Astronomy in the University of the City of New York, and remained at that post for five years.

In November, 1839, he was chosen to the chair of Mathematics and Natural Philosophy at Delaware College in Newark, Del. Here he taught for ten years, serving in the last year (1849) as the President of the College. Thence he was called to Brown University, and for three years he conducted in that institution the Departments of Natural Philosophy and Civil Engineering. In 1852 he was elected Professor of Civil Engineering in Yale College, and in the autumn of that year he began the connection which terminated only with his life. A class of twenty-six students followed him from Brown University to Yale. Yale drew heavily upon Brown in 1852, receiving thence Professor Norton and his pupils, and also his lamented colleague, the late Professor John A. Porter, who had

also been at one time connected with the faculty of Delaware College.

Professor Norton was both a student and a teacher. He pursued closely various lines of investigation, and made numerous and important contributions to scientific literature. His earliest elaborate book was a "Treatise on Astronomy, Spherical and Physical," published in 1839. In 1858 appeared another one of his more elaborate works, a "First Book of Natural Philosophy and Astronomy." Among the more noteworthy of his many scientific memoirs, which were published in magazines and in reports of associations, is a series of essays which appeared in the *American Journal of Science* between 1852 and 1876. The first article developed at length a theory of the action of solar repulsion in producing the tails of comets. From this subject he advanced to the consideration of the phenomena of magnetism, discussing not only terrestrial magnetism, but also, as he argued, a similar force in the body of the sun and in the structure of comets.

Subsequently the investigation broadened out to include the whole subject of molecular physics. Many of his views differed from theories of wide acceptance, but whatever the final verdict of science may be concerning their truth, his most daring conceptions were based upon patient, sincere, and laborious investigation, and were formulated with painstaking care and logical completeness. Clearness and conciseness characterized all of Professor Norton's work, whether on the printed page or in the class-room. His experiments upon the set and transverse strength and deflection of bars of wood, iron, and steel, were of great permanent value to the science of engineering. The tests which he applied were most searching, and the results obtained have been incorporated in the standard text-books upon the subject. In 1853 he made a searching and discriminating study of Ericsson's caloric engine, an invention concerning which, at that time, the most extravagant expectations were entertained. So true was Professor Norton's analysis, that his conclusions are quoted to-day as among the best expositions of the actual nature and probable future of the hot-air engine.

In 1859 Professor Norton was appointed to represent this State on a Commission to determine the long-vexed question of the boundary line between Connecticut and New York. The labors of his later years were mainly devoted to the preparation of a work which was intended to embody in systematic form, his views and conclusions about molecular agencies. He was enthusiastic in his task and earnestly desired that he might live to see its completion. It is the cause of profound regret to his friends and co-laborers that his hope was not realized.

Professor Norton married, in 1839, Miss Elizabeth Emery Stevens, of Exeter, N. H., and his home was a nook of peace and pleasure to the many pupils who found him there. With a disposition peculiarly cheerful and sympathetic, a manner in which frankness, courtesy and dignity were blended, and a spirit guided by simple faith

W A Norton

towards lofty aims, Professor Norton, whether by his own fireside or in the instructor's chair, was to each and every one of his scholars a patient, gentle teacher, a guide inspiring to thorough research, and a cordial, judicious friend. Better than all his precepts in science was his example of manly character shaped by worthy ideals. No higher praise can be given him than this tribute from one of his pupils: "No student, however trying or dull, ever heard from him an impatient or sarcastic word." At the services of his funeral, held in the College Chapel, September 24, 1883, President Porter delivered an address, in the course of which he said: "In all his investigations Mr. Norton was animated by the faith and strong in the assurance that scientific conclusions more than admit, that they demand the assumption that man the thinker and God the creator are spiritual forces, superior to the material creation which they interpret and explain. His Christian faith was, like himself, firm, unostentatious, peaceful, charitable, and sweet. It was known and read of all men through his upright and loving life; crowned and finished by a peaceful death; and consummated, as we all believe, by the open vision which is vouchsafed to the consistent and faithful believer."

PROFESSOR JOHN A. PORTER

was born at Catskill, N. Y., March 15, 1822. His father, Addison Porter, was the eldest son of Rev. Dr. David Porter, a well-known and widely-respected clergyman, for twenty-eight years pastor of the Presbyterian Church at Catskill. His mother, Ann Porter, was the daughter of John C. Hogeboom, a prominent citizen of Columbia County, N. Y. The early education of the lad was obtained at Catskill, New York City, and Kinderhook. In the academy at the latter place he was noted for excellence in mathematics, and for the promise of rare oratorical powers.

In 1836 the family removed to Philadelphia, and in that city Mr. Porter prepared himself, under private tuition, to enter Yale College with the Class of 1842. Throughout his college course he sought not so much the attainment of scholastic honors as the acquisition of a broad culture and positive knowledge of philosophical truth. With partial accomplishment he was never contented; in thought, as in act, he was conscientious and sincere. With literature he gained a wide acquaintance, and developed within himself a fine poetic faculty, which, like his gift of elocution, remained throughout his life a source of relaxation to himself and of pleasure to his friends.

His class-mates, who knew and admired his commanding qualities, chose him to deliver the valedictory poem upon the "Class Day" of 1842. Mr. Porter had hoped to enter the Christian ministry, and during his senior year he read extensively in metaphysics; but after two years he felt constrained to abandon his cherished purpose, with many regrets on his own part and on the part of his friends. In 1844 he joined the faculty of Delaware College, at Newark, Del., first in the capa-

city of tutor of mathematics, afterwards as professor of Rhetoric.

In the autumn of 1847, after the death of his father, Professor Porter decided to relinquish the study of literature, and to devote himself to the science of chemistry. The labors and influence of Baron Liebig were then investing that science with unusual interest to the student, and in his laboratory at Giessen, Professor Porter spent the latter half of his two years study in Germany. Returning home in January, 1850, he was immediately employed in the Lawrence Scientific School at Harvard, and in the ensuing autumn Brown University elected him Professor of Chemistry as Applied to the Arts. From this position he was called in 1852 to fill the Professorship of Agricultural Chemistry in his own Alma Mater. His unremitting industry soon bore tangible fruit. In 1856 he published his "Principles of Chemistry," a lucid and admirable statement of those fundamental laws which are often deemed so difficult of exposition.

In July, 1855, Professor Porter married a daughter of Joseph Earle Sheffield, of New Haven. His intimate relations with Mr. Sheffield, and his successful zeal in the conduct of the analytical laboratory, for which he was directly responsible, both contributed materially to the establishment and rapid advancement of the Sheffield Scientific School. In the organization of that school, under a responsible Faculty in the determination of a general course of study, Professor Porter was actively and efficiently engaged. In the future of Yale's scientific department, Professor Porter never lost faith, and he was untiring in the arduous work of its successful inception. To his energy and directive skill was due the course of lectures upon agriculture and cognate subjects which was delivered in the winter of 1860. These lectures attracted people from various parts of the country, and to this convention much of the late interest in scientific agriculture throughout the land must be attributed.

Professor Porter joined the Republican party at an early day, and labored earnestly for the election of President Lincoln. Into the struggle to save the Union for freedom, he threw himself with all the ardor of his nature. Nothing but his ill-health prevented his personal participation in the perils of the battle-field. His discriminating perceptions of right and wrong made him keenly alive to the fundamental issues of the war, and with voice and pen he strove to educate and elevate the patriotic sentiment of the community around him. He established, and, while health permitted, edited a monthly publication, called *The Connecticut War Record*, which was intended to preserve the story of sacrifices and achievements by the volunteers from this State. Professor Porter's connection with the Scientific School, so honorable to himself, so fortunate for that institution, was severed in 1864, on account of failing health.

A trip to Europe in quest of surgical counsel and aid afforded only a temporary relief. With quiet courage and Christian resignation, he prepared to face death. Although subjected frequently to the severest suffering, his mind was triumph-

ant over bodily weakness. He delighted especially in literary labor, and rendered into English verse, selected portions of the "*Kalevala*," the national epic of Finland. His version of this poem was afterwards published. He also made translations of Swedish poetry, and wrote verses of his own—often humorous, always sympathetic and cheerful.

But the progress of his disease was very rapid. On the 25th of August, 1866, the summons for which he waited came, and peacefully he fell asleep.

Professor Porter was richly endowed in mind and body. His presence was commanding, his face attractive, his head remarkably large and well-

molded. His fluent utterance, graceful delivery, courteous manners, and warm heart, made him popular and beloved, not only in the class-room, but also in the larger public assemblies of his fellow-men. To scientific pursuits, he brought subtle analytical powers, strong perceptions, and close observation. To the foundation and management of the Scientific School he brought unflagging enthusiasm and boundless energy.

To all men his catholic sympathies went forth, and he preached powerfully the necessity of justice, the beauty of love. His life work is a part of the history of Yale College and of New Haven. His life itself is a fragrant memory to all who knew him.

CHAPTER IX.

LIBRARIES OF NEW HAVEN.

I.—THE COLLEGE LIBRARY AND ITS AUXILIARIES.

IN any account of the libraries of New Haven, the College Library, which is first in the order of time as well as of importance, naturally claims the first place. It is also, if we may trust the authority of President Clap, the senior department of the college, the first formal act of the founders having been a gift of books for the library. According to the familiar story, preserved in his "*Annals of Yale College*," the ten ministers who had been chosen by common consent to act as trustees, met at Branford, and bringing each a number of books and laying them on the table, said these words, or to this effect: "I give these books for the founding of a college in this colony." Doubt has been thrown upon some of the details of this transaction, but the essential facts of the gift, and its legal purpose, are generally conceded. This meeting, which is placed in the "*Annals*" in 1700, is thought by Professor F. B. Dexter, on other evidence, to have taken place in 1701, shortly before the October session of the General Court at which the charter of the college was granted, the first of the regular sessions held at New Haven after the union with the Connecticut colony.

The books thus given, estimated by President Clap at forty folio volumes, and some others subsequently added, remained at Branford in the keeping of Rev. Samuel Russell in whose house the trustees had met, three years. They were then carried to Killingworth (now Clinton), the home of Rector Pierson, where the few students under his care received instruction. On his death in 1707, they were removed to Saybrook, which had been fixed upon at the outset as the seat of the "*Collegiate School*," the name which the college then bore. Here, in 1714, was received the first considerable gift, a collection of books sent over by Jeremiah Dummer, the colony's agent in London. Of the seven hundred volumes, nearly one-half folios and quartos, ninety-two were his own gift and the rest obtained by his solicitation. The value of the gift was still further enhanced by the eminence of the donors, among whom were Sir Isaac

Newton, Sir Richard Steele, Sir Richard Blackmore, Dr. Halley, Dr. Bentley, Dr. Calamy, Matthew Henry, Sir Edmund Andros and Sir Francis Nicholson. Governor Yale added thirty or forty volumes, the forerunner of larger gifts to follow. Shortly afterward, two hundred volumes were received from Sir John Davie, of New London, who a few years before had fallen heir to an estate and a title in England. The original lists which accompanied these gifts are preserved among the papers of the college, and some of the books, Sir Isaac Newton's among the number, can still be identified.

The final settlement in 1717 of the vexed question of the location of the college in favor of New Haven, was not reached without opposition from other parts of the colony, and it was hardly to be expected that Saybrook would submit quietly to the removal. When in October, 1718, on the completion of the new college building in New Haven, the trustees demanded possession of the books, which up to this time had been left behind in Saybrook, they were met by a refusal. The aid of the sheriff was finally called in, but his writ was also disobeyed, and he was compelled to force an entrance into the house where the library was kept. The opposition did not stop here. The carts which had been impressed to transport the books, were broken by night, the oxen driven off, and some of the bridges broken down. "In this Tumult and Confusion," says President Clap, "about 250 of the most valuable Books and sundry Papers of Importance were conveyed away by unknown Hands, and never could be found again." The remaining books, about one thousand volumes, reached New Haven in December, 1718, and were here reinforced by seventy-six volumes from Mr. Dummer, and three hundred from Governor Yale, which had arrived some months before. With this date, 1718, properly begins the history of the library as a New Haven institution, and with it the history of New Haven libraries.

More important than any gift that preceded or that followed for many years, was that received in 1733 from Dean Berkeley. This choice collection, pronounced by President Clap, "the finest

that ever came together at one time into America," and judged by him to have cost at least £400 sterling, comprised about nine hundred volumes, of which two hundred and sixty were folios. A list of the books was printed from the original manuscript in 1865, in the Papers of the New Haven Colony Historical Society, Vol. I. During the remainder of the eighteenth century, the library made on the whole no great advance, though down to the time of the Revolution there was a gradual increase. In the first printed catalogue of the library, published by President Clap in 1743, the number of volumes is placed at twenty-six hundred, and in the edition of 1755 at three thousand. In his "Annals" (1766), he says: "We have a good Library, consisting of about 4,000 Volumes, well furnished with ancient Authors, such as the Fathers, Historians and Classics, many modern valuable Books of Divinity, History, Philosophy, and Mathematicks, but not many Authors who have wrote within these 30 Years." During the War of the Revolution, the library was removed for greater security to the interior of the State, a precaution which was itself not free from danger, as is shown by the catalogue of 1791, in which only twenty-seven hundred volumes appear.

The first contribution toward a permanent fund for the increase of the library, was a bequest of £10 from Rev. Jared Eliot, of Killingworth, in 1763. A like amount was received from Rev. Thomas Ruggles, of Guilford, in 1777, and \$1,122 from Rev. Samuel Lockwood, D.D., of Andover, Conn., in 1791. Hon. Oliver Wolcott gave \$2,000 in 1807; Eli Whitney in 1822 and Daniel Wadsworth, in 1824, \$500 each; Rev. John Elliott, of Guilford, a gradually increasing fund which now amounts to \$1,500; John T. Norton, of Albany, N. Y., \$5,000, in 1832. In 1836 the library received, by bequest of Dr. Alfred E. Perkins, of Norwich, Conn., \$10,000, the largest gift which up to that time had been made to the college, and still the largest contribution to the library fund. A legacy of \$5,000 was received from Addin Lewis, of New Haven, in 1849, and a gift of \$500 from Professor James L. Kingsley, in 1850. Mrs. William A. Larned gave, in 1861, \$1,100 for a music fund, and on her death, in 1877, left a bequest of \$5,000 for the department of English language and literature. Dr. Jared Linsly, of New York, gave, in 1867-76, \$5,000 for the department of modern European languages, and in connection with this gift a bequest of \$3,000, made to the college by Noah Linsly, of Wheeling, Va., in 1814, was by vote of the Corporation permanently assigned to the library. A gift of \$1,000 was received from Hon. Alphonso Taft, of Cincinnati, in 1869, and the like sum from an anonymous donor in 1870. Charles H. Board, of Edenville, N. Y., who died in 1871, shortly after graduation, left to the library \$2,500 for the department of political and social science. In the same year, Henry W. Scott, of Southbury, Conn., left an accumulating fund, which must reach \$5,000 (it is now \$3,600) before the income can be used. The Class of 1872 gave at graduation and subsequently, \$2,100, and Thomas Hooker,

of New Haven, \$1,000 in 1875. The latest addition to the fund are bequests of \$3,000 from Clarence Campbell, of Bath, N. Y., and \$2,500 from Joshua Coit, of New Haven, both received in 1885. These various gifts, amounting together to about \$57,000, constitute the whole of the permanent fund. Since 1874, Hon. William Walter Phelps has assigned to the library the income of a fund of \$50,000 left in trust for the college by his father, the late John J. Phelps, of New York.

Of gifts, other than contributions to the library fund, during the same period, the following are the more noteworthy.

In 1834 the publications of the Record Commission, in seventy-four folio volumes, were received from the government of Great Britain; and in 1847 a copy of the "Description de l'Egypte" in twenty-three folio volumes, from Dr. William Hillhouse, of New Haven. President Woolsey gave, in 1861, his Greek library of nearly one thousand volumes, and his later gifts have been both frequent and valuable.

The largest benefactor of the library has been Professor Edward E. Salisbury, who, in 1870, in addition to his already precious collection of Oriental books and manuscripts, gave \$6,000 for increasing it, and has since contributed \$2,000 for the same object. The collection, which numbers about four thousand volumes, is especially rich in Arabic and Sanskrit literature, and contains also many large and costly illustrated works and complete sets of the leading Oriental journals.

For special purchases of books the library received in 1871 from Charles Astor Bristed, \$500; in 1873 from Hon. George Peabody Wetmore, of Newport, \$700; from Frederick W. Stevens, of New York, and Professor O. C. Marsh, \$500 each; from Hon. Henry Farnam at various times, \$2,500; from the Class of 1832, at its fiftieth anniversary, \$400.

Hon. James E. English purchased and presented to the library, in 1875, a bound set of the Parliamentary Papers of Great Britain, from 1865 to 1873. They are in seven hundred and forty-two volumes.

The late George Brinley, of Hartford, directed that at the sale of his collection of books relating to America, the most valuable ever disposed of by auction in this country, the library should receive, against purchases which it might make, a credit of \$10,000. By this generous provision the library has been able to secure many useful books, and some rare ones, which but for this opportunity it could never have hoped to possess. A similar credit of \$5,000 at the sale of the library of the late Joseph J. Cooke, of Providence, R. I., in 1883, brought also a very important accession of books.

Yung Wing, late Chinese Minister to the United States, gave in 1878 a valuable collection of Chinese books, in seventeen hundred volumes, to which in 1884, Frederick W. Williams added a thousand volumes from the library of his father, the late Professor S. Wells Williams. To Professor Henry W. Farnam, the library was, in 1882, mainly

indebted for the means of securing a rare collection of Philadelphia newspapers during the Revolutionary War, in twenty-six volumes; further for several important series of economical and statistical publications, amounting together to not less than four hundred volumes, for the continuation of which he still provides. Two important bequests of books were received in 1884: sixteen hundred volumes from the library of Rev. James T. Dickinson, of Middlefield, Conn., and Professor Lewis R. Packard's Greek library of six hundred volumes. Professor James D. Dana's gifts in recent years have been unusually large and valuable, amounting in the aggregate to fully one thousand volumes. To Rev. Edgar L. Heermance, of White Plains, N. Y., to Henry Holt, of New York, to the late Richard S. Fellowes, to John Davenport Wheeler, and to Professor George J. Brush, the library is also indebted for gifts of especial value.

William L. Andrews, of New York, established in 1882, as a memorial of his son, Loring W. Andrews, who met his death by accident when just about to graduate, a loan library of text-books, to which he has thus far given \$1,850.

Acknowledgment should also be made of the important contributions which the library receives from the Connecticut Academy of Arts and Sciences. Since the Academy resumed, in 1866, the separate publication of papers read before it, it has entered into exchange of publications with three hundred publishing societies, more than two-thirds of them foreign. The exchanges received, which are of great value, and amount on the average to two hundred and fifty volumes a year, are deposited by vote of the Academy in the College library.

Thanks to an increased, though still quite insufficient, income, and to more frequent gifts, the recent progress of the library is in striking contrast with the former slow rate of growth. The statistics of the last century we have already given. In 1808 the whole extent of the library was four thousand seven hundred volumes; in 1823, six thousand five hundred; in 1830, ten thousand. The expenditure for books, in 1845, of \$8,000 of accumulated income, the approaching completion of the new library building, and the fact that the librarianship, hitherto attached to some other more engrossing college duty, then became an independent office, make that an important era in the history of the library. In 1850 the number of volumes had risen to twenty-one thousand; in 1860 to thirty-five thousand; in 1870 to fifty-five thousand; in 1880 to ninety-eight thousand. It is now about one hundred and thirty thousand, to which must be added many thousands of unbound pamphlets. For some years past the average annual increase has exceeded the entire growth of the first hundred years. What the number will be a hundred years hence it would be rash to predict.

For a qualitative analysis of the library we have here not the space, but in general it may be said that, while it is not complete, nor nearly complete, in any department, it is reasonably good in a few, and respectable in more. The directions in which it is strongest are the publications of learned

societies and scientific journals, of which it has many complete series, and an unusually large number of current issues; Oriental, classical and comparative philology; American history, both general and local; English and French dramatic literature; the too much neglected English literature of the eighteenth century; literary periodicals; newspapers, of which the library has more than two thousand bound volumes and many unbound files.

Important material for American history between 1755 and 1795 is contained in the manuscripts of President Stiles. They have been freely used by Mr. Bancroft the historian, and others, and it is now proposed to print, under the auspices of the New Haven Colony Historical Society, in a series of volumes, whatever they contain of permanent interest. Contemporary records, twenty-six hundred years earlier, are found on four slabs covered with Assyrian sculptures and inscriptions, obtained from Nimrud in 1855, through the kind offices of Rev. W. F. Williams, of Mosul, brother of the late Dr. S. Wells Williams.

Here also is deposited the numismatic collection of the college. It contains about eleven thousand pieces, and has been formed chiefly by gifts, among which those of Dr. Andrew T. Pratt, of Constantinople, in ancient coins, and of Henry Champion, of New Haven, in modern coins, have been especially large and valuable. A very full and careful catalogue of the Greek and Roman coins, thirty-three hundred in number, was published by the curator, Dr. Jonathan Edwards, in 1880.

The library, when first removed to New Haven, in 1718, was placed in the building erected in part by the bounty of Governor Yale, and named in his honor. It was transferred in 1763 to the Athenæum; in 1804 to the Lyceum; in 1825 to the old chapel (then the new chapel), occupying in each a room on the upper floor. The present building was commenced in 1843, and though not completed till 1846, one room was made ready, and the library removed to it in 1844. The cost of the building was about \$34,000, toward which Professor Salisbury gave \$6,000, President Woolsey, \$3,000, and other subscribers, in smaller sums, \$9,000. It is hardly a matter of surprise that a building erected forty years ago, when the rate of library growth everywhere was so different from that of to-day, should now be overcrowded, and that the most urgent need of the library at present should be more room.

Of the various special libraries grouped about the general one, the Linonian and Brothers' Library stands to it in the closest relation. It perpetuates the name and continues an important part of the work of the once famous public societies of the college. The Linonian library, younger by sixteen years than the society itself, was commenced in 1769. Timothy Dwight, Nathan Hale, and James Hillhouse, the first just graduating, and the others just entering college, made the first contribution of books. The example was soon followed by the Brothers in Unity, but for half a century the growth of both libraries was slow. About 1825 the advance became more rapid, but slackened again

after 1850, when the interest in the societies declined. The Linonian library contained in 1800, four hundred and seventy-five volumes; in 1811, seven hundred; in 1822, twelve hundred; in 1831, three thousand five hundred; in 1841, seven thousand five hundred; in 1846, ten thousand; in 1860, eleven thousand; in 1870, thirteen thousand. The Brothers' library ran an almost parallel course, the mutual rivalry suffering neither to get far in advance of the other. In 1870, by vote of the societies, their libraries were placed under the care of the college library, though still sustained by a tax included in the term bills of the undergraduate students. The following year, from considerations of convenience, no less than of economy, the libraries of the two societies were united. A few hundred volumes were transferred to the college library, and several thousand duplicates set aside for sale and exchange. The number of volumes was reduced thereby to seventeen thousand, but subsequent additions have raised it to twenty-eight thousand. Even before the closer union was formed, these libraries were not merely useful, but indispensable auxiliaries of the college library, which, enabled thereby to employ its slender resources in other directions, scarcely attempted to enter the field, that of general literature, which they occupied. They now form practically one department of the college library, under a common administration, though separately catalogued. So far as the character of their contents is concerned, the relation between the two is not unlike that between the reference and lending departments of some public libraries.

The Calliopean Society, mainly composed of southern students, was organized in 1819, and dissolved in 1854. Its library of six thousand volumes was sold to an association in Bridgeport. The three libraries, before they were removed to the present library building, occupied together the second floor of the Athenæum.

In 1867, a reading room, well furnished with newspapers and periodicals, was opened in South Middle College, four rooms having been thrown into one for this purpose. In 1877, the more suitable room left vacant by the removal of the cabinet to Peabody museum, was occupied. One hundred newspapers, of which forty-five are dailies, and sixty periodicals (in addition to a much larger number at the college library) are received.

The several departments of the University have each a separate library, confined in some cases to the most needful books of reference, in others surpassing in the special department the college library in fullness. In order of age they are:

1. The Medical Library.—The Medical School, organized in 1813, has never possessed a library fund and has received few important gifts of books. The most valuable was the bequest, in 1881, of the medical library of the late Professor David P. Smith, M. D., consisting of upwards of four hundred volumes, mostly recent works. A similar, but smaller, bequest was received in 1882 from Professor Lucian S. Wilcox, M. D. Worthy of mention also is a like gift from Dr. Lewis Hermann, of the

United States Navy, about 1830. A little more than twenty years ago, the library, which had hitherto been kept in the medical college, was transferred to the college library, and such medical books as the latter possesses are united with it. Together they amount to about three thousand volumes.

2. The Law Library.—The Yale Law School was the outgrowth of a private law school, which in 1843 was formally adopted by the college. It was dependent on the private libraries of its instructors until 1845, when, on the death of Judge Samuel J. Hitchcock, his library was purchased and enlarged at a total cost of \$5,000. One-half of the expense was borne by the college, and the rest met by contributions, chiefly from members of the New Haven Bar. The history of the library down to 1873 was one rather of decline than of growth, the additions being insufficient to make good the losses arising from the want of proper supervision. In 1873 a successful effort was made to place the library on a secure foundation. More than \$20,000, contributed mainly by friends of the school in New Haven and New York, was expended on books, and a library fund of \$10,000 was established by Hon. James E. English. The number of volumes in 1873 was eighteen hundred; it is now nearly nine thousand, and the annual rate of growth about two hundred. In 1873, the library, which had been hitherto kept in the old lecture-room, was removed with the Law School, to more commodious rooms in the New County Court House, where the services which it renders to the Courts and the Bar are regarded as a full return for the hospitality which it receives.

3. The Library of the Sheffield Scientific School.—In the enlargement of the Sheffield Scientific School building in 1866, Mr. Joseph E. Sheffield provided a room for the library and gave a fund of \$10,000, which he afterwards raised to \$12,000. At the same time, further sums, amounting to \$2,000, were contributed by friends of the school for immediate purchases of books. In 1869, Mr. Sheffield purchased, at a cost of \$4,000, the valuable mathematical library collected by Dr. William Hillhouse, and presented it to the school. Dr. Hillhouse also not only refused a larger offer from another quarter, but gave \$500 for the needed binding. From Professor Wolcott Gibbs, of Harvard University, also a valuable gift of books has been received. For some years past the fund has been unproductive and the growth of the library in consequence less rapid. The present number of volumes is about six thousand.

4. The Library of the Divinity School.—The Trowbridge Reference Library of the Divinity School was established mainly by the liberality of the late Henry Trowbridge, who, on the completion of East Divinity Hall in 1870, gave \$1,000 for the fitting up of the library room and \$3,000 to provide the most necessary books. This he afterwards supplemented by gifts of \$200 and \$300 from year to year for the purchasing of new theological works. In 1881, a new building was erected for the better accommodation of the library,

by the late Frederick Marquand, of Southport, at a cost of \$10,500. Mr. Trowbridge again assumed the expense of furnishing the room and at his death, in 1883, bequeathed \$5,000 for a library fund. Other gifts deserving of mention are a legacy of \$500 from Mrs. Clarissa B. Butterfield, of New Haven, in 1870; and from Rev. E. Goodrich Smith, of Washington, D. C., at his death, in 1873 and previously, more than one thousand volumes of theological books. The whole number of volumes is about three thousand.

The Lowell Mason Library of Church Music, presented to the Divinity School in 1873 by the family of the late Dr. Mason, occupies a room specially prepared for it in West Divinity Hall. It consists of about eight thousand separate works, many of them in manuscript, about equally divided between sacred and secular music, and is of great value. In it is included the library of the eminent composer Dr. C. H. Rinck, of Darmstadt. The book-cases which hold the library were the gift of the late Atwater Treat.

5. The Library of the Art School.—Hon. Henry Farnam in 1875, at an expense of \$900, furnished the library-room, and about five hundred volumes of books on art have since been gathered, partly by gift and partly by purchase. Among them are included complete sets of the important journals, *Gazette des Beaux-Arts* (the gift of Hon. Charles L. Mitchell) and *L'Art*.

6. The Peabody Museum.—The museum has only a small collection of about six hundred volumes. The want of a separate library is, however, in part supplied by the valuable private collection of Professor Marsh deposited in the building.

8. The Observatory.—The library of the observatory is barely commenced, consisting of only about two hundred and fifty volumes.

9. The Sloane Physical Laboratory, the joint gift of Henry T. Sloane and Thomas C. Sloane, has just received from the latter \$1,000 to be expended in books for a working library.

Together the libraries of the University contain upwards of one hundred and eighty thousand volumes, of which one hundred and sixty thousand are in the College Library Building.

Mention should be made in this place of the library of the American Oriental Society, which, for the past thirty years, has found a home under the roof of the College Library. The society was organized in 1842 in Boston, where, until 1855, the library remained. New Haven members have always taken a leading part in the direction and active work of the society, and the library is held here by still another tie. Hon. Charles William Bradley, of New Haven, who made large and valuable gifts, amounting to several hundred volumes, attached to a portion of them the condition that, in case of the removal of the library from New Haven, they should become the property of the college. Next to Mr. Bradley, the library of the society is most indebted to Rev. Joseph P. Thompson, D.D., who, in 1879, bequeathed about three hundred volumes relating to Egypt and the East. By these and other gifts, and by the exchanges received

for the Journal of the Society, the library has become respectable in size and more than respectable in value. The number of volumes is not far from four thousand, including one hundred and sixty manuscripts.

II.—CITY LIBRARIES.

The Mechanic Library Society, a body which met for the first time in the State House, February 5, 1793, is the earliest of the city library organizations which has come to our notice. The preamble of the constitution then adopted, "*Whereas*, the establishment of a Public Library in the City of New Haven would advance useful knowledge and literature" is still serviceable, and no less applicable to a city of eighty thousand inhabitants than to one of eight thousand. The library society evidently stood in the relation of parent or offspring (we have been unable to ascertain which) to the Mechanic Society. In the call for the annual meeting in January, 1798, the proprietors of the library are summoned to meet at six o'clock and the members of the society at eight o'clock at the same place. From the slender resources of the library, which consisted of an entrance fee of one dollar and a half, and an annual tax of fifty cents for the first five years, and twenty-five cents thereafter, a rapid growth was not to be expected. In the printed catalogue of 1801, seven hundred volumes are entered; in a later edition, without date, nine hundred. At the annual meeting in January, 1809, "a punctual attendance is requested, as it is probable that the constitution will receive material alterations, or that the society will be dissolved and the library sold." Another library had been recently established, and danger may have been apprehended from that source. This crisis, however, was safely passed, and we find from an advertisement in the *Connecticut Journal* of March 19, 1812, that the number of volumes was then seven hundred, the entrance fee five dollars, and the annual tax twenty-five cents and such further sum as should be agreed upon at the annual meeting. In 1815 it surrendered its name and was united with the Social Library.

The Social Library Company, though not incorporated till 1810, issued in 1808, probably not long after the date of the first organization, a catalogue of two hundred and fifty volumes. In 1812, when another catalogue was printed, the number had increased to five hundred, and in the list of members appended are the names of many prominent citizens. It was provided in the constitution that "no novels, romances, tales or plays shall be admitted into the library, unless by a vote of two-thirds of the members present at any legal meeting." And we find that only Shakespeare among dramatists, and a dozen volumes of fiction, had been able to pass this strict censorship. The Mechanic Library had been more liberal on this point. At the annual meeting in 1794, the directors were given authority to purchase such books as they should judge proper, and a somewhat larger, though by no means dangerous, amount of fiction was admitted.

In 1815 the libraries were united under the name, charter and constitution of the Social Library, with seventeen hundred volumss and one hundred and sixty-six members. From this point it slowly advanced to eighteen hundred volumes in 1822, nineteen hundred in 1826, and two thousand in 1833. Here the growth stopped and the membership declined, until the library came to be practically unused, and passed, in 1840, into the possession of a younger and more vigorous organization. In 1826, and for some years previously, the library occupied, free of expense, a room in the Eagle Block. It afterward enjoyed for some time similar hospitality in the store of George Gabriel in the Exchange Building.

The Young Men's Institute traces its origin to the Young Apprentices' Association, formed August 1, 1826, by eight young men, who met weekly for practice in writing and speaking. In addition to these exercises, in the following year a teacher was engaged to direct them in some branch of study. The association was reorganized, with twenty-four members, November 21, 1828, under the name of the Young Mechanics' Institute, the object of which, as defined by the constitution, was "mutual assistance in the attainment of useful knowledge." Although the gathering of a library was one of the means proposed to this end, the interest of the institute centered chiefly in its lectures and schools or classes. In 1829 the number of volumes reported was only sixty-five; in 1833, two hundred and twenty-five; in 1840, four hundred and twenty-six. The membership was never much above one hundred, and usually below that number. The meetings were held at first in the Glebe Building, later in the room of the General Society of Mechanics. This was a charitable association (apparently the successor of the Mechanic Society mentioned above), incorporated in 1807 and dissolved in 1840. A notice of a library opened by this society for the gratuitous use of apprentices, appears in the newspapers for July, 1827.

Overtures were first made by the Young Mechanics' Institute for the purchase of the Social Library in 1838, but the price demanded was thought too high. They were renewed in 1840, and the agreement reached was that the institute should pay \$500 (which was much less than the estimated value, even at a forced sale) and give to the stockholders of the Social Library, then reduced to thirty-five, the perpetual use of the library for themselves and their representatives. As a part of the plan the institute was reorganized August 5, 1840, on a broader foundation, under the name of the New Haven Young Men's Institute; and in the following May an act of incorporation was procured. These changes, and the increase of membership which followed, gave it not only a new impulse, but also a new direction. From a private it became a public institution. The free public library was then practically unknown. The subscription library was the common substitute for it. From twenty-four hundred volumes, the number after the purchase, the library increased in 1842 to thirty-five hundred. Three hundred volumes,

chiefly periodicals, were received from the New Haven Athenæum, discontinued in 1841. The era of the popular lecture, then just commencing, had a powerful influence in the same direction. The annual courses of lectures were not at first, as they came to be afterward, conducted as a source of revenue, but in the line of the regular work of the institute, to which, being free to the members, they usually brought no profit, but rather a loss. Evening schools were maintained for a number of years, with the attendance in the various classes at times as large as three hundred.

As early as 1852, efforts began to be made to secure a building for the Institute. Among the plans proposed was this, that a lot having been obtained, the city should loan to the Institute its bonds for an amount sufficient to erect on the front part a block of stores with rooms for the Institute above, and in the rear a building to contain city offices and a large hall for the common use of both. The rent paid by the city would gradually extinguish the bonds, the interest on which in the meantime would be met by the rents received from other portions of the building. This proposition was submitted to vote in a city meeting held April 17, 1854, and was carried, but was defeated at a town-meeting the same day and the project abandoned. The lot which it was then proposed to purchase was that where the Third Church now stands, which has recently been urged as a site for the public library. The friends of the Institute thereupon set to work to obtain, by subscription, the funds for building. The whole amount secured was \$12,000, of which Leverett Candee gave \$2,000; Joseph E. Sheffield and Oliver F. Winchester \$1,000 each, and others smaller sums. Mr. Sheffield likewise sold to the Institute, for less than the market value, a lot for the building, and in 1856 gave a library fund of \$5,000. The building (now occupied by the Palladium) was commenced in July, 1855, and completed the following year, at a cost, including the lot, of \$34,000. It was formally opened October 13, 1856, the library having taken possession in July. During the first year it increased from five thousand to seven thousand seven hundred volumes, two-thirds of the accessions being gifts, and the membership rose to six hundred. But this prosperity did not continue. The building on its completion was burdened with a debt of \$22,000. Additional subscriptions had been counted upon, but none came, and the financial depression of 1857 made the prospect still more gloomy. In 1864 the burden was found too heavy to be longer borne, and the building was sold for \$30,000, leaving, after the payment of the debt, \$11,000 to accumulate for a future building. During the ten years from 1869 to 1878, the lecture courses yielded an average annual profit of \$1,100, against a uniform deficit in the receipts of the library and reading-room. At length this resource failed. The Sheffield fund also, after yielding dividends amounting in the aggregate to \$3,600, became unproductive, and the membership steadily sank.

The migrations of the Institute have been as va-

rious as its fortunes. In 1840, after the purchase of the Social library, it occupied rooms in the Street Building, corner Chapel and State; in 1841 it was removed to the Saunders Building, corner Chapel and Orange; in 1845 to the Temple on Orange street; in 1847 to the Phoenix Building on Chapel street; in 1856 to the Institute Building on Orange street; in 1864 to the Phoenix Building again; in 1871 back to the Institute Building; in 1875 to the State House. In 1878 the fund having reached a sufficient amount, the present lot was purchased at a cost of \$23,000, and the building erected at a further cost of \$8,000. When the Institute took possession, October 1, 1878, it was encumbered by a debt of \$3,500. During the past eight years this debt has been paid, and about four thousand volumes have been added to the library. Compared with the years immediately preceding, which were a hard struggle for existence, the present situation of the Institute—with an income from rents and membership fees of \$3,000, and a library of twelve thousand volumes—is full of encouragement. It must not, however, be overlooked that in the meantime the character and work of the Institute have undergone an important change. The lectures, which were once so prominent a feature, were practically abandoned ten years ago, and there is little likelihood that they will be resumed. The evening schools were discontinued still earlier. The Institute has in fact ceased to be a lyceum and has become a library only. Though its position thirty years ago was far less stable than now, it may be questioned whether it was not one of greater influence and importance. This change has, however, come about through no fault of the Institute; it is a result of the changed circumstances of the times.

The New Haven County Bar Association, organized May 18, 1880, under the provisions of an act of the General Assembly approved March 7, 1877, possesses a library of about eleven hundred volumes. The library was commenced as early as 1848, by a subscription from members of the Bar. Another subscription was made some years later, and more recently the County Commissioners made an appropriation of \$300. The law library of Hon. Alfred Blackman was received by bequest in 1880. At present the library is dependent for increase on the fees for admission to the Bar, and is deposited in the County Court House.

The New Haven Colony Historical Society, which was organized November 14, 1862, has gathered by gift and exchange a library of nineteen hundred volumes and six thousand pamphlets. The collections of the society were transferred from the City Hall, where they had hitherto been kept, to the present rooms in the State House, in January, 1881.

The Hillhouse High School has expended, since the erection of the present building in 1871, about \$500 annually upon its library, the State and the city each appropriating an equal sum. The number of volumes is about twenty-five hundred, consisting in part of valuable books of reference, in part of works of a miscellaneous character.

We regret that we cannot bring this sketch to a

close with an account of the Free Public Library of New Haven. That an institution which is becoming almost as familiar a feature of New England scenery as the church and the school-house should be wanting here, demands at least an explanation. Many of these libraries planted around us have been established by the generous act of some one person as a free gift to the place of his birth or his residence. This good fortune has not fallen to the lot of New Haven, though few greater opportunities of good, we may safely say, are placed within the reach of the possessors of large wealth. A noble contribution toward this object has, it is true, been made by one, the later years only of whose life were passed in New Haven. The late Philip Marett, who died in 1869, besides other large bequests to the College and the charities of the city, left one-tenth part of his estate on the death of his wife and of his daughter, who is still living, "to the City of New Haven in trust, the income to be applied by the proper authorities for the purchase of books for the Young Men's Institute, or any public library which may from time to time exist in said city." The value of this bequest is estimated at \$70,000.

The College Library is often assigned as the cause—the innocent cause—of the absence of a public library, and it is no doubt true that had not the wants of a portion of the community been thus supplied, the popular demand would have gathered such force as to compel the city to take action. While the College Library contains little of a popular character, and aims to satisfy the demands of the scholar and investigator rather than the general reader, its resources are freely placed at the service of the public. Nor will its value to the city cease with the establishment of a public library. With that the College Library can co-operate heartily and effectively. Of many costly books, indispensable, and yet not often wanted, the one copy in the College Library will be sufficient for the needs of the city, and the public library, spared this expense, can extend itself in other directions to the general advantage.

There are now indications that this reproach on the fair fame of our city will soon be taken away. The past three years have been fruitful in discussions and plans, out of which doubtless in some shape, possibly not the fairest, will come a public library. In 1883 a Committee of the Common Council, appointed to consider the subject of a public library, reported favorably a plan arranged in concert with the Young Men's Institute. It was proposed to raise by subscription the sum of \$75,000, at least, for a literary building, which which it was hoped that the \$50,000 voted by the city for a Soldiers' Memorial, might in some way be combined. In this would be placed the Institute library, and the income of the other property of the Institute would be devoted to its increase. An elaborate scheme for a general subscription was prepared, but before the time arrived for putting it into execution, the gloomy financial outlook in the summer of 1884, and later the excitement of the Presidential election, caused it to be indefinitely post-

poned. Thereupon a few gentlemen, who thought longer delay unwise, and believed that a public library once started would quickly draw to itself support, resolved to make the experiment. Within a few days subscriptions amounting to \$1,800, and many offers of books, were obtained, and in January, 1885, they presented a petition to the City Government, praying for the establishment of a public library under the provisions of the Act of 1881, and for the assignment of rooms in the State House; the memorialists engaging to maintain, for one year, free of expense to the city, a reading-room furnished with periodicals and books of reference. The proposal met with opposition from two quarters: from those who wished the State House removed, and feared this would be an additional obstacle to the removal; and from the friends of the Institute, who thought the public library should

be built on that foundation. The Board of Councilmen voted to grant the petition, the Board of Aldermen to grant merely the use of the State House, without giving recognition to the library. Both Boards afterwards reconsidered their action, in order to enter into further conference with the Institute. During the last session of the Legislature, special legislation was procured, authorizing the city to issue bonds to the amount of \$100,000 to provide a building and establish a library; to expend \$10,000 a year for its maintenance; and to enter into a contract with the Institute. Whether the city will avail itself of the power thus granted, and in what way, is yet to be seen. In the present division of sentiment on this question, it will be a matter of sincere congratulation if a plan can be found which shall deserve and receive the loyal support of the whole city.

CHAPTER X.

CONTRIBUTIONS TO LITERATURE.

NEW HAVEN began early to make contributions to literature. Before John Davenport had provided himself with a permanent dwelling-house, he had written out "A Discourse about Civil Government in a New Plantation, whose Design is Religion." Three years after the author's death it was "published by some undertakers of a new plantation, for general direction and information," and bears the imprint, "Cambridge, printed by Samuel Green and Marmaduke Johnson, 1673." It is a small quarto of twenty-four pages. On its title-page, the name of Mr. Cotton is by mistake put for that of Mr. Davenport; as Cotton Mather, whose father was a son-in-law of Mr. Cotton, testifies. The internal evidence confirms the testimony of Mather. The same year his pen produced "A Profession of Faith, made at his Admission into one of the Churches of God in New England." This treatise having been sent to England in manuscript, was printed by Congregationalists, to vindicate their orthodoxy by exhibiting the views of one of their representative men. Editions printed in London in 1641, 1642, and 1645 are extant. It was reprinted in New Haven in 1853, with a preface by Dr. Leonard Bacon. In 1656, or earlier, Davenport and his assistant in the ministry prepared "A Catechism containing the Chief Heads of Christian Religion," which was printed in London in 1659, and reprinted in New Haven in 1853. "The Saints' Anchor-Hold" was printed in London in 1661, with a preface by William Hooke and Joseph Caryl. It is a small duodecimo of 231 pages, and professes to have been originally preached in sundry sermons. In one of the discourses which were printed in "The Saints' Anchor-Hold," occurs the passage in which it is believed that Davenport appealed to his congregation to sympathize with and help the regicides, Whalley and Goffe.

Brethren, it is a weighty matter to read letters and receive intelligence in them concerning the state of the

churches. You need to lift up your hearts to God when you are about to read your letters from our native country, to give you wisdom and hearts duly affected, that you may receive such intelligences as you ought; for God looks upon every man in such cases, with a jealous eye, observing with what workings of bowels they read or speak of the concerns of his church. * * * * The Christian Hebrews are exhorted to call to remembrance the former days, in which, after they were illuminated, they endured a great fight of afflictions, partly whilst they were made a gazing stock both by reproaches and afflictions, and partly whilst they became companions of them that were so used. Let us do likewise, and own the reproached and persecuted people and cause of Christ in suffering times.

Withhold not confidence, entertainment and protection from such, if they come to us from other countries, as from France, or England, or any other place. Be not forgetful to entertain strangers, for thereby some have entertained angels unawares. Remember them that are in bonds, as bound with them, and them who suffer adversity, as being yourselves also in the body. The Lord required this of Moab, saying, "Make thy shadow as the night, in the midst of the noonday," that is, provide safe and comfortable shelter and refreshment for my people in the heat of persecution and opposition raised against them; "hide the outcasts, bewray not him that wandereth; let my outcasts dwell with thee, Moab; be thou a covert to them from the face of the spoiler!" Is it objected, but so I may expose myself to be spoiled or troubled? He therefore, to remove this objection, addeth, "For the danger is at an end, the spoiler ceaseth; the treaders down are consumed out of the land." While we are attending to our duty in owning and harboring Christ's witnesses, God will be providing for their and our safety by destroying those that would destroy his people.

Both in the field of education and in the field of theology, Ezekiel Cheever, the first schoolmaster of New Haven, was an author, having written "A Short Introduction to the Latin Tongue," which he called an "Accidence," and a book on the millenium under the title "Scripture Prophecies Explained." President Quincy, of Harvard University, says of the "Accidence,"

A work which was used for more than a century in the schools of New England, as the first elementary book for learners of the Latin language; which held its place in some of the most eminent of those schools nearly, if not quite, to the end of the last century; which has passed through at least twenty editions in this country; which was

the subject of the successive labor and improvement of a man who spent seventy years in the business of instruction, and whose time is second to that of no schoolmaster New England has ever produced, requires no additional testimony to its worth.

The eighteenth edition bears the following title-page :

A SHORT
INTRODUCTION
TO THE
LATIN TONGUE :
FOR THE USE OF THE
LOWER FORMS IN THE LATIN SCHOOL,
BEING THE
ACCIDENCE,
ADDED AND COMPILED IN THAT MOST EASY AND
ACCURATE METHOD, WHEREIN THE FAMOUS
MR. EZEKIEL CHEEVER TAUGHT, AND
WHICH HE FOUND THE MOST ADVANTAGEOUS, BY SEVENTY
YEARS EXPERIENCE.
TO WHICH IS ADDED
A CATALOGUE OF
IRREGULAR NOUNS AND VERBS,
DISPOSED ALPHABETICALLY.

THE EIGHTEENTH EDITION.

PRINTED BY JOHN MYCALL, FOR E. BATTELLE,
AND SOLD BY THEM AT THEIR SHOPS IN
BOSTON AND NEWBURY-PORR.
M.DCC.LXXXV.

The last edition was published in Boston in 1838, and had the following title-page:

CHEEVER'S
LATIN ACCIDENCE.
AN
ELEMENTARY GRAMMAR
FOR
BEGINNERS IN THE STUDY
OF THE
LATIN LANGUAGE:
COMPILED BY
EZEKIEL CHEEVER,
WHO WAS SEVENTY YEARS A TEACHER OF LATIN,
AND USED
IN THE SCHOOLS OF THIS COUNTRY FOR MORE THAN A
HUNDRED AND FIFTY YEARS PREVIOUS
TO THE CLOSE OF THE LAST
CENTURY.
CAREFULLY REVISED, CORRECTED, AND STEREOTYPED,
From the Eighteenth Edition.

Mulum in Parvo.

FOR SALE BY THE PRINCIPAL BOOKSELLERS IN THE
UNITED STATES.

BOSTON
1838.

It is believed that the "Accidence" was written while he was schoolmaster at New Haven. The other book came from his pen at a later date.

Probably it did not attain to so many editions as the Accidence, but it continued to be issued after the death of the author. So late as 1757 an edition was printed with this title-page:

Scripture Prophecies Explained.

In three Short

ESSAYS.

- I. On the RESITUTION OF ALL THINGS.
- II. On St. JOHN'S FIRST RESURRECTION.
- III. On the PERSONAL COMING OF JESUS CHRIST, as commencing at the beginning of the MILLENNIUM, described in the *Apocalypse*.

By EZEKIEL CHEEVER,

In former Days Master of the Grammar School
in Boston.

*We have a more sure Word of Prophecy, whereunto
ye do well that ye take heed, as unto a Light that
shineth in a dark Place.—For the Prophecy
came not in old Time by the Will of Man, but
holy Men of GOD spake as they were moved by
the HOLY GHOST.*

Apostle PETER.

B O S T O N :

Printed and sold by GREEN and RUSSELL, at their
Printing-Office in Queen-street. M.DCC.LVII.

The next author with whom we would make our readers acquainted is Michael Wigglesworth. He came with his parents to Quinipiac in the autumn of 1638, being then about seven years of age, from Hedon, a village in the East Riding of Yorkshire. The next summer he was sent to school to Mr. Cheever, and in a year or two "began to make Latin," perhaps with the help of the Accidence in manuscript. In 1651 he graduated at Harvard College, and after serving for some years as a tutor in that institution, became the teacher of the church in Malden, Mass.

Soon after his settlement at Malden, his mother and sister, the only remaining members of his father's family, removed from New Haven, so that as he was not born here and did not reside here after leaving college, New Haven has but a feeble claim to number him among her sons. However, as it was not his fault that he was born seven years before his parents came to Quinipiac, we are disposed to claim him. He is the only one in this catalogue of contributors to literature who was not either a native of New Haven or a resident here during some of the productive years of his life.

Feeble health had delayed Wigglesworth's acceptance of the call to Malden; and in a few years feeble health compelled him to suspend his ministerial work. He studied and practiced medicine, and applied himself to literary work. For the benefit of his health he made a voyage to Bermuda. During his absence the church called and settled a *pastor*, the Rev. Benjamin Bunkers, who remained in office till his death, more than six years

afterward. Two other pastors were successively settled, and then the pulpit being vacant by the retirement of Rev. Thomas Cheever, a son of Wigglesworth's teacher at New Haven, and the church being in a state of discouragement, Wigglesworth resumed the functions of an office which he had never demitted, though for almost twenty years he had rested from its labors. From this time onward he was active in the work of the ministry for as many years as he had been at rest—so active, that in the sermon at his funeral we read:

It was a surprise unto us to see a little feeble shadow of a man, beyond seventy, preaching usually twice or thrice in a week, visiting and comforting the afflicted; encouraging the private meetings; catechising the children of the flock, managing the government of the church; and attending the sick, not only as a pastor, but as a physician too, and this not only in his own town, but also in all those of the vicinity.

While he was laid aside from the work of the ministry he wrote, "The Day of Doom; or, A Poetical Description of the Great and Last Judgment, with a Short Discourse about Eternity." The first edition "consisted of 1800 copies, which were sold within a year with some profit to the author." Copies of ten different editions are extant; two of which were printed in the seventeenth century; three in the eighteenth and two in the nineteenth. The other three have lost a part or the whole of the title-page; but one of them was probably of the first edition. "The Bicentennial Book of Malden" cites the following extract from "The Short Discourse on Eternity:"

What mortal can with a span
mete out Eternity?
Or fathom it by depth or wit,
or strength of memory?

The lofty sky is not so high,
Hell's depth to this is small;
The world so wide is but a stride,
compared therewithal.

It is a main great Ocean,
withouten bank or bound;
A deep Abyss, wherein there is
no bottom to be found.

* * * * *

Nought joined to nought can ne'er make ought
nor cyphers make a sum;
Nor things finite to Infinite
by multiplying come;
A cockle-shell may serve as well
to lade the ocean dry,
As finite things and Reckonings
to bound eternity.

The title of another book by Wigglesworth, is "Meat out of the Eater; or, Meditations concerning the Necessity, End and Usefulness of Afflictions unto God's Children. All tending to prepare them for and comfort them under the cross." The first edition was published in 1669, and three more appeared before the end of the century. At least three editions were printed in the course of the eighteenth century. For a hundred—perhaps for a hundred and fifty years, no poetry was more popular in New England than that of Wigglesworth. "The Day of Doom," however, was more exten-

sively circulated than "Meat out of the Eater." Picturing in lively colors the terrors of the Judgment Day, it appealed to the imagination of the young as well as the piety of their parents, and therefore was welcome in every pious household. A writer in the *Christian Examiner* for November, 1828, speaks of it as—

A work which was taught our fathers with their catechisms, and which many an aged person with whom we are acquainted can still repeat, though they may not have met with a copy since they were in leading strings; a work that was hawked about the country, printed on sheets like common ballads; and, in fine, a work which fairly represents the prevailing theology of New England at the time it was written, and which Mather thought might "perhaps find our children till the Day itself arrives."

In the Bicentennial Book of Malden it is said that the following epitaph is still legible on an ancient gravestone in the old burial ground,

Memento Mori; Fugit Hora.

Here lyes Buried y^e Body of
That Faithful Servant of
Jesus Christ, y^e Reverend
Mr. Michael Wigglesworth,
Pastour of y^e Church of Christ
at Malden, years, who
Finished his Work and Entered
Upon an Eternal Sabbath
Of Rest on y^e Lord's Day, June
y^e 10, 1705, in y^e 74 year of his age.

Here lyes Interd in Silent Grave Below
Malden's Physician of Soul and Body too.

For some reason the number of the years of his pastorate was omitted on the stone; neither does the epitaph recognize that distinction between the pastor and the teacher which obtained when Wigglesworth was ordained.

The first half of the eighteenth century was an unfavorable time for literature, and we cannot point to anything of permanent value which was produced at New Haven till the time of President Clap. His administration of the college covers the period between 1740 and 1767. His first publication was a code of laws for the college; the substance of which he gathered from several sources. This having been adopted by the corporation and translated into Latin, was published in 1748. The first book ever printed in New Haven was an edition of this work, which appeared in 1755.*

His subsequent publications were "An Essay on the Religious Constitution of Colleges," 1754; "A Vindication of the Doctrines of the New England Churches," 1755; "Essay on the Nature and Foundation of Moral Virtue and Obligation," 1765; "The Annals or History of Yale College, in New Haven, from the first founding thereof in the year 1700, to the year 1766; with an Appendix, containing the present state of the College, the Method of Instruction and Government, with the Officers, Benefactors and Graduates," 1766. His "Conjectures on the Nature and Motion of Meteors above the Atmosphere" was issued posthumously in 1781. He made collections for a history

* President Clap's Code of Laws is said to have been printed in 1748; but the college possesses no copy of any edition earlier than that printed in New Haven in 1755.

of Connecticut, but his manuscripts, then in the possession of his daughter, the widow of Gen. David Wooster, were carried away by the British when they plundered New Haven in 1779, and thrown into Long Island Sound. A few were picked up some days after by boatmen; but the greater part were lost.

In 1766, when President Clap retired from the administration of the college, the Presidency was offered to the Rev. Ezra Stiles, who had been for more than ten years pastor of a church in Newport, Rhode Island; but as he declined to be a candidate the Rev. Naphthali Daggett was appointed president *pro tempore*. During his administration several young men were in college who in early life attained celebrity in literature. Among them were John Trumbull, who graduated in 1767; Timothy Dwight, who graduated in 1769; David Humphreys, who graduated in 1771; and Joel Barlow, who graduated in 1778. Selecting these four as having some further connection with New Haven than a residence of four years as undergraduates, we propose to write a few lines concerning the literary work of each.

But before we do so, it is opportune to mention again the Rev. Ezra Stiles, who, though he was unwilling to remove from Newport to New Haven in 1766, accepted the presidency of the college in 1777, being then exiled from Newport in consequence of the British occupation of the city, and the use of his church by the enemy, who had "put up a chimney in the middle of it and demolished all the pews and seats below, and in the galleries, but had left the pulpit standing." From 1777 till his death in 1795, Stiles was the president of the college, and during this time was, as he had been before, a voluminous writer. His diary and bound manuscripts preserved in the college library fill forty-five volumes. Of these, fifteen are occupied with his literary diary, embracing the narrative of daily occurrences, public and private notices of the books he read and the sermons he preached and heard. A meteorological record occupies five volumes; an itinerary of his tours, notices of town and church records, tombstone inscriptions and such matters occupy five more; while the remainder are filled with letters and miscellaneous extracts. The following citations illustrate the quality of the diary:

1777. Sep. 19. Received the following letter from the Rev. Mr. Whittlesey. [Here follows the letter announcing that he had been chosen President of Yale College.] My election to the Presidency of Yale College is an unexpected and wonderful ordering of Divine Providence. An hundred and fifty or 180 young gentlemen students is a bundle of wild fire, not easily controlled and governed; and at best, the diadem of a President is a crown of thorns.

1779. Nov. 1. Mr. Guild, Tutor of Harvard College, visited us this day. He has been to Philadelphia, and is planning an Academy of Sciences for Massachusetts. I had much conversation with him upon this as well as upon an Academy of Sciences which I am meditating for Connecticut.

1780. Dec. 19. Mr. Doolittle tells me there has been made at his Powder Mill in New Haven, eighty thousand pounds of powder since the commencement of this war.

1784. June 21. This evening Mr. Whittlesey told me that

he dined here in town with Gen. Washington and his suite in June, 1775, on his way to take command of the army at Boston; when observing to him that he must have been young at the Ohio action in 1753 or '4, Gen. Washington then told Mr. Whittlesey that at that action he was only twenty-two years old.

1784. June 28. Before the war, or A. D. 1775, there were forty sail of vessels belonging to the town of New Haven. They were reduced by the war to a single sloop of 75 tons, belonging to Capt. Fairchild and no coaster left, A. D. 1781. They are so increased that now, June 28, 1784, there belong to this city thirty-three sea vessels using the West India and foreign trade: one of which a ship of 300 tons; four square-rigged vessels or brigs; the rest sloops of 60 to 110 tons. There are four coasters and seven vessels on the stocks. There were seven or eight shops in the war: three of which traded considerably and might have £600 or £800 sterling worth of goods in each. Now, 1784, June, they have counted fifty-six shops in the city: half a dozen of which have £2,000 to £3,000 sterling worth of goods; and the rest £500 down to £200 or £150.

The collection of the 5 per cent. impost began last week.

This day Mr. Tutor Channing brought a piece of ice seven miles, from North Branford, and showed it to all the classes at College.

1786. July, 26. This day Mr. Tutor Russell resigned the tutorship, bade farewell to his class, and left college in the fourth year of his tutorship; in which he has done worthily. Tutor Channing and myself rode out and accompanied him five miles. Returning I introduced Mr. Morse, who was elected tutor at Hartford on Election Day, and gave him the tuition of the freshmen.

1786. June 29. The spirit for raising silkworms is great in this town, Northford, Worthington, Mansfield, etc.

1786. July 8. The German or wheat insects have got into and destroyed Squire Smith's harvest of rye and wheat at West Haven, and that of several of his neighbors, but are not general there. These animalcules, which fix in the joints of wheat, and if no wheat, in rye, have come from the westward and got into Litchfield and New Haven counties.

1786. October 25. Mr. Tutor Morse, desiring to be absent [until] spring in order to make the tour of the States to Georgia, for perfecting a new edition of his Geography—we elected the Rev. Abiel Holmes, Tutor.

1787. July 2. The Rev. Manasseh Cutler, of Ipswich, visited us. He is a great botanist, and is traveling on to Philadelphia to inspect all vegetables and plants in their state of flowering, with the view of perfecting his publication upon indigenous American plants, ranged into classes, genera and species, according to the sexual or Linnæan system.

1787. August 27. Heb. Recita. Finished the first psalm. Judge Ellsworth, a member of the Federal Convention, just returned from Philadelphia, visited me and tells me the convention will not rise under three weeks. He there saw a steam engine for rowing boats against the stream, invented by Mr. Fitch, of Windsor, in Connecticut. He was on board the boat and saw the experiment succeed.

1788. January 7. This evening I gave permission to the Freshman class to wear their hats in the college yard after the ensuing vacation. Formerly they kept off their hats the whole Freshman year. About 1775 they were permitted to wear them after May vacation. We now permit them after January vacation.

1794.—Mr. Whitney brought to my house and showed us his machine, by him invented, for cleaning cotton of its seeds. He showed us the model which he has finished to lodge at Philadelphia, in the Secretary of State's office, when he takes out his patent. A curious and very ingenious piece of mechanism.

1794. July 17. This day I was visited by M. Talleyrand Perigord, Bishop of Autun, etc., and M. Beaumez, Member for the District of Arras. * * * Both men of information, literature, calmness and candor: and very inquisitive. * * * The Bishop has written a piece on education and originated the bill or act in the National Assembly for setting up schools all over France, for diffusing education and letters among the plebeians. I desired them to estimate the proportion of those who could not read in France. M. Beaumez said, of twenty-five millions, he judged twenty millions could not read. The Bishop corrected it, and said eighteen millions. They were very inquisitive about our mode of diffus-

ing knowledge. I told them of our parochial schools from the beginning, and that I had not reason to think there was a single person of the natives in New Haven that could not read.

Dr. Channing, who was a native of Newport, says of Stiles: "In my earliest years I regarded no human being with equal reverence." Chancellor Kent, who graduated at Yale four years after Stiles commenced his administration of the college, says in his Phi Beta Kappa oration: "Take him for all in all, this extraordinary man was undoubtedly one of the purest and best gifted men of his age. In addition to his other eminent attainments, he was clothed with humility, with tenderness of heart, with disinterested kindness, and with the most artless simplicity. He was distinguished for the dignity of his deportment, the politeness of his address, and the urbanity of his manners. Though he was uncompromising in his belief and vindication of the great fundamental doctrines of the Protestant faith, he was nevertheless of a most charitable and catholic temper, resulting equally from the benevolence of his disposition and the spirit of the Gospel."

Stiles' chief literary publication was, "A History of Three of the Judges of King Charles I: Major-General Whalley, Major-General Goffe, and Colonel Dixwell; who, at the Restoration, 1660, fled to America, and were secreted and concealed in Massachusetts and Connecticut for near thirty years. With an account of Mr. Theophilus Whale, of Narragansett, supposed to have been also one of the Judges."

Of the literary quartette who have been mentioned as in college when Daggett was President *pro tempore*, the youngest graduated one year after Stiles came to the college, and all the four were at New Haven for a longer or shorter period, either a little before or during his administration.

Trumbull and Dwight were appointed tutors in 1771, and during the next two years were very much associated together in literary work, as well as in college duty. John Trumbull, the poet, is to be distinguished from his kinsman, John Trumbull, the painter. John Trumbull, the poet, was born in Watertown, Conn., where his father was the settled minister. He was admitted a member of Yale College at the early age of seven years, having successfully passed the required examination, though his residence at college was postponed for six years.

During this period, the precocious child became acquainted with some of the best English classics. During his college course he became intimate with Timothy Dwight, and the two wrote essays in the style of the *Spectator*, which they published in the newspapers.

During the two years of his tutorship, Trumbull wrote his "Progress of Dullness," a satirical poem in which he indirectly advocates the study of English literature and *belles lettres*, by depicting the career of Tom Brainless, who, having passed through college and stuffed himself with the ancient languages, mathematics and theology, ascends the pulpit.

Now in the desk, with solemn air,
Our hero makes his audience stare;
Asserts with all dogmatic boldness,
Where impudence is yoked with dullness;
Reads o'er his notes with halting pace
Masked in the stiffness of his face,
With gestures such as might become
Those statues once that spoke at Rome,
Or Livy's ox, that to the State
Declared the oracles of fate.
In awkward tones, nor said, nor sung,
Slowly rumbling o'er the faltering tongue,
Two hours his drawling speech holds on,
And names it preaching, when he's done.

Dick Hairbrain is then introduced. His college course was as dull in point of learning as that of Brainless, but differs in morals to represent the dullness of those students who went to profligacy and French infidelity rather than to the pulpit.

What though in algebra, his station
Was negative in each equation;
Though in astronomy surveyed,
His constant course was retrograde;
O'er Newton's system though he sleeps
And finds his wits in dark eclipse,
His talents proved of highest price
At all the arts of card and dice;
His genius turned with greatest skill,
To whist, loo, cribbage and quadrille,
And taught, to every rival's shame,
Each nice distinction of the game.

Not to neglect the ladies and the faults of the system of female education in vogue, he introduces to his readers Miss Simper, who, after vainly laying snares for Hairbrain, accepts the proposals of Brainless.

The parish vote him five pounds clear,
T' increase his salary every year.
Then swift the tag-rag gentry come
To welcome Madame Brainless home;
Wish their good parson joy; with pride
In order round salute the bride:
At home, at visits and at meetings,
To Madam all allow precedence;
Greet her at church with reverence due,
And next the pulpit fix her pew.

The first edition of "The Progress of Dullness" was published in New Haven, and is thus announced in the columns of the *Connecticut Journal and New Haven Post Boy* of Friday, January 8, 1773:

Just published, and to be sold by the printers hereof,

THE PROGRESS OF DULLNESS.

Part First.

OR, THE RARE ADVENTURES OF TOM BRAINGLESS;

Showing what his father and mother said of him; how he went to college, and what he learned there; how he took his degree and went to keeping school; how he afterward became a great man and wore a wig; and how anybody else may do the same.

The like never before published. Very proper to be kept in all families.

Now in the Press.

THE PROGRESS OF DULLNESS.

Part Second.

OR, THE ADVENTURES OF DICK HAIRBRAIN, OF FINICAL MEMORY.

Having studied some law during the two years of his tutorship, Trumbull was admitted to the

bar in 1773, and went to Boston to pursue the study still further in the office of John Adams, afterward President of the United States. He remained in Boston, however, but one year, and seems to have been too much interested in politics and literary work to make the greatest possible advancement in the knowledge of law. During this year he wrote "An Elegy on the Times," a poem of sixty-eight stanzas, which celebrates the Boston Port Bill, the non-consumption of foreign luxuries, and the strength of the colonies. At the end of 1774 he returned to New Haven, and in 1776, in consequence of the resignation of Roger Sherman as Treasurer of Yale College, Trumbull was appointed his successor in that office, and retained it till 1782. In New Haven our poet wrote the greater part of "McFingal," on which his fame chiefly rests. At the end of the war he added a fourth canto, and published the completed work. It is a poem in the style of Butler's "Hudibras," in which the author relates the history of the American struggle for independence, with a particular description of the character and manners of the times, satirizing, as he declares, "the follies and extravagances of my countrymen, as well as of their enemies." The chief butt of his wit is, however, a Tory squire, whom he calls McFingal, and makes as ridiculous as Butler does his "Hudibras." Being a tract for the times, its popularity was very great. There were more than thirty different pirated impressions in pamphlet and other forms. Neither the "Progress of Dullness" nor "McFingal" is without interest to the reader of the present day. The first deserves the attention of those who believe that the curriculum of college studies should include more of modern literature; and the student of history will find in "McFingal" a lively and realistic description of revolutionary days. In 1801 Trumbull was appointed a Judge of the Superior Court, and in 1808 received the additional appointment of a Judge of the Supreme Court of Errors, which he retained till he retired from public life in 1819.

TIMOTHY DWIGHT entered upon his duties as tutor in Yale College at the same time with his friend Trumbull, but continued in that office four years after Trumbull had laid it down. He immediately commenced his "Conquest of Canaan," and worked upon it till it was finished in 1774. But the war coming on, it was not published till 1785. Retiring from his office as tutor in 1777, he was licensed to preach, and became a chaplain in the army, and at the beginning of his military career wrote the national hymn,

Columbia, Columbia, to glory arise,
The queen of the world and child of the skies.

While he was a settled clergyman at Greenfield Hill, he wrote a poem called "Greenfield Hill." It was in seven parts: I. The Prospect. II. The Flourishing Village. III. The Burning of Fairfield. IV. The Destruction of the Pequots. V. The Clergyman's Advice to the Villagers. VI. The Farmer's Advice to the Villagers. VII. The Vis-

ion; or, Prospect of the Future Happiness of America. In 1795 he succeeded Ezra Stiles in the presidency of Yale College, to which was united the Professorship of Theology. One fruit of his work in the chair of Theology was the well-known series of sermons published after his death, under the title, "Theology Explained and Defended." In 1797 the General Association of Congregational Ministers in Connecticut requested President Dwight "to revise Dr. Watts' 'Imitation of the Psalms of David,' so as to accommodate them to the state of the American churches, and to supply the deficiency of those psalms which Dr. Watts had omitted." After Dwight had completed his task, the Association appointed a committee to examine his alterations and additions; and the General Assembly of the Presbyterian Church learning what had been done, appointed some of its members to act with the committee of the association. The joint committee approved and recommended the book which Dwight had prepared, and recommended to him "to select such hymns from Dr. Watts, Dr. Doddridge and others, and annex them to his addition of the psalms, as shall furnish the churches with a more extensive system of psalmody." The book appeared in 1800, and immediately displaced a similar psalter prepared by Joel Barlow, which the churches had been using for about fifteen years.

President Dwight spent his vacations in traveling through the country in a chaise with some chosen companion; and, keeping notes of what he saw and heard, he wrote them out in the form of letters to a friend in England. After his death these letters were published in four volumes, entitled, "Travels in New England and New York." Southey was so much pleased with the description of the New World contained in this series of letters, that in an article in the *Quarterly Review* for October, 1823, he pronounces it the most important of Dwight's writings, "a work which will derive additional value from time, whatever may become of his poetry or his sermons."

Those who are curious to know what New England was when the eighteenth gave place to the nineteenth century, find these volumes very entertaining. Two volumes entitled, "Sermons on Miscellaneous Subjects," were also issued after Dr. Dwight's death. The description of New Haven, which the reader has seen in a previous chapter of this history, was copied from the first volume of the *Travels*. In concluding this brief notice of Dwight's contributions to literature, we transcribe in full his familiar version of the 137th Psalm, that the reader may compare it with the equally poetic, but less lyric, version of the same psalm by his friend Barlow, which will be found a few pages further on:

I love Thy kingdom, Lord,
The house of Thine abode,
The Church our blest Redeemer saved
With His own precious blood.

I love Thy Church, O God!
Her walls before Thee stand,
Dear as the apple of Thine eye,
And graven on Thy hand.

If e'er to bless Thy sons,
My voice or hands deny,
These hands let useful skill forsake,
This voice in silence die.

If e'er my heart forget
Her welfare or her woe,
Let every joy this heart forsake,
And every grief o'erflow.

For her my tears shall fall;
For her my prayers ascend;
To her my toils and cares be given,
Till toils and cares shall end.

Beyond my highest joy
I prize her heavenly ways,
Her sweet communion, solemn vows,
Her hymns of love and praise.

Jesus, Thou Friend divine,
Our Saviour and our King,
Thy hand from every snare and foe
Shall great deliverance bring.

Sure as Thy truth shall last,
To Zion shall be given
The brightest glories earth can yield,
And brighter bliss of heaven.

DAVID HUMPHREYS went to Cambridge with one of the four Connecticut regiments that were sent thither after the battle of Lexington; and being on the staff of Putnam, was soon sought by Washington, and appointed *aide-de-camp* with the rank of colonel. He was so much beloved by the commander-in-chief, that he was invited at the close of the war to reside at Mount Vernon. Accompanying Washington on his journey, he remained in his family more than a year. That he was an agreeable inmate is evident, when we learn that having accompanied Jefferson to Europe in 1784, as Secretary of Legation, he was invited on his return to America, to reside again at Mount Vernon, and continued there till Washington went to New York to be inaugurated as President, when Humphreys was again his traveling companion. In 1794 Humphreys was appointed Ambassador to Lisbon; whence, after several years residence, he was transferred to Madrid, where he remained till 1802. He then returned to America, and resided for the rest of his life at New Haven, or at the village of Humphreysville, in his native town of Derby. He died at New Haven February 21, 1818, and was buried in the Grove street Cemetery.

Humphreys' earliest publication was his "Address to the Armies of the United States of America." It was written in 1782, when the enemy were in possession of New York and Charleston. In it he alludes to the famous passage in a sermon, which President Davies preached in 1755, predicting the future serviceableness of "that heroic youth, Colonel Washington, whom I cannot but hope Providence has hitherto preserved in so signal a manner for some important service to his country."

"Oh! raised by heaven to save th' invaded state,"
So spake the sage, long since, thy future fate.

The address was translated into French by his companion in arms, the Marquis de Chastellux, who writes to Franklin in 1786:

When you were in France, there was no need of praising the Americans, we had only to say, *Look, here is their representative*. But, however worthily your place may have

since been filled, it is not unreasonable to arouse anew the interest of a kind-hearted but thoughtless nation, and to fix from time to time its attention upon the great event to which it has had the happiness of contributing. Such has been my motive in translating Colonel Humphreys' poem. My success has fully equaled and even surpassed my expectation. Not only has the public received the work with favor, but it has succeeded perfectly at Court, especially with the king and queen, who have praised it highly.

While Humphreys was abroad on his first visit to Europe, he wrote "A Poem on the Happiness of America, Addressed to the Citizens of the United States," which in 1804 reached its tenth edition. Returning to America in 1786, he was chosen to represent his native town in the Legislature of Connecticut, and soon became associated with Dr. Samuel Hopkins, and his old friends Trumbull and Barlow, in a literary club, by whose joint labors a series of papers called "The Anarchiad" were written and printed in the newspapers of Hartford and New Haven, designed to influence public opinion in favor of a new Constitution for the United States, in place of the Articles of Confederation. The plan of the series assumed the discovery of an ancient heroic poem in the English language, of which the papers were fragments. The plan was suggested by Humphreys, who had seen in England a series of essays produced by the joint efforts of Fox, Sheridan, and others, and called "The Rolliad." While on his second visit to Mount Vernon, Humphreys produced a memoir of Putnam, which he entitled "An Essay on the Life of the Honorable Major-General Israel Putnam, Addressed to the State Society of the Cincinnati in Connecticut." Other writings of Humphreys are: "The Widow of Malabar; or, the Tyranny of Custom: A Tragedy;" "A Poem on the Future Glory of the United States of America;" "A Poem on the Industry of the United States of America;" "A Poem on the Love of Country;" and "A Poem on the Death of General Washington."

When Humphreys was in Spain, he conceived a design of importing the merino sheep of that country into America.

Oh! might my guidance from the downs of Spain,
Lead a white flock across the western main;
Famed like the bark that bore the Argonaut,
Should be the vessel with the burden fraught!
Like Cincinnatus, fed from my own field,
Far from ambition, grandeur, care and strife,
In sweet fruition of domestic life,
There would I pass with friends, beneath my trees,
What rests from public life, in lettered ease.

His wish was fulfilled. He imported a flock and engaged in the manufacture of cloth. So much importance was attached to Humphreys' endeavor to introduce a new industry, that President Jefferson wrote to the Collector of New Haven to purchase for him "as much of his best as would make me a coat;" adding in a subsequent letter, dated December 8, 1808, that "a great desideratum will be lost if not received in time to be made up for our New Year's Day exhibition, when we expect every one will endeavor to be in homespun, and I should be sorry to be marked as being in default." Hildreth, in his "History of the United States," mentions that President Madison

was inaugurated March 4, 1809, in a coat made from the fleeces of Humphreys' "white flock."

JOEL BARLOW, the youngest of the Yale literary quartette, was in college when hostilities commenced at Lexington. His home being in Reading, Fairfield County, he was out with the militia in vacations, and fought bravely in the battle of White Plains. His first published poem was "The Prospect of Peace," which he delivered on Commencement Day in 1778, when he took his degree. It was published at New Haven the same year, and was afterward reprinted in a collection of "American Poems," by Elihu H. Smith. From college, Barlow went to the study of law, but the army needing chaplains, he turned to theology, and in six weeks crammed himself sufficiently to obtain a license to preach and a chaplain's commission. Like his friend Dwight, he wrote patriotic songs for the soldiers, to cheer them in camp and battle. He retained his chaplaincy till the end of the war, faithfully and successfully performing its duties, but employing his leisure in the composition of his "Vision of Columbus." At the end of the war he returned to the profession of law. He was admitted to the bar in 1785; and during the same year he was commissioned by the Congregational ministers of Connecticut in their General Association to prepare a revised edition of Dr. Watts' Psalms. Some of the psalms had been adapted by Dr. Watts to the history and constitution of the British empire, and the clergy desired that the book should be purged of these inaptitudes, and fitted to the condition of churches in the free and independent States of America. For some reason, not plainly stated, Barlow's Psalm Book did not give permanent satisfaction, for in 1797 the General Association requested President Dwight to prepare another revision. As Barlow had meanwhile lost his religious faith, perhaps, the eyes of the clergy were more keen to discover in the Psalter defects of unction or of orthodoxy. It does not appear that his volume was submitted to the inspection of a committee of clergymen as Dwight's was, when the association had learned to be wary. Barlow's version of the 137th Psalm is as follows:

Along the banks where Babel's current flows,
Our captive bands in deep despondence strayed,
While Zion's fall in sad remembrance rose,
Her friends, her children mingled with the dead.

The tuneless harp, that once with joy we strung,
When praise employed and mirth inspired the lay,
In mournful silence on the willows hung;
And growing grief prolonged the tedious day.

The barbarous tyrants, to increase the woe,
With taunting smiles a song of Zion claim;
Bid sacred praise in strains melodious flow,
While they blaspheme the great Jehovah's name.

But how, in heathen chains and lands unknown,
Shall Israel's sons a song of Zion raise?
Oh hapless Salem, God's terrestrial throne,
Thou land of glory, sacred mount of Praise!

If e'er my memory lose thy lovely name,
If my cold heart neglect my kindred race,
Let dire destruction seize this guilty frame;
My hand shall perish and my voice shall cease.

Yet shall the Lord, who hears when Zion calls,
O'ertake her foes with terror and dismay,
His arm avenge her desolated walls,
And raise her children to eternal day.

Miss Calkins, in her "History of Norwich," narrates the following anecdote of Oliver Arnold, who had some celebrity in Norwich for extempore verses. "In a bookseller's shop in New Haven, he was introduced to Joel Barlow, who had just then acquired considerable notoriety by the publication of an altered edition of Watts' Psalms. Barlow asked for a specimen of his talents: upon which the wandering poet immediately repeated the following stanza:

You've proved yourself a sinful cre'tur;
You've murdered Watts, and spoilt the meter;
You've tried the Word of God to alter,
And for your pains deserve a halter.

From 1788 to 1805 Barlow was in Europe, where his pen was active in French politics. As an interlude between such writings as "Advice to the Privileged Orders;" "The Conspiracy of Kings; or, The Alliance against France;" "Letter to the National Convention of France;" "A Letter addressed to the People of Piedmont, on the Advantages of the French Revolution, and the Necessity of adopting its Principles in Italy," he wrote "The Hasty Pudding: a Poem in three cantos," which was first published in New Haven in 1796. The design of the writer is set forth in the first sentence of a letter to Martha Washington, with which he prefaces his poem.

"MADAM—A simplicity in diet, whether it be considered with reference to the happiness of individuals or the prosperity of a nation, is of more consequence than we are apt to imagine."

"The Columbiad," the great work of Barlow, appeared in 1807. It is an amplification of his earlier work, "The Vision of Columbus." The discoverer of America beholds, passing before him, the course of events on the new continent. Those who love simplicity of style, who believe that human history is the history of redemption, and is to terminate in the Kingdom of God, will prefer the earlier work to the more elaborate. Barlow having been appointed Minister to France, went abroad a second time, in 1811, and died while on an excursion into Poland, December 22, 1812.

From the heights of poetry to which we have been conducted by Trumbull, Dwight, Humphreys and Barlow we must descend to the prose of "the father of geography," Jedidiah Morse.

Graduating in 1783, Morse immediately became a teacher in a school for young ladies in New Haven. In the *Connecticut Journal* for December 22, 1784, is this advertisement:

On Tuesday next will be published and ready for sale by the author and at the Book Store of Abel Morse, next door to Mr. Scott's Tavern: *Geography Made Easy: Being a short but comprehensive System of that useful and agreeable Science: Exhibiting in an easy and concise view an account of the Solar System: a general description of the Earth; the Boundaries, Extent, Climate, Soil, Produce, &c., of the several Empires, Kingdoms and States in the World; in which is a particular Description of the United States.* Taken from a

Variety of the best Authors. Illustrated with two correct Maps; one of the World, the other of the United States, together with a number of newly constructed Maps, showing the situation of the Places with regard to each other. Adapted to the Capacities and Understanding of Children. Calculated particularly for the Use and Improvement of Schools in the United States. By Jedidiah Morse, A. B.

This little 18mo was the first book on geography published in America. Retiring from his school in 1785, he was a tutor in the College for a year. We have already read in Stiles' Diary that in October, 1786, he was about to travel through the States to Georgia, "for perfecting a new edition of his geography." Edition followed edition, so that geography became the author's specialty. He was settled in the ministry at Charlestown, Mass., from 1789 to 1820, and suffered many things in defense of orthodoxy during the theological wars of that period. His health becoming enfeebled, he resigned his pastorate in 1820 and spent the remainder of his life in New Haven, residing in the house in Temple street, now occupied by John S. Beach, Esq.

JONATHAN EDWARDS, 2d, was pastor of the White Haven Church and Society in New Haven from 1769 to 1795. He was born in Northampton, Mass., May 26, 1745, and died in Schenectady, N. Y., August 1, 1801. At the age of six years he went with his parents to reside at Stockbridge, where there was but one school, and that common to the children of both the Indian and the white inhabitants; of the latter of whom there were so few that he was in danger of forgetting the English tongue. He so thoroughly learned the language of the Stockbridge Indians, that, as he tells us, all his thoughts ran in their dialect; and though its pronunciation was extremely difficult, the natives acknowledged that he had acquired it perfectly; which, they said, had never before been done by any Anglo-American. He published in his later years a treatise on this language, which led Humboldt to say that if he had not been the greatest theologian, he would have been the greatest philologist of his age. His "Complete Works," with a memoir of his life, were published in two volumes at Andover in 1842, under the superintendence of his grandson, the Rev. Tryon Edwards, D. D. With the exception of the philological treatise mentioned above, they consist of theological treatises and sermons.

BENJAMIN TRUMBULL was pastor of a church in North Haven from 1760 to his death in 1820. As North Haven belonged to and was a part of New Haven till it was constituted a separate town in 1786, we may claim Dr. Trumbull as in some sense a New Haven man. His principal contribution to literature was his "History of Connecticut." The first volume was published in 1797, and republished in 1818 with the second volume. Between these dates he published one volume of a "General History of the United States of America." The plan of this work required two additional volumes, which have never appeared. Another book by Trumbull was entitled, "Twelve Discourses on

the Divine Origin of the Scriptures." Besides these volumes many brochures appeared containing sermons and other products of his pen. His History of Connecticut is a valuable storehouse of material for future historians. He was an ardent patriot in the War of the Revolution. Serving in the army as a chaplain, he went into the ranks to use a musket at the battle of White Plains. Among those who went out to defend New Haven on the 5th of July, 1779, was Benjamin Trumbull. Continuing on horseback, as the enemy marched from Allington to Hotchkiss town he annoyed them on their left flank, firing at their skirmishers as opportunity offered, and galloping forward to some new position. He was equally prompt in the defense of New Haven in 1814, when, as we have recorded in a previous chapter, "one hundred men came from the town of North Haven, under the direction of their reverend pastor, the venerable historian of Connecticut, eighty years of age, volunteered their services," and spent a day throwing up an earthwork on Beacon Hill.

JARED MANSFIELD was born at New Haven in 1759, graduated at Yale College in 1777, and died at New Haven February 3, 1830. He was for several years a schoolmaster in New Haven, and afterward Professor of Natural and Experimental Philosophy at West Point. In 1802 he published "Essays: Mathematical and Physical."

NOAH WEBSTER

graduated at Yale College in 1778, in the same class with Joel Barlow. He became a resident in New Haven in 1798 and was quite active in public affairs, being chosen an Alderman of the city, a representative of the town in the General Assembly, and appointed a Judge of one of the State Courts. Very early in his career he had begun to issue school books, the need of which he had himself felt when teaching. In New Haven he commenced in 1807 the great work of his life, his "American Dictionary of the English Language." Finding his resources inadequate to the support of his family in New Haven, he removed in 1812 to Amherst, Massachusetts, and remained there ten years while working on the dictionary. He returned to New Haven in 1822, went to Europe in 1824 with a view to perfect the dictionary by consulting literary men abroad, and by examining some standard works to which he could not gain access in this country, and carried the book through the press in 1828. Another edition of the "Great Unabridged" was published in 1840, and numerous abridgements of varying bulk prepared by Dr. Webster, or by some of his family, appeared in the interval between 1828 and 1840. The later years of Dr. Webster were occupied in literary work of another kind. In the beginning of 1843 he published "A Collection of Papers on Political, Literary and Moral Subjects." This was a reproduction of political essays which he had given to the press at different times before he came to New Haven; and of an elaborate treatise "On

the Supposed Change in the Temperature of Winter," which he had read before the Connecticut Academy of Arts and Sciences in 1799.

The philological works of Noah Webster have had a larger sale than those of any other author. Of the "Elementary Spelling Book," in its various editions and revisions, not fewer than 41,000,000 copies had been sold before January, 1862, and during the preparation of the dictionary the entire support of the author and his family was derived from his copyright on this little book. In the earlier years of his residence in New Haven, Dr. Webster occupied the Arnold House in East Water street, but the memory of living citizens does not extend back beyond the time when his home was at the corner of Temple and Grove streets in the house now occupied by the family of the late Henry Trowbridge. Dr. Webster died in that house May 28, 1843.

ABRAHAM BISHOP, graduating at Yale College in 1778, became an active politician in New Haven, where he was made Collector of the Port by appointment of President Jefferson. He published in 1802 an octavo volume of 166 pages, entitled "Proofs of a Conspiracy Against Christianity and the Government of the United States: Exhibited in Several Views of the Union of Church and State in New England."

JEREMIAH DAY, graduating at Yale College in 1795, became a tutor in 1798, and was chosen Professor of Mathematics and Natural Philosophy in 1801. On the death of Dr. Dwight, in 1817, he was elected President of the College. While in the professorship he prepared a series of text-books, his "Algebra," appearing in 1814; his "Mensuration of Superficies and Solids," in the same year as the Algebra; his "Plane Trigonometry," in 1815; and his "Navigation and Surveying," in 1817. In 1838 he published an "Inquiry on the Self-Determining Power of the Will; or, Contingent Volition," and a second edition in 1849. In 1841 he published an "Examination of President Edwards' Inquiry as to the Freedom of the Will."

BENJAMIN SILLIMAN, graduating at Yale in 1796, and serving as tutor from 1799 to 1802, was induced by President Dwight to relinquish the profession of law, to which he was looking forward, and accept a professorship of Chemistry, Mineralogy and Geology. These sciences were then in their infancy, and Silliman accepted the appointment with the stipulation that time should be allowed him for preparation. In 1804, he gave a partial course of lectures on chemistry. As soon as he had completed his first full course, in 1805, he sailed for Europe to prosecute his studies in the sciences which he was expected to teach. His earliest publication was a "Journal of Travels in England, Holland and Scotland in 1805-6." This work was in two volumes, and in a subsequent edition, issued in 1820, was enlarged into three volumes. Being one of the earliest accounts of Great Britain by an educated American, it attracted

much attention on both sides of the Atlantic. In 1818, Professor Silliman commenced the *American Journal of Science and Arts*, better known as *Silliman's Journal*. This periodical, which at first was a quarterly, is now issued six times in a year, and shows no abatement of its excellence. In 1820, he published "A Journal of a Journey between Hartford and Quebec," which, like President Dwight's "Travels," increases in interest as the times change and the world changes with them. In 1829 he edited, with notes and appendices, an edition of "Bakewell's Geology," which in the course of ten years passed to a third edition. In 1830 he published a text-book on Chemistry in two large volumes. In 1851 he again visited Europe, after an interval of forty-five years, and spent six months there. The narrative of this journey, replete with scientific observations, was published in 1853, under the title of "A Visit to Europe in 1851," and has passed through several editions.

LYMAN BEECHER was born at New Haven September 12, 1775; graduated at Yale College in the class of 1797; and studied theology under the direction of President Dwight. His publications consisted of a work on "Political Atheism," and numerous sermons and addresses. A collection of his writings in four volumes was made in Boston in 1852.

JAMES MURDOCK was born at Westbrook, Conn., February 16, 1716, and graduated at Yale College in the same class with Lyman Beecher. After being a pastor for thirteen years at Princeton, Mass., he was appointed Professor of Ancient Languages in the University of Vermont at Burlington, whence he removed to Andover, Mass, having accepted the Brown Professorship of Sacred Rhetoric and Ecclesiastical History in the Theological Seminary. In 1828 he removed to New Haven and devoted the rest of his life to study. His principal works are a translation from the German of Munscher's "Elements of Dogmatic History;" a translation of "Mosheim's Institutes of Ecclesiastical History;" an edition of Milman's "History of Christianity," with a preface and notes; "Specimens of Modern Philosophy, especially among the Germans;" a "Literal Translation of the whole New Testament from the Ancient Syriac Version," with a preface and marginal notes; and a translation from the Latin of Mosheim's "Commentaries on the Affairs of the Christians before the Time of Constantine the Great."

He died in 1856, while visiting his son in Columbus, Miss.

JAMES L. KINGSLEY, born in Windham, Conn., August 28, 1778, died at New Haven, August 31, 1852. After having been for a short time a student in Williams College, he removed to Yale College, where he graduated in 1799. During the two years following he was occupied in teaching, first in Wethersfield, and afterward in his native town. In 1805, after being a tutor in Yale College for four years, he was appointed to the newly established professorship

of the Hebrew, Greek, and Latin Languages. He was relieved from giving instruction in Hebrew when a professorship of sacred literature was established in 1824, and in 1831 was further relieved by the establishment of a professorship of the Greek language and literature. In Latin he continued to instruct till he became *Emeritus* in 1851. Professor Kingsley is celebrated in college history for the exactness of his knowledge and the keenness of his wit. His publications, besides text-books, were "A Historical Discourse Delivered by Request before the Citizens of New Haven April 23, 1838. The Two Hundredth Anniversary of the First Settlement of the Town and Colony;" "A History of Yale College" in the *American Quarterly Register*; and a "Life of Ezra Stiles" in "Sparks' American Biography."

SERENO E. DWIGHT, born in Greenfield, Conn., May 18, 1786, died in Philadelphia, November 30, 1850. When between nine and ten years of age, he removed with his parents to New Haven, his father having become President of Yale College in 1795. Graduating at that institution in 1803, he was a tutor from 1806 to 1810. Studying law during the period of his tutorship, he was admitted to the bar and practiced his profession in New Haven from 1810 to 1815. Having in that year experienced, as he believed, a change in the governing purpose of his life, he consecrated himself to the work of the Christian ministry. In 1817 he became pastor of the Park street Church in Boston, where he labored with great zeal and success till 1826, when he was obliged to resign on account of ill-health. Returning to New Haven, he occupied himself in writing the life and editing the works of the elder President Edwards, which were published in 1829. In 1828, he and his brother Henry commenced in New Haven a large school for boys on the plan of the German gymnasium. Afterward Sereno was for a short time President of Hamilton College. He published, besides his "Life of Edwards," a volume on "The Atonement;" a "Life of Brainerd;" and "The Hebrew Wife." A volume of his "Select Discourses," with a memoir of his life, was published after his death by his brother, Rev. W. T. Dwight, D.D., of Portland, Maine.

NATHANIEL W. TAYLOR, a native of New Milford, Conn., graduated at Yale College in 1807, and spent the remainder of his days in New Haven—five years in the study of theology under Dr. Dwight (with whom he resided for two of those years as an amanuensis); ten years as pastor of the First Church and society; and thirty-six years as Dwight Professor of Didactic Theology in Yale College. Dr. Taylor contributed many articles to the periodicals of his day, but was so averse to publication, that with the exception of these contributions and some occasional sermons, he gave nothing to the press during his long life. Since his death four 8vo volumes of his works have been issued; one a volume of "Practical Sermons;" one of "Essays and Discourses upon Select Topics in Revealed Theology;" and two on "The Moral Government of God,"

JAMES A. HILLHOUSE was a son of that James Hillhouse who nobly resigned his seat in the Senate of the United States to devote his life to the preservation of the School Fund of Connecticut, and a grandson of that William Hillhouse whom he thus pictures with his graphic pen. "William Hillhouse, of Montville, who, in the days of steady habits, came up on his Narragansett pacer and took his seat in one hundred and six legislatures (then semi-annual) was a tall, spare man, as dark as the Black Douglass himself, and did not particularly fancy being hit upon his reputed Mohegan cross. Being the Patriarch of the eastern section of the State, and with a relish of wit, he usually had a circle round him at his lodgings. On a certain occasion the *Sachem*, who had often in the State Legislature been opposed in argument to his father, but was then a young member of Congress, happened to call on the old gentleman during the Hartford session, at a moment when he was reading with great glee to the whole *mess* a squib upon the Congressmen from a Philadelphia newspaper. It was at the time a library was talked of for Congress. The gist of the pleasantry lay in the adaptation of a book to the private history of each of the prominent members. The old man read on, chuckling, for some time. At last, looking up, he said drily, 'Why, Jemmy, they don't notice you at all.' 'Read on, father.' He did so, and soon came to the volume to be ordered for his son, namely, 'A History of the Aborigines, to aid him in tracing his pedigree.' For a rarity, the old gentleman was floored. Venerable image of the elder day! well do I remember those stupendous shoe-buckles; that long gold-headed cane (kept in madam's, thy sister's, best closet, for thy sole annual use); that steel watch-chain and silver pendants, yea, and the streak of holland, like the slash in an antique doublet, commonly seen betwixt thy waistcoat and small clothes, as thou passedst daily, at nine o'clock A. M., during the autumnal session. One of his little granddaughters took it into her head to watch for her dear 'Black Grandpapa,' and insist on kissing him in the street as he passed. He condescended once or twice to stoop for her salute; but anon we missed him. He passed us no more, having adopted Church street instead of Temple street on his way to the Council Chamber. One of the earliest recollections of our boyhood is the appearance of that Council Chamber, as we used to peep into it. Trumbull sat facing the door—*clarum et venerabile nomen*—and round the table, besides his Excellency and his Honor, were twelve noble looking men, whom our juvenile eyes regarded as scarcely inferior to the gods. And compared with many who floated up afterward on the spume of party, not a man of them but was a Capitoline. As the oldest councillor, at the Governor's right hand sat ever the Patriarch of Montville (a study for Spagnoletto), with half his body, in addition to his legs, under the table, a huge pair of depending eyebrows concealing all the eyes he had till called upon for an opinion, when he lifted them up long enough to speak briefly, and then they immediately relapsed. He resigned his seat

at the age of eighty, in the full possession of his mental powers. The language of the letter before me is: 'He has withdrawn from public life with cheerfulness and dignity.' He was able at that age to ride his Narragansett from New Haven to New London in a day, abhorring 'wheel carriages.' At his leave-taking, I have been told, there was not a dry eye at the Council Board."

The reader will doubtless be pleased to make acquaintance with William Hillhouse, but we present this picture of him rather for the purpose of introducing the grandson, by whose skillful pen the picture was drawn. James Abraham Hillhouse, the poet, is to be distinguished from James Abraham Hillhouse, a brother of the poet's grandfather, who was a lawyer in New Haven before the Revolution. The poet was born at New Haven, September 26, 1789, and graduated at Yale College in 1808. Upon taking his Master's degree in regular course, he delivered an oration on "The Education of a Poet," which was so much admired that it obtained him an invitation to deliver a poem at the next anniversary of the Phi Beta Kappa Society. In fulfillment of this appointment, he delivered at the College Commencement in 1812, a poem entitled "The Judgment: A Vision," descriptive of the last evening of the expiring world. It was immediately published in New York, and secured the commendation of both American and English critics. After leaving college, Hillhouse spent three years in Boston in preparation for a mercantile career; but the War of 1812 interrupting his plans, he employed his enforced leisure in writing "Demetria," "Percy's Masque," and other dramatic compositions. After the war was ended, he engaged in commerce in the City of New York, and in 1819 visited England, where he published "Percy's Masque." It was at once reprinted in this country and received with great favor on this, as it had been on the other side of the Atlantic. Soon after his marriage in 1822 he retired to a country-seat in New Haven singularly combining rural beauty with proximity to the city, and here spent the remainder of his life in literary labor. Here "Hadad: A Dramatic Poem," was written in 1824, and from this appropriate birthplace it was sent forth into the world in 1825. In 1839, having carefully revised his previously published poems, and added to them "Sachem's Wood" and "The Hermit of Warkworth: A Northumberland Ballad," he published the poems, and three prose compositions with them, in two volumes, entitled "Dramas, Discourses and Other Pieces." The prose compositions were a Phi Beta Kappa oration delivered at New Haven in 1826 on "Some of the Considerations which should Influence an Epic or a Tragic Writer in the Choice of an Era;" a discourse before the Brooklyn Lyceum on "The Relations of Literature to a Republican Government;" and a discourse pronounced at New Haven, by request of the Common Council, August 19, 1834, in "Commemoration of the Life and Services of General Lafayette."

"Sachem's Wood" having the scene of its action laid in the author's native town, claims the

attention of those whose home is in New Haven, not only for its poetic merit, but for its description of the landscape in the midst of which it was produced.

Hillhouse first named his home Highwood, but finding that the name had been previously appropriated, he called it Sachem's Wood in allusion to the soubriquet by which his father was known among his associates in Congress.

His little poem announcing the change, begins:

Farewell to Highwood! name made dear
By lips we never more can hear!
That came, unsought for, as I lay,
Musing o'er landscapes far away;
Expressive just of what one sees,
The upland slope, the stately trees;
Oaks, prouder than beneath their shade
His lair, the valiant Pequot made,
Whose name, whose gorgon lock alone,
Turned timid hearts to demi-stone.
Within this green pavilion stood,
Of, the dark princes of the wood,
Debating whether Philip's cause
Were paramount to Nature's laws;—
Whether the tomahawk and knife
Should, at his bidding, smoke with life;—
Or pact endure, with guileless hands,
Pipes lit for peace, and *paid-for* lands,
With men, who slighted frowns from kings,
Yet kept their faith in humblest things,
The Pillars of our infant state
Shafts, now, in Zion's upper gate.

It closes with these lines:—

The *Sachem's* day is o'er, is o'er!
His hatchet, buried oft before,
In earnest rusts: while he has found
Far off, a choicer hunting ground.
Here, where in life's aspiring stage,
He planned a wigwam for his age,
Vowing the woodman's murderous steel
These noble trunks should never feel;
Here where the objects of his care,
Waved grateful o'er his silver hair;
Here, where as silent moons roll by,
We think of Him beyond the sky,
Resting among the wise and good,
Our hearts decide for *SACHEM'S WOOD*.

In *Sachem's Wood* the poet does not attempt to rise higher than the two rocks, which guard our city on the east and the west, which he calls respectively Sassacus and The Regicide, but in "Hadad" he soars to the clouds. It is a highly-wrought dramatic poem employing the agency of the supernatural. The fallen angel who in the imagination of Milton wages war with God and the hosts of heaven, here hides himself in a heathen prince, who seeks the love of a Hebrew maiden, Tamar, daughter of Absalom and granddaughter of David. Hillhouse died January 4, 1841, less than two years after the publication of his collected works.

JOSIAH W. GIBBS, born in Salem, Mass., April 30, 1790, graduated at Yale College in 1809 and was tutor from 1811 to 1815. In 1824 he was appointed Professor of Sacred Literature and assigned to the theological department of the college. His principal publications are a translation of "Storr's Essay on the Historical Sense of the New Testament;" a translation of "Gesenius'

Hebrew Lexicon of the Old Testament;" "Manual Hebrew Lexicon," abridged from Gesenius; "Philological Studies;" "Latin Analyst."

Professor Gibbs also contributed to periodicals many important papers on philology and criticism.

CHAUNCEY A. GOODRICH, born in New Haven, October 23, 1790, graduated at Yale College in 1810, and was tutor from 1812 to 1814. He was ordained pastor of a church in Middletown in 1816, but resigned the office in 1817 to accept the Professorship of Rhetoric and Oratory in Yale College. He continued in this position till 1839, when he was transferred to the chair of Pastoral Theology in the Theological Department. While a tutor he translated the "Greek Grammar" of Hachenberg, which was published in 1814. This he subsequently revised and enlarged with much original material, and published under his own name. It was often reprinted, and for many years was extensively used. About the year 1832 he published "Latin Lessons and Greek Lessons" in which the precepts of grammar are throughout accompanied with practical exercises—a method afterward applied by Ollendorf to modern tongues. He wrote many articles for the *Christian Spectator*, and was editor of the Quarterly Series of that periodical for several years. He was also the editor of several editions of the Dictionaries of Noah Webster, who was his father-in-law. In 1852 he published a large octavo volume entitled "Select British Eloquence: embracing the best Speeches entire of the most eminent Orators of Great Britain for the last two Centuries, with Sketches of their Lives, an Estimate of their Genius, and Notes critical and explanatory."

DENISON OLMSTED graduated at Yale College in 1813, and was appointed tutor in 1815. In 1817 he received the appointment to a professorship in the University of North Carolina, where he distinguished himself by proposing and executing the first State geological survey ever attempted in this country. In 1825 he was appointed Professor of Mathematics and Natural Philosophy in Yale College, and from that time, till his death in 1859, he was a resident of New Haven. In 1831 he published the first volume of a treatise on "Natural Philosophy," which in the next year was followed by the second volume. This work, which was designed as a college text-book, and a "School Philosophy" abridged from it, had a very large sale. In 1839 he published "An Introduction to Astronomy," designed as a text-book for the students of Yale College, and in 1840 a "School Astronomy." In 1842 appeared his "Rudiments of Natural Philosophy and Astronomy," and not long after his "Letters on Astronomy." Professor Olmsted also contributed many articles to *Silliman's Journal* and other scientific journals.

HENRY E. DWIGHT, born in New Haven in 1797, died in 1832. He published, in 1824, "Journal of a Tour in Italy in 1821;" and in 1829, "Travels in the North of Germany in 1825-6."

LOUISA CAROLINE (HUGGINS) TUTHILL, a native of New Haven, was born in 1799, and was married to Cornelius Tuthill (Y. C., 1814) in 1817. Her husband was a person of literary taste, and editor for two years of a periodical called *The Microscope*, in which the poet Percival was first introduced to the reading public. After the death of her husband in 1825, Mrs. Tuthill became an anonymous contributor to magazines. She first appeared under her own name in a volume of selections entitled "The Young Lady's Reader," published in 1839, and soon followed by a collection of tales and essays under the title of "The Young Lady's Home." Her next production consisted of a series of tales for juvenile readers. They are entitled "I will be a Gentleman;" "I will be a Lady;" "Onward! right Onward;" "Boarding-school Girl;" "Anything for Sport;" "A Strike for Freedom; or, Law and Order;" each occupying a volume of about one hundred and fifty pages. They were published at different times between 1844 and 1850. In 1852 Mrs. Tuthill commenced a new series for the same class of readers with a tale entitled "Braggadocio," which was followed by "Queer Bonnets," "Tip Top," and "Beautiful Bertha." Her third series, with the running title "Success in Life," included "The Merchant;" "The Lawyer;" "The Mechanic;" "The Artist;" "The Farmer;" and "The Physician," in six volumes. These were followed by many other stories for the young. Mrs. Tuthill's books of this kind are admirably adapted to their purpose and have had a very large circulation, two of them having reached the fortieth edition. Besides her books for the young, Mrs. Tuthill wrote a novel entitled "My Wife;" "The History of Architecture;" "The Nursery Book," a volume of counsel to mothers on the care of infants; and many others. She compiled a volume of selections from De Quincey and three volumes of selections from Ruskin. It is said that the appellation, City of Elms, was first given to her native city by this writer. She spent the later years of her life in Princeton, New Jersey, but was buried with her kindred in New Haven.

JAMES G. PERCIVAL, a native of Berlin, Connecticut, having graduated at Yale College in 1815, studied medicine and received the degree of M. D. in 1820. In 1821 he published at New Haven a duodecimo volume of 346 pages entitled "Poems," containing the first part of "Prometheus" and a few minor pieces. In 1822 he published an "Oration delivered before the Connecticut Alpha of the Phi Beta Kappa Society;" and the second part of "Prometheus." In the same year he issued at Charleston, S. C., the first number of "Clio," consisting principally of verse; soon afterward the second number, all verse; and later in the same year the first and second numbers of "Clio" in one issue (New Haven, 1822), a miscellany of prose and verse. In 1823 a collection of his "Poems" appeared in New York in one octavo volume, which was republished in London in 1824 in two volumes. In 1824 he received the appointment of

assistant surgeon in the United States Army, and was detailed to West Point as Professor of Chemistry in the Military Academy. In a few months he resigned and was appointed surgeon in connection with the recruiting service at Boston. In 1826 he published at Boston his poem, "The Mind," delivered before the Connecticut Alpha of the Phi Beta Kappa Society. In 1827 he removed to New Haven, which continued to be his residence till his death. In the same year he published the third part of "Clio: a Poem," and commenced a revision, by a comparison with the original French of the English version—adding notes of his own—of Malte-Brun's geography, which was completed in 1832. In 1827–28 he assisted in the preparation of the first half, more especially of the scientific words, of the first quarto edition of Webster's Dictionary. Having been appointed in 1835 to make, in conjunction with Prof. Charles U. Shepard, a mineralogical and geological survey of the State of Connecticut, he published in 1842 his "Report on the Geology of Connecticut." In 1843 he published in New Haven "The Dream of a Day: and other Poems." In 1853 he was engaged by the American Mining Company to survey their lead-mining region in Wisconsin. In 1854 he was appointed by the Governor of Wisconsin, State Geologist, and continued in this office till his death. His first report was published in 1855, and the second was left nearly ready for the press. He died at Hazle Green, Wisconsin, May 2, 1856.

He accumulated more than 10,000 books in a library building in Park place, south of George street, more unique than elegant in its appearance. They were offered *en masse* by his executor for \$20,000, but finally were sold by Messrs. Leonard & Co., at Boston, in April, 1860, and scattered to the corners of the earth.

EDWARD DEERING MANSFIELD was born at New Haven, in 1801. Professor of Constitutional Law in Cincinnati College, Ohio. Author of "Political Grammar," 1835; "Legal Rights of Women," 1845; "Life of General Scott," 1846; "History of the Mexican War," 1848; "American Education," 1850; "Treatise on Constitutional Law," 1835; "Memoirs of Daniel Drake," 1855, with B. Drake; "Cincinnati in 1826."

LEONARD BACON, having graduated at Yale in 1820, and spent the following four years at Andover Theological Seminary, was installed pastor of the First Church in New Haven, March 9, 1825, in which office he remained till his death, December 24, 1881, though released from service in 1866. A catalogue of his publications, to the number of eighty-seven, may be found in the Congregational Year Book for 1882. Some of his more bulky productions are: "Select Practical Writings of Richard Baxter, with a Life of the Author," 1831; "Manual for Young Church Members," 1833; "Thirteen Historical Discourses on the Completion of Two Hundred Years from the Beginning of the First Church in New Haven," 1839; "Slavery Discussed in Occasional Essays from 1833 to

1846," 1846; * "Christian Self-Culture," 1862; "Genesis of the New England Churches," 1874.

DAVID FRANCIS BACON, graduating at Yale College in 1831, published in New Haven in 1833, "Memoirs of Eminently Pious Women of Britain and America." In 1836 he sent to the press "The Lives of the Apostles of Jesus Christ, Drawn from the Writings of the Early Christian Fathers, and Embracing the New Testament History. Illustrated with Ample Notes, Historical, Topographical, and Exegetical." In 1836 he received the degree of M. D. Though some smaller publications were given to the public, he does not seem to have devoted himself to literature in the later years of his life with as much diligence as in the first four years after he received his first degree.

DELIA BACON, a sister of the preceding, and of Rev. Dr. Leonard Bacon, issued in 1831: "Tales of the Puritans," a volume of 300 pages, containing three stories, "The Regicides," "The Fair Pilgrim," and "Castine;" and in 1839, "The Bride of Fort Edward: a Dramatic Story, Founded on an Incident of the Revolution." The incident referred to is the murder of Jane McCrae by a party of Indians, who were commissioned by her betrothed lover, a British officer, to bring her safely within the British lines. In 1857, Miss Bacon issued in London; "Philosophy of the Plays of Shakspeare Unfolded. With a Preface by Nathaniel Hawthorne." In the *Atlantic Monthly* of January, 1863, Hawthorne relates the story of his own connection with this work, which he had never read either before or after he had kindly aided Miss Bacon to bring it before the public. He knew her as a woman of genius, but did not know that her intellect had become disordered. The publication of this book revealed the condition of the author, and she spent the short remainder of life in an asylum.

JOHN S. C. ABBOTT, a native of Brunswick, Maine, and a graduate of Bowdoin College, in its celebrated class of 1825, became a resident of New Haven in 1861, being installed pastor of Howe street Church in June of that year. He retired from that pastorate in 1866 to devote himself entirely to literary work. Some years later he became acting pastor of the Congregational Church in Fair Haven East. Before his removal to New Haven, he had written many books, of which the earliest was "The Mother at Home," which has been translated into nearly all the languages of Europe, and printed in all of the four quarters of the globe. His "History of Napoleon Bonaparte" has been much criticized and much read. His series entitled "Kings and Queens; or, Life in the Palace" has also had a large sale. During his residence in New Haven he wrote his "History of the Civil War in America," and a series of American Biographies.

* It was to the above collection of tracts, entitled *Slavery Discussed in Occasional Essays*, that President Lincoln attributed his "first convictions of the enormity of slavery."

MARTHA DAY, daughter of President Day, of Yale College, was born in 1813 and died in 1833. She attained great proficiency in mathematics and the languages, and wrote poetry of uncommon merit. In compliance with the wishes of many friends, a collection of her "Literary Remains," with memorials of her life and character, was published at New Haven in 1834.

WILLIAM T. BACON, a native of Woodbury, Connecticut, resided in New Haven several years before he entered college, and again several years at a later period of life. He graduated in 1837, and after a course of theological study, was ordained to the ministry. After a few years, ill-health compelled him to retire from the pulpit. At this period of his life he came to New Haven and engaged in literary and chiefly editorial work. While editor of the *New Englander*, he established the *Morning Journal*, and continued in it three years. He afterward removed to Derby, where he became proprietor and editor of the *Derby Transcript*. There he spent the last years of his life, and there he died May 18, 1881. His grave is in the Grove street Cemetery in New Haven. His literary tastes were marked while he was in college, and soon after his graduation, he issued a collection of poems, which was received with so much favor that it reached a third edition in 1840.

From one of the minor pieces in this volume, entitled "East Rock in Autumn," we give a single stanza:

There spreads the forest silent as the dead !
There rolls the ocean solemn and sublime !
There lies the city in the distance spread ;
So distant that the ear hears not the chime,
Which from the steeples all the valley fills,
And sometimes rolls out here to these far hills.

In 1880, he printed for distribution among his college class-mates, but not for publication, another collection of poems, which he entitled "Dawn and Sunset." As a companion to the piece, written by him, which was sung at the Centennial Celebration in 1838, the following is copied from "Dawn and Sunset:"

How peaceful smiled that Sabbath's sun,
How holy was that day begun—
When here, amid the dark woods dim,
Went up the Pilgrim's first low hymn !

Hushed was the stormy forest's roar,
The forest eagle screamed no more ;
And far along the blue wave's tide,
The billow murmured where it died.

The young bird cradled by its nest,
Its matin symphony repressed,
And nothing broke the stillness there
Save the low hymn or humbler prayer.

The red man, as the blue wave broke
Before his dipping paddle's stroke,
Paused, and hung listening on his oar,
As the hymn came from off the shore.

Look now upon the same still scene,
The wave is blue, the turf is green ;
But where are now the wood and wild,
The pilgrim and the forest child ?

The wood and wild have passed away,
Pilgrim and forest child are clay ;
And here upon their graves we stand,
The children of that Christian band.

O ! while upon this spot we stand,
The children of that Christian band—
Be ours the thoughts we owe this day,
To our great fathers passed away.

By prayer and contemplation led,
Be ours by their brave spirits fed ;
Be ours their efforts, and their aim,
Their truth, their glory, and their name !

EBENEZER P. MASON, a native of Washington, Litchfield County, Conn., graduated at Yale College in 1839. He was a young man of extraordinary promise, and but for his speedy death would have distinguished himself in both science and literature. He was the author of "An Introduction to Practical Astronomy;" and after his death Professor Olmsted published, in 1842, "Life and Writings of Ebenezer Porter Mason," in which the editor speaks of Mason as uniting in the finest proportions the qualities of the artist, the mathematician, and the poet." Some of the poetry in the volume justifies the epithet of poet applied to him by his biographer.

JAMES HADLEY, graduating at Yale College in 1842, became tutor in 1845; assistant professor of Greek in 1848; and, when President Woolsey resigned the professorship of Greek in 1851, Hadley was appointed to succeed him. He died in New Haven November 14, 1872, aged 51 years. He published a Greek Grammar in 1866, and an abridgment of the same in 1869. After Professor Hadley's death, two productions of his pen were published—one with a preface by President Woolsey, and the other with an introduction by Professor Whitney. The first is entitled "Introduction to Roman Law." It is commended by President Woolsey as admirably fitted to initiate the student into the mysteries of that store-house of legal learning, to impart great precision and accuracy of definition, and to broaden the foundation of legal studies generally. The other is entitled "Essays, Philological and Critical. Selected from the Papers of James Hadley, LL.D." In the preface to the essays, Professor Whitney bears this testimony: "In extent and accuracy of knowledge, in retentiveness and readiness of memory, in penetration and justness of judgment, I have never met his equal. Whatever others may have done, he was, in the opinion of all who knew him most fully, America's best and soundest philologist; and his death in the maturity and highest activity of his powers is a national calamity—a calamity to the world of scholars."

New Haven has many contributors to literature who have not yet finished their work; but those whose names have been mentioned are all among the dead. Many more might be mentioned who have wrought in periodicals and pamphlets; but these have produced bound volumes of greater or less magnitude and in various departments of literature.

CHAPTER XI.

THE FINE ARTS.

BY PROFESSOR J. M. HOPPIN.

IF the situation of a place have anything to do with its artistic development, the site of New Haven cannot be without its influence. There is something striking to the eye of a traveler as he approaches New Haven from almost any direction. The wide plain on which the town is built, opening to the sea, and backed by the wall of East and West Rocks, not indeed lofty, but boldly abrupt, like Salisbury Crags at Edinboro; the winding streams which flow through the plain; the tall elms fairly embowering the city itself in foliage; the avenues of maples, which in autumn are arrayed in scarlet and gold—this scenery calls for whatever is fit in architectural adornment. Strangers from the Old World, and from the university towns of England, have frequently praised the quiet and half rural beauty of our Puritan city seated amid its elms.

Art, as well as wealth, centers in cities. New Haven and Hartford, up to within a short period the capitals of Connecticut, have been the chief seats of whatever of art cultivation there has been in so industrial a State; but as Hartford has absorbed the civil power, in all probability New Haven will become more and more the home of art, as it is already of learning. Here is the College, where the arts and sciences are supposed to flourish, and, in the views of higher education that now prevail, comprehending not only the education of the reasoning powers but of the imagination and taste, forming the soil of a genuine artistic culture which shall exert its influence for good upon national character.

The architecture of New Haven in past times mingled the sober colonial with a more ambitious classic style. But there is a change, and in some respects an improvement going on, in the introduction of more picturesque types of architecture. The first attempt at public building was the old College Hall, erected in 1718 by an English architect, with its prim dormer-windows and belfry and its conspicuous clock-face, as if to remind students of the words of an Italian scholar, "Time is my estate." Then followed South Middle and the other college buildings, now somewhat venerable for age, but remarkable for nothing else than a parsimonious economy of space and ornament. The new college edifices, especially Durfee, have more claims to academic architecture, and when all the contemplated buildings are completed, the college inclosure will resemble an Oxford quadrangle on a larger scale.

The State House on the Green, characteristic as a feature of New Haven for the last half century, though its occupation be now gone, was designed by Ithiel Towne, an architect of learning and taste, after the plan, it is said, of the Temple of Theseus at Athens; and though a windowed edifice com-

posed of brick and stucco, and without peristyle, is a good classic model. New Haven church architecture, varied by ecclesiastical tastes, and ranging from plain Puritanic to modern florid styles, is not of a marked character. The general ornamentation of the city owes much to Mr. Aaron N. Skinner, a former mayor (1850-54), who left the impress of his taste—particularly upon the Green, the old cemetery, and Hillhouse avenue—not perhaps so much in what he himself did, as in giving an impulse to the spirit of improvement, and awakening a desire in the people to harmonize the outward aspect of their city with its intellectual reputation.

In regard to the arts of painting and sculpture, the first gleam of anything like art that visited New Haven was through the influence of Bishop Berkeley, who, following out his dream of founding a seat of learning in the Western World, brought with him, among others, to America a young artist named John Smybert, who had studied under Vandyke, and from whom Benjamin West first received an impulse in his career as a painter. Smybert lived for a while in New Haven, and his large picture of "Dean Berkeley's Family," painted in 1750, came, in 1807, into the possession of Yale College—which work, if not of the highest merit, is respectable, and strong in its portraiture; and, at the time, was undoubtedly the best work of art in America. It was painted while the Dean was living at Newport, R. I., and represents him standing in his clerical dress holding a volume of Plato; his wife, with a child, in her arms; a young lady, Miss Handcock; Sir James Dalton writing at a table. Mr. James, Mr. Moffat, and the artist compose the remaining figures.

But Smybert was the forerunner of greater American-born painters, such as Trumbull, Copley, Leslie, Stuart, and Allston. The name of Trumbull, among the foremost of American artists of any time, belongs in a peculiar manner to Connecticut and New Haven.

Colonel John Trumbull was the son of Governor Jonathan Trumbull, the "Brother Jonathan" of revolutionary memory. He derived his ardent patriotism, it may be, from his father, but his artistic instincts seem to have been peculiarly his own. He was graduated at Harvard in 1773, and early manifested a decided bent for art; and it is worthy of note that, as an artist, he was superior to the poets of that day of struggle and privation, showing that art is a hardy plant and can grow in any soil. Trumbull joined the army and served for two years, 1775-76, as *aide-de-camp* of Washington; and during the war he went to London,

where, though suffering imprisonment for a while as a spy, he pursued his art studies under Benjamin West. Before he was twenty-five he had painted sixty-eight portraits and small miscellaneous pictures. He was smitten with the idea of becoming the painter of the Revolution—of the heroic period of our history—an idea that Polygnotos had, who painted the Battle of Marathon in the Pœcile at Athens, and the Siege of Troy in the Lesche at Delphi. "My son, Connecticut is not Athens," his father said to him, in order to repress his artistic enthusiasm, but he determined to make it so. While in London he produced his first historical picture: "The Death of General Warren at the battle of Bunker's Hill." Many of the portraits for other historical pictures were studied while abroad in England and Paris. In 1789 he returned to America, where he completed his series of portraits and his preparation for further achievements. He spent a great deal of time and effort in traveling through the country, where journeying was slow and laborious, in order to secure correct likenesses from life of distinguished revolutionary characters. In 1816, thirty years after he had painted the "Battle of Bunker's Hill," he was authorized by Congress to execute for the Government other historical pieces. Those which he completed were: "The Death of General Montgomery at Quebec," "The Capture of the Hessians at Trenton," "The Declaration of Independence," "The Death of General Mercer at the Battle of Princeton," "The Surrender of General Burgoyne," "The Surrender of Lord Cornwallis," and "The Resignation of General Washington."

These valuable paintings, made familiar now through good engravings, put him at the head of American historical painters, and made for him a European reputation. He became a witness of no mean authority in historic events. He himself saw the battle of Bunker's Hill, while an adjutant of the first regiment of Connecticut troops stationed at Roxbury; and in his picture he gives to General Putnam that leading prominence in the fight that rightly belongs to him. This painting is justly celebrated. It has unity of motive, dramatic power, and, above all, the stamp of truth and reality. There is also a touch of moral heroism and pathos in the act of the English officer in warding off the bayonet stroke from Warren. "The Death of Montgomery," is a still better painting, and has wonderful fire and action, though perhaps the criticism that was made by Canova of Benjamin West's historical pictures, might be made of his pupil Trumbull's pictures, that "he groups, but not composes." The drawing of these pictures is good (for the time, excellently so), and though their tone is a little hard and flat, there is immense spirit and vigorous life in them. They are well-balanced and harmonious in their coloring. The smaller portraits in the gallery of the New Haven Art School—where Trumbull is far better seen than in the Capitol at Washington, just as Delacroix, the French painter, is best appreciated in the recent collocation of his pictures at the *Ecole des Beaux Arts*—are invaluable, not only in their historic worth,

but from vividness of expression and their clear light caught from life. They are more than miniatures, having, like Greek cut gems, marks of greatness in a small compass. The portrait of Alexander Hamilton, of a larger size, might be particularly mentioned for the life and mind that shine in the countenance. Trumbull's full-length portrait of Washington is undoubtedly the best military portrait of Washington; and the writer, when a school-boy, once heard the old artist in his sharp way, say in explaining this picture: "There you have Washington not in his town-clothes and a set of false teeth, but as he looked on the battle-field in his regimentals. Don't be deceived by other portraits of General Washington, this looks just like him." In the picture of the "Declaration of Independence," the monotony of its composition has been criticised in the popular name of "shin-piece," but it has its peculiar merits also: truth, dignity and earnestness; the solemnity of a great occasion; and the portraits of illustrious Americans with the costume of the time realistically rendered. Trumbull began late in life a new series of copies of his historical paintings on a reduced scale, and these, with many other pictures—original portraits, ideal figure-pieces, and copies from the old masters—that remained unsold, amounting in all to fifty-four, he gave in 1831 to Yale College, as partly a gift and partly as the source of a life-annuity. It might be called a priceless gift, since the money that he received by no means represents their value. He did this while living with his friend and relative, Professor Silliman, in New Haven where he spent his last days, and where he was buried, linking his artistic name and fame with our city. His pictures, removed from the small building erected for them to the gallery of the new Yale Art School building, form the most interesting feature of that collection, illustrative of the beginnings and history of American art.

As to other New Haven artists, it may be said that some who have attained eminence, like Kensett and Huntington, though they did not reside long in New Haven, were either born or educated here; in fact touched New Haven on their way to fame.

Professor S. F. B. Morse's brilliant success as an inventor has outshone his artistic career, but while a student of Washington Allston, he promised well and did some good work as a portrait painter. When he was living in New Haven, a young artist struggling for his livelihood, he gave Yale College five hundred dollars, a princely gift, considering the circumstances, and one in harmony with his liberality later in life, when he presented to the college seven thousand dollars, to secure for it Washington Allston's painting of "Jeremiah in Prison." Daniel Huntington was his pupil.

John F. Kensett studied the engraver's trade at New Haven, which town, it may be said, has always been noted for good engravers. Kensett was a special friend of Thomas P. Rossiter, who was born in New Haven, and who, though deficient in some points, especially color, and, while an industrious painter, was careless and hasty, yet had genius, and had he been able to concentrate his

effort, might have won renown. Nathaniel Jocelyn is more truly a New Haven artist than any of these, having been born and lived here all his life. He was much of his life involved in business troubles and real-estate difficulties, being led into them by his public spirit and desire to beautify his native city. But he left many paintings, especially portraits, of merit, once receiving a gold palette for the best portrait exhibited in the State. Colonel Trumbull, who was usually curtly critical, gave him praise as a young painter. His works are marked by refinement, and he will be remembered for his enthusiasm, his simplicity of character, his graphic power in conversation, made racy by his long experience of art and artists and his love of freedom. He is closely identified with the earliest beginnings of the Yale Art School.

The name of Flagg is another thoroughly New Haven artistic name. Mayor Flagg, of New Haven, was the brother-in-law of Washington Allston, and the artistic instinct seems to have descended to his children and children's children. His oldest son, Henry C. Flagg, was born in New Haven in 1812. He showed skill as a painter of marine views and also of animals; but his life was chiefly devoted to the naval service. George W. Flagg, the second son, began his career as a painter with extraordinary promise of success. He was a pupil of Washington Allston in Boston, and it was thought that he would eclipse his famous relative, and stand at the head of American art. His portrait of Dr. Channing is, even now, the classical likeness of that great man. He also painted an ideal head of "Hester Prynne," and other pieces, more purely of the imagination, in which the coloring aims after that of the Venetian school.

Jared B. Flagg, another brother, has been known chiefly as a portrait painter. But as an active clergyman of the Episcopal Church, his whole mind has not been given to art, although he has taken a deep interest in art matters, and particularly in the formation of the Yale Art School Picture Gallery. His own painting of "Angelo and Isabella" won him an election to the National Academy. His son, Montagu Flagg, born in 1843, and educated in Paris, continues the artistic prestige of this highly gifted family. Charles Noel Flagg, his younger brother, educated also at Paris, is a painter who promises not to let the family reputation, that seems to belong specially to New Haven, die out.

The brothers John and George H. Durrie should also be mentioned as New Haven artists, pupils of Jocelyn, the last of whom has distinguished himself as a painter of farm scenes, and his well-known picture of "Winter in the Country," hangs now in the Yale Art Gallery.

George Edward Candee, the water-colorist; Wales Hotchkiss, pupil of George Flagg, and his friend, Charles Hine, who died in 1871; J. E. Wylie the flower painter, S. S. Osgood the portrait painter and others who might be noticed, have claims to be considered New Haven artists, and as belonging to a group of painters who here received professional impulse and education. And

although a New Haven school of painting can hardly be claimed to have been founded, yet it may be seen that New Haven has heretofore proved to be a fruitful soil for painters, has at least not been unpropitious to creative art; and that though science has overshadowed art, yet as the seat of the Yale School of Fine Arts, New Haven may be expected to become one of the country's chief art centers.

Before speaking of the Art School, I would say a word upon the much less developed branch of sculpture. There is not indeed very much to be said of New Haven art in this form, though there are some pieces of modern sculpture in the city, like the "Abdiel," by Greenough, belonging to Professor Salisbury, and the "Ruth," by Lombardi of Rome, presented by W. S. Thompson, Esq., of New Haven, in the alcove of the Art School gallery, Launt Thompson's bronze statue of Abraham Peirson (fortunately, perhaps, an ideal portrait, as no authentic likeness of the first Yale College President exists), standing in the college grounds, a fine work by a man of genius, was the first of such public monuments that will, it may be hoped, adorn the city where so many men of mark, not only in letters, but science and industry, have lived.

There is however, one rude group in the same alcove with the "Ruth" which shows that the instinct of sculpture has not been wholly wanting. Hezekiah Augur, son of a New Haven carpenter, and born 1791, grew up a mild-tempered and shy boy, much given to "carving and cutting," and not at all to the dry-goods business, or any other in which his careful father wished him to engage. Harrassed and wearied out by trying to be what he could not be, he passed his life in small business ill-successes and struggles with fortune. Sensitive and timid, he shrank from men, and his sole amusement was in carving. Professor Morse urged him to change his wood for marble carving; and he made a marble head of Washington, a figure of Sappho, and a bust of Chief Justice Ellsworth that is now in the room of the Supreme Court at Washington; but his most elaborate work was the statuette group of "Jephthah and his Daughter," which I spoke of as standing in the alcove of the south gallery of the Yale Art School. These figures were carved without model, and are quite rough in technique, but are remarkable considering the circumstances under which they were made, and that their author had received no artistic education, and only practiced wood-carving. They are not mechanical figures or copies of other statues, but are wrought from an original conception. They have expression, and both in the subject and its treatment show that the artistic faculty was present, which might, if rightly cultivated, have produced greater works. In 1833, Mr. Augur was made an honorary member of the Alumni of the college, and died in 1858. He may be called the first Connecticut sculptor in point of time, though far excelled by Bartholomew of Hartford, whose story had also in it something of the pathetic, but who was more heroic in nature and fruitful in execution.

I have now but to speak of the art of music, to which some critical attention has been paid of late years in New Haven.

As to New Haven musical societies, there have been several, which, if not all of them entirely successful, have contributed to the better culture of the people in this noble art.

In 1847 the Musical Association was formed, continuing four seasons with varying fortune, artistically and financially.

In 1858 the Mendelssohn Society was instituted, and lasted ten years. Dr. Gustave J. Stoeckel, the instructor of music in Yale College, became its president and conductor, and the greatest musical achievements of the city were undoubtedly made by it. Besides the great oratorios, the "Seasons," by Haydn, was brought out twice in 1863, and once in 1865, with splendid success. The society falling into other hands, attempted one new oratorio in the next four years, viz.: "Eli," by Costa, an inferior work, after which it gradually died out.

In 1867, the Philharmonic concerts were established, which were well sustained for one season, but were given up after the first concert of the second season for want of support.

Several futile efforts have since been made to create a new society such as the Mendelssohn was or promised to be. It might be stated that, in 1877, the New Haven Oratorio Society brought out the "Elijah."

A new enterprise of Philharmonic concerts has met with unexpected encouragement for one season (1885), and there is much hope for it in the future.

The Beethoven Society in Yale College was established in 1850, and the Yale College Glee Club in 1869. The arrangements for male voices in the college choir, introduced by Dr. Stoeckel in 1853, have been used ever since. The new college chapel was finished in 1876, and its magnificent organ, remarkable both for power and sweetness, which was largely the gift of Mrs. Professor Larned, has aided to make the organ service of Battell Chapel a beautiful one. It might be added here as an historical item, that the first organ in New Haven was placed in Trinity Church soon after the close of the Revolutionary War; and an Englishman by the name of Salter was employed as organist at a yearly stipend of ten guineas. Soon after the erection of the North Church an organ was placed in it, chiefly by the exertions of Daniel Read, a musician of remarkable talent, who had charge of the music of that church as his friend Salter had at Trinity.

The names of Dr. Anderson, Mr. Ensign, Mr. J. Hubbard, Professor Wehner, Mr. Charles Elliott, and Mr. J. Sumner Smith deserve honorable mention with others, in the history of efforts to develop a musical standard of taste in our city.

Dr. Stoeckel, to whom a prominent place is due in any account of the progress of the musical art in New Haven, has kindly furnished me with the following brief remarks, which, coming from an

accomplished and learned teacher, will be read with pleasure and profit:

"Once it was supposed that music was merely a combination of sounds for the purpose of pleasing our sensibilities. No thought or sentiment to dictate these combinations was deemed necessary. Attempts were made to imitate the phenomena of nature, like the lightning and thunder; the musicians delighted also in descriptions of battles and other questionable practices. On such foundations music could never stand. Happily now music is almost universally acknowledged to be the language of the soul; and in the expression of its feelings, sentiments and passions, no other art affords so appropriate a medium.

"Defining music in this latter sense, a careful observer must acknowledge the great progress New Haven has made in this art during the last forty years. Particularly is this true in the appreciation of good classical concerts, and in the cultivation of the best music in the home circle in piano and organ-playing. By these means our community can justly be proud of having acquired that refined taste without which classical symphonic concerts could never be enjoyed.

"Church music has not obtained so high a degree in the scale, although it has risen somewhat from the musical zero where it stood forty years ago. Organ-playing and organ music make a favorable exception. A fine voice is still mistaken for fine singing, or even for fine music, and it may safely be asserted that the modern quartette choir is at the bottom of all the delay in the advancement of church music. The choir should, of course, be the leader in religious musical exercises, but the congregation must take part in it if it shall become worship. The particular desires of the singers, or even of the leader, must be subordinated to the devotional demands of the service; and only when that is done will the congregation be apt to join in worship in the musical portion of it.

"There are two reasons, besides the one already named, why congregational music does not make progress in our churches. The first is the ever-recurring repetition of the very few really good tunes with which everybody is familiar; and the second is bringing into the Lord's house tunes and music with secular and even often immoral associations.

"The remedy is simple. When the large oratorio societies were in prosperous existence, they owed their life and success to true enthusiasm and faithful training, aided by the practice of the best music and much time given to the study of music. Singing by the people in the churches can be introduced successfully only by equally earnest means. When musical committees of the bodies ecclesiastic can be made to see and understand this, then, and then only, will church music make real improvement.

"When all the musical capacities in our city shall be again united under competent management and leadership, then may New Haven regain the position she once had in the day of the Mendelssohn Society."

It remains for me to say a word respecting the Yale Art School, which constitutes, and in the future will probably more and more form, the center of whatever development of art there may be in New Haven. And, judging from the past, the promise is both rich and sure.

Various influences, small when viewed separately, but important in their combination, tended to the final establishment of this institution.

This school may be regarded as the first regular art school ever founded in this country, certainly in connection with a university of learning; and it antedates the School of Art at Oxford, England, which has been made illustrious by the name of John Ruskin. Singularly enough the influence of Trumbull, and more directly of the Trumbull gallery belonging to the college, formed the germ of the Yale Art School. The Trumbull gallery had already given a name and place to the idea of art in the college and the community. In 1858 there was a loan exhibition of pictures at the Trumbull gallery, largely attended, that awakened great enthusiasm, and brought in a considerable sum of money; and a course of art lectures was given by gentlemen of culture, among them Professor Salisbury and Donald G. Mitchell, of New Haven, which also served to strengthen the desire that there should be a distinct school of art established; the way for this, however, was not opened until the year 1863, when Mr. Augustus Russell Street, a citizen of New Haven, made the munificent offer to build an art building at his sole expense. This structure, now an ornament to the college and city, was completed in 1866, its architect being Mr. P. B. Wight, who was the architect of the Academy of Design edifice in New York. The building, which cost originally \$175,000 (but a fraction of what Mr. Street gave to the college), is in the style of revived Gothic and is built of Portland stone, with yellow Ohio-stone ornamentations. Its principal entrance is upon Chapel street, and this is significant of the fact that Mr. Street intended to have his gift, and the Art School which was soon afterwards formally constituted as a department and faculty of the college, to be also a source of education to the community and the people of New Haven. The terms of his gift, which embraced something more than a gallery or museum of art for the college, should not be lost sight of:

* * * and should any portion of said avails remain unexpended for the aforesaid purposes, to apply the same to the furnishing of suitable appliances and instruction in connection with the said building, for a School of Art in Yale College, for the purpose of providing instruction in, and of diffusing a knowledge of, the arts of drawing, designing, painting, sculpture, and other of the fine arts, under such regulations for the admission of pupils of both sexes, and for the method and course of instruction, as said Corporation from time to time shall prescribe, it being among the objects of this gift to provide for those desiring to pursue either of the fine arts as a profession, the means of instruction and improvement, and to awaken a taste for, and appreciation of, the fine arts, among the undergraduates of the college and others.

The Yale Art School was thus designed by its real founder to have a *popular* side, to open to the town its door of whatever privilege and refining

influence it has to bestow. And this fact has not been unappreciated. Numbers of the youth of both sexes from outside the college walls have received artistic instruction; the regular and incidental lectures at the school have been largely attended by the people of New Haven; and the galleries of casts and pictures have afforded a constant source of mental cultivation and enjoyment to the community, keeping before them right standards of art and taste. And this is important for art's sake, which can make little progress in a community or a State where there is no appreciation for it, and where the public taste is still unformed.

It is not within the scope of this paper to give a detailed description of the New Haven Art School, of its collections, and especially of the unique Jarves gallery of Italian painting, numbering one hundred and twenty pictures, in which many characteristic copies, and perhaps some originals, of the early masters from the eleventh to the seventeenth centuries are to be found, and which is so important in an historical point of view; nor to speak of its methods of instruction that pertain more exclusively to that department of college education to which it belongs; but only to bring out this one fact, that here is opened a spring of higher culture to all the people of New Haven, widening ever in its influence through the State and nation, and which is of the greatest value in this formative period of the country's history, when nothing is more needed than to build up a spiritual kingdom in opposition to a kingdom of mere materialism; and every influence which counts on the side of intellectual life, which, like art or science, takes us out of self, and is refining and elevating, is a blessing. The roots of true art are spiritual, even if it require science and severe study to perfect it. Though belonging to the more attractive and pleasing side of the mind, art is as indestructible an expression of the human mind as is science or literature.

I will not speak of the industrial arts, which blend with and draw aid from the fine arts—for art has its useful as well as poetic side, and, as is well known, among the Greeks, all works that called for skill of hand were held to be works of art, and their makers artists—these industries in which New Haven, beyond most cities in the country, is notably rich; but would only say in conclusion that the opening of the new Park upon East Rock promises to summon into use the labor of various kinds of skilled artisans. And as industry has been called a main spring of art, here Art may combine with Nature to create one of the finest public parks connected with any city in the land, and, from its commanding site, reminding of a bit of the Cornici road, or the steep drive and view of San Miniato at Florence.

Why indeed, should not we in this country, where the skies are as blue as those in Italy and the forms of nature as beautiful, have also the wisdom to draw from this Nature kindly and ennobling lessons. The names of Hillhouse and Percival in the field of poetry, combined with the names of those New Haven artists that have been mention-

Daniel Road

ed, show us that here a school of American art may exist which shall complete the circle of academic education, and lend to learning a mellower tone and deeper humanity.

So build we up the being that we are;
Thus deeply drinking in the soul of things,
We shall be wise perforce; and, while inspired
By choice, and conscious that the will is free,
Shall move unswerving, even as if impelled
By strict necessity, along the path
Of order and of good. Whate'er we see,
Or feel, shall tend to quicken and refine;
Shall fix, in calmer seats of moral strength,
Earthly desires; and raise, to loftier heights
Of divine love, our intellectual soul.*

DANIEL READ.

Early in this century there was standing in Attleborough, Mass., at a distance from the main road on a high hill, an ancient farm-house known as the old Read Place. It had originally been painted red, but had grown dingy with the years. A noble oak shaded the doorway, and there was an old-fashioned well-sweep in the side yard with a watering trough for the use of the faithful animals. On this goodly spot Daniel Read was born November 16, 1757. When Daniel was thirteen years of age, his father yoked the oxen to take a load of wood to Providence, some 15 miles distant, and gave Daniel permission to go with him. In asking permission, the boy had a long cherished object in view, of which he said nothing, for he ever had a silent tongue. He had long worked and secretly saved money to buy a singing book. This procured, he rode back in the empty cart happier than a monarch in a golden chariot.

Before he was twenty years of age, Daniel was on the east bank of the Hudson teaching the Dutch lads and lasses psalmody. This was in the region of Sleepy Hollow, the scene of Irving's amusing legend. Early in the Revolutionary War he came to New Haven, and lived in Broadway the remainder of his life. He began business as a comb maker, but soon got into trade, opening a country store, first alone, then in company with his son, George Frederic Handel. About the year 1785, Mr. Read married Jerusha Sherman, called "the Beauty of Stratford." The portrait of her by Jocelyn shows that the appellation was well deserved. The store of the Reads—father, son, George Frederic Handel, son-in-law, Jonathan Nicholson, and grandson, Theodore—continued for many decades a noted trading place for the farming people of the outlying western and northern towns at Woodbridge, Hamden, Cheshire, etc.

In his later years Mr. Read gave up trade entirely. All through life music absorbed him greatly, and it was as a teacher of psalmody, leader of a choir, organist, composer of music, and compiler of music books, that he acquired fame. One of his most intimate friends was Daniel Salter, an Englishman, who, like Handel, was totally blind. Mr. Salter played on the first organ that

was introduced into a church in this city, viz., that of the old Episcopal Church on Church street.

Mr. Read was organist and leader of the choir of the United Society. He got up the subscription for its organ, the second organ introduced into New Haven.

In an old ledger of Mr. Read's, date 1794, is a charge against the "Singing-School Committee of the United Society for 51 days' teaching Singing School." The charge is 6 shillings a day, or 15 pounds and 6 shillings in all. It was in New England currency, not sterling, and was \$3.33 per pound. He credits the committee in full, all in cash, but "half of a cow" at "\$10, or 3 pounds currency." In 1799 he charges the committee "for teaching singing 12 evenings at 6 shillings an evening," and "for room and candles 12 shillings." These charges show that church societies then paid for teaching their people congregational singing. Six shillings currency was \$1.00, so it seems he obtained a dollar an evening for his services. These old-time singing schools were social institutions with the young people; and what began in music often ended in matrimony.

Mr. Read's singing books were highly popular, and ran through many editions. A copy of the second edition is before us, entitled

"The American Singing Book; or, a Sure and Easy Guide to the Art of Psalmody. Designed for the Use of Singing Schools in America. Composed by Daniel Read, Philo-Music. New Haven: Printed for and sold by the Author, MDCC-LXXXVI." Another of his books was the "Columbian Harmonist." Printed by Manning & Loring, Boston, 1810. It contains 103 tunes, of which 23 are of his own composition; one of the latter is a funeral anthem, which is a fair specimen of the old fugue tunes. Of Mr. Read's own composition the most noted were "Winter" and "Windham," both written in 1785. "Winter" opened with

His hoary frost, his fleecy snow,
Descend and clothe the ground;
The liquid streams forbear to flow,
In icy fetters bound.

"Windham," named like most old psalm tunes from a town, soon became famous everywhere; for the music, so sad, so mournful, exactly fitted the opening verse:

Broad is the road that leads to death,
And thousands walk together there;
While wisdom shows a narrow path
With here and there a traveler."

Jonathan Nicholson, born in England August 6, 1796, came to this country when a youth, served his time in Mr. Read's store, married his daughter, Mary W., and about 1820, with Mr. Read's son, succeeded to the business. Mrs. Nicholson, who survives her husband, has in her possession the first family organ which came to New Haven. She inherits her father's musical tastes, and the organ was a present to her from him in 1816, when she was 14 years of age, on her return from New York, whither she had gone to learn its use of its maker, Urban.

* Wordsworth's Excursion.

She relates an incident complimentary to the reputation of her father, which occurred when she, a young woman, was at a wedding feast, seated by the side of the elder Professor Silliman, to whom she was personally a stranger. Attracted, as we fain must think, to his conclusion by the full bloom upon her countenance, where one can see as yet, at the ripe age of 83 years, the faint lingering tints of what in its prime must have been strongly and pleasingly pronounced, he turned and exclaimed:

"You are an English lady, I presume?" "No, sir," she replied. "I was born here." "Who was your father?" "Daniel Read." Whereupon the Professor, who never neglected to say a kindly word or perform a noble act, to her pride and joy finished with: "One of our best citizens—universally esteemed."

Mr. Read had his private study room, and at one period for two years was engaged there upon some great labor of love; but no one would ask what it was. At the end of that time he produced for their inspection the result; it was a large manuscript book of choice music which he had copied from the old masters, a perfect marvel of beauty from its elegant penmanship. It is still preserved, a most choicely-valued memento.

The modesty and originality of Mr. Read is illustrated by the dedication prefixed to his first publication, "*The American Singing Book*," issued just after the close of the Revolutionary War.

TO THE TEACHERS OF MUSIC IN THE UNITED STATES.

GENTLEMEN,—This little Book is presented for your candid Perusal and Acceptance. If at your Bar it should be judged unworthy of your Patronage, let it suffer either Death or Banishment. It carries with it, however, one Request, a request no one will presume to say is unreasonable, viz.: That it may not be condemned without an impartial Examination and a fair Trial. Not doubting your Inclination to do it Justice, I submit it, and am happy in writing myself,

GENTLEMEN,

Your most Obedient

And very humble Servant,

THE AUTHOR.

Daniel Read is remembered by the writer, who often, in his boyhood, saw him in the North Church, where both attended. He was of ordinary stature, full, broad figure, with a venerable gray head, mild blue eyes, and a face fresh, healthy, and beaming with benignity. He always supposed Mr. Read was a deacon of the church, because he looked so grave and good. Lately he asked a friend, who not only knew him well, but knew also all the requisites for a deacon, as he himself had been for many years a preacher of "the everlasting Gospel." A slight twinkle lighted his eye as he answered, "No, Daniel Read was too modest a man for deacon."

CHAPTER XII.

THE PERIODICAL PRESS.

THE first newspaper published in New Haven was *The Connecticut Gazette*. It was commenced by James Parker & Co. in April, 1755, and its publication by that firm was suspended April 14, 1764. James Parker had been for many years a printer in New York, as his friend Benjamin Franklin had been in Philadelphia. He had taken Benjamin Mecom, Franklin's nephew, as an apprentice, and though he found him wayward, had borne with the faults of the boy for the sake of his friend, the boy's uncle. It was not an unprecedented thing for a printer who had capital, to set up a branch at a distance from his principal office, for Franklin already had an office in Charleston, South Carolina, and another in the Island of Antigua, the profits of which were in each case shared by him with the managing printer. Indeed Parker's printing-office in New York was a branch, Parker himself residing in Woodbridge, New Jersey, where he personally managed a printing office. His New York office was managed by William Weyman, who was associated with Parker in a copartnership, under the name of Parker & Weyman. The establishment of the printing-office in New Haven was intimately connected with the establishment of

a post-office. Isaiah Thomas, in his *History of Printing in America*, says:

At the commencement of the war between England and France in 1754, Benjamin Franklin and James Hunter were joint Deputy Postmasters-General for America. As the principal seat of the war with France in this country was to the northward, the establishment of a post-office in New Haven became an object of some consequence. James Parker, in 1754, obtained from Franklin the first appointment of postmaster in this place. Associated with him was John Holt (a brother-in-law of Hunter), who had been unfortunate in commercial business. Having secured the post-office, Parker, who was then the principal printer in New York, sent a press to New Haven at the close of the year 1754. The first work from his press was *The Laws of Yale College*, in Latin. Holt directed the concerns of the printing-house and post-office in behalf of James Parker & Co. Parker remained in New York. Post-riders were established for the army, and considerable business was done at the post-office and printing-house during the war. Parker had a partner, named Weyman, in New York, who managed their affairs in that city until the year 1759, when the partnership was dissolved. This event made it necessary that a new arrangement should take place. Holt went to New York in 1760; took the direction of Parker's printing-house in that city, and conducted its concerns. The press and post-office in this place were left to the agency of Thomas Green; Parker & Company still remaining proprietors and continuing their firm name to the *Gazette* till 1764, when they resigned the business to Benjamin Mecom.

In the chapter in *The Yale Book*, where Mr. Henry White traces the titles of the land comprised in the College Campus, from the first planters of New Haven to the corporation of the College, Mr. White says:

There had been a correspondence between President Clap and Franklin on the subject of a printing-office in New Haven, and Franklin, in the hope of making an opening for his nephew, Benjamin Mecom, had procured printing materials from England, which were received in the fall of 1754. But Mecom declined to come at that time, and Parker was induced to undertake the printing-office. He accordingly purchased the printing materials of Franklin, for which he gave his bond, and also purchased this lot of Franklin (a lot bought by Franklin of Samuel Mix for 94 Spanish pieces of eight, having a front of 50 feet on the street by the market-place and a depth of 100 feet, and described as being near the Court House), for which he paid 90 dollars in cash. There appears to have been no building on this lot while Parker owned it. He devised the lot to his daughter Jane, the wife of Gunning Bedford, of Wilmington, Delaware. In 1785, Bedford and his wife sold the lot to Jonathan Ingersoll, State Attorney for New Haven County, for the use of the county for a jail, and in 1791, Ingersoll conveyed the lot to the County of New Haven, with the jail which had been erected on it.

In 1790, the heirs of Samuel Mix sold to the county a strip of land eight feet wide on College street, adjoining the county lot, to be used for setting on it a jail and jailer's house.

Before 1799 the town of New Haven had acquired a small piece of land in the rear or west part of this county lot and had erected on it an almshouse. In 1799 the county of New Haven sold to the College for \$1,000, and the building of a new jail, the lot on which the jail and jailer's house stood, bounding it on the west by land of the town of New Haven; and in 1800 the town sold this rear lot and almshouse to the College, describing it as bounded on all sides by the land of the College.

So careful a man as Henry White did not make these statements in regard to the sale of the printing materials and the lot of land without sufficient warrant; so that we may conclude that Franklin had been promised by President Clap the job of printing the laws of Yale College, and had expected that his nephew would, with these materials, do the first printing in New Haven.*

Till recently New Haven had no file of the numbers of *The Connecticut Gazette* preceding No. 130, which bears the date October 1, 1757. But in that portion of the Brinley collection which recently came into the possession of Yale College, is a well preserved volume containing the early numbers, and thus supplying what was wanting in the collection belonging to the estate of Colonel William Lyon.

As has been already said, in the quotation from Mr. Henry White, there was no building on the lot owned by Mr. Parker. The *Gazette* was printed at first "near the hay-market." The hay-scales and the hay-market were on an open piece of ground at the corner of State and St. John streets. Before No. 130 was printed, the office had been removed to what is now called Custom-house square, that number bearing the imprint: "Printed by J. Parker

and Company at the Post Office near Capt. Peck's at the Long Wharf." The tradition is that the post-office and the printing-house were in a building on the east side of Custom-house square, the lot on which it stood being bounded on the north by East Water street.

Perhaps Mr. Holt, when he became personally acquainted with the town, thought a location near the Haymarket or at the Long Wharf would be more convenient for the business of the printing press and of the post-office than the site purchased of Franklin; or perhaps the setting up of the press elsewhere was a temporary experiment, to be superseded by the erection of a house as soon as the success of the enterprise became assured.

The removal of Mr. Holt to New York is thus noticed in the *Gazette* of June 21, 1760: "The printer of this paper being about to remove to New York, desires all persons whose accounts have been unpaid above the usual and limited time of credit, immediately to discharge them; else he shall be obliged to leave them in other hands to collect; and he hopes they will not be against allowing interest. The business will be carried on as usual by Mr. Thomas Green in New Haven."

John Holt, says Mr. Thomas, was born in Virginia. He received a good education and was instructed in the business of a merchant. He commenced his active life with commercial concerns, which he followed for several years, during which time he was elected Mayor of Williamsburgh, in his native province.

In his pursuits as a merchant he was unsuccessful; and, in consequence, he left Virginia, came to New York, and formed a connection with James Parker, who was then about setting up a press in New Haven. Holt went to New Haven and conducted their affairs in that place under the firm of James Parker & Co., as has been related.

After the business at New Haven was discontinued, Holt, in the summer of 1760, returned to New York, and here, as a partner, had the direction of *Parker's Gazette* about two years. During the four succeeding years he hired Parker's printing materials and managed *The New York Gazette and Post Boy* as his own concern. In 1765 he kept a book store, and in 1766 he left Parker's printing-house, opened another, began the publication of *The New York Journal* in the October following, and retained a large number of the subscribers to the *Gazette*.

Holt was a man of ardent feelings, and a high churchman, but a firm Whig; a good writer and a warm advocate for the cause of his country. A short time before the British army took possession of New York he removed to Esopus and thence to Poughkeepsie, where he remained and published his *Journal* during the war. He left at New York a considerable part of his effects, which he totally lost. Another portion of his property, which had been sent to Danbury, was pillaged or burnt in that place by a detachment of the British army; and a part of his types, etc., were destroyed by the enemy at Esopus. In the autumn of 1783 he returned to New York, and there continued the publication of the *Journal*. He was printer to the State during the war; and his widow, at his decease, was appointed to that office. Holt was brother-in-law to Robert Hunter, who was Deputy Postmaster-General with Franklin. Soon after his death his widow printed the following memorial of him on cards, which she dispersed among his friends and acquaintances, viz.:

A due tribute to the Memory of

JOHN HOLT,

PRINTER TO THIS STATE,

a native of Virginia, who patiently obeyed Death's awful summons on the 30th of January, 1784, in the 64th year of his age. To say that his family lament him, is needless; that

* Mr. White found authority for his statements respecting the correspondence between Franklin and President Clap in two manuscript letters of James Parker to J. Ingersoll, dated February 19, 1767, and March 14, 1768. Those letters are extant, but so carefully put away by Governor Charles R. Ingersoll that, after diligent search, he has not been able to find them. He testifies, however, that Mr. White borrowed and returned the letters.

his friends bewail him, useless; that all regret him, unnecessary; For that he merited every esteem, is certain. The tongue of slander can't say less, though justice might say more. In token of sincere affection, his disconsolate widow hath caused this memorial to be erected.

After the departure of Holt from New Haven in 1760, the publication of the *Gazette* in the name of James Parker & Co. was continued by Thomas Green till April 14, 1764, when No. 471 made this announcement: "As the encouragement for the continuation of this paper is so very small, the printers are determined to discontinue it after this week. They request all those that are indebted to make speedy payment."

The printing of the *Gazette*, thus suspended in April, 1764, was resumed July 5, 1765 by Benjamin Mecom, the nephew of Franklin, who had learned his trade of James Parker. Mecom had been sent out by his uncle to Antigua, to manage the printing-office there of which Franklin was the owner, and had annoyed his uncle, first by refusing to work for a share of the profits, as his predecessor had done, and requiring that he should have the right to purchase; and afterward by selling out what Franklin regarded as an office remarkably well situated for a profitable business having a good run of custom and no competition. He returned from Antigua too late to be associated in the New Haven adventure at its inception. After an interval of nine years spent in Boston, he was ready to come to New Haven and undertake the publication of the newspaper which James Parker & Co. had relinquished. He advertised to do so immediately after its suspension, but it was fifteen months before he was able to issue his first number, on the 5th of July, 1765. In it he says: "A year is passed since the printer of this paper published proposals for reviving the *Connecticut Gazette*. It is needless to mention the reasons why it did not appear sooner."

The Mecom family were as different from Benjamin Franklin in capacity for successful business as if there had been no consanguinity. Franklin never ceased to be helpful to his sister, but he could not teach her children the art of success. A glance at the portrait of Benjamin Mecom, as sketched by the pen of Isaiah Thomas, will illustrate the difference between the uncle and the nephew.

Benjamin Mecom was a native of Boston. His mother was the sister of James and of the celebrated Benjamin Franklin. Mecom served his apprenticeship with his uncle, B. Franklin, in Philadelphia.* When of age, having received some assistance from his uncle, he went to Antigua and there printed a newspaper; but in 1758 he quitted that Island and returned to Boston. In 1757 he opened a printing-house in Cornhill, nearly opposite the Old Brick Church. At the same place he kept a shop and sold books. His first work was a large edition, thirty thousand copies, of the Psalter, for the booksellers. This edition was two years worrying through his press. After the Psalter, Mecom began to print and publish on his own account, a periodical work, which he intended should appear monthly. It was entitled *The New England Magazine of Knowledge and Pleasure*. It contained about 50 pages, 12mo, but he published only three or four numbers. These were issued in 1778, but no date either of the month or year appeared on the title-page or in the imprint. In this magazine were inserted several

articles under the head of "Queer Notions." Each number, when published, was sent about town for sale by hawkers; but few copies were vended, and the work of course was discontinued. His business was not extensive; he printed several pamphlets for his own sale and a few for that of others. He remained in Boston for a number of years; but when James Parker & Co., who printed at New Haven, removed to New York, Mecom succeeded them. Soon after, Dr. Franklin procured Mecom the office of postmaster at New Haven. He married in New Jersey, before he set up his press in Boston. He possessed good printing materials; but there was something singular in his work as well as in himself. He was in Boston several months before the arrival of his press and type from Antigua, and had much leisure. During this interval he frequently came to the house where I was an apprentice. He was handsomely dressed, wore a powdered bob-wig, ruffles and gloves, gentlemanlike appendages which the printers of that day did not assume and, thus appareled, would often assist for an hour at the press.

An edition of "The New England Primer" being wanted by the booksellers, Z. Fowle consulted with Mecom on the subject, who consented to assist in the impression, on condition that he might print a certain number for himself. To this proposal Fowle consented, and made his contract with the booksellers. Fowle had no help but myself, then a lad in my eighth year. The impression consisted of ten thousand copies. The form was a small sixteens on foolscap paper. The first form of the Primer being set up, while it was worked at the press, I was put to case to set the types for the second. Having completed this, and set up the whole cast of types employed in the work, and the first form being still at press, I was employed as a fly; that is, to take off the sheets from the tympan as they were printed and pile them in a heap; this expedited the work. While I was engaged in this business, I viewed Mecom at the press with admiration. He indeed put on an apron to save his clothes from blacking, and guarded his ruffles; but he wore his coat, his wig, his hat and his gloves, whilst working at the press; and at case, laid aside his apron. When he published his Magazine with "Queer Notions," this singularity, and some *addenda* known to the trade, induced them to give him the appellation of "Queer Notions."

Mecom was, however, a gentleman in his appearance and manners; had been well educated in his business; and, if "queer," was honest and sensible; and called a correct and good printer.

Mr. Thomas elsewhere thus testifies to the same effect:

Mecom, though singular in his manners and deficient in the art of managing business to profit, was a man of ingenuity and integrity; and as a printer he was correct and skillful. He was the first person in this country, so far as I know, who attempted stereotype printing. He actually cast plates for several pages of the New Testament, and made considerable progress toward the completion of them, but he never effected it.

Such was the man who on the 5th of July, 1765, resumed the publication in New Haven of the *Connecticut Gazette*, which fifteen months before had been relinquished by James Parker & Co. It came to a stop again February 19, 1768, and was never resumed. Under the date mentioned is this announcement: "The printer of this paper now informs the public that he is preparing to remove from this place with his family; and that he chiefly depends on his debtors for something to pay the expense. Since he now discontinues this *Gazette*, it may not be improper to say that all persons may be supplied with a newspaper by Messrs Thomas and Samuel Green, at the Old State House, where other printing work is done and books bound."

The older paper yields to its younger rival so

* I know not how to reconcile this statement with a letter of Franklin to his sister, in which he speaks of "Benny" as an apprentice to James Parker. Probably Mr. Thomas was mistaken.

gracefully, that one may believe that its proprietor received some consideration for retiring from the race.

The *Gazette* had four pages, and at first each page measured nine inches by six and a half inches exclusive of margin. The page was afterward enlarged to measure fourteen inches by nine and a quarter inches; but sometimes paper of the normal measure not being obtainable, a smaller size was used for one, two or three numbers. There were two columns on a page.

The first number bears the imprint—"New Haven, in Connecticut: Printed by James Parker, at the Post Office, near the sign of the White Horse." It contains also an advertisement of books to be sold "at the Printing Office, near the Hay-market, in New Haven."

Of the following extracts, all but the first are to be found in Barber's "History and Antiquities of New Haven," and were doubtless taken from the copy belonging to the estate of Colonel William Lyon, which is on deposit in the Library of Yale College.

NEW HAVEN, May 17, 1755.

We are credibly informed that on the 16th of March last, the wife of Mr. James Pierpont, of New Haven, was happily delivered of a fine, well-featured son, who the same day was christened by the name of Evelyn, which is the Christian name of the present Duke of Kingston; and as it is said that this child is descended from the eldest branch of the Pierpont family, excepting that of the present Duke, and as the present Duke is far advanced in years and has no heirs of his body, it is possible this young Evelyn may in time succeed to the honors and estate of that ancient and honorable family of Great Britain.

New Haven: Printed by J. Parker and Company, at the Post Office, near Captain Peck's at the Long Wharf, where this paper may be had at 2s. 6d. *Lawful Money*, per Quarter, if sent by the special post; or 1s. 10d. *Half Penny* without postage; the first quarter to be paid at entrance. *Note.* Thirteen Papers go to the Quarter; none to stop but at the end of the Quarter. *Saturday, October 1st, 1757.*

NEW HAVEN, June 16th, 1758.

Next week will be published Proposals for sending, by subscription, a Post to Albany during the summer, and for paying the postage of all letters to the Connecticut soldiers in the army. Toward which the printers of this paper will advance *Five Pounds*, lawful money. This is mentioned now, that gentlemen may be as expeditious as possible in sending in subscriptions.

NEW HAVEN, January 22, 1761.

His Honor, the Governor, having received despatches confirming the accounts of the death of our late most Gracious Sovereign, King George the Second, on the 25th day of October, 1760—and other despatches also, for proclaiming his present Majesty—in pursuance thereof, yesterday issued orders for the Militia to appear under arms.

Whereupon (though many of them from considerable distances), two troops of horse and four companies of foot, with great despatch and alertness, were this day before noon drawn up on the Great Square, before the Town House, on notice whereof, his Honor the Governor, with the Gentlemen of the Council on this occasion convened, with many other Gentlemen of character and distinction, were escorted by Captain Peck's company of foot from the Council Chamber to the place of parade; where in the audience of a numerous concourse, (the severity of the season notwithstanding), *with great alacrity* convened, His Sacred Majesty was proclaimed by reading and proclaiming aloud the following

PROCLAMATION.

Whereas it hath pleased Almighty God to call in his mercy our late Sovereign Lord King George the Second, of

blessed and glorious memory, by whose decease the imperial crown of Great Britain, France and Ireland, as also the supreme dominion and sovereign right of the colony of Connecticut in New England, and all other his late Majesty's dominions in America are solely and rightfully come to the high and mighty Prince George, Prince of Wales—We therefore, the Governor and Company, assisted with numbers of the principal inhabitants of this colony, do now hereby with one full voice and consent of tongue and heart, publish and proclaim that the high and mighty Prince George, Prince of Wales, is now, by the death of our late Sovereign of happy and glorious memory, become our only lawful and rightful liege Lord George the Third, by the grace of God, King of Great Britain, France and Ireland, Defender of the faith, Supreme Lord of the said colony of Connecticut in New England, and all other his late Majesty's dominions and territories in America, to whom we do acknowledge all faith and constant obedience, with all hearty and humble affection; beseeching God, by whom Kings and Queens do reign, to bless the royal King George the Third, with long and happy years to reign over us.

Given at the Council Chamber at New Haven, the twenty-second day of January, in the first year of the reign of our Sovereign Lord, George the Third, King of Great Britain, France and Ireland, Defender of the Faith, etc., *anno que Domini 1761. GOD SAVE THE KING!*

Which proclamation was subscribed by his Honor the Governor, the Deputy Governor and the Gentlemen of the Council, and many other Gentlemen of a Civil, Military, and Ecclesiastical Character. Which was followed by three general huzzas and a royal salute of 21 cannon. The Governor, Deputy Governor, and Council, with members of clergy and other Gentlemen of distinction were again escorted to Mr. Beers; where an elegant entertainment was provided on the occasion; and his Majesty's, the Royal Family's, the King of Prussia's, and other loyal healths were drunk; and the Militia, after proper refreshments, were discharged; and the whole conducted and concluded with great decency and order, and great demonstrations of joy.

To be sold, several likely Negro Boys and Girls arrived from the Coast of Africa.

SAMUEL WILLIS, at Middletown.

Whereas on last Tuesday evening, a number of persons gathered together near the College, and there, and round the town, fired a great number of guns, to the great disturbance and terror of his Majesty's subjects, and broke the College windows and fences, and several of them had gowns on with a design to bring a scandal upon the College; these may certify that I and the tutors several times walked among and near the rioters, and could not see any scholars among them; but they appeared to be principally the people of the town with some few strangers.

T. CLAP.

September 12, 1761.

NEW HAVEN, March 5, 1762.

Last Saturday afternoon, David Slusher and James Daley were cropt, branded with the letter B on their foreheads, and received each of them fifteen stripes on their naked bodies, pursuant to their sentences for some time since breaking open and robbing the shop of Mr. Philo Mills, of Derby.

A Likely Negro Wench and Child to be sold.—Inquire of the Printer.

To be sold by the subscriber, of Branford, a likely negro wench, 18 years of age. Is acquainted with all sorts of housework; is sold for no fault.

June 15, 1763.

NEW HAVEN, July 4, 1763.

We, the subscribers, Selectmen of the town of New Haven, do hereby give notice to the inhabitants of said town, that there will be a Vendue on the 2nd Monday of August next, at the State House in said town, at four of the clock in the afternoon, when those persons which are maintained by the Town will be set up, and those persons who will keep them at the cheapest rate, may have them. Also, a number of

children will be bound out until they are either 14 or 21 years of age, if any persons appear to take them.

WILLIAM GREENOUGH,
AMOS HUTCHCOCK,
JOHN MIX,
THOMAS HOWELL,
Selectmen.

JUST IMPORTED FROM DUBLIN, IN THE BRIG DERRY.—A parcel of Irish Servants, both Men and Women, and to be sold cheap by Israel Boardman, at Stamford.

5th January, 1764.

A year is passed since the printer of this paper published proposals for reviving the *Connecticut Gazette*. 'Tis needless to mention the reasons why it did not appear sooner. He returns thanks to all those who favored him at that time, and hopes they are yet willing to try how far he is able to give them satisfaction. A sample of it is now sent abroad in order to collect a sufficient number of subscribers barely to pay the charge of carrying it on. When such a number appears it shall be printed weekly, and delivered to subscribers in town and country at the rate of *two-pence* for each paper, which is *Eight Shillings and Eight Pence* for one year. And no additions shall be made to the price when the Stamp Act takes effect, if it is then encouraged so as to be afforded at that rate.

Subscribers are not desired to engage for any particular time, so that they can stop it when they please.

A special post is appointed to carry it out of the common post-roads.

Advertisements shall be printed at a moderate price, according to their length.

All kinds of provision, firewood and other suitable country produce, will be taken as pay of those who cannot spare money, if delivered at the printer's dwelling-house, or at any other place which may accidentally suit him.

The printer hereby invites the benevolent of all parties to send him an account of whatever novelties they think may be useful to their countrymen. The shortest hints on such subjects, however written, will be gratefully received and faithfully communicated to the public, if convenient.

Besides the help he hopes to receive from different correspondents in this colony and elsewhere, the printer has sent for three sorts of English Magazines, the Monthly Review of New Books, and one of the best London newspapers. These, together with American intelligence from Nova Scotia to Georgia inclusive, and also from Canada, cannot fail to furnish him with a constant stock of momentous materials and fresh advices to fill this GAZETTE.

July 5, 1765.

BENJAMIN MECOM.

At the Post Office, New Haven.

BENEDICT ARNOLD

wants to buy a number of genteel fat Horses, Pork, Oats and Hay.—And has to sell choice Cotton and Salt, by quantity or retail; and other goods as usual.

NEW HAVEN, January 24, 1766.

MR. PRINTER: SIR,—As I was a party concerned in whipping the Informer the other day, and unluckily out of town when the Court sat, and finding the affair misrepresented much to my disadvantage, and many animadversions thereon, especially in one of your last by a very fair, candid gentleman indeed, as he pretends; who, after he had insinuated all that malice could, adds that he will say nothing to prejudice the minds of the people. He is clearly seen through the grass; but the weather is too cold for him to bite. To satisfy the public, and and in justice to myself and those concerned, I beg you would insert in your next the following detail of the affair:

The Informer having been on a voyage with me, in which he was used with the greatest humanity, on our return was paid his wages to his full satisfaction, and informed me of his intention to leave town that day, wished me well, and departed the town, as I imagined. But he, two days after, endeavored to make information to a Custom House officer; but it being holy time, he was desired to call on Monday, early on which day I heard of his intention and gave him a little chastisement, on which he left the town, and on Wednesday returned to Mr. Beecher's, where I saw the fel-

low, who agreed to and signed the following acknowledgment and oath:

I, Peter Boole, not having the fear of God before my eyes, but being instigated by the Devil, did, on the 24th instant, make information, or endeavor to do the same, to one of the Custom House Officers for the port of New Haven, against *Benedict Arnold* for importing contraband goods, do hereby acknowledge I justly deserve a halter for my malicious, wicked and cruel intentions.

I do now solemnly swear I will never hereafter make information, directly or indirectly, or cause the same to be done against any person or persons whatever, for importing contraband or any other goods into this colony or any port of America; and that I will immediately leave New Haven and never enter the same again, *So help me God.*

NEW HAVEN, 29th January, 1766.

This was done precisely at seven o'clock, on which I engaged not to inform the sailors of his being in town, provided he would leave it immediately according to our agreement. Near four hours after I heard a noise in the street, and a person informed me the sailors were at Mr. Beecher's. On inquiry, I found the fellow had not left town. I then made one of the party, and took him to the whipping-post, where he received near forty lashes with a small cord, and was conducted out of town; since which on his return, the affair was submitted to Colonel David Wooster and Enos Alling, gentlemen of reputed good judgment and understanding, who were of opinion that the fellow was not whipped too much, and gave him 50s. damages only.

Query.—Is it good policy, or would so great a number of people in any trading town on the continent, New Haven excepted, vindicate, protect and caress an informer—a character, particularly at this alarming time, so justly odious to the public? Every such information tends to suppress our trade, so advantageous to the colony and to almost every individual both here and in Great Britain, and which is nearly ruined by the late detestable Stamp and other oppressive act; acts which we have so severely felt and so loudly complained of, and so earnestly remonstrated against, that one would imagine every sensible man would strive to encourage trade, and discountenance such useless, such infamous informers.

I am, Sir, your humble servant,

BENEDICT ARNOLD.

The narrative which Jared Ingersol, the stamp-master, gave of the treatment he received at the hands of the company of horsemen coming from the eastern counties of Connecticut, and meeting him at Wethersfield on his way to Hartford, was published by him in this newspaper, and from the columns of the *Gazette* was copied into our chapter on the Revolutionary War.

In that chapter we alluded to an article on the Stamp Act, communicated to the *Gazette* by Nathali Daggett, Professor of Theology in Yale College, That short communication to a weekly newspaper exerted so much influence, that it has seemed worth while to reprint it in a chapter which recounts the history of the periodical press in New Haven. It appeared in the *Gazette*, August 9, 1765. Before the month of August came to an end it had been printed in at least nine other newspapers in different places from Portsmouth to Philadelphia. A correspondent of the *New York Gazette* of August 29th, says: "The piece published, first in the New Haven paper, and since in most of the other papers in America, signed 'Cato,' is universally approved, and contains the unanimous sentiments of all the British colonies on that subject."

NEW HAVEN.

Quid non mortalia pectora cogis, auri sacra fames?
VIRGIL.

Since the late impositions on the American Colonies by the Parliament of Great Britain, our papers have been filled

with woful exclamations against slavery and arbitrary power. One would have thought, by this mighty outcry, that all America to a man had a noble sense of freedom, and would risk their lives and fortunes in the defense of it. Had this been really the spirit of the colonies, they would have deserved commiseration and relief. Nothing can fill a generous breast with greater indignation than to see a free, brave, and virtuous people unjustly sunk and debased by tyranny and oppression. But who can pity the heartless wretches whose only fortitude is in the tongue and pen? If we may judge of the whole by those who have been already tampered with, the colonies are now ripe for slavery and incapable of freedom.

Have three hundred pounds a year, or even a more trifling consideration, been found sufficient to debauch from their interest those who have been entrusted with the most important concerns by the colonies? If so, O Britain, heap on your burdens without fear of disturbance! We shall bear your yoke as tamely as the overloaded ass. If we bray with the pain, we shall not have the heart to throw off the load or spurn the rider. Have many already become the tools of your oppression, and are numbers now cringing to become the tools of those tools to flay their wretched brethren? 'Tis impossible! But, alas! if so, who could have thought it! Those who lately set themselves up for patriots, and boasted a generous love for their country—are they now suing (O Disgrace to Humanity!), are they now creeping after the profits of collecting the Unrighteous American Stamp Duty! If this is credible, what may we not believe? Where are the mercenary publicans who delight in nothing so much as the dearest blood of their country? Will the cries of your despairing, dying brethren be music pleasing to your ears? If so, go on! bend the knee to your master horseleach, and beg a share in the pillage of your country. No, you'll say, *I don't delight in the ruin of my country, but since 'tis decreed she must fall, who can blame me for taking a part in the plunder?* Tenderly said! why did you not rather say, *If my father must die, who can accuse me as defective in filial duty in becoming his executioner, that so much of the estate, at least, as goes to the hangman may be retained in the family?*

Never pretend, whoever you are that freely undertake to put in execution a law prejudicial to your country, that you have the least spark of affection for her. Rather own you would gladly see her in flames, if you might be allowed to pillage with impunity. *But had you not rather these duties should be collected by your brethren than by foreigners?* No! vile miscreant! Indeed we had not. That same rapacious and base spirit which prompted you to undertake the ignominious task will urge you on to every cruel and oppressive measure. You will serve to put us continually in mind of our abject condition. A foreigner we could more cheerfully endure, because he might be supposed not to feel our distresses; but for one of our Fellow-Slaves, who equally shares in our pains, to rise up and beg the favor of inflicting them, is intolerable. The only advantage that can be hoped for from this is that it will rouse the most indolent of us to a sense of our slavery and make us use our strongest efforts to be free. Some, I hope there are, notwithstanding your base defection, that feel the patriotic flame glowing in their bosoms, and would esteem it glorious to die for their country. From such as these you are to expect perpetual opposition. There are men whose existence and importance does not depend on gold. When, therefore, you have pillaged from their estates they will still live and blast your wicked designs by all lawful means. You are to look for nothing but the hatred and detestation of all the good and virtuous. And as you live on the distresses, you will inherit the curses of widows and orphans. The present generation will treat you as the authors of their misery, and posterity will pursue your memory with the most terrible imprecations.

CATO.

We subjoin to the above notice of the first newspaper in New Haven, a list of newspapers and other periodicals copied from Barber's "History and Antiquities of New Haven," page 166. It is said to have been prepared by Mr. Edward C. Herrick, Librarian of Yale College.

The Connecticut Gazette. Printed by James Parker

& Co. Begun in April, 1755; suspended April 14, 1764; revived July 5, 1765, by Benjamin Mecom; and ended with No. 596, February 19, 1768.

The Connecticut Journal and New Haven Post Boy. Begun October 23, 1767, by Thomas & Samuel Green. It passed through the hands of many publishers and ended with No. 3,517, April 7, 1835.

The New Haven Gazette. By Meigs, Bowen & Dana. Begun May 13, 1784; ended February 9, 1786. Weekly.

The New Haven Gazette and the Connecticut Magazine. By Meigs & Dana. Begun February 16, 1786. Weekly.

American Musical Magazine. Monthly, 4to. Published by Amos Doolittle and Daniel Read. Ten numbers. About 1788.

The New Haven Gazette. Begun January 5, 1790; ended June 29, 1791. Weekly.

Federal Gazeleer. Begun in February, 1796; ended August 9, 1802. Weekly.

The Messenger. Begun January 1, 1800; ended August 9, 1802. Weekly.

The Sun of Liberty. Begun in 1800.

The Visitor. Begun October 30, 1802; and became the *Connecticut Post and New Haven Visitor*, November 3, 1803. Supposed to have ended November 8, 1804. Weekly.

The Churchman's Monthly Magazine. Begun January, 1804. Four volumes published.

Connecticut Herald. Begun 1804 by Comstock, Griswold & Co. Weekly.

The Literary Cabinet. Begun November 15, 1806; ended October 31, 1807. Edited by members of the senior class in Yale College.

Belles Lettres Repository. Edited and published by Samuel Wadsworth. Begun and ended in 1808.

Memoirs of the Connecticut Academy of Arts and Sciences. Begun 1810; ended 1813.

Columbian Register. Begun December 1, 1812. Weekly.

The Atheneum. Begun February 12, 1814; ended August 6, 1814. Edited by students of Yale College.

Religious Intelligencer. Begun June 1, 1816.

The Guardian. Commenced 1818; ended December, 1828. Monthly.

The Christian Spectator. Begun January, 1819; ended in this form 1829; but continued as a quarterly. Monthly.

The American Journal of Science and Arts. Conducted by Benjamin Silliman. Begun in 1818.

The Microscope. Edited by a Fraternity of Gentlemen. Begun March 21, 1820; ended September 8, 1820. Semi-weekly.

The National Pilot. Begun October, 1821; ended in 1824.

United States Law Journal and Civilian's Magazine. Begun June, 1822; ended 1823. Quarterly.

American Eagle. Begun 1826.

New Haven Chronicle. Begun February, 1827; ended about June, 1832.

New Haven Advertiser. Begun May 1, 1829; ended October 20, 1832. Semi-weekly.

New Haven Palladium. Begun November 7, 1829. Weekly.

The Sitting-Room. Edited by members of Yale College. 1830.

New Haven City Gazette. Begun April 1, 1830; ended May 7, 1831. Weekly.

The Miscellany. Begun November 12, 1830. Semi-monthly.

The Student's Companion. By the Knights of the Round Table. Begun January, 1831; ended May, 1831. Monthly.

The Little Gentleman. Begun January 1, 1831; ended April 29, 1831.

National Republican. Begun June 26, 1831; ended March, 1832.

The Boys' Saturday Journal. Begun December 3, 1831; ended February 18, 1832.

The Literary Tablet. Begun March 3, 1832; ended March 29, 1834. Semi-monthly.

The Sabbath-School Record. Begun January, 1832; ended December, 1833. Monthly.

The Child's Cabinet. Begun April, 1832. Monthly.

Daily Herald. Begun November 26, 1832

Watchtower of Freedom. Begun October 20, 1832.

Morning Register. Begun November, 1833. Daily.

Morning Palladium. Begun November 15, 1833. Daily, and thrice a week.

The Medley. Conducted by an association of the students of Yale College. Begun in March and ended in June, 1833.

Journal of Freedom. Begun in May, 1834; ended about May, 1835. Weekly.

Jeffersonian Democrat. Begun June 7, 1834, and continued about six weeks. Weekly.

The Microcosm; or, the Little World of Home. Begun July, 1834. Monthly.

The Perfectionist. Begun August 20, 1834; ended March 15, 1836. The last four numbers bore the title of *The New Covenant Record*. Monthly.

Literary Emporium. Begun June 16, 1835.

Religious Intelligencer and New Haven Journal. Begun January 2, 1836.

The American Historical Magazine and Literary Record. Begun January, 1836. Monthly.

Yale Literary Magazine. Conducted by the students of Yale College. Begun February, 1836.

Chronicle of the Church. Begun January 6, 1837.

The above catalogue is probably nearly complete from the time of the *Connecticut Gazette* to the year 1837. *The New Haven*, however, was in existence in 1837. It would be difficult, perhaps impossible, to fill the gap between 1837 and 1884 with the names of newspapers which between those dates were born to die. A bound volume in the college library contains the numbers of a tri-weekly called *The New Haven Democrat*. It was commenced in April, 1845, and was continued to April, 1847, when its publication came to an end, for the reason that so many subscribers failed to pay.

Not attempting to furnish a complete list of

periodicals that have been begun, we mention some whose names have been communicated by Mr. Henry Peck, a gentleman long connected with the periodical press of New Haven.

Loomis's Musical and Masonic Journal; The Home World; The Sea World and Packer's Journal; The Educator, changed to *Home Cheer*, now extinct; *The Shore Line Times*. Four of these are still extant.

The following are extinct: *Nutmeg Gratings; The Daily Lever*, started by R. W. Wright and Edwin A. Tucker. (Its name was changed more than once, and was at one time *The Elm City Press*.) *The Outsider* was a little sheet originated by the late Frederick Crosswell. *The Observer*, a weekly, and for a short time a daily, was the enterprise of Principal Loomis of the public schools. *The Sunday Times* was started by Henry W. Vail, but did not long survive. Very many College periodicals—too many to be catalogued—were also begun during the last half-century.

We now pass on to present some selections from the paper which followed next after the *Connecticut Gazette*, viz., *The Connecticut Journal and New Haven Post Boy*. The latter part of this title was omitted about the time when our first extract is dated. The *Journal* was started by Thomas & Samuel Green, October 23, 1767, about four months before the publication of the *Gazette* ceased. The name of Thomas Green will be recognized as the youngest partner in the firm of James Parker & Co. Our extracts are from numbers printed before the expiration of the eighteenth century.

The first number contains this announcement:

Friday, October 23, 1767.

To the inhabitants of the Colony of Connecticut, especially in the town of New Haven:

My Respected Friends,

The kind treatment I have received during a residence of seven or eight years in this place has particularly endeared it to me. And though I was induced, from the prospect of affairs two or three years ago, to change my situation, which I did with reluctance, it was with singular pleasure and gratitude that I have received repeated solicitations and encouragement to return to a beloved acquaintance and neighborhood; the separation from which my heart has often felt with sincere regret.

THOMAS GREEN.

Friday, January 6, 1769.

The Senior Class in Yale College have unanimously agreed to make their appearance at the next public commencement, when they are to take their first degree, wholly dressed in the manufactures of our own country; and desire this public notice may be given of their resolution, that so their parents and friends may have sufficient time to be providing homespun clothes for them, that none of them may be obliged to the hard necessity of unfashionable singularity by wearing imported cloth.

September 1, 1769.

To be sold by the subscriber, of East Haven, a likely Negro Wench, aged about 23 years, strong and healthy, and well skilled in all business suitable for a wench. As also a Negro Girl between two and three years of age.

NICHOLAS STREET.

October 18, 1771.

STAGE COACH.

The subscriber, having at great expense furnished himself with an elegant and convenient Stage Coach and four horses, proposes for a low and moderate price, upon suitable encouragement, to drive between Hartford and New Haven once in each week, and to return to Hartford the day after he comes down to New Haven; and as it may greatly tend to increase the intercourse between the two towns of Hartford and New Haven and (if another coach should proceed from Hartford to Boston, as is probable will be the case if that takes place) encourage gentlemen from the Southern Provinces traveling to Boston to pass through this colony, who now generally go by water from New York to Providence. And as he must, for a long time at least, be money out of pocket and risk imposing on himself considerable loss, he humbly desires all gentlemen disposed to countenance the undertaking to leave their names at the Post Office in New Haven, adding such sum for him as their generosity shall dictate. If any gentlemen are disposed to share with him the loss or gain of the undertaking, he is ready to admit them into partnership.

NICHOLAS BROWN.

June 26, 1772.

The public are hereby notified that the Hartford stage Coach will be in New Haven on Thursday evening, the 9th of July next, on its way to New York, when any gentlemen or ladies that may want a conveyance there, or to any place on the road between this town and that city, may be accommodated in said coach by their humble servant,

J. BROWN.

N. B.—The coach stops at Mr. Beers' Tavern.

March 1, 1775.

Wanted to purchase, sixty muskets and bayonets, as soon as they can be made in this colony. Any person who will engage for part or the whole will meet with proper encouragement by applying to

BENEDICT ARNOLD.

NEW HAVEN, March 1, 1775.

Yesterday the ladies belonging to Fair Haven Parish in this town met at the Rev. Allyn Mather's, and presented Mrs. Mather with 109 skeins of well-spun linen. And after having drunk tea as usual upon such occasion, they unanimously came into this resolution (as recommended in the Third Article of the Association of the Continental Congress), that they would drink no more of that pernicious weed till the late oppressive acts of the British Parliament are dissolved.

NEW HAVEN, April 12, 1775.

We are informed from the parish of East Haven that last week the women of that parish, in imitation of the generous and laudable example of the societies in the town of New Haven, presented the Rev. Mr. Street, of said parish, with upwards of one hundred and thirty run of well-spun linen yarn, which was gratefully received by the family; and the generous guests, after some refreshment and taking a few dishes of coffee, agreeable to the plan of the Continental Congress, to which that society unanimously and fixedly adheres, dispersed with a cheerfulness that bespoke that they could be well pleased without a sip from that baneful and exotic herb (tea), which ought not to be so much as once more named among the friends of American Liberty.

NEW HAVEN, April 26, 1775.

As the alarming situation of affairs is such as to gain the most anxious attention of the public, who are desirous to have the freshest intelligence, we intend to publish this paper twice a week. The next paper will be published on Saturday next.

NEW HAVEN, May 10, 1775.

The subscriber informs the public that he has entered into the business of making bayonets of any size, and will warrant them to be equal in goodness to any ever imported into this country. Any gentleman may be supplied with a bayonet fitted to his gun on the shortest notice; and all favors will be gratefully acknowledged by their humble servant,

SAMUEL HUGGINS.

NEW HAVEN, December 6, 1775.

Last evening the Lady of his Excellency, General Washington, and the Lady of Adjutant-General Gates, arrived in town from Virginia, being on their way to Cambridge.

NEW HAVEN, April 17, 1776.

Thursday morning last, came to town from Boston, *via* New London, his Excellency General Washington, accompanied by Adjutant-General Gates and some other officers, who, after tarrying in town a few hours, set off for New York. And last Saturday evening, came to town from the same place, *via* Hartford, the Lady of his Excellency, and the next morning she set off for New York.

Francis Vandale, from Old France, intends to open a Dancing School in this town, and also teach the French Language on very reasonable terms. As he gave entire satisfaction to his pupils, of both sexes, at Cambridge, Boston and Newport (Rhode Island) in these necessary arts, he will acquit himself of his duty in the same manner. He is a Protestant, and provided with good certificates. For further particulars, inquire at Mr. Gould Sherman's, where he lives, in New Haven.

December 13, 1775.

We are very sorry that we cannot procure a sufficiency of paper to publish a whole sheet; but as there is now a paper-mill erecting in this town, we expect, after a few weeks, to be supplied with such a quantity as to publish the journal regularly, on a uniform-sized paper, and to be able to make ample amends for past deficiencies.

July 3, 1776.

To whom it may concern.

An express having arrived in this town, on Monday evening last, from General Washington, on his way to Providence, with despatches to Governor Cook and General Spencer; and being in great want of a horse to proceed, application was made to a Justice of Peace for a warrant to impress one, which he absolutely refused granting.

NEW HAVEN, 8th April, 1777.

N.B.—The printers are at liberty to mention the author's name whenever the Justice pleases to call upon them; likewise the names of the persons ready to testify to the above charge.

September 10, 1777.

The printers of the CONNECTICUT JOURNAL are very sorry to inform their customers that the necessity of the times obliges them to advance its price to twelve shillings a year. Those who have paid in advance will have their papers continued to the time they paid for, at the old price; and those who pay in country produce or manufactures at their old prices, may be supplied with the papers as heretofore.

THE PRINTERS.

February 18, 1778.

The price of this paper till further notice will be at the rate of eighteen shillings per annum.

Any gentlemen, farmers or others, that have any juice extracted from corn-stalks, which they are desirous of having distilled into rum, are hereby notified that the subscribers, distillers in the town of New Haven, will distill the same on shares, or otherwise as they can agree. And those who will please to favor them with their employ, may depend on having the strictest justice done them and their liquor distilled to the fullest proof. Or any person that would rather dispose of said juice of corn-stalks, on delivering it at the distillery, will receive the market price; and every favor will be most gratefully acknowledged by the public's very obedient servants.

September 24, 1777.

JACOBS & ISRAEL.

N.B.—Private families may have cider distilled for their own use by Jacobs & Israel.

NEW HAVEN, May 6, 1778.

Monday last came to town, Major-General Benedict Arnold. He was met on the road by several Continental and Militia Officers, the Cadet company and a number of re-

spectable inhabitants from this place, to testify their esteem for one who has by his bravery rendered his country many important services. On his arrival in town he was saluted by a discharge of thirteen cannon.

NEW HAVEN, July 15th, 1778.

On Wednesday, the 8th inst., the Rev. Ezra Stiles, D.D., was inducted and inaugurated into the presidency of Yale College, in this town.

The formalities of this installation were conducted in the following manner:

At half after ten in the forenoon, the students were assembled into the Chapel, whence the procession was formed, consisting of the Undergraduates and Bachelors. At the tolling of the bell they moved forward to the President's house to receive and escort the Rev. Corporation and President-elect, by whom being joined, the procession returned to the Chapel in the following order:

The four classes of Undergraduates, consisting of
116 students, present.

Bachelors of Arts,

The Beadle and Butler,
carrying

The College Charter, Records, Key and Seal.

The Senior Presiding Fellow.

One of the Hon. Council, and the President-Elect.

The Reverend Corporation.

The Professors of Divinity and Natural Philosophy.

The Tutors.

The Reverend Ministers.

Masters of Art.

Respectable Gentlemen.

The Rev. Eliphalet Williams, Senior and Presiding Fellow, began the solemnity with prayer. The oath of fidelity to this State was then administered to the President-elect by the Hon. Jabez Hamlin, Esq., one of the Council of the State; which being done, the President-elect publicly gave his assent to the Ecclesiastical Constitution of this Government, and thereupon the Presiding Fellow delivered a Latin oration well adapted to the occasion; in which he committed the care, instruction, and government of the college to the President-elect, and in the name and by the authority of the Rev. Corporation, constituted him *President of Yale College in New Haven, and Professor of Ecclesiastical History*, and delivered to him the charter, records, key and seal of the college. The President being seated in the chair, Sir Dana, one of the Senior Bachelors, addressed him in the Auditory, in a beautiful Latin oration, delivered in a graceful manner. Then the President arose and politely addressed the audience in an elegant, learned and animated oration in Latin, upon the *Cyclopaedia* or general system of universal literature; which for the beauty of classical diction, elevation of thought, and importance to the cause of learning in general, was worthy its author. After which an anthem, the 122nd Psalm set to music, was sung by the students; and the President closed the solemnity with a blessing.

The Rev. Corporation, Officers of institution, Ministers, and other respectable gentlemen, after a short recess in the Library, dined together in the College Hall; an entertainment having been provided for the occasion.

All gentlemen volunteers who are desirous of making their fortune in eight weeks' time, are hereby informed that the fine new privateer called the New Broome, mounting sixteen sixes and four pounders, besides swivels, Israel Bishop, commander, is now completely fitted for an eight weeks' cruise near Sandy Hook and in the Sound, where she will be under the protection of his Most Christian Majesty's fleet, and will have the best chance there has been this war of taking prizes; she only waits for a few more men and then will immediately sail on her cruise. All those who are desirous of entering for the cruise are requested to apply soon on board said brig, now lying in Connecticut River, or on board her in New London harbor, where she will be on the first of August.

WETHERSFIELD, July 25, 1778.

NEW HAVEN, November 18, 1788.

The privateer New Broome, from Connecticut River, commanded by Israel Bishop of this town, is taken and car-

ried into New York. We are told that several of her crew were prisoners on board the Somerset man-of-war, lately stranded on Cape Cod.

YALE COLLEGE, January 29, 1779.

The students of Yale College are hereby notified that the present winter vacation is extended a fortnight from the 4th of next month. As this is occasioned by the difficulty which the steward finds in procuring flour or bread, it is earnestly requested of the parents that they would assist in furnishing the necessary supplies.

EZRA STILES, *President*.

NEW HAVEN, May 9, 1779.

Wanted to purchase immediately.—Two negro or mulatto boys, or men, from 14 to 24 years of age. Also wanted, a second-hand Sulkey. Inquire of the printers,

NEW HAVEN, August 18, 1779.

Yesterday a Cartel Ship sailed from this port with a number of prisoners, to be exchanged for those who were taken by the enemy from this town, and by them considered as prisoners of war.

The Steward of Yale College wants to purchase a quantity of butter and cheese, for which he will pay the best kind of Rock Salt, Molasses, Continental or State's Money, or part in hard money.

November 2, 1780.

We, the subscribers, being, by the Court of Probate for the District of New Haven, Conn., appointed Commissioners to receive and examine the claims of the several creditors of Benedict Arnold, late of New Haven, in New Haven County, now joined with the enemies of the United States of America, whose estate hath been in due form of law confiscated, give notice to all concerned, that we shall attend to the business of our said appointment at the dwelling-house of Pierpont Edwards, Esq., in said New Haven, on the second Monday of December next, at 2 o'clock in the afternoon; on the second Monday of January next, at the same time of day; and on the third Monday of February next, also at the same time of day.

ISAAC JONES,

MICHAEL TODD,

Commissioners.

NEW HAVEN, November 29, 1781.

All persons who were indebted to the said Arnold at the time he joined said enemies, are requested by the subscriber, who is by said Court of Probate appointed Administrator on said Arnold's estate that was the property of said Arnold at the time he joined as aforesaid, are requested to deliver the same to the subscriber, or account with him therefor.

PIERPONT EDWARDS.

NEW HAVEN, November 29, 1781.

NEW HAVEN, February 16, 1791.

Number of inhabitants in New Haven, 4,510; of whom 3,471 are within the limits of the city. The number of families, 860; of which 665 within the city. In the town and city are 129 free negroes and 78 slaves included in the above.

NEW HAVEN, December 21, 1791.

A Xmas ox will be distributed on Saturday next, and the needy are requested to apply. WILLIAM HILLHOUSE.

NEW HAVEN, January 28, 1796.

The Roman Catholics of Connecticut are informed that a Priest is now in New Haven, where he will reside for some time. Those who wish to make use of his ministry will find him by inquiring at Mr. Azel Kimberly's, Chapel street.

The printers of this State are desired to insert this advertisement:

Les Francois sont avertis qu'il y a un Pretre Catholique en ville On le demandera chez Monsieur Kimberly, Rue de la Chapelle, New Haven.

Frederick B. Harrington.

We now take leave of these periodicals of the olden time to enumerate those of the present day.

There are in New Haven, five dailies, viz.: *The Journal and Courier*; *The Evening Register*; *The Daily Palladium*; *The Daily Union*; and *The Morning News*.

The history of *The Journal and Courier* extends back to October 23, 1767, when *The Connecticut Journal and New Haven Post Boy* was begun by Thomas and Samuel Green. The latter part of the title was omitted in 1775, and the paper was published as the *Connecticut Journal* till 1799, when for a few months *Weekly Advertiser* was added to the title. Afterward for a few months in 1809 the word *Advertiser* was again added. From this newspaper we have given above copious extracts illustrative of the history of New Haven. After passing through many changes of ownership, it became the property of Woodward & Carrington, who were already proprietors of *The Connecticut Herald*, a weekly, commenced by Comstock, Griswold & Co. in 1804. Thomas Green Woodward had long been connected with the *Herald*, and while its sole proprietor he started *The Daily Herald*, November 26, 1832. John B. Carrington, who had learned the printer's art in the office of Mr. Woodward, was received into partnership with him January 1, 1835. It was not long after the formation of this partnership that the subscription list and the name of the *Journal* passed into the hands of this firm. In 1846 the name of the *Journal* was attached to their daily issue. Mr. William T. Bacon came into the firm in 1846, Mr. Woodward being now deceased, and edited *The Morning Journal and Courier* till 1849. The name had its origin partly in the *Connecticut Journal* first published in 1767 and partly in the *Morning Courier*, a paper originated by Winthrop Atwell, a few years before, and now purchased by the proprietors of the *Journal and Herald*. Mr. John B. Hotchkiss was the successor of Mr. Bacon, and until his death the firm bore the name Carrington & Hotchkiss. By the death of Mr. Carrington, February 11, 1881, the paper passed into the management of his sons, Mr. John B. Carrington, Jun., and Mr. Edward Carrington. The younger of the two sons dying soon after the decease of his father, the *Journal and Courier* came into the hands of Mr. John B. Carrington, the present manager and chief proprietor. It has always been conservative in tone and has aimed to be the family paper of the city. It has given a steady and consistent support to the principles of the Republican party, but is not illiberal or unduly partisan. Its present editor is William G. Pratt.

Besides the daily, a weekly is issued, bearing the name, *The Connecticut Herald*, which it has borne since 1804; to which *Weekly Journal* is now added.

JOHN B. CARRINGTON.

The local history of New Haven for half a century brings prominently into view no single name of greater influence in the wealth and prosperity of

the city than that of John B. Carrington. He was born in the village of Bethany, in this State, in 1811, and at the time of his death was in the seventieth year of his age. In youth he was studiously inclined, and it was expected that he would enter the profession of the ministry; but, being of an active temperament, he left his home in 1824 and came to New Haven, where, with the exception of a short period, his useful life was spent. Entered as an apprentice in the newspaper office managed by Thomas G. Woodward, one of the ablest Whig editors of New England, he served his full time in the mechanical department of the business, finding time however to write for publication various articles on the topics of the day. His long and honorable connection with the Press may be dated from this happy choice of a career which was eminently successful in a moral as well as pecuniary sense.

While a young man Mr. Carrington spent about two years in Macon, Georgia, engaged in a newspaper enterprise, but liking his New Haven associations better, he returned to this city, and, in connection with Mr. Woodward, commenced publishing the *Daily Herald*, the first daily newspaper in Connecticut. He was the sole publisher in 1845. No newspaper enterprise ever had more difficulties to overcome than the *Journal and Courier*, the outgrowth of the *Herald*, at particular seasons of competition and general depression in business, and it was owing to the personal popularity of Mr. Carrington, and to his energy and foresight, that it is to-day more firmly established than any of the four principal cotemporary daily papers.

In 1849 a partnership was formed by Mr. Carrington and John B. Hotchkiss, who published the *Journal and Courier*. The partnership ceased by the retirement of Mr. Hotchkiss, when a company was formed, with John B. Carrington as manager and the largest owner; and Abner L. Train; President E. C. Scranton, of the New York and New Haven Railroad; Hon. N. D. Sperry, formerly Secretary of the State of Connecticut and postmaster at New Haven for twenty-five years; Hon. William W. Boardman, an ex-congressman; and the late Morris Tyler, as stockholders. In 1875 Mr. Carrington purchased the interest of all the other owners and admitted his two sons—Edward T. and John B. Carrington, Jr.—into partnership. By the death of the eldest son further change became necessary, and the paper is now published by a company, of which John B. Carrington, son of the subject of this sketch, is the president and treasurer.

Fifty years ago the acrimony engendered by political differences was reflected in the organs of party, and too often the editorial article was simply an instrument favoring personal discord. Mr. Carrington introduced into New Haven journalism a spirit of forbearance and courtesy toward men and newspapers of differing political faith or adverse views in all measures of public interest. The personal affability of Mr. Carrington, his considerate treatment of all agitating matters, and his fair presentation of all sides of a question in dispute

made the *Journal and Courier* acceptable in the homes of different classes of people. He recognized that while "all men have their foibles" it was no part of a high-minded newspaper to expose them, except in the extreme necessity of some great public good. His editorial letters while in Europe in 1871 and 1872, were characterized by a rare blending of polished diction and an agreeable faculty of telling in a straightforward manner all those things which came under his trained observation.

In politics, from being a supporter of Henry Clay, he became a member of the American party which succumbed under the assaults first made by William H. Seward, and from that time he was a Republican. In 1849 and for some years he published the *New Englander*, then edited by Theodore D. Woolsey, of Yale College, and Rev. Leonard Bacon, having some interest in that publication as late as 1856.

Editor, manager and publisher of one of the most successful and respected journals in Connecticut, Mr. Carrington, who had acquired more than a competence invested, in 1848, in the manufacture of malleable iron, being among the first to see the value of this material. When the war broke out, the *Journal and Courier* was constant and unflinching in its vigorous support of the Government, and its editorials, written without passion, were permeated with loyalty to the American union. There was hardly an enterprise started in New Haven, either a few years before or after the war, that Mr. Carrington was not asked to assist with his money and advice. He was never afraid of a business project because of its novelty or in the hands of young, rather than older and more experienced business men. He was a member of the Bigelow Manufacturing Company, and a director of the first horse railroad company in the city and State; of the New Haven County National Bank, the Griley Screw Company, the Mansfield Elastic Frog Company, the New Haven Gas-Light and Water Companies, the New Haven *Palladium*, and other companies. There were many instances when he lent his money to promote some business affair in which he had no other interest than its success.

Mr. Carrington made the most use of the pleasant things of life consistent with temperance and good principle. He was always fond of travel and of seeing nature in every aspect. From Europe, the West Indies and Utah, his letters to his newspaper were filled with the best spirit of journalistic correspondence, and in the city of his adoption he was ever alert and sympathetic in every public improvement.

The Carrington homestead on Elm street, one of those fine old-fashioned houses, such as suggest the New England thanksgiving, has been for years the home of elegant refinement and true hospitality. Mr. Carrington was a member of the Society's committee of the First Congregational Church. At the time of his death the city newspapers united in paying honors to his memory, printing many tributes to his good qualities as a citizen, neighbor and friend.

He was married in 1838 to Miss Harriet Hayes Trowbridge. Eight children were born to them. The wife did not long survive her husband and there have seldom been married lives more united in affection than theirs.

The publication of *The Columbian Register* was begun December 1, 1812, by Joseph Barber, and until now it has been issued without interruption. The history of New England, and particularly of Connecticut, during more than seventy years, has been told in its successive numbers, and the influence it has exerted is beyond computation. Mr. Barber was an earnest Democrat, and a strong supporter of the course of President Jackson, during the troubles of the old United States Bank, which led to a removal of the Government deposits from this institution. The *Register* was started for the purpose of giving the earliest and most reliable news regarding the proceedings of Congress and the course of events in the Old World. It also gave attention to matters affecting the interest of the city and the commonwealth where it was published. In its columns were freely discussed whatever subjects were at the time of public interest or importance. Those were days when obedience to constituted authority partook largely of subservience to the dominating class of citizens, and liberty in political discussion was oftentimes construed as a sort of impiety. New Haven was a village of less than 7,000 inhabitants, the local government being generally in the hands of Congregationalists. In 1818 the Democratic party secured an ascendancy in the State and the adoption of a new constitution.

The *Register* was then printed at the rate of 250 sheets an hour, the ink being applied to the types by means of cushions or balls manipulated by boys. There were two other papers in the city—*The Connecticut Herald* and *The Connecticut Journal*—both devoted to the policy of the Federalists.

In 1817 the paper was published on Church street, below Chapel street. In 1826 it was removed to Chapel, below Orange. In 1884 a large brick building was erected in Crown street, where the *Register* is provided with every convenience and is permanently located.

Minott A. Osborn, who entered into the service of the *Register* in youth, had written many articles for its columns while in subordinate positions, and in accordance with the wish of leading men in the city, became a partner with Mr. Barber in 1834, and so continued till 1838, when Mr. Barber disposed of his interest, Mr. Osborn becoming the sole editor. He had for a partner the late William B. Baldwin, who supervised the mechanical department. In 1842 the *Register* was firmly established in a large daily and semi-weekly edition, its weekly edition reaching every town in the western part of the State. The first stenographic reports were published in 1840, and in 1848 news was received by telegraph from the large cities.

The firm of Osborn & Baldwin was dissolved in 1866, Mr. Osborn and one of his sons thenceforth

Wm. H. A. C. C. C.

managing the business. After the death of Minott A. Osborn, in 1877, the paper was conducted by two of his sons, one of whom, Colonel Norris G. Osborn, is the present editor, and has been for some time in entire charge. Daily, weekly, and Sunday editions are published, the latter having a large circulation in many other States besides Connecticut.

MINOTT AUGUR OSBORN.

The editor of an influential newspaper occupies in these days a position comparable only to that formerly held by the village parson. Daily the editor mounts his pulpit; every day the worshippers assemble to hear him. To the public, which grows up around him, he becomes in politics a teacher and an oracle; in society a mentor; in religion a critic; in business matters an indispensable assistant and adviser. If, in addition to all this, he is gifted with graces of body and of mind, which fit him to become a genial comrade, a sympathetic counselor, esteemed by the community, beloved in his home—his character is such as New Haven knew and delighted to honor in the person of Minott Augur Osborn, for forty-three years an editor of the *New Haven Register*.

He was born in this city, April 21, 1811, in a house in Cherry (now Wooster) street, near the corner of Union street. His father, Eli Osborn, was a merchant tailor, whose place of business was on State street, near the store now occupied by E. G. Stoddard. His family had been identified with the fortunes of the New Haven settlement from the beginning. During all the years of Mr. Osborn's life, he was rarely away from his native city for more than a week at a time, and he ever rejoiced to return to it rather than to leave it. He was unable to obtain more than the ordinary advantages of education, and at the age of fourteen quitted Mr. John E. Lovell's famous Lancasterian School, in order to learn the art of printing. For this purpose he entered the office of the *Columbian Weekly Register*, which was owned and edited by his uncle, Joseph Barber. At the type-setter's case his receptive mind developed rapidly, and his fitness to do better, higher work was speedily recognized by his uncle, who admitted him to full partnership in 1834. The infusion of young blood and quick wit into the editorial columns of the *Register*, gave new life to the paper. Bright, sharp paragraphs began to attract wide attention, and gave rise to many a political tilt. Mr. Osborn's lance was keen, and his thrust severe, but he ever tried to heal the wounds that he had made, by a generous touch of kindly humor.

In the course of time, some differences of political opinion sprang up between Mr. Barber, who was a staunch old-school Jeffersonian, and the nephew, who was a zealous adherent of President Jackson. The disagreement culminated in the winter of 1837-38, over the Sub-Treasury scheme, which Mr. Barber opposed, but which Mr. Osborn as strongly favored. The senior editor found that the majority of his party in this neighborhood was opposed to him and sided with Mr. Osborn. Fi-

nally the latter proposed that one or the other should retire from the paper. Mr. Barber thereupon determined to withdraw, and, about the 1st of January, 1838, Mr. Osborn and Mr. W. B. Baldwin, under the firm name of Osborn & Baldwin, succeeded to the control of the paper. Mr. Barber published a sort of farewell address on Saturday, December 30, 1837, in which he introduced his successors as follows:

"The young men named above are well qualified for the responsible position which they have assumed—so much so, that if the whole printing fraternity of the country had been presented to us from which to make the selections of our successors, we should have named the two who have purchased the establishment."

Osborn & Baldwin conducted the *Register* for twenty-eight years with unvarying success. The *Register* nailed its colors to the masthead, and, if it was strongly partisan, was always frankly and honestly so. It grew with the city. The weekly was supplemented by a tri-weekly edition, and finally a daily evening paper was issued. The subscription list increased, and the enterprise yielded a handsome income to its proprietors.

In 1866 Mr. Baldwin retired. Mr. Osborn associated with him his eldest son, and the business was continued under the firm name of M. A. Osborn & Co. But in 1875 the company was transformed into a joint-stock corporation, bearing the name of "The Register Publishing Co.," and such it still remains.

When a young man, Mr. Osborn was a popular member of the New Haven Grays, and he was a non-commissioned officer of that company when he was elected Major of the 2d Regiment, at the same time that Gardner Morse was chosen Colonel. He served in the militia for about two years, and thus obtained that military title by which he was popularly known throughout the State.

In the councils of the Democratic party in State and nation, Mr. Osborn held naturally a prominent place. He did not desire office for himself, preferring to support the candidature of other good men rather than to join personally in the race for office. He was once a member of the Common Council; was Collector of the Port of New Haven under Presidents Pierce and Buchanan; was appointed Railroad Commissioner by Governor Ingersoll, and Road Commissioner of this city by Mayor Lewis. He was among the first to advocate the introduction of water into the city, and did more than any other man to organize the present Water Company. At the time of his death he was treasurer of that company, and also a director in the New Haven Gas Light Co., and in the Connecticut Savings Bank.

In the domestic circle was his greatest joy. He was twice married. His first wife, Caroline McNeil, of this city, died in 1838, after bearing him two children, one of whom, a daughter, survives. In 1841 he married Catherine Gilbert, daughter of the late Ezekiel Gilbert, of Humphreysville (now Seymour). Nine children, of whom seven are now living, were the fruit of this marriage. Among

his children and grandchildren he spent his last days, cheered by the ministrations of a devoted wife. For some months the grasp of disease upon him slowly tightened, until, on the 24th of October, 1877, in the 67th year of his age, the end came, and the tireless worker, the good citizen, the beloved husband and father, was no more on earth.

The New Haven Palladium was founded by Charles Adams, and was first published as a weekly, its initial number bearing date of November 7, 1829. Late in 1830, James F. Babcock assumed the editorship and general management, beginning a connection with the paper which continued uninterrupted for nearly thirty-two years. It was largely due to Mr. Babcock's vigorous personality that the *Palladium* early achieved a leading position among the newspapers of New England, a position which it has steadily maintained. In 1839 Mr. Babcock began the publication of a tri-weekly edition, which at that time was looked upon as a rash venture for New Haven. It proved a success, however, and paved the way for the *Daily Palladium*, the first number of which was issued February 23, 1841. Mr. Babcock bade a final adieu to journalism in 1862, and was succeeded in the editorial chair by Cyrus Northrop, who retired a year later to accept an appointment to the Professorship of Rhetoric and English Literature in Yale College. Among the more prominent journalists who have since been connected with the *Palladium* are A. H. Byington, Colonel William M. Grosvenor, Abner L. Train, and Herbert E. Benton. The *Palladium* was originally Whig in politics, but was among the first newspapers of the country to espouse the principles of the Republican party, to which it has steadfastly remained true. While largely devoted to the dissemination of local news, it is well equipped as a general family newspaper in all its departments, and the best evidence of its success lies in the fact that it has had a continuous and prosperous existence for more than half a century.

The New Haven Union was established July 23, 1871, in the Stafford Building on State street, and was the outcome of a movement made by a number of printers to have an organ for the promulgation of the interests of working men. There had been a strike of compositors in the office of the *Journal and Courier*, and among the speakers who in public meetings addressed the working men on the rights of labor was Alexander Troup, then a practical printer working in New York. He, together with James A. Peck and Jefferson J. Young, issued the first number of the paper, publishing it on Sunday mornings, it being the first Sunday newspaper in Connecticut. Mr. Troup was the editor and manager from the outset, and he so continues. He has been recognized as a power in politics, and has represented the town in the Connecticut Legislature. In the earliest numbers of the paper were printed, as a declaration of principles, the platform of the National Labor party.

Efforts were made to discourage the enterprise,

and an early failure was generally predicted. In October the *Union* was issued Saturday afternoon instead of Sunday, the name being changed to *The Saturday Evening Union*.

On July 1, 1873, the paper took its place as a daily, in competition with the three other dailies of the city, and a stock company was formed with a capital stock of \$20,000. The first president was George W. Goodsell. Charles Atwater was treasurer, and Horace Day was a director. The paper was thereafter issued six evenings of the week and Sunday morning, and was a four-page sheet. In January, 1876, it was published with eight pages. In 1874 the Potter drum press was exchanged for a Hoe double-cylinder. The office for several years was at 263 and 265 Chapel street, but on May 1, 1883, it was moved into a new building on Chapel, below Union street, built expressly. A Hoe web printing, pasting and folding machine was purchased.

The *Union* never printed less than 2,000 copies for a daily edition, and has sometimes printed 12,000 in seasons of special excitement. Under the editorial management of Mr. Troup, the paper for some years advocated the principles of the Greenback reformers, and upon the decline of interest in the greenback financial theories, the *Union* became a Democratic organ. It has a uniform and satisfactory circulation, and has been a profitable institution since its foundation.

The New Haven Morning News first saw the light on the 4th of December, 1882. It was stated in the prospectus that the new paper was a continuation of the *Observer*—a small sheet which had been issued since October 12th of that year. The *Morning News* was, however, to all intents and purposes an entirely new journal, it having simply bought out, for a small sum, the subscription list and the few other assets of the *Observer*.

The *News* was conducted at that time, and in the main owned, by Mr. Reuben B. Davenport, of New York; Mr. Henry Allaway, of New York; and Mr. James Craig, of New Haven. Mr. Davenport was editor-in-chief; Mr. Allaway, news editor; and Mr. Craig, business manager. It was established distinctly as an independent newspaper, not connected with either of the political parties, but aiming to give all the news in a condensed form; to discuss public events impartially; and finally, in the words of the prospectus, to "identify itself unmistakably with the best interests of New Haven, and in every way possible to promote the growth and prosperity of the city."

The new paper seemed to meet with public favor from the start, and grew rapidly. Its original five columns were increased to six on the 1st of January, 1883, and these again to seven in March of the same year. The dimensions of the sheet thus became 23 x 17½ inches—a size which has been maintained ever since.

In the spring of 1883 a number of new stockholders took an interest in the paper, and the capital was at the same time increased. The intention of those who thus lent their support to the

paper was to insure it a character and stability which it might not otherwise have maintained.

The circulation of the *Morning News* grew rapidly during the year 1883, and amounted to over 9,000 a day at the beginning of the year 1884. On the 5th of November, 1884, the day after the election, its edition was over 16,000, a figure unprecedented in the history of journalism in New Haven.

At the beginning of 1884 a change took place in the editorial management, Mr. Davenport selling his stock to Messrs. Baldwin & Farnam, and withdrawing from the paper. In February, 1884, Mr. Clarence Deming, formerly of the New York *Evening Post*, was appointed to take his place, and under his management the *Morning News* has continued the independent policy which characterized it at the beginning. In July, 1884, the telegraphic service of the paper was strengthened by the dispatches of the New England Associated Press. In May, 1885, Mr. Craig retired from the position of business manager, and Mr. John S. Fowler, of New Haven, was appointed to take his place.

The *Morning News*, though independent of political parties, is always outspoken on public questions, and never hesitates to advocate the side that it believes to be for the interest of New Haven. During the legislative campaign of 1883, for instance, it advocated the election of Mr. William H. Law of the Democratic ticket, and the Hon. Henry B. Harrison of the Republican ticket, and had the gratification of seeing both its candidates elected, though in a town which usually gives a clear majority to the Democratic party. Again, in 1884 the paper strongly advocated the nomination of the Hon. Henry B. Harrison as Governor. The Republican convention actually did nominate him, and the *Morning News* strongly supported him during the campaign that followed, and had the satisfaction of seeing him installed in office, though he did not gain a majority of the popular vote. During the presidential campaign of 1884 the *News* advocated the election of Mr. Cleveland, and supported him vigorously, though being careful to avoid abuse or unjust criticism of his opponent.

At the close of the Legislative session of 1884, the *Morning News* required its reporter to return to the State the sum of \$200, which he, together with the other newspaper reporters, had received for doing the Legislative work. It also returned two sums of \$50 each, voted to its reporter by the Selectmen and the Court of Common Council of New Haven, and from that time has waged a vigorous warfare upon the whole system of subsidies to reporters. This had in the course of time proved to be an abuse of considerable magnitude in Connecticut, the newspapers practically sending their reporters to Hartford at the public expense, and thus causing an annual drain upon the treasury of several thousand dollars. At the beginning of the Legislative session of 1885, the *Morning News* carried on its attack upon this abuse with renewed vigor, and though the whole movement was treated with silence by the other New Haven papers, and received very little journalistic support throughout the State, the Legislature voted to repeal the act

providing for the subsidy. In 1885 the Court of Common Council and the Selectmen of New Haven refused to make an appropriation for the subsidies to their reporters. It is believed that this action of the Legislature and of the Local Boards was due entirely to the efforts of the *Morning News*, as the system had been unassailed before its time, and as none of the other papers gave any real support to the agitation for repeal.

These facts from the history of the paper indicate its aims and policy. It endeavors to attack and expose all abuses in the administration of the Government, regardless of the interests that may be affected thereby. It advocates economy and purity in politics, and a reform of the civil service. It tries, in particular, to further the special interests of New Haven without making itself the organ of any party, corporation, or clique. In its news department it aims to neglect nothing, though presenting everything in a concise form, and it endeavors, whenever it has occasion to attack any person, system, or party, to carry on the fight in a dignified and fair manner, without malice or misrepresentation.

The price of the *Morning News* has always been two cents, which has thus made it the popular paper of New Haven and made its street sales very large. It has endeavored to benefit, as far as possible, the working classes, and for that purpose has, from the very start, printed without charge the advertisements of those who were seeking employment. The other morning papers followed its example as regards price in 1884, and one of them has also adopted its plan of giving free advertisements to people who are out of work.

Besides the five daily papers which have been enumerated, there is one in German, called *Der Republikaner*, edited by Paul Gebhard. It has also a weekly edition. Two other weekly papers are issued in German entitled respectively *Der Volksblatt* and *Der Botschafter*.

The *Shore Line Times* is a weekly published in Fair Haven.

Other periodicals are: *The American Journal of Science*, established in 1818, by the first Professor Silliman. It is a bi-monthly, and maintains the high reputation of its early years.

The New Englander, established in 1843, is also a bi-monthly.

Loomis' Musical and Masonic Journal, established in 1867, is published monthly.

Among the College periodicals are *The Yale Literary Magazine*, established in 1836; *The Yale Courant*, established in 1865; and *The Yale News*.

The pupils of the Hopkins Grammar School have a paper called *The Critic*, and the pupils of the Hillhouse High School publish *The Crescent*.

Members of Trinity M. E. Church publish a paper called *The Lyceum*.

Among papers recently, but not now, published in New Haven may be mentioned *The Gospel Union News*, which has been merged in a paper printed in New York, and *Der Anzeiger*, a German paper established in 1877.

CHAPTER XIII.

THE BENCH AND BAR OF NEW HAVEN.

BY LYNDE HARRISON, ESQ.

THE PERIOD FROM 1639 TO 1664.

WHILE New Haven existed as an independent colony, and for many years after, there was neither a Bench nor a Bar in the sense that these words are taken to-day. In the hard struggle for existence which the early colonists went through, there was no room for a small body of men devoted to the study and practice of the law who could form a Bar. Controversies between the people concerning personal rights and wrongs were of such a simple character that they could be easily heard and determined by and before magistrates chosen from year to year from the body of the people. The complicated system of tenure under which real estate was held in England never existed in Connecticut. The land, as it was purchased from the Indians, was allotted to the different settlers, passed by inheritance to their children, or was conveyed by a simple form of deed and record. Personal property, except live stock, was scarce, and the time of the magistrates was generally occupied in disposing of petty questions concerning trespass or debt, and punishing minor offenses, many of which are rarely noticed by the prosecuting officers of to-day.

On the 4th day of June, 1639, the free planters of New Haven assembled, and all legislative and judicial powers were vested in a Court consisting of twelve Free Burgesses. None but church members were eligible. To this Court was given the power of appointing magistrates. On the 25th of October, 1639, the Court proceeded to the choice of a magistrate and four deputies, "to assist in the public affairs of the plantations." At this time the first legislative caucus for the appointment of judicial officers was held in New Haven, and the Rev. Mr. Davenport, who was one of the Free Burgesses, began by reading the 13th verse of the 1st chapter of Deuteronomy, and the 2d verse of the 18th chapter of Exodus, because in these verses there is a description of magistrates "according to the mind of God." After this reading, Mr. Theophilus Eaton was unanimously appointed Magistrate for the term of one year. Mr. Robert Newman, Mr. Mathew Gilbert, Mr. Nathaniel Turner and Mr. Thomas Fugill were appointed Deputies, or Assistant Magistrates. Mr. Thomas Fugill was at the same time appointed a Notary Public and Clerk of the Court. Mr. Robert Seeley was appointed Marshal or Sheriff, and he was given power to appoint a deputy.

The first reported case before this Court was that of the Colony against Nepaupuck, who was charged with the murder of Abraham Finch at Wethersfield, a year or more before that time. Nepaupuck had been accused of murdering the Englishman, and came into the town voluntarily. A warrant was is-

sued, and the Marshal arrested him. He attempted an escape, but was recaptured on the 26th of October, 1639. The evidence against him consisted of the testimony of several Indians, and Nepaupuck finally, on the 28th of October, confessed his guilt, and on the 29th of October was sentenced to be executed. The following day his head was cut off, and pitched upon a pole in the Market Place.

The Court of Magistrates held sessions as occasion demanded, either once or twice a month, for several years. They exercised advisory powers in many instances, and endeavored to bring about agreements between parties without going through the formalities of a trial. The following illustrations show their methods of dispensing simple justice according to their lights. On the 4th of December, 1639, Thomas Saule and Goodman Spinage were ordered to agree with each other before the next Court, "or else the Court will determine the difference between them." It does not appear from the records what was the nature of the disagreement, but on the 5th of February, 1640, as they had not agreed together, the Court ordered Thomas Saule to pay five shillings in every week to Mr. Evance, who was instructed to hold the same for the benefit of Goodman Spinage. Roger Duhurst and James Stewart stole five pounds and seventeen shillings out of the chest of their master, John Cockerill, on the Lord's Day, and in the meeting-time; doubtless Mr. Cockerill had gone to the meeting and had left the servants at home. For this offense they were whipped and ordered to make double restitution to their master. Mr. Perry had two servants, Thomas Manchester and Nicholas Tanner. Both of them having become intoxicated, used uncomely language to their master, who administered personal correction to Manchester, but for some reason failed to serve Tanner in the same way. Both the servants were brought before the magistrates, and these facts all appearing, upon the charge of drunkenness and using abusive language, the Court ordered Tanner to be whipped, but as Manchester had already received his whipping from his master, they only caused him to be set in the stocks.

The principle of the foreign attachment process was practiced quite early in New Haven. On the 5th of February, 1639, the Court having found that one Robert Campian was indebted to Mr. Mulliner, ordered Brother Andrews to detain so much of Campian's wages in his hands as might be necessary to secure the debt of three pounds due from him to Mulliner.

Indemnification in kind was sometimes ordered. Mr. Wilkes owned some hogs; Thomas Buckingham had a corn-field. Mr. Wilkes' hogs trespassed in the corn-field, and upon complaint before the

Court made by Mr. Buckingham, Mr. Wilkes was ordered to pay him five bushels and a half of Indian corn.

Intoxication upon the Sabbath was considered at that early day a more aggravated offense than upon other occasions. Isaiah, the servant of Captain Turner, was fined five pounds for being drunk on the Lord's Day. But William Broomfield, for a similar offense was set in the stocks; and David Anderson for being drunk was whipped.

These old Puritan magistrates did not convict except upon clear proof, for Mr. Mulliner, who was accused before the Court of being drunk, was re-sited because the offense was "not clearly proved." Nor did they fail on some occasions to temper justice with mercy. John Jenner was accused of being drunk "with strong waters," but he was acquitted because it appeared to be on account "of his infirmity, and was occasioned by the extremity of the cold."

The Court knew how to dispose of those who set a bad example. Goodman Love was whipped and sent out of the plantation, not only because he was disorderly himself, but because he encouraged others to gather at disorderly drinking meetings. George Spencer, who was profane and disorderly in his whole conversation, and "abetted others to sin," was also whipped and sent out of the plantation.

The General Court of Magistrates exercised probate jurisdiction. Mrs. Higginson died intestate in February, 1640, and left eight children. An inventory of her estate was taken, and the Court made the distribution with the consent and approbation of the oldest son, saving a bill for administrator's and probate fees.

Committees were sometimes appointed by this Court to hear the evidence between parties in controversy, and to certify to the Court the facts in the case, unless they could bring about a settlement "on the grounds of difference betwixt the parties."

These Magistrates were properly jealous of the dignity of their Court. Edward Banister was fined twenty shillings "for contempt of the Court, and therein the Ordinance of God."

The Court had a summary way of disposing of gossipers and scandal-mongers which might be effective in modern times. Edward Woodcliff was whipped severely for slandering his master's wife and sent out of the plantation, "being a pestilent fellow and a corrupter of others."

The time of the Court was frequently occupied in controversies between masters and servants. One of the principal cases reported was between Mr. Wilkes and his servant, John Davis. Wilkes seems to have been a man of a grasping disposition and somewhat quick-tempered. He was accused by his apprentice, Davis, with endeavoring to hold him for a longer time than he, Davis, had been bound by his father. John thereupon became stubborn and refused to work faithfully, and Mr. Wilkes struck him upon the head with a hammer. The parties coming before the Court, it was ordered that John should be whipped for his stubborn

carriage, and that Mr. Wilkes forfeit two months of the time for which John had been bound to him. Several months later the parties were again before the Court, on account of the same controversy about the length of time for which Davis had been apprenticed. Neither Davis nor Wilkes could satisfy the Court, and the case was continued for a year, upon an order that if Mr. Wilkes should fail to prove the contract to be as he alleged, that he should pay Davis twenty shillings a month for every month he should work for him beyond the time claimed by Davis to be the correct period.

In 1641 the business of the Court had increased to such an extent that it became necessary to choose two Magistrates, with four Deputies, as above. Although there was no society for the prevention of cruelty to animals, Matthew Wilson was fined twenty shillings for killing a dog belonging to Mr. Perry, and he was also ordered to pay Mr. Perry twenty shillings for the loss of the dog. As Wilson was unable to pay the fine and judgment, Edward Copperfield gave bonds for its payment within three months.

In February, 1641, one George Spencer, a servant of Henry Browning, was charged with the unnatural crime of bestiality. After many interviews with the Rev. Mr. Davenport, Marshal Seeley, and others, in prison, he confessed the crime. Upon his own confession he was convicted in March, 1642, and sentenced to be executed. This sentence being approved by some of the Massachusetts authorities, Spencer was hanged upon a gallows April 8, 1642.

The first record of the appearance of a member of the Bar in the Colony is on the 7th of September, 1642, when one Thomas Pell, as attorney for the executor of Richard Jewell, demanded the remainder of the term of nine years which Thomas Tobey was under covenant by indenture to serve the said Jewell. The matter was referred to a committee, consisting of Captain Turner and Mr. Evance, to set down what damage should be paid the estate of Richard Jewell out of the wages of said Thomas Tobey. This Mr. Pell did not continue long in the colony. About two years later, Richard Malbon, of New Haven, who was one of the principal first settlers, practiced before the Court as attorney for Richard Bellingham, of Boston, in a suit against Owen Rowe, of London. The Court in New Haven took jurisdiction of the case, because goods of the defendant were attached within the New Haven jurisdiction. The process of attaching goods before trial seems to have been practiced from the very first within the New Haven jurisdiction.

Business before this simple Magistrate's Court increased so rapidly, that in 1643 it became necessary to make a reorganization of the Courts in New Haven and the towns adjacent that were under the same jurisdiction. It was provided that magistrates should be appointed in each town by the resident church members, who should have civil jurisdiction in all cases where the matter in dispute did not exceed in value twenty pounds, and in all criminal matters "according to the mind of God,

revealed in His Word, touching such offenses, that do not exceed stocking, whipping, or, if the fine be pecuniary, that it exceed not five pounds." From all decisions of this local Magistrate of the Plantation Court, or Particular Court as it was called, an appeal could be taken, by any party aggrieved, to the Court of Magistrates for the whole jurisdiction. This latter consisted of the magistrates of all the towns, and they held two sessions annually at New Haven. It had power in all matters above the jurisdiction of the Plantation Courts, but an appeal could be taken from it to the General Court for the jurisdiction, which met at New Haven on the first Wednesday in April and last Wednesday in October. The General Court consisted of the Governor, the Deputy Governor, all the Magistrates within the jurisdiction, and two Deputies for every plantation or town in the jurisdiction. It had conferred upon it all the legislative power for the whole colony, which before that time had been vested in the Court of Free Burgesses. Taxes were assessed and collected under its authority. For the next few years many of the controversies before the General Court grew out of the division of lands and disputes about the boundaries of the same. In 1646 it became the common practice for plaintiffs and defendants to employ some friend to appear as counsel or attorney for them, to present the testimony to the Court, but the parties so employed were not skilled in the intricacies of the law, and in the next century were not recognized as attorneys or lawyers were.

At a meeting of the General Court held on the 3d of April, 1644, it was ordered "that the judicial laws of God, as they were delivered by Moses, and as they are a fence to the moral law, being neither typical nor ceremonial, nor had any reference to Canaan, shall be accounted of moral equity and generally binding on all offenders, and be a rule to all the Courts in this jurisdiction in their proceedings against offenders, until they be branched out into particulars hereafter." Notwithstanding this rule as to the method of proceeding against offenders, the magistrates generally followed the practice and customs of which they had acquired more or less familiarity in England. To protect the colonists from the Indians, stringent rules were made for the keeping of arms and ammunition in good order; but frequent complaints were made against parties who were not properly equipped, and fines were imposed very rigorously against delinquents in this respect.

At the Magistrates' Court held in New Haven on the 2d of October, 1644, Mrs. Stollion brought an action against Goodman Chapman upon a note given by him for three pounds eight shillings and six-pence. Several witnesses were examined and judgment was finally given for the plaintiff. In 1645, Richard Catchman practiced before the Magistrates' Court as attorney for several parties.

Before the same Court, in October, 1645, James Russell brought a complaint against John Walker for damage done to his corn by hogs; but John Walker pleaded that the fences were defective, whereupon he was advised "to warn those whose fences were defective." At the same session of the

Court, Joseph Brewster and Joseph Cox were complained against for drinking to excess. Brewster confessed that they had drunk sack out of his father's cellar, through the bung with a tobacco pipe, and after that they went to the Ordinary and drank a quart of beer. Sister Linge testified that she saw them, and she asked whether Cox were drunk, whereupon Brewster let him go, and then she saw him stagger and reel, and he sit down upon a block, but could not sit like a sober man, whereupon she concluded, "because he could neither go nor stand, that he was drunk." Other witnesses testified that when they saw Cox they perceived nothing that ailed him. The Court found, upon the testimony of Sister Linge, that they were drunk, and that they had told numerous lies and deserved to be severely whipped, but referred them to their masters for correction.

On the 4th of November, 1645, Banfield Bell was singing profane songs, and being reproved by William Paine for doing so, Bell said to Paine, "You are one of the holy brethren that will lie for advantage." Bell was brought before the Court and several witnesses testified to the facts. Mr. Evance said that it was the constant practice of Bell to reproach those that walked in the ways of God. Bell was thereupon sentenced to be severely whipped. Before the same Court, John Beach and Ambrose Sutton, being set forth to walk the watch at night, and having gone into a house and laid down to sleep, were fined five shillings apiece for their neglect of duty.

On the 3d of December, 1645, the Court imposed a fine of forty shillings upon James Robinson for removing landmarks from the meadows of Mr. Hooks and Mr. William Fowler. Before the same Court, at the same time, Mrs. Stollion was heard upon the complaint of Captain Turner, that she had made uncomplimentary remarks about a bargain they had, in which he had bought cloth of her in consideration of two cows. The trial soon drifted into an inquiry concerning the prices Mrs. Stollion had charged other customers for cloth. Mrs. Stollion had sold cloth to William Bradley at twenty shillings a yard for which she had paid only twelve shillings; she had sold English mohair at six shillings per yard in silver which could be bought in England for three shillings and two-pence per yard at the utmost; she had sold thread at the rate of twelve shillings per pound which cost not over two shillings and two-pence in England. For this, and divers other instances of overcharging, the case of Mrs. Stollion was referred to the General Court of Magistrates at the next session.

On the 8th of December, 1645, George Ward was arrested and brought before the Court for slandering the Rev. Mr. Davenport in New Haven and other places in connection with the trade with Delaware. The slanderous words being proved against Ward, the magistrates found that it was of "So high a nature, considering the person slandered," that it should be referred to the Court of Magistrates to be held in April next.

Mr. Thomas Fugills, after being Secretary of the Court for five or six years, was charged with making

false entries in the Book of Records in the allotment of land to himself, and after a full investigation by the members of the General Court and a feeble defense, he was removed and a new Secretary was chosen. Four months later he was ordered to come before the Court of Magistrates for the several miscarriages and offenses committed by him, but from time to time he made the excuse that he was suffering from severe indisposition of body. He finally put in an appearance on the 7th of July, 1646, but his defense was so weak and frivolous he was fined twenty pounds for falsifying the records and for contempt of Court. Fugill soon after turned over lands of his in payment of his fine and left the town.

On the 2d of June, 1646, the Particular Court was occupied with a very long hearing, growing out of the slanders by Mrs. Brewster, Mrs. Moore, and Mrs. Leach, and about certain gossip concerning Mrs. Eaton's trouble with the church and the sermon of the Rev. Mr. Davenport. The gist of the charge against Mrs. Brewster was that she said the sermon and prayer had made her sick at the stomach, and that when she went home she told her son to make waste paper of it. The well known controversy of Mrs. Eaton with the church concerning the validity of baptism by sprinkling had evidently affected the mind of Mrs. Brewster. After hearing all the witnesses, the Particular Court referred it to the General Court of Magistrates at its next session. One of the witnesses at that hearing testified that Mrs. Brewster's son had said that he would rather fall into the hands of the Turks or be hung, than be whipped as persons had been whipped in New Haven for sundry offenses. In addition to criticising her pastor, by using improper language, Mrs. Brewster was in disfavor on account of her familiarity with Widow Potter, who had been excommunicated from the church. Mrs. Brewster denied any familiarity, whereupon the Widow Potter testified that Mrs. Brewster drank with her. Mrs. Brewster then answered that she only put the cup to her mouth, but that "none of the sap went down." To this Widow Potter replied that from the carriage and outward appearance of Mrs. Brewster she apprehended she drank, but could not say what quantity went down. Mr. Edward Parker testified at that trial that Mrs. Brewster said Mr. Malborn, who was one of the magistrates, was a liar, "which being spoken against the magistrate in a whispering way, besides the reference to the ninth commandment, is an offensive and sinful miscarriage against the fifth commandment." One of the complaints against Mrs. Moore at this same trial was sustained by the evidence of Job Hall, who testified that Mrs. Moore in prayer had said "Lord, thou hast brought us indeed into the wilderness, the wilderness of Sinai, where we are in bondage with Hagar and her children, but let never a soul of us have any fellowship with them."

On the 7th of July, 1646, Pawquash, an Indian, was brought before the magistrates charged with two offenses. The first was that he had left open the oyster-shell field gate, so that damage had been done. The second complaint was that about four

years prior to that time he came into Mr. Crane's house and did blaspheme the name of Christ, and said that an Indian in Mantoises' plantation had ascended into heaven. The sentence of the Court was that he should be severely whipped for blasphemy, and informed that if he should do so hereafter, or now, as it had been against the law, it would hazard his life; and for the damage by means of the gate being left open, he was to pay five shillings to Thomas Knowles.

On the 4th of August, 1646, William Ball was arrested for not having his gun charged with powder as well as bullets, and for informing the watch that the gun was properly loaded, "for which direful carriage of his and untruthfulness unto the watch," Ball was fined forty shillings, and to pay the charges of those that had attended upon the Court. This addition to the fine imposed seems to have been the first record of "costs." The controversy between Mrs. Eaton and the church produced further business for the magistrates. On the 1st of September, 1646, Richard Perry was fined ten shillings for being mixed up with Goody Ball and Mrs. Brewster in scandalous gossip about Governor and Mrs. Eaton. On the 2d of February, 1646, George King was whipped for profane swearing.

Offenses against cleanliness, decency and morality were frequently brought before the Court, and received lectures as well as punishment. James Hayward, a man of some standing in the town, was called to answer for the sin of drunkenness. The charge against him being that he went aboard a Dutch vessel, and did there drink strong waters in such excess that he made himself drunk by it, "so that he had not the use of his reason, nor his tongue, hands or feet, and so that there was all the character of a drunken man about it." This was so fully proved that he was cast out of the church. The Governor, when he was brought before the Court, declared to him how greatly his sin was aggravated with many circumstances, especially that he being a member of the church, with whom the Lord had dealt so kindly, and that he to so regard the Lord was a sinful, foolish thing.

Hayward answered the Governor, "I own my sin, and take the shame and do confess the name of God hath been dishonored and blasphemed through me, for my sin hath many circumstances which makes it grievous, for which the hand of the Lord is justly out against me, so that I have nothing to say, but do justify the proceedings of the Court in what God shall guide their hearts to do." Upon this answer being given, the Governor opened the case to the Court as follows: "Drunkenness is among the fruits of the flesh, to be witnessed against both in the church and in the civil court, and it is a brutish sin and so to be witnessed against. A whip for the horse, a bridle for the ass, and a rod for the fool's back. And his sin is more heinous as he was a member of the church. But it hath not been brought to me that this man hath been given to drunkenness, nor is it found that it was at an appointed meeting for drinking, but he being

called (invited), did drink an excessive quantity which caused these effects. I leave it therefore to the Court's judgment whether they shall find it a disposition to drunkenness, or an act only." After this address, which was in the nature of a charge of a judge to the jury, the Court considered what had been said, and found that it was not a disposition to drunkenness in Hayward, nor was it at a match or meeting appointed for the purpose of drinking. They therefore thought it not fit to punish him with corporal punishment, but only with a fine. The sentence of the Court therefore was that Hayward pay fifty shillings to the town for this one act of drunkenness.

One Thomas Osborne was employed to drive the cows to the public pasture, and upon one occasion, it being a rainy day, Osborne protected himself for some time in a wigwam for shelter. When night came, the cow of Edward Banister had disappeared, and Osborne vainly searching for her, but failing to find her, was brought before the Court upon complaint of Edward Banister, for negligently losing his cow. Several witnesses being examined, it was found by the Court, that as Osborne only sought shelter for three-quarters of an hour, and as the day was exceedingly wet, and as the cows were not far from the house at the time, and as Osborne, with the help of Seely and George Smith and Richard Osborne, sought for the cow in the swamp, therefore Osborne was not guilty of gross neglect, and that Osborne should be free from payment of damage, and that Goodman Banister must bear it as an afflicting providence of God cast upon him.

All men capable of bearing arms were required to be at the Meeting-house on the Lord's day with their guns in good order, and duly charged with powder and bullet, so that there might be military inspection for protection against the Indians, and at the same time a strict attendance upon religious worship. William Blayden was arrested upon a complaint for getting late to the meeting on two Lord's days. The defense of Blayden was that on the first day he did not hear the drum, and on the other day he having been wet the day before, in the evening, when it rained, was not able to make a fire to dry his clothes, therefore was forced to lie abed on the Lord's day. These excuses were not satisfactory to the Court, and he was fined two shillings and ordered to appear before the next Court, "to hold forth the sight of his sin in profanely neglecting the ordinances." Before the next Court, one of the magistrates made an examination into the truth of Blayden's defense, and at the next session it was found that the truth appeared to be no other than a profane neglecting on the part of Blayden, and the despising of the ordinances of Christ through slothfulness, whereupon the judgment of the Court was that he be publicly whipped for profanely breaking the Sabbath, worshiping not God, nor watching for the blessing of God on himself.

In September, 1647, William Pert was before the Court charged with taking watermelons on the Lord's day out of the lot of Mr. Hooks. Pert made answer that his master sent him into the quarter to

see if any hogs had got within the fence, and he was bid by his master to go that way through Mr. Hook's lot and bring home a watermelon with him after the Sabbath. It is probable that his master intended that he should do it after sunset. Pert said it was the first act of this kind and he hoped it would be the last. The Court decided that for his unrighteousness of spirit to do it so soon after sunset he should be publicly corrected, but yet moderately, because his repentance had appeared.

Governor Eaton had a negro servant named Anthony. Mr. Evance had a negro servant named Matthew. Anthony having been sent to the house of Mr. Evance for some sugar, Matthew asked him to drink, and gave him some strong water in a beer pot, and Anthony drank much and became intoxicated publicly. Governor Eaton having had him brought before the Court, stated that because it was openly known he thought the matter should be heard by the Court, as if it had been kept within the compass of his own family he might have given him family correction for it. Anthony's defense before the Court seemed to be that he did not know it was strong water, that he disliked liquor, and thought from the look of the vessel in which the liquor was offered to him that it might be beer. The Court considered that as this was the first time they had heard anything of this kind of Anthony, and that possibly he might not know what he was drinking, it being given to him in such a vessel as he used to drink beer from, and hoping it will be a warning to him, thought it fit not to inflict any public corporal punishment on him; but as the Governor's zeal and faithfulness hath appeared in not conniving at sin in his own family, the Court leaves it to the Governor to give Anthony such correction which he in his wisdom should judge meet.

The magistrates were very strict in enforcing the observances of the Lord's day. Stephen Reekes was the master of a vessel that came from the Barbadoes. He was brought before the Court charged that he did, contrary to the law of God and of this place, haul up his ship toward the Neck bridge upon the Sabbath, which is a labor proper for the six days, and not to be undertaken on the Lord's day. Captain Reekes answered that his ship lay on the ground and did not float for several days before, but on that day the wind came up at the southeast and brought in a great tide and the ship floated, and all that he did with his crew was to keep her from running on the bank or driving upon her anchor. The Court told him that he should have provided for that before, for it was the duty of all men to remember the Sabbath, and to provide so beforehand that nothing may disturb them upon the Sabbath, unless it be in cases of mercy or works of such necessity as could not be provided for the day before, nor set aside until the day after.

Mr. Larehe, a seaman on the Phoenix, was before the Court charged that he with others went aboard that vessel on the Sabbath, and did haul the vessel up and empty some stones out of a canoe, to which Larehe answered that he conceived

the work was a work of charity, to preserve the vessel that it might not perish, for there was some danger of her oversetting; and beside Mr. Perry came to him and said it was proper somebody should go down for that purpose. At this state of the hearing, Mr. Malbon, one of the magistrates, said that Mr. Perry was at his house and he was speaking of some danger the vessel might be in, whereupon he advised Mr. Perry to go to Mr. Davenport and ask his advice. This was done, and Mr. Davenport told him he should leave it to God's mercy, the Sabbath was a day of rest and therefore he ought to rest. Then Mr. Malbon told him that he should give orders that nothing should be done, only he might go down and look at the vessel to see what state she was in; but that nothing should be done without apparent necessity, yet Mr. Larehe, with others, went and worked, contrary to the law of the Sabbath. The Court having considered both the cases of Reekes and Larehe, found them to be much alike, but considering that they were strangers, and thinking that they did not do it out of contempt, but ignorantly, "and they acknowledging their failing and promising amendment for the time to come," concluded to pass it by, but the Court said: "If any of our own take liberty hereby, the sentence will be heavier on them."

A case which created much feeling in the colony was the somewhat fully reported shoe and leather case of John Meigs against Henry Gregory. Meigs was a trader and shop-keeper. Gregory was a shoemaker. Meigs furnished Gregory leather and made a contract by which Gregory was to make for him fourteen dozen pairs of shoes, for which Gregory was to receive twelve-pence a pair for making and Meigs was to furnish the leather ready cut out. Gregory made thirteen dozen pairs and Meigs complained that they were so badly made that the shoes fell in pieces, some in a week and some in fourteen days' time, and that he, Meigs, had been damaged in his good name as a merchant throughout the colony, and he had been unable to furnish others with merchantable shoes as he had agreed. The plaintiff further complained that Gregory not only made the shoes badly, but spoiled the leather by leaving it in the sun, and further, that he had not put on wooden heels to the shoes as he had promised, and also that he had marked some of them with an X when the size was only IX. Gregory, the defendant, said that Meigs furnished him with poor leather, and when he called his attention to it, promised to furnish better leather, and that he agreed to furnish hemp from Connecticut to sew the shoes with, but he had not furnished the hemp, and so the defendant was forced to buy flax and sew them with that. From time to time he told him the leather he furnished for the shoes was worse than the first, and that the tanner who tanned it ought to be hung for it, because he cheated the country; and that when he told Meigs this, the plaintiff replied that they were obliged to take the leather out before it was tanned enough, because people were in haste for their shoes. When the defendant said to the plaintiff he ought

to have hemp, the plaintiff replied "the thread would last as long as the leather." As for marking the IX with an X, Gregory said he marked them in that way because the plaintiff told him to, and the plaintiff had not cut them long enough to make X's. After the parties had told their stories, witnesses were called and examined, first for the plaintiff and then for the defendant. Among the witnesses for the plaintiff was Jonathan Sargent, who testified that he bought a pair of russet shoes of Goodman Meigs, and that he wore them two or three times to a neighbor's house and twice to meeting, and then he walked about sixty rods to the waterside, and brought home the soles of the shoes in his hand. Afterwards he got them sewed again and wore them now and then, but not constantly, for a week or a fortnight, and then the insoles and outsoles all fell from the upper leather, and he could not remember that he wore them any more after that. Thomas Whiteway testified that he bought a pair of russet shoes of Meigs, of New Haven; that he wore them three or four days and the outsoles ripped; then he sewed them again and wore them three or four days more, and then the insoles and welts all came off and he sewed them together again; and shortly after the upper leather, seams, heels and sides all ripped, so that they would not hang upon his feet, and to such an extent that he thought Goodman Meigs should be put in prison. John Parmelee, of Guilford, testified by a deposition taken before Mr. Disbrowe, that he bought a pair of shoes which came from Goodman Meigs, of New Haven, and that in six or seven days the soles ripped from the upper leather. Samuel Nettleton, of Totoket, testified, upon deposition taken before the Governor, that he bought a pair of shoes of Goodman Meigs, of New Haven, for his wife; that she put them on on the Lord's Day and the next Thursday morning they were ripped, but that the soles were together as he thought. Mark Meigs testified that he saw the shoes made by Henry Gregory lying in the sand by Gregory's house; that he saw the old man working on them with a very great awl, a small thread, and with very little wax, and he blamed him for it. Witnesses for the defendant were called to prove that it was the badness of the leather that made the shoes so unmerchantable. Mrs. Blackman said that after two or three days' wearing the leather was like the flaps of a shoulder of mutton. Mr. Blackman testified that his son had a pair of the shoes which lasted two or three weeks and then the leather broke through. Judah Gregory testified that he saw his father at work upon the shoes, and the leather was so horny that no man could make shoes of it. Moses Wheeler testified that he saw some of the leather, and his wife took it up and tore it between her hands with ease. Mrs. Crocker testified that she heard Goodman Meigs say that he would go to Connecticut (the colony at Hartford) and get some hemp, but he thought the flax would last as long as the leather; and further she said that Meigs told her father he could not blame the tanner so much, for he was obliged to take it out before it

was tanned, and that she saw the leather tear in pieces when Gregory put it on the last. At this stage of the trial the Court found there was fault on both sides and that the country was much wronged, therefore it was concluded to have some expert testimony. Some of the shoes were sent for and they were delivered to Lieutenant Seeley and Goodmen Dayton and Grove, who were shoemakers, and to Goodmen Osborne and Sergeant Jeffrey, who were tanners, to examine and report their opinions to the Court. These experts, after examination, made this report: "We apprehend this, that the leather is very bad, not tanned nor fit to be sold for serviceable leather, but it wrongs the country, nor can a man make good work of a great deal of it. And we find the workmanship bad also. First, there is not sufficient stuff put in the thread, and instead of hemp it is flax; and the stitches are too long and the threads not drawn home; and there wants wax on the thread; and the awl is too big for the thread. We ordinarily put in seven threads, and here is but five, so that, according to our best light, we lay the cause both upon the workmanship and the badness of the leather."

After this report of the experts, additional witnesses were heard. Goodman Gregory testified that while he had not done his part of the work, the fault was with Goodman Meigs, who said to him, "Flop them up, they are to go far enough." William Hook testified that he heard Meigs say to Gregory, "Flop them up together, they are to go far enough." John Gregory corroborated Hook, and said that he told Goodman Meigs to be cautious, because his father was old and his eyesight failed him, and he durst not employ him himself, for he could not do as he had done. The Court decided, after hearing all the evidence, that both the parties were faulty. "Goodman Gregory had transgressed rules of righteousness, both in reference to the country and to Goodman Meigs, though his fault to Goodman Meigs is the more excusable, because of the encouragement Goodman Meigs gave him to be slight in his workmanship, though he should not have taken any encouragement to do evil, and should have complained to some magistrate, and not have wrought such leather in such a manner into shoes, by which the country, or who-soever wears them, must be deceived. But the greater guilt and fault lies upon Goodman Meigs for putting such untanned, horny, unserviceable leather into shoes, and for encouraging Goodman Gregory to slight workmanship, upon motive that the shoes were to go far enough, as if rules of righteousness reached not into other places and countries." The Court then ordered Meigs to pay a fine of ten pounds to the jurisdiction, with satisfaction to every particular person as damage shall be required and proved; and that none of the faulty shoes be carried out of the jurisdiction, but sold within it, if they were sold with information to the buyer that they were deceitful ware. They ordered Goodman Gregory, for his bad workmanship and fellowship in the deceit, to pay a fine of five pounds and the charges of the Court, and that

he require nothing of Meigs for his loss of time in the work, whether it were more or less. It will be noticed that the judgment of the Court went beyond the issues raised by the original pleadings, and this is a fair illustration of the summary way with which the Courts of New Haven Colony rendered justice to all parties interested.

Several persons appeared from time to time as attorneys for parties who had civil causes before the Court, but it does not appear that there was any rule regulating the right to appear, nor that any of them ever appeared to defend persons charged with crime. Mr. Abraham Frost, of Stamford, appeared as attorney for some people of that town. John Cowper, Anthony Waters, Joseph Mead, Joseph Alsop, Sergeant Fowler, Joseph Gunner, James Bishop, William Leat and Mr. Gordon were among those who appeared, at one time and another, between 1645 and 1664, as attorneys for parties having civil causes, and some of them had more or less knowledge of the English common law. The two last named appeared on two or three occasions as attorneys for the town of Guilford, to collect from Mr. John Ceffinch, of New Haven, certain rates due upon a lot held by Mr. Ceffinch in Guilford. Mr. Ceffinch claimed that he had settled the matter with Mr. Disburowe, the minister of Guilford, but after a continuance in Court for about two years, the town of Guilford succeeded in collecting the rates from Mr. Ceffinch.

In 1649 Lancelot Fuller brought complaint against Francis Newman and his wife for defamation. In the absence of Mr. Fuller from town, Mrs. Newman had said that Mrs. Fuller had entertained a young man by the name of Stone and made a feast or breakfast for him. Thereupon Mrs. Fuller went to Mrs. Newman for private satisfaction. Mrs. Newman said she was sorry for it, and Mrs. Fuller requested her to go and correct her statement where it had been spoken and to go to her husband when he came home. Mrs. Newman said she did not know how to do it, and Mrs. Fuller then told her she must learn. Upon this Mrs. Newman told her she would best hold her tongue and say no more about it, for if she did not it would bring out worse. Lancelot Fuller, when he came home, desired to know what that worse is which it will bring out. The witness before the Court testified to much gossip that had been going on among the good wives of the town concerning Mrs. Fuller, and as there seemed to be no foundation for it, they ordered Mr. Newman to pay Lancelot Fuller and wife five pounds, and they also found that Mr. Newman fell short of his duty in not keeping the tongue of his wife under better control.

WITCHCRAFT IN THE NEW HAVEN COLONY.

The first settlers of New Haven believed in witchcraft and its punishment by law. Goodwife Knapp had been hung at Fairfield in the New Haven jurisdiction, and Mrs. Brewster, who had married Lawyer Pell, had made herself quite busy with others in trying to induce Goodwife Knapp to

charge other women in the colony as witches. Several were suspected, including Goodwife Staples and Mistress Elizabeth Goodman. Goodwife Laramore reported that on one occasion when she saw Mistress Goodman come into the house of Good-man Whitnells, as soon as she saw her she thought of a witch. This being reported through the town, Mistress Goodman brought Goodwife Laramore before the Court for defamation of character. Goodwife Laramore denied having said this at the house of Whitnells, but admitted that she had so spoken at the house of Mr. Hooke, and that her ground was because Mr. Davenport about that time had occasion in his ministry to speak of witches, and said that a froward, discontented frame of spirit was a subject fit for the devil to work upon in that way, and that she, Goodwife Laramore looked upon Mistress Goodman to be of such a frame of spirit. Goodwife Laramore further said that Mistress Goodman had had a hearing once before the Governor for this, and the Governor asked her if she thought Mistress Goodman was a witch, and she answered no. Mistress Goodman was then asked what she had warned other persons to the Court for, and she said that they had given out speeches that made folks think that she was a witch, and she believed Mistress Atwater was the cause of it all, and she desired that a certain examination, put in writing three months ago before the Governor, might be read. She said that Mrs. Atwater had stated that she thought she was a witch, and that "Habbamocke" was her husband, but that she, Mrs. Atwater, could not prove it. The evidence taken before the Governor was then read, and it appeared that several persons had testified before the Governor that Mistress Bishop and others had been taken suddenly sick after Mrs. Goodman had been in their houses. Children had heard Mistress Goodman talking softly to herself in her bed. Mrs. Goodyear testified that she told Mrs. Goodman that if there were any such persons as witches she was persuaded God would find them out and discover them, "for," said she, "I never knew a witch died in their bed." Mrs. Goodman answered, "you mistake, for a great many die and go to the grave in an orderly way." After hearing several witnesses called by Mrs. Goodman on this occasion, the sentence of the Court was that she had unjustly called Goodwife Laramore and other persons before the Court, because she could not prove anything against them, and that her carriage doth justly render her suspicious of witchcraft, "which she herself, in so many words, confesseth," therefore the Court advised her to look to her carriage thereafter, "for the further proof these things will not be forgotten;" and she was charged not to go in an offensive way to folks' houses in the railing manner, as it seemed she had done, but that she keep her place and meddle with her own business.

About a year later, in May, 1654, Thomas Staples, of Fairfield, brought complaint against Roger Ludlow, of Fairfield, declaring that Ludlow had defamed the wife of Staples, by reporting to Mr. and Mrs. Davenport that Mrs. Staples had laid

herself under the suspicion of being a witch, because she had caused the body of Mrs. Knapp to be new searched after she was hung, and when she saw the breast, she said, "if them were the marks of a witch then she was one, for she had such marks;" and further, Mr. Ludlow said, Knapp told him that Goodwife Staples was a witch, and also that Ludlow had said that Mrs. Staples made a trade of lying. Mr. Byrne, as attorney for Mr. Ludlow, desired the charge to be first proved to him. Mr. Davenport being called, said he hoped what he had written in the letter would be received as evidence. But as the Court required his oath, and as he "looks at an oath in a case of necessity having confirmation of truth to end strife among men as an ordinance of God, according to Hebrews 6, 16," he decided to take the oath and testify. Mr. and Mrs. Davenport said Mr. Ludlow had in substance told them that Knapp's wife, the witch, came down from the ladder at the time of her execution and told them Goodwife Staples was a witch. Other witnesses testified that Mr. Ludlow had charged Goodwife Staples with getting on the track of lying. At this stage of the trial the attorney of Mr. Ludlow presented several depositions, some of which were taken before Mr. Ludlow himself. The plaintiff objected that the deposition taken by Mr. Ludlow ought not to be read, as he was an interested party, and they were not attested by the hands of any public officer. The Court admitted them however, to be read for such use as they should think proper. These depositions were of some length, and while they tended to show that Mrs. Staples had been under suspicion, and had made unfortunate remarks about Goodwife Knapp not being a witch, the defendant failed to prove that Mrs. Knapp ever charged Goodwife Staples with being a witch, and after hearing all that the witnesses for the plaintiff had to say, the Court found "that they see no cause to lay any blemish of the witch upon Goodwife Staples, but must judge that Mr. Ludlow hath done her wrong." The defendant was therefore ordered to pay ten pounds for reparation and five pounds more for costs.

PUNISHMENT FOR THEFT.

The Deputy Governor, Mr. Goodyear, had a very troublesome servant, George Wood. He stole a knife and two silver spoons, and erased the goldsmith's marks from the spoons by filing them off. When charged with the offense he hid the knife and spoons in one place and another, and desperately denied that he had taken them, even cursing himself if he had. When he was arrested he threatened to kill himself and refused to go to prison; then he broke the prison at night, but was caught by the watch before he escaped. When he was brought before the Court, however, he seemed sorrowful, and confessed all that was charged upon him to be true, and said that his sin had been very great, and he blessed God that he had thus discovered him and afflicted him, for by it he saw his condition and hoped it would be a warning to him. His penitence and confession had but little effect upon the Court.

He was sentenced to be first set in the pillory for an hour, with a paper fixed to it declaring his offenses, after that he was to be severely whipped and then banished out of the jurisdiction, and if he is found within it again, "death is to be executed upon him without any further sentence," but as Mr. Goodyear had laid out some money on him which should be repaid, Wood was put in the prison in irons for fourteen days and the Deputy Governor was authorized during that time to sell him into any of the other colonies.

QUAKERS.

At the meeting of the General Court held in April, 1657, it was ordered "That no Quaker, Ranter, or other heretic of that nature be suffered to come into or abide in this jurisdiction, and if any such be raised up among ourselves, that they be speedily suppressed and secured for the better prevention of such dangers."

One of the first persons to suffer after the passage of this law was Edmond Barnes, a sailor and Quaker, who, being found ashore, was called before the Court and examined. The Court, however, found that he was weak in his way, and it was not proved that he had preached tenets of the Quakers on shore, and he was committed to the Marshal to be carried aboard the vessel, and not to come again on shore without license. The Marshal was also ordered to search for and seize any Quaker books he should find and bring them to the Court. It was also demanded of the master of the ship, why he brought Quakers amongst us contrary to the law. The master, having pleaded his ignorance, and promising to endeavor to keep Barnes on board the vessel and to carry him out of the jurisdiction, was not further proceeded against at this time. The town of Southhold, on Long Island, was in 1659 within the jurisdiction of New Haven Colony, and Arthur Smith, of that place, was sent over to New Haven to be tried on the charge of being corrupted with notions of the Quakers. Smith answered that he knew not that he was corrupted. To satisfy Smith that he was mistaken in relation to this, the Court then read to him several depositions which had been taken at Southhold.

Joseph Horton, Jr., deposed that Arthur Smith told him if man would attend to the light that is within him, it would lead or bring him to heaven; and second, that there was neither devil there before nor in Adam's time; and third, that either infants had no sin or were charged with no sin till they had sinned actually; and fourth, that he had no governor or teacher but God.

Thomas Mapes deposed that Smith asserted he had no governor or teacher but God, and that men's laws were corrupt, and that the seven churches in Asia were the seven vials, and that there was no such thing as seven churches in Asia. Mapes further deposed that having demanded of Smith why the Quakers looked into the faces of men and women, he answered him that by looking on men they could tell whether they had the mark of the beast, to be seen on the forehead and right hand, and that he himself could discern it. Charles

Grover deposed to the same statements as Mapes, and Philemon Dickerson testified to similar declarations made by Smith. Barnabas Winds deposed that Arthur Smith said in his hearing that the three friends of Job which came to visit him were the three persons in the Trinity.

After these depositions, Arthur Smith was required to give answer to these peculiarities. The Court found his answers to be profane, absurd, conceited and ridiculous. He was warned to take heed of dealing with the fundamental truths of God, and was told that the Court looked upon him as a man of profane spirit and disorderly way, that would overthrow the order and government God had established; and as he was one that had spoken profanely at the best, and blasphemously as testified by one witness, it was ordered that he be whipped and be bound in a bond of fifty pounds for his good behavior, and if he did not, he should be removed out of the jurisdiction.

DIVORCE.

The first code of laws passed by the General Court was compiled by Governor Eaton, and printed in London in 1656. By that code divorces were allowed, first for violation of the seventh commandment, secondly for fraudulent contract, and thirdly for desertion long continued, and after due means had been used to convince and reclaim the deserter. To justify divorce for desertion, the code made the reference to the fifteenth verse of the seventh chapter of the first Corinthians. When divorce was granted for violation of the seventh commandment, the innocent party had liberty to marry again. The first application for divorce seems to have come in 1658 from John Bartram, who sought to obtain a divorce from a wife which he said he had in the Barbadoes. While making this statement to the Court he was caught in a lie, for which he was fined ten shillings, and the Court then told him that it would not meddle with the business of his divorce, but advised him to prosecute the matter, if he should see cause, "Where the state of the question had been understood."

In 1661, Mary Andrews, the wife of William Andrews, Jr., came into Court and asked for a divorce, because her husband was married to another woman that lived in Ireland. Witnesses were produced to testify that Andrews had admitted to them in the Barbadoes that he had married a woman in Ireland. Some letters written from England corroborated this testimony, and the Court granted Mary Andrews a divorce with full liberty to marry again.

In 1665, the Court amended the divorce law of 1663, so as to permit a divorce after seven years' desertion and absence unheard of, and in such cases authorized the deserted party to marry again in the same manner as in cases of willful desertion.

MINISTERS AS SUITORS IN COURT.

The ministers were frequently witnesses in lawsuits, and on some occasions were parties to them. In 1658, Rev. Abraham Pierson brought a case

against John Cowper and Matthew Moulthrop to recover a dun mare and her colt, which he alleged had been taken up from the common fields and kept by them, and which mare he believed to be his. It was the practice with the early settlers to brand their horses and stock and let them run at large through the summer in the common fields. Sometimes by mistake, and sometimes from base motives, parties would take up in the fall of the year stock which did not belong to them, and suits on account of such mistakes were not uncommon. When this case was first called in October, 1658, Mr. Pierson opened it by stating that he did not deem it unlawful for a minister of the Word to present his case to the judgment of the magistrate for the determination of such civil controversies as may arise betwixt themselves and others, for were it so then they would be in worse case in that respect than other men; but he had not been forward this way, but had offered to those two brothers to put the matter in question to arbitration and not be brought to public trial, but they told him it concerned an absent man, therefore they thought it needful to be determined by the Court. In the prosecution of the action the plaintiff found himself not prepared in point of testimony, and at his desire it was continued. At the session of the Court in May, 1659, Mr. Pierson produced his witnesses. Richard Harrison upon oath stated that as he was seeking a mare that winter, when the iron work began, he saw a brown mare with a small colt of the same color, and on the same day he saw going to the water-side another brown mare with a colt. Thomas Harrison said when he came to Mrs. Gregson's Farm, that mare had a bay colt with her, and that mare with another mare and colt he drove to South End. Josiah Colt affirmed that he saw the same mare that Thomas Harrison saw, and other witnesses were of opinion that this mare was Mr. Pierson's mare. Mr. Pierson swore to the mare as his own, and said that he had known the colt from the first year that he saw it with the mare. Several witnesses testified to matter which was irrelevant. Mr. Cowper testified that when Mr. Pierson saw this mare on one occasion he said, "what mare is this?" as if he had not as much knowledge of her as he now speaks of. To this Mr. Pierson answered it was his great desire to see this mare, because they had said theirs was marked. After more contradictory evidence of this character, the Court found that after what had been alleged by both parties, and what had been testified to by the witnesses, the question who owned this mare remains doubtful, and the Court desired them to choose a man who might examine the mare and more fully inform the Court, or else bring the mare so as it might be seen by the Court, and that the issue might be put to this business. The case was then continued one year and the mare was presented to the Court, at which time additional contradictory testimony was offered concerning what the parties and the witnesses had said at different times about the color of Mr. Pierson's mare and another mare. The Court then viewed the mare, and after waiting until the defendant declared that he had nothing

more to say unless he should ask for a review, the Court decided "that they do not apprehend any clear evidence by either party presented," but the case had been pending long and they hoped the matter might have been issued betwixt themselves, or by the help of some friends with them in way of arbitration; but the defendant apprehending himself not in a fit capacity to so end it, the Court according to evidence presented and compared, decided that the mare now she hath been viewed, "they do at present judge that the most probable right falls on the plaintiff's side, and that he shall have the mare and what increase she hath in his possession." As for the costs which have been expended about this business, the Court ordered them to be divided between them. It does not appear in this case that the Court paid much attention to the rule concerning the burden of proof, but as the plaintiff was a minister, and the case was a "horse controversy," probably the prejudices of the Court inclined it toward the plaintiff.

An action was brought at the October term of the Court, 1659, by Joseph Alsop against John Thompson, in an action of debt upon the forfeiture of a bond for the payment of sixty pounds, the sum named in the bond being one hundred and twenty pounds. The plaintiff seemed to have a good case, and the Court by way of sentence declared that they looked upon the obligation as formed for one hundred and twenty pounds, but they would not be for extremities but for furtherance of righteousness, and they therefore gave judgment for only sixty pounds.

At this early day the Courts of New Haven united equity and law jurisdiction and administered both from the same Bench without much regard to the form of the action. The simple, sometimes rude, system of procedure in the days when New Haven existed as an independent colony seemed to give general satisfaction to the people, although on many occasions the decisions were somewhat arbitrary, and evidence was received contrary to the usual rules. The magistrates, whether sitting alone or together in the General Court, were honest God-fearing men, who intended to do what they considered the right thing between the parties.

AFTER THE CHARTER OF 1660 AND THE UNION OF THE TWO COLONIES.

After the union with Connecticut in 1664, the Plaintiff or Justice Courts were continued in the several towns with about the same jurisdiction they had exercised before. The County Court was established by the General Assembly of Connecticut at New Haven in October, 1665. This Court was the only Court at New Haven until October, 1701, when a Superior Court was held at New Haven for the first time. With the establishment of the County Court in October, 1665, the practice of the English Courts was introduced, and then for the first time a jury was impaneled in New Haven. In 1673 a new Code of Laws was approved, and printed at Cambridge, for the united colony. All of the judicial powers necessary for the management of the affairs of the

colonists, including all probate business, was transacted by the County Court until 1716, when special Probate Courts were authorized for each county. By subsequent legislation, many of the towns of New Haven County were cut off from New Haven for probate purposes, and only a few towns of the county are now attached to the New Haven Probate District. During a period of 150 years after 1701, all the civil and criminal business of New Haven was disposed of in the County and Superior Courts. In 1784, when New Haven became a city, the charter granted at that time provided for the establishment of a City Court. Very little civil business was transacted in that Court until a recent period, and criminal jurisdiction was not conferred upon it until 1865. For many years the City Court of New Haven consisted of the Mayor of the City and the two Aldermen first chosen at the annual city meeting, the Mayor being the Chief Judge and the Aldermen being the Assistant Judges of the Court. The Mayor or the Senior Assistant Judge could hold a special City Court alone on motion of any party interested. At a later period however, the charter was so amended as to provide for the appointment of the City Court Judge, or Recorder, by the Common Council of the City, who was the sole Judge of the City Court.

Soon after the union of the colonies had been perfected, the General Assembly provided for the Courts regular Judges and assistants in the various counties. The General Assembly also appointed for the several counties, Justices of the Peace, who held their Courts in the several towns, performing the work done in the old Plantation Courts by the Magistrates. In 1704, the County Courts were directed to appoint in each county and separate district a religious person to be attorney for the Queen, to prosecute all criminal offenses and to do all other things necessary or convenient, as an attorney, to suppress vice and immorality. The Judges and Magistrates appointed by the General Assembly were men of intelligence and character, and always had more or less knowledge of the common law of England. The population of New Haven was only about one thousand as late as 1724. Trade had been dull; the commercial enterprises in New Haven in the preceding century had resulted generally in failure; and there was neither the wealth, the business, nor the population in New Haven to encourage or support a body of men devoted to the business of the legal profession. Therefore during the eighteenth century there were few regular lawyers in New Haven; only a few names appeared upon the records, and a still smaller number made any reputation for themselves as students or lawyers. A sufficient number of men learned in the law were found upon the Bench or practiced at the Bar to maintain a practice in conformity to the common law of England, except as far as it was modified by the statutes of the General Assembly. Among those whose names stand foremost as regular practitioners in the last century may be especially mentioned Jared Ingersol, James Abraham Hillhouse, and Roger Sherman.

JARED INGERSOL was born in Milford in the year 1722. He graduated at Yale College in 1742. Soon after graduation he commenced the practice of law in New Haven and early acquired a reputation as an advocate. His eloquence was remarkable; he made the cause of his client clear to the jury by his power of explicit statement, and his logical method of reasoning. He was a man of open, frank and engaging manner, and in those days, when nearly all causes were tried by the jury rather than the Court, his eloquence and skill made him very successful in the management of the business of his clients. In 1757 he went to Great Britain as the agent of the colony, receiving the special appointment from the General Assembly. He went again to England in 1764, and while there was appointed to the office of Stamp-master.

There is little doubt that he accepted this office for the purpose of making the law as easy in its operation to his fellow countrymen as possible. Party feeling ran so high however, that he did not receive credit for the good motives that actuated him, and it made him personally unpopular throughout the colony. It was not a wise act on his part, and he gladly laid down the office after taking the famous ride from Wethersfield into Hartford, when he is reported to have said that he felt like the Angel of Death described in the Book of Revelations.

In 1770, Mr. Ingersol was appointed by the Crown, Judge of the Vice-Admiralty Court in the Middle District of the Colonies. Having accepted this office, he went to Philadelphia to reside, and continued to live there until the office was abolished by the beginning of the Revolution, when he returned to New Haven, where he lived quietly until his death.

JAMES ABRAHAM HILLHOUSE was born at New London. He graduated in 1749, was a tutor in Yale College, and soon after that time opened a law office in New Haven. He was very successful as an advocate and jury lawyer, and was for many years a member of the Legislative Council of the colony. He died in 1775.

ROGER SHERMAN was born at Newtown, Mass., April 19, 1721. He received a common school education, and in 1743 settled at New Milford, Conn. Here he studied law and was admitted to the Bar in 1754. In 1761 he came to New Haven, opened an office in the town, and continued to reside in the home of his adoption until his death in 1793. He was a member of the lower branch of the General Assembly before the Revolution.

In 1776 he was appointed a Judge of the Superior Court and continued on that Bench for many years. While he held this office he was also chosen a member of the Continental Congress, and as such he was one of the committee that drew up the Declaration of Independence. He was also a member of the Constitutional Convention of 1787, and was immediately chosen a representative to the first Congress. In 1791 he was elected to the United States Senate. Mr. Sherman was in many respects the strongest man in public life New

Roger Sherman

Haven had during the last century. His mind was powerful and his habits of industry were remarkable. He not only studied the books of his profession closely and carefully, but he ranged over the whole field of natural, moral and metaphysical philosophy, and history, logic and theology. He was a broad-minded, far-seeing statesman, and had great influence in the convention which framed the Federal Constitution.

When the Federal Courts were established, after the adoption of the Constitution, the Circuit and District Courts for Connecticut were directed to be held alternately at New Haven and Hartford. For many years one term of the Circuit Court and two of the District Court in each year have been held in New Haven. Until the completion of the Federal Building on Church street, about 1858, the United States Courts were always held in such rooms as were from time to time occupied by the Superior Court for New Haven County. Since 1858 the Circuit and District Courts of the United States have been held in the third story of the Post Office Building on Church street.

In 1855, the County Courts, which had been held continuously for nearly two centuries at New Haven, were abolished, and all the civil and criminal jurisdiction of these Courts was given to the Superior Court. This Court has always been a Circuit Court, and to provide a force that could dispose of the additional business, four additional Judges of the Superior Court were appointed by the General Assembly of 1855. The Judges of the County Courts had been appointed annually, but the Judges of the Superior Court, prior to 1855, were appointed until they arrived at the age of 70 years. Those appointed in 1855, and since that time, hold office for the term of eight years only. In 1869 a County Court was re-established in New Haven, under the title of the Court of Common Pleas, but with jurisdiction only in civil causes where the matter in demand does not exceed five hundred dollars. At the present time there are in New Haven—First, Justice of the Peace Courts, with jurisdiction in civil causes only where the matter in demand does not exceed one hundred dollars and with the right of appeal to the Court of Common Pleas; second, the City Court, with unlimited jurisdiction within the City of New Haven in civil causes, subject to a right of appeal to the Superior Court where the matter in demand exceeds five hundred dollars, and with a criminal jurisdiction, without a jury, to the extent of imprisonment for six months or a fine of two hundred dollars, but subject to appeal to the Superior Court; third, a Court of Common Pleas, with jurisdiction as stated; and fourth, the Superior Court, which is in session almost continuously from September until June and having unlimited jurisdiction in civil and criminal causes. Appeals may be taken from the City Court, the Court of Common Pleas and the Superior Court, upon all questions of law that may arise, to the Supreme Court of Errors, which holds a session at New Haven in June and December of each year.

COURT BUILDINGS.

No regular place was provided for the location of the Courts of New Haven until 1717. It is believed from references in some of the colonial records, that on some occasions the Meeting-house was used for Court purposes, but generally the particular Courts were held in convenient rooms in the houses of the magistrates.

The first State House at New Haven was built in 1717, and was located near the northwest corner of the Green. A room in this State House was used for the sessions of the County and Superior Courts until 1763, when a fine brick building was erected for the State House. This building was located between the location of Trinity Church and the Centre Church, the entrance facing upon Temple street. The Court and Jury-rooms for the County of New Haven were on the first floor of this building.

When the Courts were removed from the old timber building on the corner of Elm and College streets to the New State House in 1761, the business had so increased, owing to the increase of population and wealth, that the docket of the April term of the County Court for 1765 contained 757 cases, but many of them must have been causes of little importance. The jurisdiction of Justices of the Peace was at that time more limited than now. The old brick State House was used during the Revolution, and also during the first third of this century, for all Court and legislative purposes in New Haven. Many of the older inhabitants of New Haven at this time remember the substantial looking building as it stood just south of the then cemetery grounds upon the Green.

At the June term of the County Court in the year 1827, the following vote was put upon the record:

"Whereas, The General Assembly of the State of Connecticut, at its session in May, 1827, resolved that it is expedient and necessary that a new State House for the accommodation of the General Assembly should be built in the City of New Haven, and that the same building contain accommodations for the various Courts which by law are to be held at New Haven, provided one-third of the expense is paid by the City, Town and County of New Haven; it is by this Court ordered that the Clerk forthwith issue notices to the several representatives last chosen to attend the General Assembly belonging to the respective towns in this county, to assemble with the Judges of this Court at the State House in said New Haven, on the fifth day of July, 1827, at ten o'clock in the forenoon, for the purpose of taking into consideration the subject of said resolve, and, if deemed expedient, to lay a tax upon the inhabitants of said county to carry the same into effect."

On the 5th day of July, 1827, the Judges of the County Court, Hon. Bennet Bronson, Noyes Darling, and Hon. Jared Bassett, together with Representatives Denis Kimberly, Charles A. Ingersoll, of New Haven; Jonathan Rose, of Branford; William Todd, of Guilford; John B. Reynolds, of Wallingford; Erastus Welton, of Waterbury; Abijah Car-

ington, of Milford; and the other representatives of New Haven County, met at the old Brick State House and passed the following vote:

"*Voted*, That it is expedient for the County of New Haven to unite with the State and with the City and Town of New Haven in erecting a State House, pursuant to the resolve of the General Assembly in May last, and that said State House contain a suitable Court-room, Jury-room and two Lobbies for the accommodation of the Courts and of the Bar, and also a room and a fire-proof vault for the use of the Clerk of the County and Superior Courts; and to effect said object, this county will assume and agree to raise and pay such a sum as shall accrue from the taxes of one cent on the dollar on the list of the polls and ratable estate of the inhabitants of the county and no more."

This State House, which was soon after erected, continued to be used as a Court House until 1861, and as a State House by the Legislature until 1874. Since 1874 it has been the property of New Haven, but it has not been used for public purposes to any great extent. The Court-room was on the first floor, and upon the east side. In this room the celebrated Amistad slaver case was tried before Judge Judson, of the United States District Court. The notorious divorce case of *Bennett vs. Bennett* was also tried in this room. In 1860 the City and Town of New Haven erected the present City Hall on Church street, upon the site of the old county jail, which had been purchased for that purpose, and, upon motion of the Bar of New Haven County, steps were taken to remove the Courts from the State House to the City Hall.

At a Bar meeting held in April, 1861, Messrs. Alfred Blackman, John S. Beach, Charles R. Ingersoll, Norton J. Buel, Dexter R. Wright and William B. Wooster were appointed a Committee of the Bar to act with the County Commissioners of New Haven County in the selection of suitable rooms for Court purposes. A contract was made by these gentlemen with the city authorities to use these rooms at an annual rental of five hundred dollars. In 1870 the city authorities notified the County Commissioners that the lease expired May 1, 1872, and would not be renewed by the city. The Court-rooms in the City Hall were used by the county, however, from December, 1862, until January, 1873. They were convenient, well lighted, and well ventilated, and, except in the summer months, were used almost continuously for Court purposes by the Superior Court and the Court of Errors. In these rooms the divorce case of *Judd vs. Judd*, and the case of the State *vs. Mrs. Lydia Sherman* were tried; and the investigation into the election frauds of 1871, by the Legislative Committee on Contested Elections, was held.

The representatives of New Haven County met in the Superior Court-room of New Haven on the 2d of June, 1871, and authorized the Commissioners to purchase a lot and erect a Court House in New Haven, and laid a tax of two mills upon the dollar for that purpose. The Committee of the Bar, consisting of Messrs. Alfred Blackman, Dexter R. Wright, Arthur D. Osborne, John S. Beach

and Luzon B. Morris, was appointed to confer with the County Commissioners on the subject of providing the new Court House. The Commissioners at that time were Messrs. Rice, Dibble and Brocket. Messrs. James E. English and Morris Tyler acted with the other committees in the selection of the site. After the examination of several proposed locations on Church, Elm and Orange streets, it was unanimously agreed to purchase the lot next north of the City Hall, then belonging to the heirs of the late Dr. Jonathan Knight. The sum of forty-eight thousand dollars was paid for the site. The contracts were immediately entered into for the erection of the present County Court House, which was completed in January, 1873. The cost of this building, with its furniture, was about one hundred and thirty-four thousand dollars. The lower floor has upon it the offices of the County Commissioners and the rooms for the Court of Common Pleas. Upon the second floor are the Bar Library and the Superior Court-room. The Superior Court-room on this floor is also used for the Sessions of the Supreme Court of Errors. In it there have been tried a large number of civil cases of magnitude. The case of the State against Herbert H. Hayden was tried in this room from October, 1879, to January, 1880, and here also was tried the case of the State against Walter and James Malley, which was begun in May and concluded in July, 1882. On the third floor of this building are the rooms of the Yale Law School, the use of which is given by the county, and in consideration of that use, the valuable Law Library of this school is free for the use of the Bar and Courts of New Haven County. This library is one of the finest in the country, and it will continue to be kept well supplied with all the valuable textbooks and reports in the English language, because of the permanent endowment fund of ten thousand dollars, which was given in 1873 by Ex-Governor James E. English.

The increasing business of the Superior Court in this county, and the separation of the criminal business from the civil side by the establishment of separate criminal quarterly terms, required additional accommodation. In 1883 the Bar appointed a Committee, consisting of Messrs. Lynde Harrison, Simeon E. Baldwin, John W. Alling, Jonathan Ingersoll and William A. Wright, to confer with the County Commissioners and Representatives with reference to an extension of the County Court House. At a meeting of the County Commissioners and Representatives, called for the purpose, the Commissioners were authorized to purchase the property of the late George Hoadley next north of the County Building. The lot and house were purchased and the erection of the present Criminal Court accommodations was at once commenced. This building was first occupied at the October Term, 1884. It contains upon the first floor offices for the Sheriff, a Grand Jury-room, a lock-up for prisoners, rooms for male and female witnesses, and a room connected by a private stairway directly with the Superior Court-room, for the use of the petit jury. This floor is especially ar-

ranged for the seclusion and lodging of a petit jury during the whole of a criminal trial if it shall be deemed necessary at any time. Upon the second floor of this building are the offices of the State Attorney and Clerk, and a Court-room with a well-ventilated gallery for the accommodation of spectators. The Hoadley House, now standing upon the front portion of the lot, is the property of the county, is rented for law offices, and will be ready for the erection of additional Court accommodation when it is needed. This property, with the building and furniture, cost the county about one hundred thousand dollars. The City Court of New Haven occupied a small Court-room on the first floor of the City Hall from 1863 until 1874. In 1872 the City of New Haven erected on Court street the building known as the Police Court Building. On the first floor are the headquarters of the Police Force and the City Lock-up. On the second floor there are the Court-rooms of the City Court and the offices of the City Attorney and the Clerk of that Court. On the third floor are additional accommodations for the use of the Police Force. The second floor of the City Hall, the two County Court Buildings, and the Police Court Building are connected in the rear by external iron bridges. There are also open drive-ways passing round the rear of these buildings for the ingress and egress of prisoners in vans, without carrying them in or out of public entrances. In the City Hall, on the first floor, are the vaults and rooms of the Probate Court for the District of New Haven, and on the second floor all of the city and town records are kept, together with all the offices connected with the management of the town and city government. It is doubtful whether any city in the country has such a convenient arrangement of all its public offices as the City and County of New Haven. The buildings are well arranged, no taint of jobbery has been connected with the erection of any of them, and the property is worth to-day far more than its cost.

CELEBRATED CASES IN NEW HAVEN.

It would be impossible to enumerate within the limits of this article the important cases that have been tried in New Haven during this century. Many of them, involving important principles of law or large sums of money, naturally attracted public attention at the time. But several, by the peculiarity of the circumstances surrounding them, had a wide newspaper celebrity at the time of their trials. The most important of all, and the one attracting attention throughout the world, was the *Amistad* case, which was tried in 1840 in the United States District Court. The first acts of this drama were in the wilds of Africa, in the Island of Cuba, and upon the Atlantic Ocean. The last act was performed in the quiet town of New Haven. The republic of the United States and the monarchy of Spain were interested in the result. The friends of humanity and liberty all over the world, and the advocates of slavery in this country and the Spanish colonies, were deeply interested spectators.

The slave trade was prohibited by the laws of Spain, and Africans introduced into Spanish territory in violation of those laws were declared to be free. A slaver sailing under Portuguese colors, in June, 1839, landed a cargo of kidnapped Africans upon the coast of Cuba, near Havana, and they were soon afterward sold as slaves. All this was done upon Spanish soil, in violation of the laws that made them free; but these laws were seldom enforced. Fifty-two of these slaves were purchased by two Spaniards, named Ruiz and Montes, who obtained a license to transport them on a vessel, the *Amistad*, from Havana to Principe. They had no opportunity to present their case to the Captain-General of Cuba, to vindicate their claims to freedom. Failing to secure their liberty by legal process, after they had been out at sea for five days, the Africans arose upon the captain and crew, under the lead of Cinque, a stalwart and intelligent negro. They all belonged to a warlike tribe in Africa, and after succeeding in killing the captain and cook of the vessel, they spared the lives of the other whites upon the vessel, including those of their so-called masters, Ruiz and Montes. They then ordered the vessel to be steered for Africa, and during the daytime compelled the crew to sail easterly by the sun. In the night season, however, Ruiz and Montes sailed the vessel toward the north. After pursuing this zig-zag course for about two months, they reached the easterly end of Long Island Sound, and on the 26th of August, 1839, the vessel was boarded by Lieutenant Gedney, of the United States brig *Washington*, and taken into New London, Conn. Here the Africans were seized and committed to the jail in New Haven by the United States Marshal, on a warrant issued from the District Court of the United States for Connecticut, to answer the charge of murder upon the high seas. A libel was brought, as in Admiralty proceedings, by Lieutenant Gedney and some Long Islanders who assisted him in arresting some of the negroes who had gone ashore for water, against the vessel, and also against the negroes themselves, as if they were so many bales of goods, claiming them as salvage. Ruiz and Montes also brought a libel in the District Court against the negroes, as their owners. The Spanish minister at Washington, seemingly oblivious of the violation of Spanish laws, demanded the vessel and cargo under the treaty of 1795, and claimed that the negroes should be sent to Havana to be tried for the murders they had committed. Upon this claim of the Spanish minister, the United States intervened in behalf of the Spanish government, and also suggested that if his claim was not well founded, the Africans should be delivered up to the President of the United States to be transported back to Africa. The District Attorney of the United States for Connecticut at that time was Mr. Holabird, of Winsted; the United States Government authorized him to employ counsel to assist him, and he retained Hon. Ralph I. Ingersoll. All of these formidable legal preparations in the interest of slavery, and against the poor friendless Africans, aroused a profound feeling among humane and generous men in the North. The Abolitionists

took hold of the case, and a committee, consisting of Lewis Tappan, Joshua Leavitt and S. S. Jocelyn, was appointed in New York to solicit funds, employ counsel, and see that the rights of the Africans were faithfully protected. This committee immediately retained Hon. Roger S. Baldwin and Seth P. Staples, of New Haven; and Theodore Sedgwick, Jr., of New York. Mr. Baldwin took up the case with his accustomed zeal and industry. The Africans were confined in the New Haven Jail, but were daily taken out on to the New Haven Green, under guard, for exercise. They could not speak the English language, and no one in New Haven could speak theirs. Mr. Baldwin sought the assistance of his friend and kinsman, Professor Gibbs, of Yale College, the eminent linguist and philanthropist. He obtained from the Africans something of their vocabulary. Taking these words and sounds he went to New York, and by visiting the crews of the foreign ships in that city he at length found a young man by the name of James Coley, who was acquainted with both the English language and the dialect of these Africans. He brought him to New Haven, and valuable communication was at once begun between the Africans and their counsel. On the 17th of September, 1839, they were taken before the Circuit Court of the United States to be tried for murder, but Judge Thompson decided that the Africans could not be held for trial in the United States for a murder committed on the high seas on board a Spanish vessel. Judge Thompson however refused to discharge them, on the ground that they were held in custody by the District Court as merchandise, in consequence of the libels against them. The Spanish minister now complained to the Secretary of State that the Courts of the United States should not take cognizance of the libels, but give up the negroes at once to the Spanish authorities, not as slaves, but as assassins. The Secretary of State informed him that when the District Court should meet on the 7th of January, 1840, it might order the restitution of the vessel, cargo and negroes, and that it would be necessary for the Spanish government to take charge of them as soon as the Court should announce its decision. This minister also requested the President to order the transportation of the negroes in a government vessel to Cuba on their release. Accordingly, such a vessel was anchored off the harbor in New Haven three days after the District Court assembled, to be in readiness for that purpose. In the meantime Lewis Tappan and other friends of the negroes had arranged with the authorities of the underground railroad to run them off to Canada, if, after release, any effort should be made by the Government to send them to Cuba. The case was thoroughly tried before the District Court by the eminent counsel engaged, and the fact that Judge Judson had no political sympathy with the anti-slavery party of that day, encouraged the hopes of the Spanish claimants, but the Court decided that the papers of Ruiz and Montes were fraudulent; that the negroes were native Africans illegally imported into the United States; that they were not slaves, but *free men*;

that no libels could lie against them as merchandise; and that they should be sent back to Africa according to the provisions of the treaty of 1819. The Secretary of State then ordered the District Attorney to take an appeal to the Circuit Court and this was done, but Justice Thompson of that Court affirmed the decision of the District Court. An appeal was then taken to the Supreme Court of the United States. Ample preparations were made for the trial before the Supreme Court, and the Hon. John Quincy Adams, the venerable ex-President, "the old man eloquent," was retained as senior counsel. The arguments in behalf of the Africans before the Supreme Court were made by Mr. Adams and Mr. Baldwin. Mr. Baldwin as junior counsel made the first argument. The laboring oar in the preparation of this case naturally fell upon Mr. Baldwin. Mr. Adams had not practiced law for many years. As he stated in opening his argument, it was thirty-two years since he had appeared in any case in the Supreme Court, and he said pathetically in his closing words, "Not one of the Judges of that day now remains." The case is fully reported in the 15th *Peters Reports*, page 579. When Mr. Adams rose to present the case, he said "The rights of my clients to their lives and liberties have already been defended by my learned friend and colleague [meaning Hon. Roger S. Baldwin, of New Haven] in so able and complete a manner as leaves me scarcely anything to say, and I feel that such full justice has been done to their interests, that any fault or imperfection of mine will merely be attributed to this cause." Mr. Baldwin argued the case exhaustively, and upon broad principles. He said: "This case is not only one of deep interest in itself—it affects the destiny of the unfortunate Africans whom I represent, contending for freedom and for life, with two powerful governments arrayed against them—but it involves considerations deeply affecting our national character in the eyes of the whole civilized world, as well as questions of power of the Government of the United States, which are regarded with interest and alarm by a large portion of our citizens; it presents for the first time the question whether that Government which was established for the promotion of justice, which was founded on the great principles of the Revolution, as proclaimed in the Declaration of Independence, can, consistently with the genius of our institutions, become a party to proceedings for the enslavement of human beings cast upon our shores, and found in the condition of freemen within the territory and limits of a free and sovereign state." Chancellor Kent said of the argument of Mr. Baldwin: "It is very logical, and absolutely unanswerable in all the points taken. His forensic performance alone would give its author high professional eminence." The Court-room was crowded during the arguments, and the argument for the United State was made by Hon. John Gilpin. The excitement was intense. Mr. Adams spoke for two days. On the night following, Mr. Justice Barbour, of Virginia, one of the members of the Court, was stricken down and suddenly died. A week later the opinion of the Court was delivered by Justice Storey. So much of

the decision of the District Court as allowed salvage to Gedney and others for the vessel and cargo was allowed; but the Court held that the Africans were kidnapped and unlawfully transported to Cuba; that they were purchased by Ruiz and Montes with a knowledge of the fact that they were free men; that they did not become pirates and robbers in taking possession of the *Amistad* and attempting to regain their native country; that there was nothing in the Treaty of 1819 that justified the claim for their surrender; and that the United States was bound to respect their rights as much as those of Spanish subjects. The decree of the Circuit Court affirming that of the District Court was affirmed by the Supreme Court, except that so much of the decree as directed the negroes to be transported to Africa was reversed, and the negroes were declared "to be free, and to be dismissed from the custody of the Court, and to go without day." The Africans were then released. Mr. Tappan and his friends had most of them reconveyed to Africa, where they became the center of the Mendi Mission of the American Missionary Society.

One of the most important murder cases ever tried in Connecticut was that of the State against Willard Clark. Clark was a small storekeeper in New Haven, and had been in love with a young girl named Henrietta Bogert, who had married a young man named Wight. In 1854, and a short time after her marriage, Clark who had brooded over his disappointment, went to the house where the young man lived, and shot him with a pistol through the head. He was indicted for murder in the first degree, and soon retained for his defense Hon. Charles Chapman, of Hartford, and Hon. Henry B. Harrison, of New Haven. The State Attorney at that time was Hon. E. K. Foster. The defense was insanity, caused by undue brooding over this and other love affairs. Depositions were taken for Clark in various parts of the country showing his conduct with women on other occasions. No one had suspected before that time that Clark was an insane man within the ordinary meaning of the word. As junior counsel, Mr. Harrison went into the preparation of the case with his usual thoroughness and ability. The young woman was about seventeen years of age, and Clark was past thirty. He had courted her with assiduity, and she had repulsed most of his attentions with disdain and disgust. Clark insisted that, notwithstanding her apparent want of affection for him, she was deeply in love with him, and that her negatives were intended to be understood by him as affirmatives. He seemed to believe that after her marriage with Wight she was dumbly pleading with him to rid her from a hateful alliance. At that time the defense of insanity upon a single subject, monomania, had not received the general favor with juries which it has since acquired. The eloquence of his counsel, and the careful preparation of the evidence, convinced the jury that he was not legally responsible for the crime he had committed, and he was acquitted on the ground of insanity. The verdict was not generally ap-

proved at the time, but the subsequent conduct of Clark in prison satisfied all who studied his case, that while this was one of the first of the so-called cases of emotional insanity, Clark was fairly entitled to the benefit of the doubt concerning his legal or moral responsibility. Judge Ellsworth, who presided over the Court, did not approve the verdict, and, as the law authorized him to provide proper custody for prisoners acquitted on such grounds, he ordered him to be confined in the county jail, and subsequently in the State's prison. Clark remained there for more than twenty years, when he was transferred to the State Insane Asylum, and died there about 1880.

In the year 1859, the celebrated divorce case of Mary A. Bennett against Dr. George Bennett was tried in the Superior Court-room of the old State House. A divorce was sought for under what was known as the omnibus clause of the old statute, that is, on account of "such misconduct as permanently destroys the happiness of the petitioner, and defeats the purposes of the marriage relation." Dr. Bennett had made a large fortune by the manufacture of pills. He occupied a very handsome house, and drove his horses and carriage about the streets. Mrs. Bennett was a very handsome lady, many years younger than her husband. The Counsel for Mrs. Bennett were Messrs. Alfred Blackman, Ralph I. Ingersoll and Joseph Sheldon. The Counsel for Dr. Bennett were Ex-Governors Roger Baldwin and Henry Dutton and Mr. George H. Watrous. The case was carefully prepared and thoroughly tried by both sides. Witnesses were examined for nineteen days. The newspapers of New Haven and other places served up the gossip of the trial for the entertainment of thousands of readers. Mrs. Bennett was granted a divorce, the custody of her children, and obtained by way of alimony about fifteen thousand dollars.

A similarly interesting divorce case was tried in the Superior Court-room in the City Hall about 1866, being the case of Elizabeth Judd against Rev. O. B. Judd, Jr. Rev. Mr. Judd was the somewhat popular pastor of a young church in this city, but he combined with his theological teachings the business of a New York speculator during the week. Mrs. Judd was a bright and intelligent lady, fond of society. Misconduct and several other causes were alleged and a cross bill was filed by the respondent alleging the same grounds for divorce as those in the petition. The Counsel for Mrs. Judd were Messrs. Dutton and Watrous, and Alfred Blackman and Henry B. Harrison appeared for Rev. Mr. Judd. The case was fully reported in the newspapers in the same manner as had been the case of Bennett vs. Bennett. The divorce was finally granted to the respondent on his cross bill.

One of the most remarkable poisoners in the country was Mrs. Lydia M. Sherman, of Derby. She killed two husbands and several children by arsenic. The number of sudden deaths in her

family finally produced so much suspicion that her last husband was disinterred, and after a *post mortem* examination she was arrested and indicted for murder in the first degree. There was great excitement over the case in the Naugatuck Valley, and she was advertised throughout the country as the Lucrezia Borgia of the century. She was prosecuted by State Attorney E. K. Foster and Mr. William B. Wooster, who was retained by the people of that town. She was defended by Mr. George H. Watrous and Mr. William C. Robinson. Professor George Barker, of the Sheffield Scientific School, made a decided reputation for himself by his testimony as an expert, he having made the chemical examination of the stomach of Mr. Sherman. Mrs. Sherman was convicted of murder in the second degree, and was sentenced to State's prison for life, where she died a few years later. The feeling against hanging a woman in Connecticut probably saved her from a conviction of murder in the first degree.

In May, 1871, a Legislative Committee of the General Assembly sat in the Superior Court-room for the purpose of determining what frauds, if any, had been perpetrated in the preceding State election in the Fourth Ward of New Haven. When the box was opened only about four hundred ballots were found for Marshall Jewell in the box. It was claimed by the Republicans that one hundred Republican ballots had been abstracted from the box after the election, for the purpose of making the number of ballots tally with the check list, and thereby prevent the discovery of the manipulation of the box in the interest of the Democratic candidate. For the purpose of proving that over five hundred Republicans had voted for Marshall Jewell for Governor, the managers of that candidate's case produced within two or three days in the Court-room five hundred qualified voters of the Fourth Ward, who testified that they voted on the first Monday of April, 1871, for Marshall Jewell for Governor. This was considered at the time a novel method of inquiry into a disputed election, but the evidence was admitted by men of both parties to be unanswerable. It produced much interest and excitement at the time.

On the 2d of September, 1878, Mary Stannard was found in North Madison in a piece of woods near her father's house, dead, with her throat cut. Suspicion pointed to Herbert H. Hayden, a lay preacher of the Methodist Church. He was arrested, and in October was indicted by the Grand Jury for murder in the first degree. A *post mortem* examination of the body of the girl showed that a short time before her throat was cut she had had a large dose of arsenic administered to her. An examination into Hayden's movements showed that the girl had formerly been a servant in his house; that he had had two or three secret interviews with her just before the murder; and that on the morning of her death he went to Middletown and purchased an ounce of arsenic. Hayden accounted for the arsenic he purchased, by producing, through

one of his friends, an ounce of that poison which he said he put upon the beam in his barn on the noon of the day of the murder. The accused accounted for his disappearance on the afternoon of the murder, by stating that he was at work in a secluded wood lot near his house. The claim of the State in relation to the arsenic produced was that some person in the interest of Hayden had put an ounce of arsenic in his barn several days after his arrest, and after Hayden knew that the body had been disinterred for the purpose of having the stomach examined for poison. The Sheriff of the county obtained possession of the substituted arsenic, and the State authorities afterwards procured samples of arsenic from the jar in Middletown whence Hayden purchased his on the day of the murder. The trial of Hayden began in the present Superior Court-room in October, 1879, Chief-Justice Park presiding. Hayden was defended by Mr. George H. Watrous, Mr. Samuel Jones and Mr. L. M. Hubbard. The State was represented by its Attorney for New London County, Mr. T. M. Waller, Mr. Lynde Harrison, who was appointed Special State Attorney at the time of the resignation of the former Attorney for New Haven County, Hon. O. H. Platt, and Mr. Edmund Zacher. The special feature of this case which attracted attention, was the evidence of Professors Dana and Brewer, of Yale College, and Professor Wormley, of the University of Pennsylvania, all of whom were eminent microscopists, and authorities in chemistry and crystallography. These gentlemen examined specimens of the arsenic in Mary Stannard's stomach and from the jar from which Hayden purchased the arsenic in Middletown, and from the substituted or barn arsenic. Their testimony occupied several days, and they all agreed that the arsenic produced by Hayden in his barn was not the arsenic which he purchased on the 2d of September, and further that the specimens of undissolved arsenic in the girl's stomach were precisely like those which he purchased. Hon George Watrous cross-examined these gentlemen at great length and with great shrewdness, and by his ability in this cross-examination so confused the minds of the jury that he probably saved his client from conviction. The case was given to the jury in January, 1880, and resulted in a disagreement. It was one of the most remarkable cases of circumstantial evidence reported in recent years. The State proved clearly that Hayden had had the time, the opportunity and the means in his possession to commit this murder, and Hayden was the only person in the vicinity who could not account for himself during the hour when the murder was committed. But the State was unable to show clearly the motive that caused the deed.

Upon a Saturday morning in August, 1881, Jennie Cramer, of New Haven, was found floating in the water at Savin Rock, not far from there. On the preceding Wednesday night she had been in close companionship with Walter and James Malley, of New Haven, and Blanche Douglass, of New York. The relations between them had been

of a criminal nature and they were together beyond doubt on part of Thursday. It was not certain that they were together after that time, nor was it certain that Jennie Cramer was ever seen alive after Thursday evening. The Malley boys and Blanche Douglass were arrested, and a few months later they were indicted for murder in the first degree. A *post mortem* examination revealed some traces of arsenic in her body. It was claimed by the accused that she had taken arsenic for her complexion, and that the cause of her death was accidental drowning, and that they knew nothing of her movements after Thursday noon. The theory of the State was that she had been killed by the accused for the purpose of covering the evidence of a violent crime. The theory of the defense was suicide by drowning. The trial was commenced in the present Superior Court-room in May, 1882, and concluded in July. Judge Granger presided. State-Attorney Doolittle and Mr. C. K. Bush conducted the case for the State. The defendants had several Counsel, including Mr. William C. Case and Mr. L. M. Blydenburgh for Walter Malley, Mr. William B. Stoddard and Mr. Dow for Blanche Douglass, and Mr. Eugene Cassidy, of Philadelphia, for James Malley. As in the case of Hayden, the trial was reported by representatives of New York as well as New Haven papers. There was no evidence to show that the accused had arsenic in their possession, but the State showed clearly that the accused had time and opportunity to commit the murder. But, as in the Hayden case, the evidence of motive was not strong and clear, nor could the jury or public be satisfied it was not a case of suicide. The prisoners were acquitted after a short deliberation by the jury, and the mystery whether Jennie Cramer's death was caused by the administration of arsenic to hide the felonies perpetrated, or by accidental drowning or suicide, will never be solved.

NOTED LAWYERS OF THIS CENTURY.

No city of the Union has furnished, in proportion to its population, a larger number of industrious, well-read, able lawyers of integrity and learning than New Haven. In the ranks of the Bar of New Haven there is to-day a body of lawyers devoted to their profession, who would take leading positions in the largest cities of the country if they had commenced the practice of the law in those places. Many of them are men noted for their ability, integrity, faithfulness, and that becoming modesty which is so often associated with culture and learning. These men are the trusted counselors of families and corporations. Much of their best work is done in leading their clients into the paths of peace and settlement, rather than into ways of litigation, yet they are men who do not fear prolonged contests in the Courts when they find the interests of their clients require it. Many of them have taken but little, if any, part in public affairs, and when they are gone their names will only be found in the body of the Connecticut Reports. But those they leave behind them will cherish as

their best inheritance the reputation of a father's work in life faithfully and well done. The local historian of the future will name them with pride, and the City of New Haven will mourn their loss.

New Haven has not furnished from its Bar so large a number of its members to the Bench of the higher Courts as some other cities of the State, but this is partially due to the fact that the emoluments of the profession have been greater than the salaries offered by the State to its judges. David Daggett and Henry Dutton became Judges of the Supreme Court of Errors while residents of New Haven. Charles I. Ingersoll was made a Judge of the United States District Court. Clark Bissell and Joel Hinman became residents of New Haven after they were made Judges of the Supreme and Superior Courts. Edward I. Sanford and Henry Stoddard, who now grace and adorn the Bench of the Superior Court, were appointed to that Bench while residents of New Haven. The Bar of New Haven has furnished from its ranks several judges for the County Court, the Probate Court and the City Court of New Haven, most of whom have given general satisfaction to the public and the profession.

It is obviously impracticable to furnish within the limits of this article suitable biographical notices of those judges and lawyers who are now living in New Haven.

Among the able lawyers who have practiced at the New Haven Bar since the adoption of the Federal Constitution, but who are now deceased, there stand more or less prominently the names of Pierpont Edwards, Roger Sherman, Nathaniel Smith, David Daggett, Dyer White, Jonathan Ingersoll, Simeon Baldwin, Eleazer Foster, John Hart Lynde, Seth Staples, Samuel Hitchcock, Isaac H. Townsend, William W. Boardman, Dennis Kimberly, Roger S. Baldwin, Alfred Blackman, Ralph I. Ingersoll, Charles Ingersoll, Clark Bissell, Henry Dutton, Jonathan Stoddard, Henry White, Eleazer K. Foster, William Bristol, John Beach, Charles Ives, Thomas B. Osborne, and Dexter R. Wright.

PIERREPONT EDWARDS.

For more than thirty years, no man took a higher rank at the Bar of New Haven County than Pierrepont Edwards, who began his professional life in New Haven in 1771. He was the third son and youngest child of the celebrated theologian, Jonathan Edwards. His father was for many years a resident of Northampton, Mass., and in that place all his children were born. The subject of this sketch was born April 8, 1750, and graduated at Princeton College in 1768. The following year he married Frances Ogden, of New Jersey, and soon afterward moved to New Haven. Like all the active young men of New Haven, he took an efficient part in favor of the movements which led to our National Independence, and was for a short time a member of the army, taking part in two battles, including that of Danbury. After the War of the Revolution he became earnestly interested in political affairs, and represented New Haven several times in the General

assembly, holding the office of Speaker of the House at the May Sessions of 1789 and 1790, and also at the October Session of 1789. He was a member of the Connecticut Convention held at Hartford, January, 1788, which ratified the Constitution of the United States. After the formation of the Republican party, he became one of its leaders with Abraham Bishop and others, and a few years later he took great interest in the work of the Toleration party, as it was called, which carried the State for the first time in 1817. It is to this party that the State owes its present Constitution, and Mr. Edwards was a member of the convention which assembled at Hartford on the fourth Wednesday of August, 1818, as a representative at that time from the town of Stratford. As a lawyer, Mr. Edwards was especially successful before juries. In 1806 President Jefferson appointed him Judge of the United States District Court of Connecticut, which position he held until his death on the 5th of April, 1826. While Judge of the District Court he attempted to revive the old Federal doctrine of the common law jurisdiction of the United States Courts. Under his instructions a grand jury found bills of indictment against sundry obnoxious persons, and among them against the publisher of the *Connecticut Courant*, for having charged Jefferson with sending two millions to Paris as a bribe to France. This case went to the Supreme Court of the United States, and in 1811 that Court held that the Courts of the United States have no criminal jurisdiction not expressly conferred upon them by statute. Judge Edwards in this matter held views as a jurist which were not entertained by his fellow-members of the Republican, or Democratic, party, as it was called a few years later. Among the descendants of Judge Edwards there are living to-day in New Haven, Mr. Eli Whitney and Mr. Eli Whitney, Jr.

DAVID DAGGETT.

Hon. David Daggett was born in Attleborough, Mass., December 31, 1764, and died in New Haven, April 12, 1851, at the age of 86.

When sixteen years old he came to Yale College, and graduated in 1783 in the same class with John Cotton Smith. He studied law in the office of Charles Chauncey, and was admitted to the Bar at the age of twenty-one. For many years he enjoyed an extensive practice, not only in New Haven, but throughout the State, and because of his high character as a citizen and ability as a lawyer, in 1826 he was chosen a Judge of the Superior Court, which office he held until 1832, when he was elected Chief Justice of the Supreme Court. He held the latter office until December 31, 1834, when he retired by reason of the constitutional limitation of age. His success as a lawyer was due to his innate knowledge of human nature, his sound judgment, and his strong common sense. He abounded in wit and humor, and had at command a fund of anecdotes to illustrate his positions and arguments. His manner of speaking was calm and deliberate. His knowledge of the law was thorough and eminently practical. He had no patience with hair-

splitting technicalities, which were the delight of many lawyers in the days of the older common law practice. His punctuality was extraordinary, and his integrity was thorough, stern and exact. He was very familiar with the Bible, and frequently used its strong and popular language in his arguments, and even in his charges to the jury when he was a Judge. Early in life he took deep interest in public affairs, and became an active member of the Federal party. He represented New Haven in the General Assembly for several years, and was Speaker of the House in 1794. For many years he was a Member of the Upper House of the General Assembly, which under the old charter corresponded with the Senate of to-day. In 1813 he was elected a Senator in the Congress of the United States, and he held that office until 1819, when he gladly left public life to attend to the practice of his profession. For a few years he was one of the instructors in the Law School of New Haven, as an associate with Judge Hitchcock.

JOHN HART LYNDE

was born in Saybrook in 1777, and graduated at Yale College in 1796. He studied law in New Haven, and commenced its practice in the year 1800. During the same year he married Elizabeth D. Nicoll, of New Haven.

For several years he devoted himself to the practice of probate law, and was a trusted counselor in the settlement of estates and family affairs. Soon after his admission to the Bar he was appointed Clerk of the County and Superior Courts, which office he filled to the satisfaction of the Bar until his death in 1817. In those early days of this century the lawyers of New Haven generally had their offices in their houses. The office of Mr. Lynde was in the house which he built on the corner of Temple and Wall streets, which is now the parsonage of the Centre Church. Mr. Lynde was an active member of the Federal party, and was deeply interested in the principles of Freemasonry, of which order he was a prominent member.

ELEAZER FOSTER.

The subject of this sketch was born in the little town of Union, in Tolland County, in 1778, and graduated at Yale College in 1802. Soon after graduation he was admitted to the Bar of New Haven County, and early acquired a prominent position in the profession. He especially devoted himself to probate law and occupied the position of a counselor in family matters requiring integrity and discretion. He was frequently selected to be an executor of wills, an administrator of the estates of deceased persons, an assignee of insolvent debtors, and to fill other positions of trust requiring industry and capacity. He was a Federalist in politics, and in April, 1817, was elected from New Haven as a representative in the Legislature. In that capacity he devoted himself to the best interests of his constituents. He was ever kind, attentive and generous to the poor, the humble, and the

helpless. As a friend he was sincere, and to those intimately associated with him he was invariably affectionate and faithful. He was an exemplary and useful member of the Church, and always lived under the steady influence of religious principles. Before he reached middle life however, he was attacked by a fatal disease, which terminated his useful life in May, 1819. One of his sons was Eleazer K. Foster, a sketch of whom is given elsewhere. Another, Pierpont B. Foster, is still a resident of New Haven. A grandson, Dr. J. P. C. Foster, graduated at Yale College, and now practices medicine in New Haven. Another grandson, William Law Foster, son of Mr. P. B. Foster, was a member of the New Haven County Bar for several years, and was also a Clerk of the Court of Common Pleas. He died at an early age in May 1881, leaving one son and a widow.

Hon. E. K. Foster, Jr., of Sanford, Fla., a Judge of the Circuit Court of that State, is another of his grandsons.

JONATHAN INGERSOLL.

The Hon. Jonathan Ingersoll, who died at New Haven on the 12th of January, 1823, in the seventy-sixth year of his age, was one of the purest statesmen Connecticut has ever seen. He was born at Ridgefield, in the county of Fairfield, and graduated at Yale College in 1766. For many years he practiced law in New Haven with industry, fidelity, and success. He always enjoyed the friendship, esteem, and confidence of his professional brethren. Before he had reached middle life, by the unsolicited suffrages of his fellow citizens he entered public life. For years he was a Member of the General Assembly, and was then appointed a Judge of the Superior Court and of the Supreme Court of Errors. He was once elected to the Congress of the United States, but declined to accept the position. In the latter years of his life he became a prominent leader in the Toleration movement, and in 1817 was elected by that party Lieutenant-Governor of the State, upon the same ticket with Oliver Wolcott, of Litchfield. Judge Ingersoll held this office, after the adoption of the present Constitution, till his death. He was the father of Hon. Ralph I. Ingersoll and Judge Charles A. Ingersoll.

SIMEON BALDWIN.

Judge Simeon Baldwin was born in Norwich, December 14, 1761. His ancestors were all of Puritan Connecticut stock from the first settlement of the colony. His great-grandfather, John Baldwin, was one of the first planters of Guilford, in 1646, and removed from that plantation to Norwich in 1660. During the Revolutionary War, although but a boy, young Simeon Baldwin was deeply interested, in connection with his brother, Rev. Ebenezer Baldwin, in ministering to the sick and suffering soldiers, and in conveying intelligence from the army to friends at home. He entered Yale College in the year 1777, and graduated with honor in 1781. During his collegelife he was one of a company of students who resisted the attack

upon New Haven by the British troops under General Tryon. In 1786 he was admitted to the Bar of New Haven County and entered on the practice of his profession. In 1790 he was appointed Clerk of the United States Courts, and performed the duties of that office until 1803, when he was elected a representative from Connecticut to the Eighth Congress of the United States. In 1806 he was appointed a Judge of the Superior Court, and he held that office under the charter, by successive annual elections, until 1817, when the Federal party went out of power. The intellectual qualities of Judge Baldwin were such as eminently fitted him for the duties of that office. His judgment was uncommonly sound, thorough, and well balanced. He had a power of clear and exact statement which enabled him to communicate his opinions accurately to others. His memory was ready, capacious, and retentive. He was candid, impartial and uninfluenced by prejudice to a degree rarely witnessed. Except for the violence of party feeling he would have continued upon the Bench which he adorned for many years. He died in New Haven on the 26th of May, 1851. One of his sons was the Hon. Roger Sherman Baldwin.

Judge Baldwin was a man of public spirit, and during the years that followed his retirement from the Bench, while he enjoyed a large practice, he devoted much of his time to the construction of the Farmington Canal and other matters in the interests of the commerce of New Haven. In 1826 he was chosen Mayor of the City of New Haven. After 1830 he declined to hold public office, and confined his practice to that of a counselor and adviser in his own office.

ISAAC H. TOWNSEND.

Professor Isaac Henry Townsend was born in New Haven April 25, 1803. He graduated at Yale College in 1822, and immediately afterward commenced the study of the law under Judge Hitchcock. In due time he was admitted to the Bar and commenced the practice of the law in his native city. In 1834 he represented the town of New Haven in the General Assembly, but thereafter declined to hold political office. In 1842 he became connected with the Law School as an instructor, and in August, 1846, was formally elected a Professor of Law in Yale College. He was an earnest, faithful student, zealously devoted to his profession. His mind was discriminating, accurate and exact.

His cases were always thoroughly prepared, and his arguments were exhaustive. He was particularly strong in the presentation of questions of law before the Court of Errors, and his opinions upon intricate legal questions were often sought by men older than himself. He died on the 11th of January, 1847, at the early age of 44.

DENNIS KIMBERLY.

General Dennis Kimberly was born in that part of New Haven which is now a portion of the town of Orange, on the 23d day of October, 1790. He graduated at Yale College in 1812, and com-

menced the practice of law in the City of New Haven in 1814. For more than forty years he was engaged in an extensive and lucrative practice, to which he devoted himself with but little interruption. He was well read in his profession and a master of its principles, and also had a thorough knowledge of human nature. His insight into character gave him a great advantage in the examination of witnesses, and made him especially strong in the trial of cases before court or jury. He was a graceful speaker, with an easy command of chaste language. He had a decided taste for military affairs, and was one of the first Captains of the New Haven Grays. He was repeatedly promoted, and in 1824 was appointed Major-General of the State. He represented New Haven in the General Assembly on several occasions between 1826 and 1835.

In 1838 he was chosen by the General Assembly United States Senator, but, preferring to devote himself to his profession and his personal affairs, he declined the great honor. He also held the offices of Mayor of New Haven and State Attorney for New Haven County. He died on the 14th of December, 1862.

ROGER S. BALDWIN.

Hon. Roger Sherman Baldwin was born in New Haven January 4, 1793. He was the second son of Judge Simeon and Rebecca (Sherman) Baldwin. His mother was the daughter of Roger Sherman, one of the signers of the Declaration of Independence and one of the members of the convention which framed the Constitution of the United States. The subject of this sketch graduated at Yale College in 1811, and was admitted to the Bar in 1814. From that time until his death he was devoted with unremitting energy to the pursuit of his profession, except for those periods when he was engaged in the service of the public. As a lawyer he was earnestly devoted to the right, and when convinced the cause of his client was that of justice, nothing could shake his confidence in the righteousness of the claims he presented to the court. He was bound to present the strongest view of his client's case as an advocate, yet nothing could cause him to violate what he believed to be the truth. He had a remarkable power in the use of words and the construction of sentences, and his language was always pertinent. While his practice brought him many cases of importance, he would frequently for the sake of justice devote his great knowledge to the management of comparatively small cases. This was especially true when his sympathies were aroused. He espoused warmly the cause of fugitive slaves, and on one occasion procured by *habeas corpus* the release of a colored man claimed to belong to Henry Clay. The successful termination of the cause of the Africans in the Amistad case was due to his great industry and devotion. In 1826 he was a member of the Common Council of New Haven, and in 1837 and 1838 he was a member of the State Senate; in 1840 and 1841 he was elected a representative from New Haven to the General Assembly, and in 1844 was

chosen Governor of Connecticut. In 1845 he was re-elected, and from 1847 to 1851 was a member of the United States Senate. He would have been elected for the full term, ending in 1857, had it not been for the defection of three or four pro-slavery Whigs, who did not like the strong anti-slavery feelings of Governor Baldwin. While in the United States Senate he took an active part in the discussions growing out of the admission of California.

On the 26th of September, 1850, he made a caustic speech in the Senate of the United States in reply to Mr. Mason, of Virginia, who had attacked Connecticut for her course in relation to the cession of her claims in the northwest territory. Mr. Mason had reflected upon the motives of Connecticut in reserving a portion of the western domain, and in reply, Mr. Baldwin said:

"Sir: This reservation was not made for any mere private objects; it was not made to aid her in the discharge of her revolutionary responsibilities or the payment of her civil expenditures; but for the noble purpose of providing for the education of every child within her limits, and of peopling, as well, the magnificent territory which she ceded, as that which she reserved, with an educated, enlightened, and enterprising population."

Governor Baldwin was an earnest Federalist and Whig until the formation of the Republican party in 1856. He was deeply interested in the anti-slavery movement, and was one of the early and trusted counselors in the organization of the party which elected Abraham Lincoln. Mr. Baldwin was a presidential elector in 1860, and in the winter of 1861 was appointed by Governor Buckingham a member of the celebrated "Peace Congress," in which he occupied a prominent and influential position. He died at New Haven on the 19th of February, 1863.

HENRY DUTTON.

Governor Henry Dutton was born at Plymouth, in Litchfield County, February 12, 1796. He graduated at Yale College in 1818, and commenced the practice of law in Fairfield County, where he remained until 1847. In that year he was appointed Professor in the Yale Law School, and opened a law office in this city, where he lived till his death in 1869. He was a very successful corporation lawyer, and had a lucrative practice, till he was elected a Judge of the Supreme Court of Errors in 1861. In 1854 he was elected the last Whig Governor of the State, by a coalition in the Legislature of the Whigs, Free Soilers, and Maine Law representatives. His only son, Henry M. Dutton, was a Lieutenant in the Fifth Connecticut Regiment, and was killed at the battle of Cedar Mountain. His grandson, George Dutton Watrous, a son of Hon. George H. Watrous, is now practicing law in the office occupied for many years by his grandfather.

A more extended notice of the services and ability of Governor Dutton will be found in another part of this volume.

RALPH I. INGERSOLL.

Hon. Ralph Isaacs Ingersoll was born in New Haven February 8, 1789. He belonged to a family of lawyers, many of whom have achieved distinction in the walks of the profession. His father, Jonathan Ingersoll, and his uncle Jared Ingersoll, have been mentioned in this chapter. A junior brother was Hon. Charles A. Ingersoll, who practiced law in New Haven for many years and was Judge of the United States District Court at the time of his decease. Two of his sons, Hon. Colin M. Ingersoll and Governor Charles R. Ingersoll, are members of the New Haven County Bar. His nephew, Jonathan Ingersoll, is Clerk of the Superior Court for New Haven County. Another nephew, Charles D. Ingersoll, has been a judge in the City of New York, and now practices law there.

Mr. Ingersoll graduated at Yale College in 1808, and in 1810 opened a law office in New Haven. For many years he was leader of the Bar of the State, and devoted nearly all of his time to the profession he loved and honored. He had a vigorous, well-balanced intellect, equipped with everything needed to adorn it. He was a hard student and had a profound practical knowledge of human nature. He was a graceful, agreeable speaker, earnest, clear, logical and complete. Upon public questions he was impetuous, eloquent and convincing. In his early years Mr. Ingersoll was a Federalist, but when his father took up the cause of the Toleration party in 1817, he joined him, and for several years was actively interested in the success of that party, which became, in process of time, after the second election of President Jackson, the Democratic party of Connecticut. From the organization of the Democratic party, Mr. Ingersoll was one of its shrewdest and most trusted leaders. He represented New Haven in the General Assembly for several years, and was Speaker of the House of Representatives in 1824. From 1825 to 1833 he was a representative in Congress. For the first four years he was a follower of Henry Clay, and supported the administration of Mr. Adams. In Congress he afterwards became a supporter of the administration of President Jackson. In 1835 he was offered the position of Senator from Connecticut, but declined. While in Congress he became an intimate friend of Mr. Polk, and when that gentleman was elected President of the United States he appointed Mr. Ingersoll minister to Russia. He held this office for two years and then gladly returned to his profession, and practiced it for twenty years with unabated vigor. He died in New Haven on the 26th of August, 1872.

HENRY WHITE

was born in New Haven in 1803. He was a son of Hon. Dyer White, who was for years a prominent lawyer in New Haven and Judge of the County Court. Mr. White graduated at Yale College in 1821, and in 1828 was admitted to the New Haven County Bar. In this city he practiced law from that time till his death, on the 7th of October, 1880. During the fifty years that he was a member of the

Bar, he probably tried more cases, as a Committee or Arbitrator, than any other member of the Bar. He devoted himself to probate and real estate practice, and in a few years was an acknowledged authority in this part of the State on all matters pertaining to these specialties of the profession. But few lawyers in Connecticut have ever succeeded so well as Mr. White in deliberately selecting a special line of professional practice. His knowledge of probate law led to his selection as executor, administrator, guardian and trustee of estates, and his opinion in all such cases was in demand by the profession of the whole State. Several of his sons studied law, and four of them now practice the profession in the building where their father had an office for many years; they are Henry D., Charles A., Oliver and Roger White.

ELEAZER K. FOSTER.

Hon. Eleazer Kingsbury Foster was born in New Haven May 20, 1813. He was the son of Eleazer Foster, at that time a practicing lawyer in New Haven. He graduated at Yale College in 1834, and commenced the practice of his profession in New Haven in March, 1837. He was State Attorney of New Haven County for more than twenty years, and filled that office in a remarkably successful manner. His tact, his ready wit, his quick perception, his knowledge of men, made him a formidable antagonist before the jury. As a cross-examiner he was remarkably skillful. In the administration of his office he sought to do justice rather than to exact the extreme penalty of the law. His management of causes was honorable and manly, and he always remembered that the public prosecutor should temper justice with mercy. In politics he was a Whig until 1854, and then became one of the founders of the Republican party. From 1845 to 1849 he was Judge of Probate for the district of New Haven. In 1860 he was a delegate to the Republican National Convention which nominated Abraham Lincoln. He represented New Haven several times in the General Assembly, and was Speaker of the House in 1865. In 1861 he would have been nominated and elected Governor of Connecticut, but he appeared before the convention and declined the honor in favor of the renomination of William A. Buckingham. From 1867 till his death, June 13, 1877, he was the Registrar in Bankruptcy for the Second Congressional District.

ALFRED BLACKMAN.

For thirty years no more smiling face or courtly figure was seen upon the streets and in the Courts of New Haven than the subject of this sketch.

Hon. Alfred Blackman was born in Newtown, Fairfield County, Connecticut, on the 28th of December, 1807. In that town he received a good common-school education and grew in health and sturdiness. He graduated in the Class of 1828 at Yale College. About two years after graduation he was admitted to the Bar of New Haven County, and opened an office in that part of Derby which

is now the town of Seymour. Here he began the work of his profession, and his rare qualifications for its successful practice soon brought him clients from the several towns of the Naugatuck Valley. In the year 1842 he moved his office to Waterbury and became intimate with such lawyers as Joel Hinman and Norton J. Buel.

Mr. Blackman was warmly attached to the principles of the Democratic party, and for many years took an active part in the contests between the Whig and Democratic parties. The Naugatuck Valley strongly supported the Whig principles of protection, but Mr. Blackman's personal popularity was so great, that in the year 1842 he was nominated and elected as a Democrat to the State Senate from the Fifth Senatorial District. The General Assembly held its session in New Haven that year. The Judges of the Superior and Supreme Court of Errors were at that time elected by the General Assembly and held their offices until the age of seventy. The Whig party was then suffering from Tylerism. Chauncey F. Cleveland had been elected Governor by the Democrats, and that party had control of both branches of the Legislature. Joel Hinman was a Democratic representative from Waterbury.

There was a vacancy upon the Bench of the Superior Court caused by the resignation of Judge Roger Minott Sherman. Joel Hinman was a friend of Alfred Blackman, and the influence of the latter was so great with the Democratic party, that he succeeded in securing the election of Mr. Hinman to the vacant judicial position.

Soon after the adjournment of the General Assembly, Mr. Blackman opened an office in New Haven, and continued to practice there until he retired from the active work of his profession in 1871.

In 1853, Mr. Blackman was appointed Clerk of the United States District Court, which office he filled with marked courtesy and ability for about twenty years, serving under Judges Ingersoll and W. B. Shipman. He also held for two or three years the office of Judge of Probate and Judge of the County Court. In 1855 he was elected, with James E. English, a representative from New Haven. This was the year of the Know-Nothing success in Connecticut; but, notwithstanding the fact that he was in a small minority in the House, Mr. Blackman was a leader in all matters of general legislation. A year later he was elected Mayor of the City of New Haven, and at that time, as always, took a deep interest in the growth and prosperity of New Haven. During the last nine years of his life he did not appear as a practitioner in the Courts, but his valuable advice and counsel was sought by many of his old clients.

Mr. Blackman was never known as a case lawyer, but was thoroughly grounded in the general principles of the common law, and knew almost by intuition its modifications as made by the decisions of the American Courts. His command of plain Anglo-Saxon was remarkable. He never failed to make himself understood by clear and concise language. His knowledge of human

nature was remarkable, and in the cross-examination of witnesses he frequently showed his deep penetration into human motives. His arguments before the jury, or a Committee of the Superior Court in a highway case, were convincing, adroit, and generally successful. He was a man of large heart and kind impulses; had a keen sympathy with his fellow men in all walks of life; and was loved and respected by his brothers of the profession. His death occurred in New Haven on the 28th of April, 1880. His portrait is one of the few, with those of Judge E. K. Foster and Governor Baldwin, that grace the walls of the Superior Court-room in New Haven. He left a widow and one son, Mr. Charles Blackman, who reside in Judge Blackman's old residence on Church street.

Ex-Governor Charles R. Ingersoll, at a Bar meeting held upon the occasion of Mr. Blackman's death, paid an eloquent tribute to the services and legal abilities of his deceased friend, by saying: "It is not easy for me, Mr. Chairman, to discriminate between the professional and the moral personal character of Judge Blackman. He had such a strong individuality, that, to those who knew him well, he was the same man whether within or without his office. But he had a large acquaintance and many associations in this community that were not professional. I need not speak of the respect which his sterling qualities command as a citizen, and which led him, without his seeking, into many positions of public trust. No one was better known upon our streets, and his affable presence, companionable ways, and shrewd and lively conversation, brought to him from all pursuits warm personal friends. It was my good fortune to be among them. He came to New Haven about the time I came to the Bar, and we happened to become office neighbors, and so continued as long as he practiced. The association soon brought us into relations of friendship. It led me to see much of him since his infirm health compelled him some years ago to lay aside his armor and retire to the quiet of his home and library. The shades of life's evening have been slowly, but very surely, clouding about him for much of this time, and he has suffered much, occasionally very much. But it has brought no gloom to his clear conscience and cheerful spirit. And the same bright disposition, kind air, and buoyant temper that distinguished him in the heat of life's battle, have in mercy attended him as he has drawn the drapery of his couch about him."

JOHN BEACH.

Among the lawyers of sterling worth who practiced at the New Haven County Bar in the first half of the century was John Beach.

He was a grandson of the Rev. John Beach, of Newtown, who was one of the founders of the Episcopal Church of Connecticut, and famous for his brave and unflinching loyalty to the crown during the War of the Revolution.

Mr. Beach was admitted to the New Haven

County Bar in 1814, and continued in the practice of the law until age and infirmity prevented him. He was City Attorney of New Haven from 1821 to 1824, and Clerk of the Superior Court, which office he filled with ability and satisfaction to the Bar, from 1824 to 1844. For several years after that date he was Judge of the City Court of New Haven. One of his sons, Daniel B. Beach, practiced his father's profession in New Haven for several years, and is now living in Rochester, N. Y. Another son, John S. Beach, is, and has been for several years, a leading member of the Connecticut Bar, especially noted for his skill and ability in the conduct of patent causes. Two of his grandsons, John K. Beach and Francis G. Beach, are members of the New Haven Bar. Mr. Beach died in New Haven in 1869, at the age of eighty.

At a meeting of the New Haven County Bar, held on Tuesday, April 13, 1869, the following resolution was unanimously adopted.

"Resolved, That we have heard with deep regret of the death of John Beach, Esq., formerly and for many years Clerk of the Superior and County Courts; and though latterly, from his advanced age and bodily infirmities, retired from active business, yet universally and deservedly honored and respected as one of the most upright and exemplary of our professional brethren, and for his Christian virtues and private worth as a citizen."

THOMAS BURR OSBORNE.

Judge Thomas B. Osborne was born in Easton, Fairfield County, July 8, 1798. He graduated at Yale College in 1817, and was admitted to the Bar at New Haven in 1820. From that day until 1854, he practiced law in Fairfield County, but in the latter year he returned to New Haven, and for several years was Professor of Law in Yale College. He died here on the 2d of September, 1869. While his practice was never extensive, he was widely known for his admirable personal and social qualities. As an instructor in the law, no one could have served with greater fidelity and acceptance to the College and the students. He was a Whig and Republican in politics. He represented Fairfield in the General Assembly for several years, and was its representative in Congress from 1839 to 1843. He was for several years Judge of the County Court of Fairfield County, which office he filled with great ability. His son, Arthur D. Osborne, was for many years Clerk of the Superior Court in New Haven County, and is now President of the Second National Bank. A grandson is a member of the New Haven County Bar, and is Executive Secretary to the son-in-law of Judge Osborne, Governor Henry B. Harrison.

CHARLES IVES.

Hon. Charles Ives was born on the 18th of September, 1815. He commenced the practice of law in New Haven in 1846, and continued it unremittently and successfully till his decease on the 31st of December, 1880. For many of the earlier years of his life he suffered from rheumatic and

other troubles, against which he struggled with determination and nervous energy, and by his indomitable will and courage partially recovered his health, and then built up a successful and lucrative practice. He had a large clientage in New Haven and vicinity, and devoted himself with untiring faithfulness to the interests of all of them. His mind was active and clear, and he had an incisive use of the English language which made him a strong antagonist. His literary taste was excellent, and his extensive reading furnished him with a large store of illustrations and arguments to add to the effectiveness and strength of his arguments, which were always listened to with interest by the court or jury. In early life he was a Democrat, but his strong anti-slavery views led him early into the Republican party, of which he was a member until his decease. He represented New Haven in the General Assembly of 1853, and East Haven in 1865, 1867, 1868. In the latter year he was speaker of the House of Representatives. He had one son, Charles Ives, who studied law with his father and gave promise of equal success, but he died in 1883, leaving no one to bear his father's name.

DEXTER R. WRIGHT.

A sketch of the life and services of Colonel D. R. Wright will be found on another page of this work.

Since its preparation, and on the 23d of July, 1886, Mr. Wright died in New Haven, after an illness of a few weeks, aged sixty-five.

A largely attended meeting of the Bar of New Haven County was held on the afternoon of his death in the Superior Court-room.

Judge Lynde Harrison presented the following resolutions, which were unanimously adopted.

"Resolved, That members of the Bar of New Haven County have received with profound sorrow the intelligence of the death of their brother, Dexter R. Wright, who for forty years has been conspicuously associated with that Bar in honorable and faithful practice; and who, by the ability, industry and courtesy which have characterized his professional life, now leaves a memory to be esteemed and cherished by his brethren.

"Resolved, That in token of our regard for his memory, this Bar will attend the funeral of the deceased in a body.

"Resolved, That the Superior Court be requested to cause a statement of these proceedings to be entered on its record and that the Clerk be requested to transmit a copy of the resolutions to the family of the deceased."

After speaking of Mr. Wright's life and successful practice, Mr. Harrison said:

"Colonel Wright was a man of commanding presence and extremely courteous manners, deeply impressing all who saw him in the Court-room or on public occasions.

"Always faithful to the interests of his clients, he was a man of very great industry. Because of that constant industry, I fear he has gone from us be-

fore the allotted years of the Psalmist had passed over his head.

"During the thirteen years I was associated with him in business, I never heard an angry or impatient word escape from his lips. If injured he never permitted the sun to go down upon his wrath.

"He was slow to anger, ready to forgive, and he had that rarer gift of charity, the ability to forget."

Honorable T. E. Doolittle, the State Attorney for New Haven County, said: "I was associated with Colonel Wright during the first quarter of a century of our practice in Meriden, where we tried about every case that came up before the Courts. On all these occasions he was either associated with me or opposed to me, but never did any words drop from his lips or from mine that either of us had any occasion to regret. I feel his loss as that of a life-long friend. The wound is too deep and fresh to allow me to discourse on his manifold good qualities, and yet I may say that his most notable characteristic was his fidelity to his clients. The doors of the court of justice were opened by him to the poor as well as the rich. I am confident he will be kindly remembered, not only by those who came to the Bar at the same time with him, but by all who have had the pleasure of knowing him."

The funeral of Mr. Wright was attended from Trinity Church, on Monday, July 26th, by the Bar, Admiral Foote Post, of the G. A. R., and many citizens. The bearers were Chief-Justice Park, of the Supreme Court; Governor Henry B. Harrison; Judge Carpenter, of the Supreme Bench; Judge Sanford, of the Superior Court; State Attorney Doolittle, Arthur D. Osborne, Judge John C. Hollister, Luzon B. Morris, Henry D. White, Judge Lynde Harrison, Judge W. B. Stoddard, and Jonathan Ingersoll.

ADDENDA ET CORRIGENDA.

Page 232, line 27. Mr. Disburowe was *not* "minister of Guilford," but a lawyer.

Page 232, line 4 from bottom of page. For New Haven read *Connecticut*.

Page 233, line 6 from bottom of page. Mrs. Goodman's case:

Dr. Leonard Bacon, commenting in his Historical Lectures on this case, attributes Mrs. Goodman's escape, as he does the fact that there was "never any execution or condemnation for witchcraft within the bounds of the New Haven jurisdiction," to the peculiarities of its civil constitution. He says (Hist. Lect., p. 99): "Under almost any other jurisdiction of that age, this woman, instead of dying as she did in her bed, would have died upon the gallows or have been burned alive. The reason of her escaping here must be found, I apprehend, in the fact that here, according to their interpretation of the 'judicial laws of God,' nothing was considered as proved but by the testimony of two or more witnesses to the same particular, and in the fact that there was no jury here to determine the question of guilt or innocence according to their impressions received from the testimony as a whole. The trial by jury is invaluable as a security for liberty against a strong government, but it is not the surest way of excluding popular prejudices and passions from the administration of justice."—EDITOR.

Samuel Miller

Joseph Sheldon

BIOGRAPHIES OF PROMINENT LAWYERS OF NEW HAVEN.

HON. SAMUEL MILLER *

was born at Williston, Vt., March 9, 1801 (the sixtieth day of the nineteenth century), and graduated from Middlebury College in 1822. In 1823 he went to Rochester, N. Y. (then a village of 2,000 inhabitants) to study law in the office of Ashley Sampson, the first Judge of the new County of Monroe, in which Rochester is situated. He was honored by his fellow citizens by choice to several elective offices, and while practicing at the Bar was appointed Judge of Monroe County Courts, which office he held for five years. Subsequently he was elected to the Senate of the State of New York, from the district embracing Rochester. In 1860 he removed to the City of New Haven to superintend the education of his children, occupying a furnished house as a temporary residence. After three years' enjoyment and appreciation of its advantages as a residential city, and being engaged in no active business which demanded his presence elsewhere, he sold his home in Rochester and purchased another here, where he has since resided.

MRS. SAMUEL MILLER,

Founder of the First Fellowship in Yale College.

The Douglas Fellowship, with an income of six hundred dollars a year, was founded in 1873 by Mrs. Samuel Miller, of New Haven, and named in memory of her brothers, Rev. Sutherland Douglas (Yale College, Class of 1822) and George H. Douglas (Yale College, Class of 1828). The incumbent, who must be a recent graduate of the Academical Department, pursuing non-professional studies in New Haven, is elected annually, but no person shall hold the fellowship for more than three years.

Mrs. Miller was born in 1807, married Hon. Samuel Miller in 1833, and died in 1882.

JOSEPH SHELDON

was born January 7, 1828, at Watertown, Jefferson County, N. Y., the fourth son of Colonel Joseph Sheldon. He worked on a farm and attended a country district school until he was fourteen years old. For three successive winters (1842-45) he taught school himself with flattering success. In the spring of 1845 he began to prepare for college, intending then to enter Hamilton College at Clinton, N. Y. He studied at the Union Academy in Rodman, N. Y., and afterwards at the Black River Literary and Religious Institute at Watertown, then under the principalship of Rev. J. R. Boyd, a Presbyterian clergyman. His health failing, Mr. Sheldon abandoned his plan of going to college, but continued to study at the Union Academy in Belleville, N. Y. During the years 1846-47 he alternated study and teaching at various places in

New York State. In May, 1848, much against the wishes of his patrons, he relinquished the charge of his large school in Watertown, and started for New York, New Haven and Cambridge, intending to learn what help the newly-established scientific and agricultural schools could possibly bring to practical agriculture and to the position of farmers. He found the expense of the proposed course of study too great for him to undertake. Accidentally meeting the late Dr. Taylor on the street, Mr. Sheldon engaged in conversation with the good Doctor, who persuaded him to enter the undergraduate department of Yale College. In the fall of 1848 he entered the Sophomore Class, and graduated in 1851, having distinguished himself in debate and in English composition. He at once began legal studies, first in Watertown, N. Y., but afterwards in the Yale Law School, where he graduated in 1853. Yale has also bestowed upon him the Master's degree. In the winter of 1852 Kossuth visited this country. Mr. Sheldon, by invitation, prepared the address which the students of all departments of the University sent to the Hungarian patriot. Both before and after graduation from the Law School, Mr. Sheldon was an inmate of the law office of Hon. E. K. Foster, and he soon found a considerable business on his hands. In 1854 he was employed as a teacher in the schools of the late Mayor Skinner and General Russell. At the same time he instituted, and conducted very successfully for two years, "The People's Lectures," chiefly with a view to aid the anti-slavery agitation, but partly to excite among the people a more stirring intellectual life.

In the presidential campaign of 1856 he took an active part in behalf of Fremont. For two or three years afterwards, invitations to lecture multiplied upon him, till he found that he must abandon either his public speaking or his profession, and thereafter he declined all invitations to lecture.

Mr. Sheldon speedily won professional reputation and a remunerative practice. He formed a law partnership with Mr. Lyman E. Munson, which endured until the latter was appointed by President Lincoln a District Judge of Montana. During all of Mr. Sheldon's professional work, the ordinary chivalry of the profession in regard to meritorious cases for the friendless and hopelessly poor was rather specially emphasized, particularly in regard to people of color. Among the active abolitionists of the city, Mr. Sheldon was one of the few who never shrank from assisting the fugitive slaves. In several cases Dr. Dutton, of the North Church, was his most efficient coadjutor. Soon after Lincoln's election, for which Mr. Sheldon labored zealously, the latter was employed by several of the leading carriage-makers of New Haven upon the perilous undertaking of settling their claims in the Southern States. Mr. Sheldon went South by way of Baltimore, Norfolk and Weldon. At the little town of Wilson, forty miles

* Judge Miller has resided so long in New Haven, that, though he has retired from the practice of his profession, we include him among the lawyers of New Haven.

below Weldon, he was finally compelled to turn back by a drunken mob, a guard being placed over him to make sure that he actually did leave the State. On his return to New Haven, he addressed, by invitation, a large audience in Music Hall in regard to his Southern experiences, which had an amusing as well as a more serious side. During the war, Mr. Sheldon assisted in sustaining an advanced public sentiment and in procuring enlistments. He believed that the negro must eventually be employed as a soldier, and at a time when negro orphan asylums were being sacked in New York, Mr. Sheldon quietly got together a company of thirty or forty colored men, and at midnight, in the basement of Music Hall, instructed them in the military drill, all hands being pledged to secrecy. When the negroes were called for, almost every man of this company became a non-commissioned officer in the 29th or 30th Regiments, and inspired confidence by his military knowledge and aptness.

Mr. Sheldon was connected with several business enterprises, particularly in the Grilley Company, and he devoted a great deal of time, care and capital to the development of real estate. He became the owner of the foreign patents for a singularly ingenious machine for the manufacture of brushes. The perfecting of this and the other requisite machinery, and the establishment in London of the business of manufacturing and selling machine-made brushes, occupied most of his time for six years. In 1874 he sold out to a joint-stock corporation, which has continued and enlarged the business on the lines originally laid out by him, till it has become the largest, most perfect, and profitable brush-making establishment in the world.

On his return to the United States, Mr. Sheldon vigorously opposed the financial policy of our Government, which was leading towards the "resumption," that finally prevailed. In the fall of 1875 he began a series of public meeting in New Haven to resist the destruction of the greenbacks, and to favor the demonetization of silver. In May, 1876, by invitation of the New Haven Chamber of Commerce, he delivered before that body an address on "The Currency," which was published. Judge Sheldon served the municipality through two terms as an Alderman (1879-82). He was chairman of the committees to which were referred the project of the Western Boulevard sewer and the retention and repair of the State House. The reports of the committees upon those subjects were drawn by him. In 1881-83 he held the judgeship of the City Court. In the year 1881 Governor Bigelow appointed him to represent the State in the Tariff Convention in New York, where he delivered an address. In 1884 Judge Sheldon was delegated by the Government of the United States, and also by the National Association of the Red Cross, to a conference of the treaty nations of the societies of the Red Cross held at Geneva. He drew up and delivered the address of the American delegation on one of the most important controverted questions before the conference,

and the question was carried unanimously, in accordance with the views urged in that address.

In September, 1861, Judge Sheldon married Miss Abby Barker, daughter of Samuel Elbridge Barker, of Onondaga County, N. Y., who was a grand-nephew and namesake of Hon. Elbridge Gerry, of Massachusetts. Mrs. Sheldon, as well as her father, was a co-worker, on terms of special friendship with the early abolitionists of Central New York, Gerrit Smith, Samuel J. May, and Frederic Douglass. To Mr. and Mrs. Sheldon two daughters have been born.

Judge Sheldon has long been known as an efficient advocate of temperance and of woman suffrage. He has commonly acted with the Republican party, but has frankly differed from that party on several important questions of public policy, and he heartily supported Horace Greely for the Presidency. He joined the Masonic order in 1883, and, in the ensuing year became a member of the Connecticut Society of Arts and Sciences. As a public speaker, aside from his political efforts, he is best known by his Fourth of July and Memorial Day addresses, and by his oration upon the death of President Garfield, which was delivered upon the invitation of certain citizens of New Haven, and was afterwards repeated by request. He has always been a Unitarian; has been long associated with the Universalist Society of New Haven; and for some years has taken an active part in its Sunday-school and conference meetings, and has supported all its ministrations.

Every department of thought or action to which Judge Sheldon has turned his attention has felt the power of searching criticism and of a vigorous personality. He has attained a good position as a lawyer; has been remarkably successful as a manager of business enterprises; but, above all, as a thinker he is far-sighted and consistent, and an undaunted opponent of evil. Every great reform of the century has found in Judge Sheldon a zealous and able champion. In all stages of the unceasing contest against oppression; against hypocrisy and sham; against the stubborn inertia of stolid conservatism; Judge Sheldon has openly pleaded for true independence of thought and action, and at times when men's hearts were failing them for fear, he has stood firm.

LUZON B. MORRIS.

Judge Luzon B. Morris is a type of that class of manhood which the people especially delight to honor, for he has made his way to honorable distinction unaided, save by the strength of his own hands and the resources of his own mind. On the 16th of April, 1827, Luzon Burrill Morris was born at Newtown, in Fairfield County, Conn. His early years were years of toil and of struggles with poverty, but he was determined to acquire an education, and persevered against all obstacles. He attended the Connecticut Literary Institute at Suffield until the preparatory classical education was obtained, and he entered Yale with the Class of 1854. After graduation he chose the profession

Luzon B. Morris

Lynde Hanson

of law, and pursued the study of that calling partly in the Law School and partly in an office. In 1856 he was admitted to the Bar, and two years later received the degree of A. M. from Yale College. Every step in his educational pathway was made possible by his own labors and sacrifices. He studied and worked alternately, being employed a part of the time as superintendent in a factory at Seymour. In the latter town he began the practice of his profession, but after a short interval he removed to New Haven, where he has since remained. He engaged at once in political life, identifying himself with the Democratic party, and from the outset was ranked among the leaders. He represented the town of Seymour through two sessions of the General Assembly (1855-56), and was elected Judge of Probate in the New Haven district for six successive terms (1857-63). The town of New Haven has four times chosen him as its representative in the Legislature (1870, 1876, 1880-81), and in 1874 he served a term in the State Senate. Throughout this long period of public service he has gained a thorough knowledge of our legislation and administration. His experience, probity, and faithfulness to trust have commanded for him an influential place in his profession and in the public councils, and have assured to him the esteem of his fellow-citizens without regard to partisan differences. He filled the chairmanships of the Judiciary Committee, of Committees on Corporations and on Railways, and was chosen President, *pro tem.*, of the Upper House. A most beneficial service to the Commonwealth was the part that he took in 1880 towards settling the controversy about the boundary line between New York and Connecticut.

The commission to which the dispute was referred, agreed to fix the line in the middle of the Sound, a decision which preserved to this State lands of immense value to the oyster producers along our coast. In the Legislature of 1884, Judge Morris was made chairman of a Committee to revise the Probate Laws of the State. His report was accepted by the Legislature of 1885, and is now embodied in our statutes. His interest in the schools has been active and productive of good. He has served one term on the New Haven Board of Education, and two terms on the similar Board at Westville. In each Board he held the office of President. He was influential in securing for Westville the erection of the present graded school building.

As the agent of Mr. Daniel Hand he has also been instrumental in the building of the Hand Academy at Madison, Conn.

Among his many important business trusts is the office of Vice-President of the Connecticut Savings' Bank, which he has held for about twelve years.

In view of these meritorious services and varied interests, it is not surprising that his name was prominently mentioned a few years ago as a desirable candidate for Governor. No member of his party would fill the gubernatorial chair more satisfactory to all classes of our citizens than Judge Morris.

Judge Morris married, in 1856, Miss Eugenia L. Tuttle, of Seymour. Their six children are all living. One son, Robert T. Morris, is now a surgeon in New York City. He is quite noted for his aptitude for natural history and for his attainments therein. He studied at the Hopkins Grammar School, took a natural history course at Cornell, then entered the College of Physicians and Surgeons in New York City; was in Bellevue Hospital for a time, and also served in an hospital at Hamburg, Germany. Two of Judge Morris's daughters have graduated from Vassar, and the elder of them is married to Charles M. Pratt, of Brooklyn, N. Y.

Judge Morris has risen to eminence by sheer force of character. He is known as a clear-minded and conscientious lawyer. The story of his municipal services reveals him as an honored citizen; and even those who are numbered in the ranks of his political opponents are among the first to acknowledge his honesty and ability as a politician and a statesman.

HON. LYNDE HARRISON.

To the public service of his native town and State, Judge Lynde Harrison has devoted, for nearly a generation, the best efforts of an active and honored life.

He was born in New Haven on the 15th of December, 1837. His education was obtained in New Haven at the Hopkins Grammar School and at General Russell's Collegiate and Commercial Institute. Having chosen the vocation of the law, he entered the Yale Law School and graduated therefrom with the Class of 1860. For a short time afterward he taught school, but in December, 1863, he opened a law office in New Haven, and has ever since remained in the practice of his profession at this place.

Mr. Harrison's first step in political life had already been taken. In 1862-63 he served as Clerk of the House of Representatives, and was promoted in 1864 to be Clerk of the Senate. In the following year he returned to the Senate, not as its Clerk, but as a member. He sat in that body for two years (1865-66), being especially instrumental in assisting the project for the Shore Line Railway Bridge across the Connecticut River at Saybrook. After a short interval of private professional labor, Mr. Harrison re-entered public life and has scarcely quitted it until this day. In 1871 he was chosen by the State Legislature to be Judge of the recently established City Court of New Haven. He left the Bench in 1874, and took his place in the House of Representatives as a delegate from the town of Guilford, at which place he had a residence from 1871 to 1883.

To this position he continued to be chosen by the suffrages of his fellow-townsmen from 1874 to 1877, and in the latter year he occupied the Speaker's chair, discharging ably and faithfully the difficult duties of that position. From July, 1877, to July, 1881, he sat upon the Bench again as Judge of the Court of Common Pleas for New Haven County.

In the latter year he returned to the House once more, and was the leader of his party upon the floor and the Chairman of the Judiciary Committee.

In the councils of his party his voice has been potent alike in State and Nation. For several years he has been a member of the Republican State Central Committee, was its chairman in 1875-76, again in 1884 to 1886, and, therefore, now holds that office. He was a delegate to the Republican National Conventions in 1876 and in 1880. During this long and varied political, judicial, and legislative career, Judge Harrison has been even more than a prominent, influential man and public leader. As a jurist and a statesman he has been enabled to leave a deep impression upon the statute and fundamental laws of Connecticut. Of the existing twenty-seven amendments to the Constitution of this State, thirteen have been added within the last twelve years, and for these Judge Harrison is largely responsible. He is the author of the amendment changing the time of the State elections from the spring to the fall; of the amendment forbidding the representation of new towns in the General Assembly unless the new and the parent town shall each have at least 2,500 inhabitants; of the amendment extending the terms of judges; of the amendment prohibiting any county or municipality from incurring debt in aid of any railway corporation, and from subscribing to the capital stock of such corporations; and of the amendment forbidding any extra compensation or increase of salary for any public officer, to take effect during the term of an existing incumbent. Judge Harrison also drafted the Biennial Session Amendment of 1884; the present State Election Law; and the well-known Specific Appropriations Bill, by virtue of which specific estimates must be made for every appropriation, and through which many thousand dollars are annually saved to the State.

In 1877, Judge Harrison took a vigorous and decisive stand in favor of the bill allowing to married women equal rights with men in the disposition and ownership of property. This measure had been proposed in previous sessions, but had been defeated: Judge Harrison left the Speaker's chair to deliver an address in advocacy of the proposed law, and the bill was adopted.

No question of public importance fails to arrest his attention and to enlist his energies upon the one side or the other. Not the least among his good works have been his services in thwarting the various schemes for building "straw" railways for speculative purposes through our State.

May 2, 1867, Judge Harrison married Miss Sara F. Plant, of Branford. They have had three children, William L., Paul W., and Gertrude, all of whom are now living; but Mrs. Harrison died on the 10th of March, 1879.

DEXTER R. WRIGHT.

Among the granite hills of Vermont and New Hampshire, on either side of old Dartmouth and

of the Connecticut River, lies the region which once aspired to the name of "New Connecticut." Cleared and settled by many sturdy pilgrims from the land of steady habits, New Connecticut preserved the purest strain of our English Puritan blood, and has been no whit behind the rest of the Green Mountain country in the production of its best exports, brawn and brains.

Prominent among the strong men with whom New Connecticut has paid back its debt to Old Connecticut, is Dexter Russell Wright. His ancestors were among the pioneers of Vermont, and the ready zeal with which Colonel Wright has joined deeds to words is a quality partly due perhaps to the perilous border-life of his sires. One of them met death during some bloody struggle in the French and Indian Wars. Colonel Wright's own father, Alpheus Wright, was engaged in the War of 1812, held an officer's commission, and was severely wounded at the battle of Plattsburg. Alpheus Wright married Miss Anna B. Loveland of Rockingham, Vt., and their son Dexter was born to them in the flourishing town of Windsor, Vt., June 27, 1821. Within a few years the family removed to the northern part of New York State, where Mr. Wright established a milling and lumber business, together with a woolen factory. All of his sons were employed in these various branches of business, and each learned some useful trade. But the youthful Dexter displayed a predilection for books and study, and desired a collegiate education. With characteristic independence and energy, he prepared himself for the preliminary examinations. He chose as his Alma Mater the Wesleyan University at Middletown, then under the personal inspiration of President Stephen Olin. From that institution he graduated in 1845, in a class comprising several eminent names besides his own, such as Judge R. C. Pitman, of Massachusetts; Professor M. C. White, of the Yale Medical School; the Rev. Dr. J. W. Beach, now President of the Wesleyan University; and the late Rev. Dr. D. A. Whedon.

In the year of his graduation, Mr. Wright became Principal of the Academy at Meriden, Conn., and taught there with marked success for nearly a year and a half. But the law was the vocation to which he had destined himself, and in 1846 he began his legal studies in the Yale Law School and in the office of E. K. Foster, a prominent lawyer of New Haven. For two years he devoted himself faithfully to the arduous labor of familiarizing himself with both the theory and the practice of law. Throughout all this period of preparation he gave great promise of the eminence which he has since attained in his profession, and especially in that branch of it pertaining to advocacy.

In 1848 he received from Yale the degree of LL.B., and commenced the practice of his profession at Meriden. In February of that year he married Miss Maria H. Phelps, daughter of Colonel Epaphras L. Phelps, of East Windsor, Conn. The years 1848-49 mark the beginning of a period of unparalleled development in our country's history—development of ways and means of transporta-

Isaac V. Wright.

C. R. Hyman

tion, of our vast Western territory, and of intense political strife. Mr. Wright's versatile and well-disciplined mind readily appreciated the various exigencies of the hour. His fellow-citizens were as ready to recognize his worth, and he became known at once as a leader among men. Political honor sought him in 1849, and he was elected to the State Senate by the Sixth District, being the youngest man who had ever been chosen Senator from that district. The gold discoveries in California were just then introducing us to a new world beyond the Rockies, and Mr. Wright, always marching in the van, determined to visit the new El Dorado. Relinquishing the prospect of political distinctions that awaited him, he turned his face toward the setting sun, and for two years practiced law in the Territorial Courts of California, engaged in land speculation, and aided in shaping the plastic materials of the future State.

In 1851 he returned to Meriden, and during the next eleven years continued singly in the practice of his profession, which soon became large and lucrative. His honesty, legal ability, and warm public spirit won for him the esteem of all classes in the community. Active in every good work, he led the way in efforts for local public improvements, and to him the people of Meriden are largely indebted for the tasteful beauty of their city.

Mr. Wright's earliest political affiliations were with the Democratic party, but he was always the master, never the slave, of his opinions. When the arm of revolt was raised to destroy the national existence, Mr. Wright promptly cast in his lot with the Republican party and with supporters of the Government. His name became a tower of strength to the loyal cause in Connecticut. At a meeting of Meriden citizens in April, 1861, immediately after the attack upon Fort Sumter, he was one of the principal speakers, and he declared the necessity of speedy and vigorous action. The Meriden company was the first that reported to the Governor. Mr. Wright obeyed his own precepts, and labored continually in the work of recruiting and organizing regiments. He spoke in different parts of the State, kindling the fire of patriotic feeling, and recruiting companies for every regiment that Connecticut raised during the years 1861 and 1862.

In the summer of 1862 he was commissioned Lieutenant-Colonel of the 14th Regiment. On the 1st of July, President Lincoln issued his call for three hundred thousand more volunteers, and in forty-five days Connecticut was putting seven additional regiments into the field. Of the first of these, the 15th Connecticut Volunteers, Lieutenant-Colonel Wright was made Colonel by Governor Buckingham. The commission was bestowed upon Colonel Wright without his previous knowledge, and on account of his superior fitness and ardent patriotism. In a very short time his personal exertions, aided by his great influence and popularity, had recruited his regiment to its full number and six hundred in excess. In August, 1862, Colonel Wright went with his regiment to Virginia, where for several months he commanded a brigade. The regiment received its baptism of fire in the

terrible battle of Fredericksburg, December 13, 1862.

After about a year's service in the field, Colonel Wright's health gave way, and he was granted an honorable discharge upon the surgeon's certificate of disability.

He returned home, but he had only shifted his battle-field; for, by Governor Buckingham's special request, he was appointed Commissioner on the Board of Enrollment for the Second Congressional District. In 1863, also, he was elected to represent Meriden in the Connecticut General Assembly, where he was at once recognized as the Republican leader. As chairman of the Committee on Military Affairs he waged effective warfare against those who desired to assert State sovereignty against the national supremacy. In the summer of 1863 he was one of those who stood quietly ready to strike down with armed force any riotous resistance to the draft. In the autumn session of the Legislature, Colonel Wright was the author and sponsor of the bill which authorized the Governor to organize regiments of colored infantry in Connecticut.

Having served the Government in the field and at home at a great pecuniary cost to himself, Colonel Wright removed to New Haven near the close of the war, and resumed there the practice of law, in which he has continued to the present time. The people, however, have not been willing to leave him free from public trusts. The municipality in which he lives has frequently profited by his ripe experience. In 1868, and in 1872-73, he was a member of the Council, and in the latter years was President of the Board. From 1872 to 1874 he was a Police Commissioner of the City of New Haven, and during the same time he held for a year the responsible post of Corporation Council. From 1877 to 1881 he was an Alderman of the city. Also for a term of four years (1865-69) he served as Assistant United States District Attorney for Connecticut. Finally, in the legislative session of 1879 he represented the town of New Haven, and was elected Speaker of the House of Representatives, which position he filled with signal courtesy, ability, and success.

Colonel Wright's forceful character has made his life an eventful one. A wide range of activities is included within the career of a California "Fortyniner," a colonel in the civil war, a leader of political parties, and a successful and influential lawyer. Yet, although he has responded manfully to so many calls upon his energies, and although his devotion to the law has been for so long a period conscientious and unremitting, he has found time to acquaint himself with literature and science. With medical studies he is so familiar, that the honorary degree of M.D. has been given to him by a medical college. He has also received the degree of Master of the Arts from his Alma Mater, and Trinity College has bestowed upon him the degree of A.M. *Causa Honoris*.

Of the six children who have been born to him, four survive. Holding the first rank among his professional brethren, honored in society and in the State, distinguished as a sincere patriot and as

a public-spirited citizen, Colonel Wright adorns, while he enjoys, the eminent position that he has so honorably won.*

CHARLES ROBERTS INGERSOLL

is the son of Ralph Isaacs Ingersoll and Margaret Vandenheuvel, and was born in New Haven September 16, 1821. He was educated at the Hopkins Grammar School in New Haven, and Yale College, where he was graduated in the Class of 1840. Subsequently he studied law in the Yale Law School, and in 1845 was admitted to the Bar of New Haven County and has ever since been actively engaged in New Haven in the practice of his profession, having been for several years associated in such practice with his father.

In 1856-58, 1866 and 1871, he was a representative of New Haven in the General Assembly of Connecticut, and in 1873 was chosen by popular vote, as the candidate of the Democratic party, Governor of the State. He was re-elected in 1874-76, declining a renomination at the next election. He was a presidential (Tilden) elector of Connecticut in 1876.

His wife is the daughter of Rear-Admiral Francis H. Gregory, U. S. N., of New Haven, and four children of the marriage are now living.

HENRY DUTTON

was born in Plymouth, Conn., February 12, 1796. He died at his residence in New Haven, April 26, 1869. He was the son of Thomas Dutton, a soldier of the Revolution (his mother was from New Haven), a lineal descendant from John Punderson, one of the "seven pillars" of the church first established in New Haven.

The family home had been in Watertown, and, after a short period in Plymouth, was removed to Northfield. His early life was spent on his father's farm. At the age of twenty he entered the Junior Class in Yale College and graduated with honor in 1818. He supported himself in his educational course by his own efforts, aided only by a legacy of one hundred dollars left him by his mother's brother. On leaving college he took charge of the Academy in Fairfield, pursuing in his unoccupied hours legal studies under the direction of Hon. Roger Minot Sherman. In 1821 he accepted an appointment to a tutorship in Yale College.

After a service of two years as tutor, he commenced practice at the Bar in Newtown. Here he remained fourteen years, and in 1837 removed to Bridgeport. In 1847 he was appointed Professor of Law in Yale College and took up his residence in New Haven, continuing the practice of his profession and also discharging from time to time divers public trusts. He was elected representative to the General Assembly from each of the towns of Newtown, Bridgeport, and New Haven, five times in all, and was once elected a member of the State Senate. He was appointed by the Legislature a Commissioner for the Revision and Compilation of

the Statutes of Connecticut in 1849, 1854, and 1866. In 1854 he was elected Governor of the State, which office he filled for one term. In this year he received the honorary degree of Doctor of Laws from Yale College.

In 1861 he was elected Judge of the Supreme Court of Errors and of the Superior Court, having previously served one year as Judge of the County Court for New Haven County. He remained on the Bench of the Supreme Court till February 12, 1866, when he reached the constitutional limit of seventy years of age. He now resumed his legal practice, continuing also his connection with the Law School, in which, on the retirement of Judge Bissell in 1855, he was the senior Professor. Besides these official and professional labors, he prepared an Analytical Digest of the State Reports, which was published in 1833, and in 1848 he published a revision of Swift's Digest of the Laws of Connecticut. After about three years from his leaving the Bench his health began to fail, and in a few months a severe access of lung fever terminated his long life of useful and honored service, at the age of a little over seventy-three years.

Mr. Dutton married Miss Elizabeth E. Joy, daughter of Captain Melzor Joy, of Boston, Mass. Their children were three daughters and one son. The eldest daughter, Ann Eliza, became the wife of William F. Keeler, of Plymouth. The second daughter, Mary Eliot, married Henry B. Graves, of Plymouth, afterwards of Litchfield; she died February 6, 1865. The third, Harriet Joy, married George H. Watrous, of New Haven, and died January 2, 1873. The only son, Henry Melzor Dutton, born September 9, 1838, graduated at Yale College in 1857, and entered upon the practice of the law in Middletown. He enlisted as a private on the first call for volunteers in the Civil War, and rose by gradual promotion to the first lieutenantcy in his company. In the hotly contested battle of Cedar Mountain, August 9, 1862, he was pierced by a ball through the heart, and was buried on the field.

In person Judge Dutton was in stature tall, somewhat above the average, spare in body, bold in feature. A slight stoop in posture betokened a man of modest spirit, of thoughtful habit, and of earnest purpose. He was affable, gentle, and courteous in manner, both in private and official life, and of a kind and generous disposition. His intellect was naturally bright and active, and became strong by diligent and careful culture. He took an active interest in all social matters. His professional life was characterized by unsparing devotion to the interests of his clients.

His keen, discriminating intellect, which enabled him at once to seize the principle involved in a complexity of facts and relations, gave him great power as an advocate, and made him a formidable opponent in argument. As a judge he was courteous and accommodating, while careful to insure all reasonable dispatch of business. He was largely instrumental in effecting, besides other improvements, that change in the law of evidence which permitted parties in interest to testify. He attained a high

* Colonel Wright died while the *pages* were going through the press, see page 247. Hon. Lynde Harrison's chapter on the Bench and Bar.

Henry Dutton

Charles C. Rice.

rank in his profession as an able and sound expounder of the law, and a successful practitioner.

His more private life was in all relations exemplary. Pure and upright in all morality; of thorough-going integrity; loyal to every principle of truth and duty; yet gentle and kind, he won to an unusual degree the confidence, the respect, the affectionate esteem of all with whom he became associated. His name stands deservedly high among the honored ones of New Haven.

CHARLES IVES

was born in New Haven September 18, 1815. Bereft of his father at the age of one and a half years, he fortunately possessed a mother of rare character. Her uncommon qualities of mind and heart well fitted her for the training of her gifted son, and won from him an appreciation and reverent affection which he cherished throughout his life. At an early age he was sent to Mr. Lovell's famous Lancasterian School, where he remained until he was sixteen years old, passing from grade to grade until he attained the highest rank, and became "monitor general of order, time and place."

After leaving school he entered a printing-office, expecting to fit himself in time for an editor. All his tastes and ambition led him towards a literary life. While in the printing-office he often worked over hours in order to be better able to assist his mother, whose means were limited. During this time he also read and studied in all leisure hours, self-improvement being ever his watchword.

On attaining his majority, life looked bright before him. He was in perfect health; tall, handsome, with a frame as lithe and wiry as an athlete's; a cultivated mind, and a determined purpose to be a success in the world. While on a visit to the country he took a severe cold, and rheumatism, combined with unskillful medical treatment, caused a long illness. As he was recovering, he went for a drive, was thrown from the carriage, seriously injured, and carried home with but few chances of ever again going forth into the sunlight. Rheumatism resumed its sway, and for nearly seven years he was bedridden. Friends despaired, and the mother's heart often failed her as she saw the apparent shattering of all her proud hopes, but his sunny courage never failed. He knew he should live; he knew he should yet act his part among the world's busy workers, and he began to prepare himself for that time. He read much and widely, laying the foundations for that broad knowledge on many topics which he had in later life. He took up stenography and made himself master of it at a period when its acquisition was rare. He began the study of law. Meanwhile his pen was not idle. He wrote articles for different literary societies of which he was a member, contributed largely, under different signatures, to newspapers and magazines, and in 1843 published a volume of poems, entitled "Chips from the Workshop." This little book had a large sale, and realized for the author a good profit. Still, although many of the poems were of real merit, he did not value the

work highly in later life, knowing that he was then able, if time could have been commanded, to produce something of more lasting fame.

After the long weary years of illness, he at length gained sufficient strength to leave his sick room, walking with crutches. He visited Sharon Springs, White Sulphur Springs, and other places in search of health, and returned to New Haven somewhat improved, but appearing to all observers as though holding on to a very slender thread of life. His own courage, however, was still undaunted, and his wonderful will nerved him on to fresh efforts. He entered the Yale Law School, from which he was graduated in 1846.

In the same year he was admitted to the Bar, opened an office, and commenced at once that career of successful achievement which ever widened with each added year. It was always a source of great gratification to him that his mother's life was spared long enough to see him in the midst of busy professional work, and to be a little repaid for all her self-sacrificing efforts in his behalf. It was not his intention at first to devote his whole life to the practice of law, his inclinations leading him towards literary pursuits. Once in the harness, however, he found it difficult to break away, and continued in full practice until his death, a period of thirty-four years, during the latter part of which time he was President of the New Haven County Bar. Of his career as a lawyer, John W. Alling, who was in his office for many years, speaks as follows in a memorial sketch he prepared for the Connecticut Reports:

"The cases in which Mr. Ives was engaged in the Supreme Court, scattered through more than twenty-five volumes of the Connecticut Reports, and the public positions he held, have already made him known to the Bar of the State as a man of professional ability, and but few words are needed on this point. It must go without question that no man in the legal profession can greatly succeed unless he greatly work, and Mr. Ives' success furnished no exception to this rule. It may be well, however, to notice briefly the special qualities of mind and character which largely contributed to his special success.

"First should be mentioned his natural fitness for literary work. From the outset of his professional career Mr. Ives could always readily and aptly express his ideas, whether to his client at the office, or to the court or jury. Facility of expression, an easy command of language, sometimes so difficult for others to attain, was with Mr. Ives his birthright.

"In the next place he was thoroughly honest and candid in dealing with his clients. He never encouraged the litigious spirit. He was not always able to control or restrain it, but he always made a client feel that he was as truly working for him as if he himself had been the client.

"Again, Mr. Ives was a very confident man in the advocacy of his opinions. He thoroughly believed his client to have the right of the cause, and that the right would prevail. He could hardly argue any interlocutory motion without adverting

to the merits of the case. No judge or jury was ever in doubt about the sincerity of his opinions.

"He also possessed great versatility of mind. He was quick to see the answer to the arguments from the other side, quick to see the mental reservations of a reluctant witness, and to detect the inconsistencies of a swift witness. After the professional labors of the day he could readily apply his mind to other subjects, especially those of a literary character, which were his delight.

"Mr. Ives was always very kind and generous to the junior members of the Bar, especially to those who had been compelled to rely upon themselves for their education. No such young lawyer went to his office in vain. At the Bar meeting called to do honor to his memory, the most touching professional tribute there paid was the ready and hearty utterance from many young lawyers who had had occasion to appreciate his kindness, of their feeling of personal affection and gratitude."

Not only to young lawyers was he kind, but to all who needed assistance or counsel. During the latter part of his life especially he gave his time and strength freely to a large number of the poor and oppressed, sometimes charging a small pittance to save wounding pride. His family have received since his death many testimonies, uttered in faltering tones, of the friend he had been to numerous troubled souls whose gratitude was all they had to give in return.

In his law practice he found the knowledge of shorthand, which he had acquired during his illness, to be of invaluable assistance to him. He was about the only expert stenographer in the city for a long time, and could not be excelled in the rapidity and ease with which he wrote, even when new improved systems were introduced and students of the art were numerous. By its aid he reproduced, for the entertainment and instruction of the members of his home circle, any anecdotes or interesting facts which he heard elsewhere, or abstracts of speeches or lectures which would have otherwise been lost to them. He was not contented to simply absorb knowledge for his own mental growth, he delighted to learn in order that he might impart it again for the enrichment of other minds. His conversation was never idle, one always heard what was worth hearing, and learned almost without realizing it, charmed by his pleasant manner and the graceful flow of words which brightly clothed even humble facts.

His command of language was truly remarkable, and came partly as a natural gift, partly from constant reading of the best authors, both of ancient and modern times, and partly from a habit he formed in early life of always expressing his thoughts in the best language he knew. He often tried to impress on young people the importance of forming this habit, urging that though at first it might be more trouble to choose fitting words than to take those which carelessly presented themselves, in time a vocabulary would be gained which, ever enlarging, would always be ready for use, not stored away to be unpacked with great effort on holiday occasions.

His love of debate and happy faculty for extemporaneous speaking served him well aside from his profession, more especially in the General Assembly, of which he was an active member at different times. He first represented the town of New Haven in that body in 1853. Afterwards, when he had moved with his family (he had married Catharine M. Osborn, of New Haven, in 1852) to his beautiful home at Iveston on Fair Haven Heights, he was sent to represent the town of East Haven in 1865, 1867 and 1868. In 1867 he was Chairman of the Judiciary Committee, and in 1868 was Speaker of the House. He was fond of politics, and doubtless would have entered into them more extensively had it not been for his lameness. This trial, modified somewhat from its first severity, in that for many years he was able to discard crutches and use a cane, was rarely mentioned by him, and all the many inconveniences and deprivations to which it subjected him were borne with uncomplaining patience. Indeed his long illness seemed to have refined and purified his whole nature, and the result was a character so noble and unselfish as to be most appreciated by those who knew him best and saw him in the beauty of his daily home life. In his home he found his chief enjoyment. Here it was he rested after his toilsome days of professional work; rested, not in inaction, but in change of occupation. Throwing off business cares when he entered the home circle he loved, he gave to it the best of himself. Happy were the evenings when he read aloud from the old poets and essayists in whom he delighted; gave his children lessons in shorthand and elocution; explained to them knotty problems; gave them in concise, clear form the gist of his scientific readings; or charmed with his genial wit the friends who sought him by his fireside. Almost the only occasions on which he was ever away from home evenings were when he attended the monthly meetings of the Connecticut Academy of Arts and Sciences, of which he was a member, and the fortnightly gatherings of a literary club to which he had belonged for over twenty years. This literary club met at the houses of its members, who assembled between five and six o'clock, had supper, and then discussed topics of interest. One person was appointed each time to open the subject, and a general debate followed, always ending by ten o'clock. This club numbered among its members such men as Rev. Dr. Bacon, Professor S. Wells Williams, Professor Twining, Ex-President Woolsey, President Porter, Professor Fisher, Professor Dwight, and many others. He enjoyed this club thoroughly; always attended, unless absolutely impossible; and took an active part in its discussions.

In 1874, Yale College conferred upon him the honorary degree of M.A.

During the winters of 1878-79, 1879-80, he went, accompanied by his wife, to Nassau, N. P., Bahama Islands, partly for health and rest, partly for pleasure. There, strengthened by the mild climate and the soft winds which were wafted to the island from those Southern waters, and enchanted by the tropical beauty of land, sea and sky, he wrote a long

Very Truly Yours
H. B. Harrison

series of letters to the *New Haven Journal and Courier*. When remonstrated with for working and taxing himself instead of resting, he replied with his usual unselfishness, "It seems a pity to enjoy all this and not give the benefit of it to those who cannot come."

The letters were received with delight by all who read them, and were written in the author's happiest vein, having the same bright sparkle which characterized his conversation: and under the sparkle, and along with it, flowed the deep stream of complete and accurate information. On his return home from his second visit to Nassau, late in the spring of 1880, he was met on all sides by the requests of those who had read his letters that he would publish them in book form. Therefore, in the fall of that year, in addition to his professional labors, he undertook the task of revising, rewriting, adding to, and arranging the letters in book form. Besides this labor, he assumed the cares of publishing the book himself, and was worried by the delays caused by printers, engravers and binders. All promised it should be ready for the holiday trade, all broke their promises, and the author never saw his book.

Overworked, he was stricken down with paralysis of the brain, and after a two days' illness he was at rest. He died on the morning of December 31, 1880. He left a wife, a son, who bore his name, and two daughters, Kate M. Ives, wife of Otis H. Waldo, of Chicago, Ill., and Marie E. Ives. The son, Charles Ives, also a lawyer, in whom were centered the hopes and love of his family, and who, for a young man, had already attained a high position at the Bar, died of typhoid fever August 31, 1883.

"Isles of Summer" or "Nassau and the Bahamas," the book for which its author spent his last strength, arrived the day after his death. It has become too well known to need any words of description. It will continue to be considered by all who read it, worthy to have been the final work in Charles Ives' life of endeavor and achievement.

HENRY BALDWIN HARRISON,

Governor of the State of Connecticut.

No citizen of New Haven is more closely associated with its daily business life than Henry B. Harrison. Upon all of its thoroughfares his slight active figure is a familiar one. For sixty-five years, as boy and man, he has lived in the community and grown with it, yet one who sees only the elastic step and vigorous look, would almost deny to the Governor his first half-century, and would count him (where indeed he belongs in feeling) among the young men of New Haven.

Nevertheless he first saw the light so long ago as September 11, 1821, in this city. He was among the pupils of John E. Lovell at the famous Lancasterian School, and while, continuing his studies in the Academic Department of Yale College, he was Mr. Lovell's assistant. Many residents of New Haven are now fond of recalling memories of attendance at that old-time school when the present Governor

conducted its classes. It is certain that the tuition was of good quality, for Henry B. Harrison graduated from Yale at the head of the Class of 1846. He entered upon the study of law and began its practice with Lucius G. Peck, Esq. Mr. Peck was a prominent Whig, and Mr. Harrison engaged actively in politics upon the same side. In 1854, the Whig party elected him State Senator from the Fourth District by a vote of 2,597 against 1,718 for Charles Atwater, Jr., who was the Democratic candidate. Mr. Harrison was now fairly embarked upon the political sea, and he shaped his course fearlessly. Northern anti-slavery sentiment was then seeking to devise means for evading the duties imposed by the recent Fugitive Slave Law, and Mr. Harrison framed the personal liberty bill, which tended to nullify that law in Connecticut.

The penalty for pretending that a free person was a slave, was fixed at a five thousand dollar fine and a term of five years in State's prison. There were severe punishments for perjury and ample provisions for the rigorous enforcement of the new law.

After the Kansas-Nebraska Bill was enacted, Mr. Harrison joined the Free Soil party, and remained with it until it was merged in the Republican host. Of the latter party in Connecticut he is one of the fathers. In the winter of 1855-56, he was one of the handful of men who organized the Republican party, and in the following spring he was its nominee for the office of Lieutenant-Governor. Gideon Welles was the candidate for the Governorship. When finally victory rested upon the Republican banners, Mr. Harrison refused to take office, and turned to his law practice. To that he devoted himself with unremitting attention, and his efforts were crowned with fortune and fame.

His legal reputation is second to none in the State. He is conscientious in his methods, clear in his statements of fact, and tireless in clearing away the rubbish which rhetoric and subtle cunning may have piled up to conceal fact. One of the most noted cases with which his name is connected was the trial of Willard Clark, at New Haven, for murder. Messrs. Harrison and Charles R. Chapman were associated together in the defense. The plea was insanity, and Clark was acquitted upon that ground. During the Civil War, Mr. Harrison was a zealous supporter of Lincoln's administration and gave continual aid to the loyal cause. In 1865 he was elected, together with Eleazer K. Foster, to represent New Haven in the Lower House of the Legislature. The latter became Speaker of the House, and the former Chairman of the House Committees on Railroads and Federal Relations. Chairman Harrison offered a bill to insure low rates of commutation on railways, which was successful in the house, but was defeated in the Senate.

In the same session he won distinguished honor by a magnificent speech in favor of amending the State Constitution by erasing the word "white" from the eighth amendment and thus opening the ballot box to the colored man.* In the ensuing political campaign (1866) he might have received

* The amendment which authorized the erasure of this objectionable word was not actually adopted until 1876.

the Gubernatorial nomination but the friends of General Hawley urged the latter's claim to recognition on account of service in the field. Mr. Harrison was ever ready to do honor to the loyal soldier, and, without solicitation, of his own motion, wrote a letter positively withdrawing in General Hawley's favor.

In 1873 he was again a representative from New Haven to the Legislature, and was a member of the Judiciary Committee. He was also chairman of the Committee on the Constitutional Convention, and in that capacity reported a bill which called such a body together. He supported the proposal with an elaborate argument, but the bill was defeated in the House.

In the next year Messrs. Harrison and John T. Wait were the Republican candidates for Governor and Lieutenant-Governor respectively, but the ticket was defeated by sectional animosities within the party. Again in 1883 New Haven chose him as its representative by over eleven hundred majority. He was at once, by a unanimous public opinion, designated for the Speakership. He was elected to that office, and presided with marked ability and to the general satisfaction. In the campaign of 1884 he became again the standard-bearer of the Republican party in Connecticut under peculiar adverse circumstances. His immediate opponent, Governor Waller, was a very popular man, and was supported by the moral force of a previous triumphant election and of a not unsuccessful ad-

ministration. It seemed probable also that the Presidential campaign would assist the Democratic rather than the Republican forces. Governor Harrison threw himself into the contest with characteristic zeal and indomitable persistence. The Cleveland electoral ticket was indeed successful, but Governor Harrison had the satisfaction of seeing the opposing majorities of two years before wiped out, the most of his State ticket elected, and the rest practically tied with their Democratic competitors, so that election by a Republican legislature was certain.

In all political contests Governor Harrison has been found in the front ranks of his party. One of its founders, he has never failed to be its champion and leader, yet his political foes have always been ready to acknowledge his fairness, his sincerity, his unimpeachable honesty, and they have rejoiced, as neighbors and fellow-citizens, in his many honors. What services Henry B. Harrison has rendered to New Haven, to his acquaintances and friends, there is no room here to tell. The evidences of his public spirit, of his interest in private and public enterprises, of his charity and courtesy, of his activity in behalf of New Haven's institutions, of Yale College, in whose corporation he has been enrolled since 1872—all these should be rehearsed.

But all these must be implied in the description of him as a citizen worthy in every way of the community which esteems and respects him, and of the State which honors him.

CHAPTER XIV.

THE PRACTICE OF MEDICINE AND SURGERY.

BY FRANCIS BACON, M.D.

[Dr. Henry Bronson, by his personal recollections, extending over many years, by his familiarity with local traditions, by his careful study of such documents as survive, as well as by his literary facility, is better qualified than any one else to write a history of the medical profession in New Haven. That he could not be persuaded to undertake the business is a cause of sincere regret to the writer of the following pages, and must be so to all who read them, especially if they are familiar with the work Dr. Bronson has already done in that direction in his "History of the Intermittent Fever in the New Haven Region," and in the numerous biographical sketches he has contributed to the publications of the New Haven Historical Society and the Connecticut Medical Society.

These productions show everywhere a conscientious industry in the collection of obscure materials, an intelligent skill in the use of them, and an unswerving justice in estimates of character that make them models for that kind of work.

The writer of this chapter will have constant need to help himself from these historical sketches, and will do it with the less scruple in that the quality of Dr. Bronson's work cheapens that of any successor he is likely to have in the same field.]

IT must be counted as a somewhat exceptional thing in the history of New Haven, that at no time, even during the early days of the colony, did the ministers of religion add the practice of medicine to their function of spiritual guides and instructors. Doubtless in those days of hardship

there was sharp and frequent need of medical help. For a while the people were ill sheltered from a climate new and untried, and often inclement. Some of them were lodged in poor huts, some in half subterranean burrows.* The perilous change of old habits for new and unfamiliar modes of life, and the stress of such manifold privations as are inevitable in the subduing of a wilderness, must certainly have made themselves felt as the cause of unusual sickness. No such terrible mortality as that which disheartened the first pilgrims at Plymouth, or later ravaged the companies of Endicott and Winthrop in "the Massachusetts," ever afflicted the New Haven colonists. But very early certainly, and probably from the outset, they felt the withering touch of that morbid cause to which our later ignorance gives the name malaria.

There is nothing however to show that either

* Like the "cellar" wherein poor little Michael Wigglesworth so nearly caught his death, when the "great rain brake in upon us and drencht me so in my bed, being asleep, that I fell sick upon it." The first trace of sanitary legislation to be found in the Records (it was probably in the interest of health as well as of morality) is directed against these "cellars" "of Decr. 1640. It was ordered yt all thatt live in cellars and have familyes, shall have liberty for thre months to provide for themselves, butt all single persons are to betake themselves forthwith to some familyes except the magistrate see cause to respite them for a time."

This were a wholesome order still, if it could be enforced in some neighborhoods which might be pointed out.

the Rev. John Davenport, or the Rev. Samuel Eaton, or the Rev. William Hooke, learned men and university-trained scholars as they were, ever were credited with any more medical skill than their fellow adventurers possessed. Had they not been town-bred gentlemen, accustomed to live within easy call of physicians, or had they very long anticipated the emergencies of an abode in the wilderness, it is probable that they, like many English clergymen of their time, and many New England clergymen after them through the following century, might have studied medicine as a part of their education, and practiced it as a useful and acceptable adjunct to their spiritual vocation. The essential elements of medical science in those days were not so bulky but that they might be tacked on as an ornamental and, in case of emergency, a useful appendage to that more sacred learning which was to vanquish the spiritual enemy of mankind. The first American contribution to medical literature was "A Brief Rule to Guide the Common People in Small-pox and Measles, 1674," by the Rev. Thomas Thacher, first minister of the Old South Church in Boston. "He that for his lively ministry was justly reckoned among 'the Angels of the Churches,' might for his medical acquaintances, experiences and performances, be truly called a Raphael," says Cotton Mather, who lets not his reader escape without much more about Ægidius Atheniensis and Constantinus Afer, and other like practitioners of "the angelical conjunction" of physics and divinity, in the style so sadly familiar in the pages of the "Magnalia."

The physicians themselves of that day, if they were learned, as some of them were, found their learning for the most part in a certain debatable ground outside of the strict limits of medical literature. The admirable Sir Thomas Browne, for instance, was a learned physician, and so, in less degree and in a different line, was his son, Edward. Sir Thomas was copious in Latin and Greek, and had more Hebrew than most theologians of this day have time to get or need to use. Their natural science was that of Aristotle and Pliny, with some recent additions in chemistry from Paracelsus and Van Helmont. Doubtless it was well for them to be learned. What more comforting for a patient roaring in a fit of the gout than that his doctor should have the "Encomium Podagræ" of Cardanus at his tongue's end? How tranquilizing in the delirium of fever to show the mystical correspondence of the signs of the zodiac with those of the twelve tribes of Israel! But with all our admiration for the devout eloquence of the *Religio Medici*, we must admit that it is less likely to be helpful to the sick man than to soothe the grief of his surviving friends.

Though the most skillful physician of that period would cut but a poor figure among the average of his brethren of this day for the paucity of his resources, yet the seventeenth century was one of great progress in medical science and art.

My Lord of Verulam's pregnant suggestions were quickening inquiry in every branch of knowledge, and thoughtful men were asking of every fact if it

were not a key that might unlock some never yet opened door.

The great epoch-making discovery of the circulation of the blood, which had stopped short of completeness seventy-five years before in Geneva, owing to the irresistible warmth of John Calvin's argument with poor Michael Servetus, was carried to its inevitable result by William Harvey.

The century through the first third of which Van Helmont dreamily groped after truth, was able to show at its close the work of Thomas Sydenham as its gain in the way of accurate observation, sagacious experiment and sound reasoning.

New Haven Colony managed to be born and to pass some years of life without the help of any doctor of its own. Neither was there a conveniently neighboring practitioner who could run in upon occasion or periodically and do a compendious stroke of medication and phlebotomy, as good Dr. Samuel Fuller, of Plymouth, Mayflower pilgrim and deacon in John Robinson's church, and "the first regularly educated physician that visited New England," used to do. "I have been to Matapan," he writes to Governor Bradford, "and let some twenty of those people blood." "What disease prevailed among those people that required the loss of blood in the warm season of June, we are unable to determine," says the judicious Dr. Thacher ("Medical Biography") in recounting this incident. Probably it was a proceeding *nunc pro tunc*, like some of the discipline in Dotheboys Hall. Matapan was an outlying corner of the Doctor's field, and who could tell what distemper might get afoot and make headway before his next visit.

In sore straits as our ancestors often found themselves, it is certain that they never thought of availing themselves of the skill of those Indian "medicine men" who could not have been far to seek, and concerning whose powers the unlearned in these later days have entertained such strange conceits. To receive the ministrations of a "medicine man," with his somewhat crude and limited resources in the way of *materia medica*, and his unlimited *armamentarium diabolicum*, whooping, rattling, dancing, steaming and stenchful, by all accounts could have been little short of a personal interview with Hobbamocke himself, a personage between whom and the old orthodox Apollyon there was no greater room for choice than is afforded by the eccentricities of individual taste. And yet, frankly admits William Wood ("New England's Prospect," 1634), "sometimes the Devill for requitall of their worship, recovers the partie, to nuzzle them up in their divellish Religion."*

* If these simple thaumaturgists were now to reappear in the pomp of bears' claws, catamounts' heads, eagles' talons, rattlesnakes' skins, and the like, which served instead of diplomas to establish their claims to the confidence of the public, and were to take their place with their legitimate successors among the irregular practitioners of the present day, their special Satanophany would at least add a picturesque vivacity to a somewhat monotonous waste of ignorance and imposture. And, as there is absolutely nothing in the existing statutes of Connecticut, and less than one could wish in the state of public opinion, to prevent it, it is probable that they would secure a share of that imperishable *clientele* which is not for a day but for all time, and which, believing that recovery from disease or injury is due not to natural law, but to supernatural interference, consequently prefers that its physician shall be ignorant, and insists that he shall be irrational, sometimes withal reckoning it a crowning grace if he is tipsy at off times.

The earliest allusion to any medical matter in the New Haven Records is of date December 3, 1645, when Mr. Pell appeared to testify to the Court concerning a wound which he had treated, inflicted by the bursting of a gun, whereby Stephen Medcalf, a cutler, had one of his eyes destroyed. He speaks of "the great chardge of the cure, affirming it was worth £10." From this time, until about 1654, Mr. Pell is occasionally mentioned in the Records as engaged in medical practice. He was in New Haven as early as 1642. It is probable that he had some qualifications, according to the standard of that time, to be a physician, both by education, for he was a gentleman by birth, of a good English family,* and by experience, for he had been surgeon to the Saybrook Fort in 1636, and had gone in the same capacity with Captain Underhill to the Pequot War in 1637. Mr. Pell's name, however, appears much oftener in connection with various business affairs than with medical matters, and it seems probable that he did not devote himself thoroughly to the work of a physician. He was a man of enterprise, not to say intrepidity, for not only did he engage in that risky Pequot War, but he married the Widow Brewster. After this latter event it is perhaps not surprising that in a matter of certain accountings he should have persisted in maintaining a contumacious attitude towards the New Haven Court, with which his bride had, during her previous widowhood, waged so lively a controversy. There are domestic experiences in the light of which the terrors of the law grow pale.

Mr. Pell removed from New Haven about 1654, and became, by purchase, the first proprietor of that estate in Westchester County, N. Y., which has ever since borne the name of Pelham Manor. He died in Fairfield in 1669. The inventory of his property shows nothing of a medical character, except "Culpeper's Dispensatory," which was rather a work for popular use than a scientific authority.

The name of Nicholas Auger first appears in the Records in 1643, as grantee of that desirable lot "reserved for an Elder," which is now occupied by the St. John Block on the corner of Church and Elm streets. Mr. Auger (his name is always accompanied with that respectful prefix) seems to have followed the practice of medicine with more assiduity than Mr. Pell, and to have prospered correspondingly less in his worldly affairs. Although, like Mr. Pell, Mr. Auger was much occupied in other business, probably the main dependence of New Haven in medical matters was upon him, except at some intervals when other help was at hand, until 1676, when he sailed upon a voyage from which he never returned. There is some reason to suppose that his medical career was not wholly satisfactory either to himself or to the public. He experienced great difficulty in collecting his dues, a difficulty not entirely peculiar to himself or to the time in which he lived. He was discouraged nearly to the point of throwing up his

practice, or at least of threatening to do so. It is interesting to his successors of the present day to find that the General Court took the trials of this ill-starred pioneer seriously to heart, and gave him what comfort they could by "witnessing against" the delinquency of his patients "as an act of unrighteousness," on one occasion. And again, January 29, 1660: "Mr. Auger declared that (it having pleased God to visit the town sorely by sickness the two last years) his stock of physic is gone, and how to procure more out of his returns he saw not, being disabled by the non-payment of some and the unsuitable payment of others. To get supplies, those that were Mr. Auger's debtors were called upon to attend their duty. It was also declared that if Mr. Auger see cause to bring any of them to the Court it will be witnessed against as a wrong to the public that a physician should be discouraged."

Earlier than this, February 4, 1650, the Court ordered "that Mr. Auger should be paid his claim of 44s. 10d. for physic to Mr. Malbon's servants, and for something to a man that was bitten by a rattlesnake."

It does not clearly appear from the Records that the rattlesnake bit the man by way of warning for his share in the prevailing slackness of Mr. Auger's debtors; but if, as the medical mind is fain to believe, that is the true explanation of the matter, it is much to be deplored that this reptile, so useful as a persuader to pecuniary punctuality, has long since disappeared from this region.

June 17, 1650, the Governor mentions to the General Court that one Mr. Besthup, "a surgeon or physician that was lately passed through the town to the Dutch," "had lived some time in Plymouth patent, and hath been of good use there." And the Governor suggests that as "Mr. Pell is now going away, whether it may not be good for this town to use some means that he may be staid here." "The Court liked well of what was done, and by vote declared that they desire he should stay here. Mr. Besthup, on this encouragement, staid." In a few days he and Mr. Auger had a surgical case on their hands. Wash, an Indian, had been beaten and had his arm broken by a sailor "that went in Michael Taynter's vessel," and he appealed for justice to the Court, and would not be bought off with wampum, which was urged upon him, "but said he desired it might be healed at the man's charge." It is pleasant to read that the Court sustained this very reasonable demand. Poor Wash was turned over to the care of the surgeons, and the arm-breaker was sent to mend his ways in prison.* Mr. Besthup's stay in New Haven seems to have been brief, for he makes no further appearance upon the Records.

In the next year, November 14, 1651, "The

* That the early New England authorities did not hold the belief recently formulated in the statement, "No good Indian but a dead Indian," there are numerous instances to show.

There is £8 charged to account which is for an Indian whose skull and jawbone was broken by the fall of a piece of timber as he was sawing for the meeting-house (this was John Eliot's meeting-house), sorely bruised and wounded, lying senseless many days; for which are the chirurgion bath £20, and his diet and attendance £8." —Records of the United Colonies, September 10, 1652.

* Hirschbutter, the Rev. John Pell, D. D., eminent as a mathematician, was appointed by the Lord Protector, in April, 1653, ambassador to the Swiss Cantons, and resided at Zurich in that capacity.

Governor acquainted the Court that there is a physician come to the town, who, he thinks, is willing to stay here, if he may have encouragement. He is a Frenchman, but hath lived in England and in Holland a great while, and hath good testimonials from both places." This was Dr. Chais, a real Doctor "from the University of Franeker," and the earliest person in New Haven to bear that title, which in those days had some significance, and was used with scrupulousness accordingly. Mr. Davenport had examined him and said "that his abilities answer the testimony given," and the townspeople were moved to extraordinary efforts to secure so valuable an accession to their community. £10 in money was voted him, together with a house, and he was to be "encouraged in provisions."

Thereupon Dr. Chais remained, but it soon appeared that he was not satisfied with his subsidy. He wanted more money and a better house. March 11, 1652, the Court was informed what "sundry of the Brethren of the Church have proposed to do concerning the Doctor, namely, to give him £25 to provide him of Physical things necessary for his calling." "After much debate they agree to let him have Mr. Malbon's house if it can be got." This must have been one of the better sort of houses. It was afterward offered by the town to John Winthrop as a gift, and became his home while he abode here.

Poor Mr. Auger must have felt himself suffering eclipse. At the same Court he sought to know on what terms his house was given him, if he can dispose of it if he goes away. To whom the Court soothingly replies; "It was given him freely as other men's lots were given them at first," and "The Town would not have him discouraged in his way." The French Doctor did not discourage him very long. After about a year, during which time there was some chaffering between him and the authorities, they complaining of his high charges "for his visiting of sick folk," the graduate of Franeker betook his skill and his title elsewhere, and Mr. Auger was left in possession of the field.

In 1654, when "the undertaking against the Dutch" was on foot, Mr. Auger and John Brockett were appointed surgeons to the New Haven contingent. They were afterward remunerated for the trouble and expense they were at "in providing things for the soldiers if they had gone out to war." This John Brockett was a surveyor, and probably his medical qualifications were of the slightest. At any rate, in 1647, when Mr. Pell and Mr. Auger* were freed from watching and warding, an immunity due to them as practicing medicine, "John Brockett propounded that he might be freed," "but the Court saw no cause to grant it."

The story of Mr. Auger's death, as told at length by Cotton Mather ("Magnalia," vi, 1), is a tragic one. He sailed from New Haven August 25, 1676, with Ephraim How and his two sons "in a

small ketch of about seventeen tons" for Boston. Attempting to return in September, they were driven far out of their course and, after drifting helplessly about for seven weeks, were wrecked upon "a dismal, doleful, rocky island" near Cape Sable, and Mr. How, Mr. Auger and a lad (the rest of the party having perished), got ashore and prepared for starvation with "a barrel of wine and half a barrel of mollosa's." Mr. Auger died after twelve weeks of this wretchedness, the lad some months later, and solitary Mr. How was at last rescued and made his way home to New Haven the next summer.

Mr. Auger's small property went mainly to his sister, Mrs. Ellen Costar, and that explains why Guilford held a special town-meeting "July 3, 1679, to consider whether the inhabitants would buy Mrs. Cosster's Physic and Physicall drugs," which by that time, it may be feared, had grown musty enough to make it a dubious bargain for "the inhabitants" to give all the beef and peas for them which they unanimously voted in payment.

When, in 1655 or 1656, the worshipful John Winthrop, Esq., came to live in New Haven, it was the fulfillment of hopes which had often been urgently expressed by Governor Eaton and Mr. Davenport, and which had long been entertained by many other people. Beside all the other admirable qualities which made him so desirable a citizen, Mr. Winthrop was very widely known as unusually learned and skillful in medical affairs, and, at his home in Pequot, his advice and medicines had for years been sought for by patients from long distances on every side. It seems likely, from his education and from his pursuits, that he was more familiar with the chemistry of that day, such as it was, than any other man on this side of the ocean. He kept eyes of observation open for important facts in the New World around him, gathering interesting specimens for the Royal Society, of which he was one of the earliest Fellows. He sent them stones and shells and silk-weed pods and "a humming-bird's nest with two eggs in it" upon which the sacred eyes of the King's Majesty rested with gracious approval. He sent them a horse-foot crab, which seems to have filled them with mingled emotions of perplexity and delight, for the combined force of the Society was brought to bear upon the humble crustacean, with the result of misinterpreting his tail and accusing him of strabismus.*

He searched diligently for mines among the rocky hills of Connecticut, and set iron-works afoot; he invented a wind-mill which he hoped would help out the short-handed young colony in its work.

He corresponded with philosophers in the old country; with the great Robert Boyle and with Sir Kenelme Digby, from the latter of whom he got that dainty device for curing agues which, in the dearth of Jesuit's bark, he had opportunity enough

*And Mr. William Westerhouse, the Dutch merchant, who also at another time had a fine for selling "stronge water" remitted, "the courts considering how usefull hee hath bin in the towne by giving physicke to many persons, and to some of them freely."

*"What you call the sharp tail of the horse-foot, is rather the fore-part and nose of the fish. . . . having also found that two of the knobs on the shell, now dried up, had been the places of the eyes, and did still by the manner of their ductus express that they had looked toward the said nose when the animal was living."—Henry Oldenburg to John Winthrop, Jr., Mass. Hist. Coll., 3d Series, Vol. X.

to test in those days at New Haven had he been so minded.*

It is to be regretted that he never put hand to that work which was repeatedly urged upon him by some of his learned correspondents in England as "an undertaking worthy of Mr. Winthrop and a member of the Royal Society"—the writing of a natural and political history of his adopted country. An intelligent and authentic account, such as he would have given, of the first acquaintance made by the white men with the wild nature which surrounded them in their new homes, would have possessed an interest constantly increasing as the experience it recorded recedes into the past.†

The Winthrop Papers, published by the Massachusetts Historical Society, contain numerous allusions to the medical practice of Mr. Winthrop. There is also extant, in his own manuscript, a collection of cases treated by him, mostly while he was Governor of Connecticut and living at Hartford. From these materials Dr. Oliver Wendell Holmes ("Medical Essays—"The Medical Profession in Massachusetts") has produced a sketch of the therapeutics of Mr. Winthrop and of his contemporaries, to which all who desire to see that subject presented in the most charming way may be referred.

He seems to have had a fair command of the *materia medica* of the period, showing special favor to two or three articles, as most doctors fall into the habit of doing after a few years of trial. Nitre he dispensed with a free hand, sharing herein the preference of so illustrious a valetudinarian as Lord Bacon, who dosed himself almost daily for many years with that salt. Antimony he prescribed very often, in a combination to which he gave the alluring name of "rubila," and which seems to have been an imitation of the old "Jovial Diaphoretic" or "Antihæctic of Poterius," and to have been potent by virtue of at least one of its ingredients. "Rubila," forsooth! But "Look you, the worm will do his kind." Governor Newman tried it once and was shy of it afterward, and the Rev. Nicholas

Street, in his quotidian ague, would not so much as hear of it.*

Beside these, and some other chemical substances which were then comparatively new in the list of medicines, Mr. Winthrop often used some of the old Galenical preparations, theriaca, mithridate and the like, which were then universally regarded with the respect due to their ancient origin and long renown. And whatever help there was to be got from a unicorn's horn, he was able to afford his patients. That picturesque article he seems to have tried for Mrs. Eaton, the Governor's wife or widow, with what success is not recorded; judging from the story of her contentions at home and in the church, there were times when nothing short of "the voyage to Anticyra" would have helped the poor lady.

Though Mr. Winthrop did not leave to us that history so greatly desiderated by the Royal Society, there is at least one bit of his manuscript extant that reflects credit upon him, to wit, a broad line of erasure which he drew through the name of a brother medical practitioner mentioned with expressions of distrust by Mr. Davenport in one of his letters. Mr. Winthrop was a gentleman conspicuously amiable and noble, and it is probably due to his early example that from that day to this there are no traces of that unhappy vice, the *odum medicum*, among the physicians of New Haven. This is the more remarkable in that he dwelt here only about two years, removing then to Hartford, where, for the rest of his life, as Governor of the commonwealth and as physician, he more than justified the old saying applied to him by the venerable Cotton Mather, "Magistratus est Civitatis Medicus."

Mention is made in the early records of New Haven of Widow Potter and Goodwife Beecher the midwives, and of other women following the same calling, indicating that an important function affecting the indigenous growth of the colony was confided to their hands, which, in later days, by a change in manners of questionable advantage, has passed over to practitioners of the opposite sex. Those worthy women are commonly spoken of in connection with some abatement of taxes or other easement, implying the esteem in which their services were held by the town. The frequency with which their fences are recorded to have been repaired at the public expense, suggests the idea that these frail barriers of the temple of Lucina may have been sometimes overthrown by the too impetuous onset of marital anxiety at critical moments and in the darkness of the night.

It is probable that for some time after the departure of Mr. Auger, New Haven was destitute of a resident physician. The town records make no mention of any for several years. At several town-meetings during the winter of 1687-88, "the need of the town being great" there was debate concern-

* "Pare the patient's nayles when the fitt is coming on and put the paringes into a little bagge of fine linnen or sarsenet, and tye that about a live eeles necke in a tubbe of water. The eeles will dye and the patient will recover. And if a dog or a hog eate that eeles, they will also dye."—Kenelm Digby to John Winthrop, Jr.

† No important knowledge of the medicinal properties of indigenous plants appears to have been gained by the earliest settlers. The simples which had been familiar in their mouths in England, they held in higher esteem than any that the American forest had to offer them. They rejoiced to see that many of those old friends migrated in their company, and, taking kindly to the new soil, "prospered notably" and "flourished exceedingly." Mr. John Josselyn who, in 1672, made the first essay toward a medical botany of the country ("New England's Rarities Discovered") gives at that early date a long list of such introduced plants, and, making a single venture into the realm of metaphysics, inquires, "What became of the influence of the planets that produce and govern these plants before this time?" What indeed! Mr. Winthrop, skilled in occult lore, and having the advantage of being on the ground at the time, might have been able to answer this weighty question, but, as he failed to do so, it must perhaps be let drop into that comprehensive category of my Lord Dundreary's, "Things that no fellow can find out."

There is this entry in the New Haven Records May 23, 1653: "It is agreed that every man shall cut up the great, stinking, poisonous weed which grows against his own ground, and for that which grows in the Market-place or other common place about the Town, that it be cut by some man appointed at the Town's charge." This weed can scarcely be else than that undesirable datura (stramonium) which has from an early date shown such unaccountable persistence in linking its fortunes with those of the white man upon this continent, winning the name of "Jimson" (Jamestown) weed, in the South, from its prompt appearance in the earliest English settlement in Virginia.

* "Once he [Governor Newman] took the Rubila, but finding himself sundries times ready to faint away, hath not been willing to take it again, nor his wife that he should, though we persuaded and encouraged him thereunto. * * * I persuaded him [Mr. Street] what I could, to take the Rubila, but doe not find him inclinable."—Letter of Rev. John Davenport, Winthrop Papers.

ing the inducements to be offered to Dr. Richard Williams, then living at Hartford, to remove to New Haven.

He was said to be "an able or licensed physician,* a man of very good report, and one that might be of good use in the place." The Rev. Mr. Pierpont and Mr. Hudson were joined with the authority and townsmen to consider of the matter. They "reported that they would allow him £8. for his house rent for five years to come." Small as this subsidy was, the town, after "much debate in confusion" voted "that they did not see it in their way to grant any yearly allowance or salary in the case, yet by a full vote (*nemine contradicente*) did declare that if Dr. Williams pleased to remove and come to New Haven, he shall be welcome and well accepted in the place." Dr. Williams thereupon came and took up his abode here. He makes no further appearance in the records, except as resolutely upholding "the dignity of the profession" from the profane touch of local politics. December 26, 1692, he was chosen constable, "but refused the choice, counting it an affront, and alledging that he knew neither law nor custom to justify the choosing him." "His return not satisfying the Town left him to the law and pay as others in like case;" a decision which, however imperfect in its grammar, indicated clearly enough an intention to get 40s. out of Dr. Williams' pocket and into the town treasury. But once more, and for the last time, nearly two years later, in 1694, the eye of the historian rests admiringly upon the figure of the inflexible doctor receding into the dim inane of oblivion, with "the dignity of the profession" unimpaired and the forfeited 40s. still somewhere about him. "Voted," the record stands, with a perceptible tinge of hopelessness, "That the Townsmen on the Town's behalf manage the case respecting Dr. Williams' fine for refusing to stand Constable, and that they see the law attended *as much as in them lies*."

After Dr. Williams, the instructive and entertaining old Town Records shed no further light upon the practice of medicine in New Haven. The government became constantly less paternal and more democratic, and the law of demand and supply was left to regulate the relations between physicians and patients. Practitioners of the healing art undoubtedly multiplied with the growth of the town and improved with the advance of science, but so little record survives of them, or of their doings, that even the microscopic research of Dr. Bronson has discovered little of interest until toward the last quarter of the following century.

The names, and little more than the names, of two physicians of that intermediate period are preserved in the *Connecticut Journal and New Haven Post Boy*. There is a foreign flavor about them which must have distinguished them at that time, when the first great wave of immigration was spent

and the second had not begun, more than it would at present.

Dr. Johann Rohde, a native of Heiligenbad, Prussia, was in New Haven as early as September 23, 1756, for on that auspicious day he married the Widow Rebecca Tyler. A very desirable widow she, four times a widow, ultimately —. Traditions of her comeliness survive among her posterity yet.

Nothing more concerning the Doctor until January 25, 1775, when the *Connecticut Journal* remarks: "Yesterday afternoon, departed this life, Dr. John Rhode [name anglicized by this time], for many years a noted physician and surgeon in this town." Benighted times were those, when "a noted physician and surgeon" could go for nineteen years without having his achievements and the sufferings of his patients trumpeted from week to week in the local newspaper.

In the *Connecticut Journal and New Haven Post Boy* of February 1, 1771, "The subscriber takes this method of informing the Public that he proposes to pursue the practice of Physick in this Place. Likewise Surgery in all its branches, as Bone Setting, etc., and Midwifery. Daniel Bonticou."

Dr. Bonticou was of the good old Huguenot family so well known in New Haven, and was born there in 1737. After his graduation at Yale College, in 1757, he went to France to study medicine. He staid abroad several years, and is said to have been a surgeon in the French army.

With such advantages, unusual in that day, it would seem that he should have become eminent among the less favored physicians around him. His early death, in 1778, gave but brief opportunity for that.

He married the widow of his predecessor, Dr. Rohde. She became in turn the Widow Bonticou, and ultimately, surviving her fourth husband, died a different widow still.

It is worthy of remark, as an illustration of the social changes that have been wrought, and especially of the relative decline in importance of rural pursuits in Connecticut, that, until about the beginning of the present century, the most renowned physicians were as likely to be found in little farming neighborhoods as in either of the two chief towns of the State.

During a period, from 1686 to 1713, when neither New Haven nor Hartford had a physician who left any striking impress upon local history, the little cluster of farms which is now Glastonbury, was the home of Dr. Gershom Bulkeley, whose medical learning and reputation, and probably whose skill, surpassed that of any other man in Connecticut. After him came Dr. Jared Eliot, "unquestionably the first physician of his day in Connecticut," as well as an uncommonly useful and distinguished citizen in many other ways. From 1709 to 1763 he lived in Killingworth, his influence and activity radiating thence over the whole State.

Still later, his son-in-law, Dr. Benjamin Gale, not less eminent as a physician, had his home in

* An "able," "licensed" or "allowed" physician was one whose qualifications had been examined and approved by the General Court. The government of this State was actually solicitous then to protect the lives of its citizens from the ignorance of worthless pretenders—a curious example of the simplicity of that uncultured age!

the same little village, until his death in 1790. In his turn Dr. Jared Potter, in Wallingford, from 1772 to 1810, kept up the succession of great country doctors, being regarded for much of that time as the leading practitioner in the State. He put society still further in his debt by teaching in medicine a succession of pupils who resorted to him, the earliest and perhaps the most noted among them being Dr. Lemuel Hopkins, of Hartford.

It may fairly be taken as showing a remarkably good condition of the profession in this region, that in December, 1783, there should have been a concerted public movement to organize a Medical Society in New Haven County.*

At that time there were very few such societies in the United States. The Massachusetts Medical Society was formed in 1781, and it would appear from an advertisement in the *Connecticut Courant* that in the same year there was a similar body in Dutchess County, N. Y. In 1783 the New Jersey Medical Society had its beginning. And remarkably enough, as early as 1767, there was a Medical Society in Litchfield County, which was probably the oldest in this country by at least fourteen years. But this completes the list of those which antedated the New Haven County Society.

It was, from the outset, the plan of the New Haven physicians to make their voluntary association the starting point of a chartered organization which should cover the State and include all qualified and reputable medical practitioners. How they labored to this end and how, in 1792, they attained it, merging their local society in the larger body, has been so fully told by Dr. Bronson (Papers of the New Haven Historical Society, Vol. II) that nothing can here be added to his account. During the eight years of the independent existence of the New Haven County Medical Society it exhibited a creditable show of vitality. Beside holding its regular and occasional meetings and transacting its routine business, it published, in 1788, a collection of Cases and Observations, containing eighty-six pages, which is still not without value.

Among the sixty-one original members of the society, the best remembered names are those of Dr. Jared Potter, of Wallingford, already spoken of; Dr. Eneas Munson, and Dr. Levi Ives, who will be more fully mentioned in another connection; and Drs. Leverett Hubbard and Ebenezer Beardsley, who, both as physicians and as citizens, were of high local repute and influence.

Dr. Hubbard was the first president of the Society and afterward the first president of the Con-

necticut Medical Society. By all accounts he was a type of the energetic, self-reliant, successful physician and man of affairs, rejoicing in the double title of Doctor and Colonel, *tam Marti quam Mercurio*, driving a multiplicity of horses in his large practice ("four good horses!" exclaimed the admiring public); building for his dwelling the square hammered stone-house which, though fallen upon evil days of exotic squalor and lager beer, is still a land-mark at the head of Meadow street; and finally leaving a handsome estate to his heirs. He died in his seventieth year, October 1, 1794, being one of the latest victims of that yellow-fever epidemic, which combined with one of "putrid sore throat" to make that year a gloomy one in the city's annals.

Dr. Ebenezer Beardsley was one of the younger members of the society at its foundation, but he had already won a high rank among the New Haven physicians. He was a clear-headed and thoughtful man, with more literary accomplishments than most of his professional brethren. Dr. Bronson is "inclined to think that in natural and valuable gifts, and perhaps in the knowledge which comes from observation and study, he stood at the head of the profession in New Haven." At any rate, before his much-lamented death in 1791, at the age of forty-five, he had come to be "considered as the most popular physician in the place, particularly among fashionable people." It is probable that the "fashionable people" of that day, in the little city of 3,000 souls, were not so wholly given to frivolity as to make it utterly disgraceful for a doctor to be popular among them.

One thing at least deserves to be recorded of Dr. Beardsley—that he had in his office, as his pupil in medicine, an uncommonly bright and attractive young man, recently graduated from Yale College at the age of eighteen years, who must even then have given to the observant eye of his teacher indications of the excellent qualities which twenty years later made him not only one of the leading physicians, but also one of the most influential and widely-known citizens of Hartford.

Eli Todd proved to be one of that sort of men who not only lay in a good working stock of accomplishments for ordinary use, but who, beyond and better than that, by force of character compel trust and helpfulness and, more or less, obedience from other men. Had he not been a doctor—he was not a man to run to waste—those good serviceable traits of his would surely have inured to the benefit of society in some other distinguished way. As it was, more than any other man he was the founder of that noble institution, the Hartford Retreat for the Insane. He was its first superintendent, and during his remarkably wise and successful administration of ten years, the most critical period of its history, he established its hold upon the confidence of the public as one of the best places of its kind in this country. To this day Dr. Todd's memory is recalled with respect and gratitude by the friends of the Retreat and of that unhappy class for whose benefit it was intended, and it is meet that New Haven, the city of his birth

* In 1783 a memorial was presented to the General Assembly by fifteen men of Norwich, praying for the establishment of a State Medical Society. It is a quaint but well meaning document, equally bewildering by its indiscriminate profusion of capital letters and its absolute indigence of all punctuation. Although it begins with the impressive statement that "Life is the most Desirable of all Sublunary Enjoyments and Health so Invaluable a Blessing that without it in some Degree Life is little Worth," and ends with the names of eleven physicians "who as in duty bound shall ever pray," yet nothing ever came of it except the disappointment of the respectable petitioners.

If they escaped without much contumacious eloquence to boot from some politician of the period, their fate was milder than that of some petitioners of later date, who, weekly hoping for the discouragement of some specially pestilent fraud, have discovered all too late that they were "attempting to establish a chartered and grasping monopoly and to trample upon the sacred rights of the individual."

and education, should take pride in the good work he accomplished.

In January, 1803, the physicians of the City of New Haven, for various reasons (the medical care of the town poor being one of the more important) feeling that a closer professional organization other than the Connecticut Medical Society was desirable among themselves, met together and formed the New Haven Medical Association.

The thirteen names which stand upon the record of the Association as its original members,* represent probably all the reputable practitioners in the city in 1803. If there were any who failed to be attracted by the formally declared purpose of the Association "to establish the practice of physic in this city on a respectable footing; to enable ourselves to live by the profession; to promote a good understanding and harmonious intercourse with each other," it is possible that to such, another clause in the articles of agreement may have proved more cogent, which, with its threat of non-intercourse, conveys to the reader of to-day a distinct flavor of trades-unionism and even of the boycott.

A brief tariff of charges in the original agreement contains some items which illustrate certain changes that have come to pass in the four-score years since they were written: "two shillings for a day visit in the city; four shillings for a night visit; one shilling for a puke; one do. for a purge; one do. for bleeding; one do. for a mile travel; three do. for a visit to the hospital [pest-house] for common cases, and four do. for small-pox and yellow fever." Changes in the public health.—Of the two diseases mentioned one was then an ever-present terror, now by the mild potency of vaccination shrunk into insignificance in every enlightened and well-ordered community, and the other was a periodical menace, whose malign fury as an invader of this and neighboring cities was then fresh in the memory of all, though now, thanks to quarantine and improved sanitation, it ranks with such far-away and dimly imagined horrors of the tropics as slave-ships, crocodiles and typhoons. Changes in the values of money and personal services.—He would be but a humble laborer who would now be content with such day's wages as he would earn on such a scale of prices. Changes in medical practice.—Blood-letting, which was then a deed of daily commission, inflicted upon the unresisting public by the shillings-worth, has become a surgical operation rarer than some which would then have been regarded as impracticable. Changes in the English language as well.—Nothing short of historic fidelity justifies to-day the writing of those two medical monosyllables which were so familiar in the mouths of our forefathers, but which are now condemned to a deeper ignominy than small-pox and yellow fever, and superseded by seemly Greek derivatives.

The New Haven Medical Association has fairly maintained to the present day the character and

purposes with which it began. Its intention is to include in its membership the reputable regular practitioners of the city. Whenever it has found itself harboring an undesirable member it has commonly relieved itself of his presence with little delay or ado; fortunately this necessity has been rare. Its meetings are semi-monthly, except during the heat of summer, when feeling the partial torpor which overtakes civic life at that season, it meets but once a month. These gatherings are partly scientific and partly social, but wholly practical. For many years they were held from house to house of the members, but with the increasing size of the association, which now numbers about sixty, it is sometimes found more convenient to resort to a public room. The observations and experiences of members form a mass of material constantly increasing in extent and variety, and the discussions growing out of them are often of much interest and importance.

The establishment of the Medical Institution of Yale College marked, at least, if it did not create, an advance in the standing of the medical profession in Connecticut. There were already six medical colleges in the United States,* one in Philadelphia, one in New York, one in Boston, one in Baltimore, and the remaining two, oddly enough, it would seem at first sight, were strictly "fresh-water colleges," in small and somewhat inaccessible villages, one of them the Medical Department of Dartmouth College, in Hanover, N.H., and the other the College of Physicians and Surgeons of the Western District of the State of New York, in Fairfield, Herkimer County, N.Y. The difficulties of travel at that time made all these places too remote for most students in Connecticut.

"The greater portion of students," says Dr. Knight,† "contented themselves with the means of instruction which were afforded them by some neighboring physician. These means were for the most part inconsiderable." The criticism does not err by over-statement. Too many of this "greater portion of students" got their science less by systematic effort than by an occult absorptive or osmotic process, continued in the mysteriously scented precincts of a "respectable physician or surgeon" for two years "if the student had a college education," and for three years if he were not thus favored; after which a brief and usually not formidable interview, called an examination, with a committee of three members of the Connecticut Medical Society, entitled him to a license to practice medicine. "The pupils of Dr. Whistlewind were rather accustomed to *ride* into medical skill than to attain it by the harder course of study."‡

* Dr. Knight, in two different printed addresses (1838 and 1853) counts his own college as the fifth in the United States in order of seniority. In enumerating its elders he omits the Baltimore school, a large and flourishing one from almost its beginning, and the school at Fairfield, which "was organized" in 1812, though whether it was in a prolific state before the New Haven school is uncertain.

† Introductory Lecture, 1838.

‡ The Life and Adventures of Dr. Dodimus Duckworth. By Dr. Asa Greene, 1833. The book has passed into unmerited oblivion. It is an unmistakable study from life in rural New England in the early part of the present century, and although drawn with too broadly farcical a touch, exhibits keen observation and genuine humor.

* Eneas Munson, Levi Ives, Obadiah Hotchkiss, Elisha Chapman, Joel Northrop, John Barker, John Skinner, Elijah Munson, Eli Ives, Nathaniel Hubbard, John Spalding, Thomas Goodsell, James Gilbert.

Those were bright and resolute spirits who rose above the poverty of their educational opportunities, and qualified themselves for really good service in their day and generation, and ultimately for the mild apotheosis of Thacher's Medical Biography. Fit praise of them can be spoken only by the teacher who, with all the appliances of to-day at his command, too often finds *alma mater* no match for the impervious *dura mater* of some crass student.

In the year 1801, the corporation of Yale College, upon the motion of the Rev. Dr. Nathan Strong, of Hartford, voted to establish a medical professorship.* Nothing further appears to have been done in this direction until 1810, when "the Legislature of the State," upon the joint application of the Corporation of the College and of the President and Fellows of the Connecticut Medical Society, passed an act to establish the Medical Institution of Yale College. Under this law the institution went into operation, and the first course of lectures was delivered in the winter of 1813-14.

At that time an unfinished building, square, massive, stuccoed and whitewashed, standing exactly across the head of College street, looked down the whole length of that thoroughfare. To-day it is recognizable by its old acquaintances as the nucleus around which have gathered, by successive accretions, the laboratories, lecture-rooms and observatory of the Sheffield Scientific School.

It was the property of the Hon. James Hillhouse, and had been intended by him, it is said, for an hotel. If such was his original purpose in building so large and expensive a structure at what was then the unfrequented verge of the city, it is likely that by the time the Medical School proposed to take it off his hands, he was in a state of mind and purse to listen without excessive coyness to the offer. Here, at any rate, with a large and almost tenantless cemetery on its right as a stimulus to unremitting activity in its labors, and on its left a convenient field to be used as a botanic garden, the Medical School found its first home.

There were thirty-three pupils in attendance upon the first course of lectures; two years later the number had increased to sixty-three; in 1822 there were ninety-three. This was the high water-mark. At this time, certainly, the school showed in its catalogue a valid *raison d'être*, but from that period until now, owing largely to the superior attractions of schools and hospitals in the greater cities, and sometimes because of the shameful ease with which diplomas could be procured elsewhere, the number of students has, with some fluctuation, pretty continuously ebbed to the present list of some twenty odd. The painful exiguity of their numbers for the last few years is hardly compensated by the large numerical growth of the force of instructors during the same period. If both these movements are to continue, it can be but a short time before the much-instructed last pupil, contemplating the subdivision of his intellectual powers among some dozens of teachers, will be in a position to exclaim: "How are they increased that trouble me; many are they that rise up against me!"

* Dr. Knight's Introductory Lecture, 1838.

There have been some critical moments when this institution has seemed ready to add one to the long list of defunct American medical colleges, but its possession of a small fund and something of the necessary plant, in the way of apparatus and building, has served not so much to make continuance in life satisfactory, as to make dying inconvenient. So it has outlived many of its more youthful rivals, though the activity of its later years has sometimes appeared not unlike that of "the pensive exile" of the poet

To stop too fearful and too faint to go.

To one familiar with the manners and customs of medical students of a later date, and especially in the less favored parts of our country, there is a sense of quaintness in the fact that, for a number of its early years, the pupils of this institution lived beneath a government more paternal than any that the most rigid of college dons would now venture to apply to a class of medical students.

"According to this plan, as many of the students as would be thus accommodated had rooms in the college building, while others took rooms in the immediate neighborhood; commons were established at which they took their meals, and morning and evening prayers were regularly attended. A code of laws similar to those of the academical department was enacted by the corporation for the regulation of their conduct, with suitable penalties annexed, and to the observance of these laws every student was required to give his assent. * * * This was done in accordance with the strongly expressed wishes of the late President Dwight. He urged its adoption upon the ground that in this way the character of the young men who came here, in morals and good conduct, could be more efficiently preserved and improved than in any other."* An acquaintance with some medical schools of the present day might have moved the great theologian to feel less solicitude for the preservation, and correspondingly more for the improvement, of "the character in morals and good conduct" of the ingenuous youth who resort to them.

This plan continued in effect for several years. "It was found to be too cumbersome," says Dr. Knight, "and one portion of it after another fell into disuse, until the system itself gradually disappeared."†

"The principal projectors of this enterprise were Dr. Eneas Munson, President Dwight, Professor Silliman and Dr. Eli Ives. They were aided by their medical friends in various parts of the State, and the project received the official sanction of the State Medical Society, and the hearty co-operation and support of a great portion of its members."

* Dr. Knight, Introductory Lecture, 1853.

† A distinct sensation of clumsiness was felt one day, as tradition goes, by Dr. Nathan Smith as he was taking his turn in conducting the public devotions of the class. Great surgeon and teacher as he was, his command of the conventional phrases used in such service was for this time at least, inadequate. After a hesitation, a pause, and a moment of embarrassing silence, the professor opened his eyes to encounter the sympathetic gaze of his pupils. Finally he solved the quandary with, "Sit down, sit down, sit down!" enforcing the words with an energetic gesticulation, and, to the relief of his audience, plunged abruptly into surgery.

"A degree of reluctance was felt on the part of some of the members of the Connecticut Medical Society to relinquish to this school the power of granting licenses and degrees, which had been enjoyed by the society for many years. To allay this, it was agreed that the Board of Examiners should consist, in addition to the professors, of an equal number appointed by the Connecticut Medical Society, of whom the president of the society should be one, with a vote at all times and a casting vote if there should be a tie; thus virtually placing the power of granting the degree in the hands of the society." * The society also reserved to itself the power to nominate professors in the school, and to appoint yearly two deserving indigent students from each county, who were to receive their lecture tickets gratis. On this basis harmonious relations between the medical society and the new school were established and long maintained.

The hold of the society upon the school was visibly, though gradually, relaxing during successive years, pretty nearly corresponding with the waning market value of medical degrees, one may infer, until in 1885 the last connection between the two, a sort of marsupial semi-attachment, was divided by act of Legislature.

The issuing of licenses, which were in the gift of the society alone, and which were granted after a shorter period of study than was required for the doctor's degree, went on at such a rate during the first twenty-four years, that at the end of that time there were about 300 licentiates to 400 graduates. Then, as now, the general public was more confident than critical, and did not too curiously consider the difference between the vernacular on the paper of the medical society and the Latin on the college parchment. After that time the license was less frequently sought from year to year. The last one issued, a solitary one for many years before, seems to have been in 1877.

At the outset the institution was entirely destitute of funds. To meet some urgent needs, a loan of a few hundred dollars was made from the academic treasury, which was soon refunded. But in 1814, "by the personal exertions of Dr. Nathan Smith," says Dr. Knight, "funds to the amount of \$20,000 were obtained by a grant from the Legislature of the State." † The sum was large for that day, and the object of its bestowal unusual. That it should have been secured by Dr. Smith, then a new-comer and nearly a stranger in the State, is an evidence of the energy and "personal magnetism" which characterized him.

The body of teachers with which the medical school began life, when compared with the usual faculty of similar institutions at the present time, appears numerically inadequate. But its *personnel* is noteworthy.

In the order of age they were as follows: Eneas Munson, Professor of Materia Medica and Botany; Nathan Smith, Professor of Medicine and Surgery;

Benjamin Silliman, Professor of Chemistry and Pharmacy; Eli Ives, Adjunct Professor of Materia Medica and Botany; Jonathan Knight, Professor of Anatomy and Physiology.

Dr. Eneas Munson* was at this time in his eightieth year, but so unimpaired were his mental powers and so active was he in matters of professional interest, that it was hoped that he would be able to perform, in part at least, the duties of the office to which he was appointed. At any rate he was a person of such reputation and influence throughout the State, that it was both wise and graceful formally to recognize it by counting him as a member of the faculty. "It is generally believed," says Dr. Bronson, "that, up to the early part of the present century, Dr. Munson was the ablest physician that ever practiced for a long time in New Haven." Coming of an ancient New Haven family, the only one of his parent's children surviving early childhood, he was educated in Yale College, graduating in 1753. Subsequently, by the study of divinity, having for his teacher Ezra Stiles, then tutor, afterward the renowned president of the college, he qualified himself to be licensed to preach as a Congregational clergyman. Considering the aptitude he afterward showed for natural science, and the excellent qualities he developed as a physician, it would seem as if he should have added another to the instances so common in earlier days of Cotton Mather's "Angelical Conjunction" of physic and divinity. But there were impediments in the way of his success as a minister. Ill-health, dyspepsia, hypochondria, fear "of being struck by lightning if he rode out," these were bad enough, yet against such foes as these saintly ministers have victoriously striven and come off the better for the fight. But there was an innate, probably hereditary, oddity of the man, which, like a sixth sense or a divining rod, showed him a vein of fun in situations where ordinary men did not suspect its existence. He called this his infirmity, and regretted it, "but said he could not help it." His portrait, an engraving from which adorns the pages of Thacher's Medical Biography, certainly looks very much as if such were the case.

However much this quality may afterward have enlivened his daily walk and conversation as a physician, it appears from certain legends still extant to have been not always to the edification of those who "sat under" him as a preacher. To have a strange young minister read out all the old "notices" that he found left over from previous years beneath the pulpit cushion, possibly including "intentions of marriage" between parties who may have spent later years in regretting that they ever entertained them, and appointments of Dorcas societies to meet with matrons long since withdrawn from earthly labors, must have impaired the effect of any sermon that might follow.

Many of Dr. Munson's witticisms, chiefly in the way of repartee, have come fluttering down through a century to this day, some of them with little

stings in their tails.* If traditions are to be trusted, it is clear that he was a man to have made some entirely new jokes, if all the jokes had not been made in the dawn of history before he had a chance.

When, after a very few years, he turned from divinity to physic, it became clear that he was in the right way to use his good natural endowments to the best advantage. "His instructors were Dr. John Darby, of East Hampton, L. I., and Dr. Townsend, of Gardiner's Island. The advantages which were afforded him for gaining a knowledge of his profession were probably very limited; for many years afterwards he remarked that no one ought to enter upon the profession with so little knowledge of it as he had obtained, or as he could obtain when he was a student." "He entered upon the practice of his profession at Bedford, N. Y., where he remained about two years." Then he removed to New Haven, where he continued until his death, at the age of 92. He was a practicing physician for seventy years. There is a good deal of a history in that statement alone. When a doctor ceases to learn he very soon shrivels up and becomes, as a doctor, quite intolerable, and the people at large "see to it that the republic takes no detriment" from him. We have good evidence that, however imperfect Dr. Munson's early medical instruction was, he kept on strengthening its weak spots during the rest of that long life of his. Botany, such as it was after Ray and before Linnæus, less like to the modern science bearing that name than to the old English wort-cunning, and busying itself not so much in the pursuit of new species as in trying to find out what the known ones were good for, he mastered. "To Dr. Munson the faculty of this country were more indebted for the introduction of new articles and valuable modes of practice than to any other individual." (Dr. Eli Ives' Historical Sketches, *passim*.) From his correspondent Baron Störck, of Vienna, who resuscitated from oblivion and restored to medical activity the famous old poison that assisted at the euthanasia of Socrates, he received some of its seeds in a letter, by which means *Conium maculatum*, having taken the Munson garden for its port of entry, still takes the opportunity of loafing along our road-sides, graceful, lurid and malodorous, resembling in these particulars another importation from the sunny south—the Italian tramp.

Dr. Munson's attainments in chemistry and mineralogy added to his local renown. "Upon these subjects he was the oracle of all this portion of the country," says Dr. Knight, much sought after by bucolic finders of iron pyrites and other showy stones. It gives an agreeable flavor of antiquity to the Medical College to say that its oldest professor was an experimental alchemist, and that

* A single typical specimen, culled from many, shows that neither personal nor official inebriety were always safe from his thrust. "He was once dining with the corporation at Commencement dinner, when President Dwight, who was a good trencherman, remarked, preparatory to some observation on diet: 'You observe, gentlemen, that I eat a great deal of bread with my meat.' 'Yes,' said the doctor instantly, and 'we notice that you eat much meat with your bread.'" (Dr. Bronson's Biographical Sketch.)

It is impossible for didactic eloquence to prosper when such ribaldry as this is allowed.

the "powder of projection," effecting the transmutation of metals, that acme of the black art, was a matter of earnest interest to him.*

Dr. Munson was as active and influential as any other man in founding the New Haven County Medical Society, and eight years later the Connecticut Medical Society. Of this latter body he was the first vice-president and the second president, holding the highest office by annual election for seven successive years. In those days the society had not yet learned from politicians the two mischievous notions of periodical rotation in office and "geographical claims" of candidates, and so there was nothing to prevent its holding itself in honor and dignity in the choosing and keeping of its officers. In spite of Dr. Munson's invalidism in early life and frequent sicknesses in later years, his vitality was of a tough fiber, so that it took a long time for an old man's malady to weary him out at the age of ninety-two—the oldest inhabitant then of the city.

There is no indication that his researches touching the transmutation of metals were successful. "About \$4,000, net value, was the whole amount of his estate," says Dr. Bronson, "showing that his large and long practice and a plain way of living were in his case not profitable, or else that he lacked the usual dollar-hoarding instinct." But if a man lives a long life of integrity and eminent usefulness, and supports and educates creditably a large family, and dies in his old age in nobody's debt and with the universal esteem of his neighbors, and having gained that approbation of his life's work that only those can give who are specially qualified to judge of it, he may be called a successful man. There is little need for him to leave a large estate.

A distinguished medical ancestor is very apt to beget doctors. Since Dr. Eneas the vocation has been hereditary in the Munson stock. New Haven has never been without some of his lineal descendants maintaining the family reputation in the medical profession, and the old saw, *dat Galenus opes*, has been less set at naught than it was by the experience of the first of the line.

It was at first the design of the promoters of the Medical College that the chair of surgery should be filled by a gentleman who, at that time, was probably the most distinguished surgeon living in Connecticut. Dr. Mason Fitch Cogswell, of Hartford, was then in his fifty-third year. He was in the enjoyment of a large and lucrative practice in

* Dr. Bronson quotes from President Stiles' Diary the following passages, which he believes refer to Dr. Munson.

"1789. March second.—This afternoon Dr. — visited me to discourse on Chemistry and inquire concerning the hermetic Philosophy. March third.—Dr. — visited me again to-day to converse about the transmutation of metals, which he says Dr. Koon [Kuhn perhaps, a fellow-countryman may be of the celebrated Douterswivel] performed at Wallingford last December. He is infatuated with the notion that I know something about it. I told him that I knew nothing but what is in the books; that I had never possessed the secret, if there was any; that I never saw or conversed with any one that I thought had it; that I had never made or seen the preparation, if that thing was possible; that I had never performed transmutation nor seen it performed; and that I held the whole to be a vain and illusory pursuit."

"*Eruditionis curæ et generis semper studiosissimus*" though he was, the President was evidently bored before the second visit was ended.

all branches of his profession, and his social and professional relations were altogether of the most satisfactory nature. He seems to have presented a rare and happy combination of all the moral, intellectual and physical qualities that should go to the making of a good surgeon. He was the first in America, it is said, to tie the carotid artery. This he did in November, 1803, without the knowledge that the same operation had shortly before been done once by Abernethy in England, and once by a less famous surgeon in Germany. "He possessed, in a greater degree than any surgeon whom I have ever known, that happy dexterity in the use of instruments which gave him the power of operating with great accuracy, neatness and rapidity. I have been told that he amputated the thigh in forty seconds," says Dr. Knight. *Laudari a laudato*. Dr. Knight was ever careful and discriminating whether in praise or in censure.

As "an assiduous and successful cultivator of polite literature, especially of poetry," Dr. Cogswell was reckoned one of that famous circle of "Hartford wits" which had for one of its brightest ornaments another member of the same profession, Dr. Lemuel Hopkins.

Not only for his excellence as a physician, but for his noble personal character and his admirable social qualities, he was held in uncommon affection by the people among whom he lived, and among whose descendants his memory is still fragrant. He listened, somewhat reluctantly it may be believed, to the call made on behalf of the new college, and was appointed professor of surgery. There can be no doubt that had he entered upon the duties of that office he would have performed them well. New Haven would have made in him a more valuable acquisition than it has been her wont to gain at the expense of her sister city, and with him in all probability she would have won that noble fruit of his enterprising benevolence, the Asylum for the Deaf and Dumb.

But when, shortly after this appointment had been made, it was found that Professor Nathan Smith, of Dartmouth College, would accept the place if it were offered to him, Dr. Cogswell readily relinquished it in his favor, and Hartford was the gainer thereby. The name of Nathan Smith,* Professor of Medicine and Surgery, follows that of Dr. Munson, by right of age, on the early catalogues of the college.

There was no hesitation at that time, there can be none now, in reckoning Dr. Smith as the most eminent man whom the medical profession in New Haven has ever counted among its members. The wide popular celebrity which he enjoyed kept only an even pace with the confidence and esteem in which he was held by his professional contemporaries, while the contributions which he made to advance the art of medicine in both its principal branches, were such that his name deserves to be a lasting one.

The history of his life is remarkable and inspir-

ing. "Truly American" as we are apt complacently to say, as if genius were of one nationality!

To be born poor, in an obscure farming town, as farming towns were in Massachusetts a century and a quarter ago; to be taken in early childhood into the mountain wilderness of Vermont, there to grow up to manhood working with his own hands in the rough agriculture and woodcraft of that time and region, with episodic hunting of Indians and being hunted by them, and starvation into the scurvy—this seems an unlikely training to bring up the first surgeon and medical teacher of his day in New England.

But when he was twenty-four years old, "almost without design on his part," he saw Dr. Josiah Goodhue, of Putney, Vt., do a surgical operation.

What the operation was is not recorded, nor what became of the patient; the important fact is, the keen-eyed, quick-witted young farmer who stood by was having his genius awakened. Genuine love at first-sight it was for that beneficent skill—an unmistakable vocation to bear a hand in that particular way of helpfulness; so that with brief delay he asked Dr. Goodhue to take him for a student. Judicious Goodhue, sadly mindful of the rude and bushwhacking warfare with disease waged by the generality of his medical neighbors, asks the young enthusiast as to his previous course of life and his acquirements. The reply is, "Until last night I have labored with my hands during my life." Honest and modest, but not otherwise an encouraging statement for the teacher, surely, and perhaps he meant to discourage the aspirant, when he told him, "Fit yourself to enter Harvard College and then I will receive you as a student." No discouragement in that for the resolute young man, only a wholesome stimulus. He takes his prescribed dose of *literæ humaniores* from a neighboring minister, laboring with his hands to pay his way, and in due time presents himself again, qualified as a medical student, to Dr. Goodhue. For three years he continued a pupil in the office of that gentleman to their mutual satisfaction, and then removed to Cornish, N. H., to practice his profession.

Two or three years later he found himself by his earnings able to enter the Medical School of Harvard University, where he was graduated Bachelor of Medicine. Returning thence to Cornish, with much improvement of his scientific equipment for work, he soon found his practice growing large and himself rising to the rank of an authority in the profession.

If 1797, being then thirty-five years old, and a practitioner of about seven years standing probably, he organized a school which has ever since been known as the Medical Department of Dartmouth College. It was a truly missionary undertaking. In that then remote region the practice of medicine and surgery was for the most part in the hands of men who, by no fault of their own, were destitute of the education needful to fit them for their work. The country was poor and thinly populated, travel was difficult and costly, the nearest schools of medicine, at Boston and New

* Nathan Smith, born in Rehoboth, Mass., September 30, 1762. Died in New Haven, December 26, 1828.

York, were practically inaccessible to most of them. In this state of things Dr. Smith's enterprise deserved and gained a measure of immediate success. For several successive years he was the sole professor of the new college, lecturing more or less on all the branches of science then usually taught in medical schools.

That one man, however competent and zealous, could do this, is a striking illustration of the state of medical education at that time. Beside this he rode far and wide over rough roads, pursuing an extensive practice among the sparse population of a half wilderness. After some years of this work, his finances having improved and his labors in teaching having been lightened by the association of other professors with him, he crossed the Atlantic and spent about a year abroad, dividing the time between attendance upon a full course of lectures in the ever famous Medical School of Edinburgh and in "walking" the hospitals of London.

It was a rare and precious privilege for an American physician in those days, and probably not one could have been found to profit more by it than did Nathan Smith.

Dartmouth Medical School, when he returned to it with the accomplishments and the prestige of his foreign pupilage, flourished apace. It seems never to have lost the headway it got under its founder, but to this day has maintained its reputation as a practical, productive institution. Dr. Smith continued to be its mainstay until he left it to come to New Haven. After that he returned one year to Dartmouth and delivered a course of lectures there, and in other years did a similar service once for the school in Burlington, Vt., and twice for that in Brunswick, Me. These peripatetic professorships have been more common since Nathan Smith's day. Perhaps he was the first to practice such itineracy. But what would he have said if he had been told that a grandson of his would practice medicine in Springfield and make a daily visit to New Haven to lecture, doing half his day's work before leaving home and the other half after finishing his lecture and his journey of 126 miles!

While the reputation which Nathan Smith brought with him to New Haven as an expert teacher, was most helpful to the nascent college, his renown as a successful surgeon was more directly useful to himself, soon giving him his hands full of work, especially as a consultant and operator, in all parts of Connecticut. In a neighboring town he tied the external iliac artery, an important operation and at that time, 1820, an extremely rare one.

Very largely we owe it to his thoughtful ingenuity that dislocations of the hip-joint are now reduced *arte, non vi*, by dexterous manipulation rather than by the irresistible and dangerous force of machinery.

The greatest triumph of operative surgery for several centuries is that ovariectomy has been established in the rank of the most beneficent and successful operations. By it, during the last thirty

years, thousands of women have been saved from a death of peculiar misery. Nathan Smith performed this operation in 1821, supposing himself to be the first to do it, and actuated by all the courage of a discoverer. It was unknown to him and to the medical world at large, so slow was the spread of such intelligence at that time, that several years before, another American, Dr. Ephraim McDowell, had done the same operation in Kentucky. But it must be said that in Dr. Smith's case for the first time, in the most important detail, the management of the pedicle, that method was applied which later surgeons, after the experience of thousands of cases, have fixed upon as the best.

Dr. Smith's contributions to medical literature were not large nor numerous—smaller and fewer, indeed, than every reader of them would wish. The most important of them, "A Practical Essay on Typhus Fever," is still consulted with profit by the studious. It is the work of one capable of making original observations and of reasoning soundly upon them.

Dr. Smith was just the sort of strong-featured character to have a small anthology of anecdotes grow up about him. Among those which have floated down to us, not one can be found to cast discredit upon him, unless we call such those which refer to his carelessness of money, which kept him, and at his death left his family, destitute of one of the just rewards of his skill and industry. Most of them go to show him a man of inexhaustible resources, of admirable tact in the management of patients and their friends, of a shrewd and kindly humor, and of a tender generosity. It is late enough now to put into print, without offense, the story, long current, of a consultation to which Dr. Smith was called in another town. The patient, a valuable and well-known citizen, his physician a very learned and very positive doctor, big with unfavorable prognosis. The disease duly labeled, with Greek generic and dative specific, *Typhus syncopalis*, a name fashionable in these parts about those days, deeply impressive to the popular ear, and apt to be interpreted by the laity as meaning "sit up with him so many nights and then come to his funeral." "Humph" remarks the consultant, after an attentive inquiry into the symptoms and the doses given. "I would give him an emetic." "In *Typhus syncopalis* an emetic is certain death," responds the attendant doctor, "the only safety, if there be any safety, is in brandy and opium." Dead-lock in the consultation; leave it to the family. What comes, alas, to despondent's learning, however positive when pitted against hopeful tact? Learning retires in indignant sorrow, radiating the visible darkness of his unfavorable prognosis all about him. Tact, bearing the potent draught, enters the darkened chamber of the sick man and shuts the door. Soon there are sounds familiar to those who go down to the sea in ships. Then there is a long, long period of perfect silence and anxious suspense for the waiting family outside. Then—do our ears deceive us, or do we hear chuckles from the *Typhus syncopalis* subject? It is even so; stupor and delirium have gone with opium and brandy, and

the old doctor from New Haven is telling lively stories to the reviving patient.

The Medical College possesses a fine portrait of Dr. Smith in his latter years by Professor S. F. B. Morse. It is full of character and is considered an accurate likeness. It shows that one of the best American portrait painters of that day had to be sacrificed that the world might be the richer by the electric telegraph.

The venerable Dr. S. C. Johnson, of Seymour, relates that, being a medical student at the time, he was one of a committee to present the portrait on its completion to Dr. Smith. "Set it down, gentlemen," said the great surgeon, rather grimly, "it's an excellent likeness." And then, with a twinkle, "It's as ugly as the witch of Endor." Another reminiscence of Dr. Johnson relates to the "dissection riot" of January, 1824, one of the most threatening disturbances orderly New Haven has known, and which for a while menaced the destruction of the Medical College.

There was a dramatic scene when the outraged and indignant neighbors of the poor girl whose body had been stolen from a rural cemetery, made their way at last into the cellar of the college. There had been nothing to reward their search through the upper part of the building, except such shreds and tatters of mortality as such places always can show, to feed the fury of suspicion, and here in the empty cellar they had apparently come to the end of their clue. But there was a persistent man with a crow-bar, whose manners must have been most unpleasant to any guilty observer, if such an one was there, for he went about trying the flag-stones in the pavement, and at last found one that was loose. This was quickly torn up, and there in the freshly disturbed earth lay the ghastly object of the quest, fortunately not yet mutilated by the scalpel. Drs. Smith and Knight were both there, honestly and anxiously aiding in the search. "Dr. Knight looked as if he would die, he was so faint and pale [he was a man of great sensitiveness], but Dr. Smith looked like a roused lion," said Dr. Johnson.

Of course there was intense popular feeling, which was increased by an exposure of the body to the public view in the streets; there were threats against the college and against individuals connected with it, necessitating a military guard under arms for two days. The rescued body was reinterred in West Haven, in a garden for greater security, and within three weeks, one of the guilty parties was tried, convicted and sentenced to sharp punishment in the Superior Court.

A stringent law grew out of this incident, exacting sureties of the Professor of Anatomy against any similar occurrence, and it still continues in force.

The name of Benjamin Silliman, Professor of Chemistry and Pharmacy, which stood third in the list of the original faculty of the Medical College, certainly added much to the renown and prosperity of the institution in its early days. He had great celebrity as an impressive and most agreeable lecturer. It is impossible to conceive of a more deft and painless insinuation of the elementary facts of

chemistry into minds not specially avid of that science, than was exhibited in his lectures to the senior classes of the academical department. The medical classes shared the entertaining privilege of listening to their somewhat florid and discursive oratory, as did also numerous young ladies pursuing the more strictly feminine accomplishments in various schools in the city. Laboratory work for students was as yet undreamed of. Physiological chemistry did not invade those peaceful precincts, and the "Loves of the Triangles" could not have been more blameless than the marriage of acids and bases beneath the dexterous hands of the Professor. The medical section of the mixed audience, occupying front seats next the retorts and bell-glasses, were commonly distinguished by their closer attention to the chemistry and their less boisterous hilarity at the jokes which were daily served to them in well-studied proportions. The praises with which the courtly Professor was wont to reward any appearance of proficiency at his weekly review of the progress of the medical class were none the less gratifying in that they were largely at the expense of "the young gentlemen yonder [the academical students] who cannot or will not learn anything."

The family name borne by the Adjunct Professor of Materia Medica and Botany has been uninterruptedly one of the chief ornaments of the medical profession in New Haven for more than a century. Beginning with Dr. Levi Ives,* who entered upon practice in 1773, down to the present day, there has been in the direct line of descent a striking perpetuation of those qualities which most insure professional success and attract and retain the popular esteem. During that time there has always been a Dr. Ives, and since 1801 there has always been an "old Dr. Ives,"† the qualifying prefix passing into popular use as each successive member of the family took up the professional title.

The first Dr. Ives, in his day, which was a long one, was a laborious and successful physician who won the reputation of a public-spirited and patriotic citizen in troublous times when that title was no unmeaning phrase. Repeatedly during the Revolutionary War he was in active service as a surgeon to the forces in the field. Once he bore a lieutenant's commission in the line, in a campaign against General Burgoyne, and on that eventful 5th of July when His Britannic Majesty's forces made so weary and unprofitable an expedition from Savin

* Levi Ives, son of Samuel and Mary (Gilbert) Ives. Born in North Haven, Conn., June 4, 1750. Died in New Haven October 17, 1826.

† A legend runs: One day, when Dr. N. B. Ives (of the third generation) had been but a short time in practice, a man came to his father's (Dr. Eli Ives') house and insisted upon seeing "the old Doctor." "Why, dear me," responded the mother of the young doctor, her thoughts reverting to her departed father-in-law, "didn't you know old Dr. Ives has been dead these four years!"

The late Dr. Charles L. Ives had for a patient an old gentleman who had previously enjoyed the services of his father, his grandfather and his great-grandfather. It is an obvious and inexpensive witicism to infer an extraordinary toughness in this patient, who nearly survived four generations of doctors; but it is quite as wise to accept the hale nonagenarian as evidence that pretty sound notions of practice prevailed in the family to whose skill and fidelity he confided himself for so long.

Rock to New Haven, he was one of the hardy *guerrilla* band who kept up a waspish resistance to the slow advance, acting that day apparently in the double capacity of sharpshooter and surgeon.

Eli Ives* had, as his father before him, Dr. Eneas Munson as his teacher in medicine, but he came vastly better prepared than his father did for his studies in that science. Other things being equal, the medical student whose father is a doctor has the advantage of him who is the son of a farmer. Inherited mental habit is a cumulative force. Beside this, Eli Ives had got the teaching that Yale College could give a diligent and conscientious student. He was a fair Latinist and Grecian, though not an ostentatious one, and for fifteen months following his graduation in arts he was Rector of the Hopkins Grammar School. He was offered a tutorship in Yale College, and as early as 1802, being twenty-three years old, he had such certificate of immortal fame as inheres in the appointment of Phi Beta Kappa orator. He did not take the tutorship, which must be regarded as fortunate, though instances are not wholly wanting of recovery from that condition and subsequent growth to usefulness in the medical profession. He did deliver the Phi Beta Kappa oration, and as he chose that it should be on botany and chemistry, that august audience for once was exposed to the singular chance of hearing some useful facts plainly stated.

The best instruction which this country could offer to a medical student at the time of Eli Ives' pupilage was in the University of Pennsylvania. "It was the golden time" of Rush and Shippen and Wistar and Barton, and twice the young student repaired thither for their teaching, being probably one of the earliest alumni furnished by Connecticut to that great school. He was not, however, graduated there, but after having been some ten years in practice received the degree of M.D. *causa honoris* from the Connecticut Medical Society in 1811. He was a slender, delicate young man when he began practice, but he had the temperament of an enthusiast, and this, happily combined with a tender generosity of disposition, served at once to impel him to and sustain him in a life of more than common labor for many years, for so long indeed, that for the last quarter century of his life he was regarded as the patriarch of the profession.

Speedily, almost in his youth, his practice became a very large one, and it continued large as long as he would have it so. It was fairly productive too, pecuniarily, though not in proportion to the labor performed. He was not an exemplary collector of his dues, having an easy temper about such matters, for which his heirs must have been the poorer, and being intensely averse to anything savoring of greed or over-reaching.

To a sharp practitioner who was bragging of the heavy fees he had exacted in a certain case, ending with a knowing wink and a "we must live, you know," Dr. Ives replied, "Yes, and we've got to die too." He might have used the trite repartee of the French wit, "I do not see

the necessity." But there is a distinct eschatological twang in the Doctor's retort—"subacid," as he used to say in criticising one of his own seedling pears; a flavor not wholly distasteful to a sound Calvinistic palate.

Dr. Ives must have received his first bent toward the study of botany and the indigenous *materia medica* from his teacher, Dr. Munson, but he greatly improved upon the teachings of that worthy, and became, as indeed the times required, a more scientific botanist than Dr. Munson ever was, and gained a knowledge of the medical uses of native plants which was believed to be unequaled in his day. Not to him could the reproach apply due to them who

Love not the plant they pluck, and know it not,
And all their botany is Latin names.

He loved botany much—he loved plants more, for their own sakes and for the good he could do with them in

Driving the foe and 'stablishing the friend.

"Isn't the old Doctor great on habitats?" admiringly exclaimed a profound botanist one day after listening to his talk; and indeed he seemed incapable of forgetting a place which he had found to be the home of a rare plant. He liked to maintain the claim of New Haven to be the abode of more adventive naturalized plants than any other region of equal extent in this country.*

When Dr. Ives began his work in the Medical College, he meant that a garden, what old Gerard calls "a phisike-garden," should be a part of the means of teaching in his department. It was mainly, if not wholly, at his private expense that he started and maintained such a garden on the east side of the college, stocking it well with interesting and important hardy plants, and building a green-house as accessory to it. His enterprise was not properly seconded; after a few years the college sold the ground; the garden disappeared, to the permanent regret of its founder. Many years after, in that spot, a few shy but persistent trilliums, arums, sanguinarias and the like, annually entered a vernal protest against their being crowded out of the medical curriculum, but in vain. Botany is no more to be sought for than Sanskrit among the medical students of the present day. Dr. Ives removed some of his more intimate vegetable friends to the spacious garden, which then half surrounded his house on Temple street, where they flourished during the life of their protector.

It was a pleasant sight, impressing one with a sense of the bounty of nature, to see the good doctor lead a patient into this garden and dispense his medicine to him with a spade.

The eagerness of rare plants in that garden to show their appreciation of the care of a medical botanist, and especially the determination of seed-

* Eli Ives, son of Levi and Lydia (Anger) Ives. Born at New Haven February 2, 1782. Died October 1, 1874.

* This opinion was derived, it is believed, from the distinguished botanist Robinson. Dr. Ives used to mention several introduced plants which perhaps are less common now than they were fifty years ago. Dr. Munson's pet hemlock is one of them, and if the henbane (*Hyoscyamus niger*) ever shows its unamiable head now-a-days after the turning up of long unbroken soil, as Dr. Ives said it used to, it must be very rarely.

ling pears to prove themselves worthy of his attention, were enough to convert one to the Manichean doctrine of vegetable souls.

It is not to be inferred, from his fondness for using indigenous simples in many cases, that Dr. Eli Ives' practice was wanting in vigor when in the presence of real danger. His skill in the use of the most energetic articles of the *materia medica* was quite as remarkable as his minute acquaintance with drugs not commonly known.

In his hands and in those of his eldest son, Dr. N. B. Ives, in 1832, that potent agent, chloroform, discovered a year before by Samuel Guthrie, of Sackett's Harbor, was first applied to medical use. In the *Journal of Science* of that year, he describes its valuable qualities, and recommends its employment as well by inhalation as by the stomach. What a little step further he need have taken to have made New Haven, instead of Hartford, the birth-place at once of anæsthesia and of an anæsthetic so convenient and so efficient that no one would have dared to try, as in the case of Horace Welles, poor waylaid and plundered messenger of the gods, to filch the glory of bringing such a gift to men! Boston would then have been saved the cost of that curious monument, crowned with an appropriate group setting forth the sad plight of him that fell among thieves, and beneath bearing an inscription which perpetuates the perplexity felt by their contemporaries in deciding which of two Bostonians had shown the greatest alacrity in appropriating to himself the credit of Welles' discovery.

A favorite doctrine with Dr. Eli Ives, one upon which he bestowed much thought, and which largely influenced his practice, was that of epidemic constitutions, changes of diathesis, and the recurrence of certain diseases in wide cycles. In accordance with this, he used confidently to predict, at a time when New Haven had long been free from any prevalence of intermittent fevers, that they would again widely infest this region. He did not live to see how abundantly his prophecy was fulfilled in the latter half of the seventh and during the eighth decade of this century, but during the latter years of his life he watched the progress of those diseases along the coast eastward from the New York frontier with a philanthropic regret which may have been gently tempered with scientific satisfaction.

Of Dr. Ives' activity outside of his strictly professional work as a teacher and practitioner, some indication is given by the facts that he was President both of the Horticultural and Pomological Societies of New Haven, and that of his own seedling pears, five sorts have been deemed worthy of description in "Thomas' Fruit Culturist;" that he was a member of the Convention which framed the first U. S. Pharmacopœia in 1820, and ten years later, at the next meeting of the convention, he was its president; that for three years running from 1824 he was Vice-President of the Connecticut Medical Society; that he was President of the American Medical Association in 1861; and that (a reminder of a curious passage in the politics of more than a half century ago) he was the Anti-Masonic candidate for Lieutenant-Governor of Connecticut in 1831.

Dr. Eli Ives' face was a clear index of his character, showing a charming combination of benevolence, shrewdness and simplicity, and often lighted with mirthfulness. He was plain in his style of living, after the wholesome conscientious old Connecticut way. Apparently his only luxuries were his many quiet charities; his books, which, during the period of his activity always represented the advance of those branches of science in which he was most interested; and his suburban farm, sloping west from "the Gravel Hill road," now Prospect street, which presumably was as great a source of revenue to him as a farm usually is to a non-resident amateur with his head well busied with other matters.

It was a large part of the happiness of Dr. Eli Ives' serene and beautiful old age, that he was closely surrounded by his two sons and one of his grandsons, all engaged, with conspicuous success, in the calling to which his own life had been so faithfully devoted, and all firmly bound to him not only by ties of family affection, but also by that other regard and veneration due to the teacher and guide in professional matters. Of the surviving son, who is still, as he has been for nearly half a century, active, eminent and beloved among the physicians of New Haven, it is beyond the purpose of this chapter to speak. His elder brother, Dr. Nathan Beers Ives,* was so long and so intimately connected with his father, that it is impossible to dissociate the two in the memory of those who knew them.

Nathan Beers Ives (graduated A.B. in Yale College in 1825, and M.D. three years later) began the practice of medicine in 1828, being then twenty-two years old. He died at the age of sixty-three, and for several of his latter years was much disabled by ill-health. He left, notwithstanding, an ample estate, much larger than had ever before by any one been accumulated in the practice of medicine in New Haven. There were a good many years when he was regarded as "taking the cream of the practice," and although some of his less fortunate competitors might indulge a not unnatural envy of his success, no one could call it unmerited in view of the qualities which contributed to it.

His perceptive faculties were naturally keen, and his management of his resources showed unusual tact. He devoted himself to his professional duties and to the welfare of his patients with that singleness of purpose which can spring only from the genuine fitness of a man for his calling. * * * Rarely did he enter a household as a physician without becoming permanently bound to it as a friend. He had a vivid enjoyment of good company and bright conversation, in which, with his natural vivacity of temperament, he always bore an active part. There always seemed a certain fitness in it that these gifts should be lodged in a short, slight, alert figure. "His soul," as old Fuller says, "had but a small diocese to visit." It was related of him as a child that he used to climb into

* Nathan Beers Ives, son of Eli and Maria (Beers) Ives. Born in New Haven June 29, 1826. Died in New Haven June 13, 1890.

the branches of a great stramonium weed that grew in his father's garden. But in Dr. Eli Ives' garden every vegetable thing was apt to take on unwonted dignity and surprising proportions, and the child was certainly a small one.

For a good many years, until his declining health kept him from avoidable labors, Dr. N. B. Ives took part in the private instruction of medical students. It would have been much to the advantage of the Medical College had it succeeded in its attempts to secure those valuable teachings for all its students by adding Dr. N. B. Ives to its Faculty, but he was ever averse to anything likely to interfere with what he regarded as his legitimate business, the practice of medicine.

The youngest member of the original faculty of the Medical College, Jonathan Knight,* was only twenty-four years old when he delivered his first course of lectures upon anatomy and physiology. His possession of the natural gifts for such a position had been remarked two or three years before by Professor Silliman and others who had the establishment of the College at heart, and when the young man was occupying himself in studying medical books in such intervals of leisure as his duty as tutor in Yale College allowed him. Advised and encouraged by those friends, he spent the winters of 1811 and 1812 in the medical department of the University of Pennsylvania, devoting special attention to those branches which it was intended that he should teach at New Haven.

Very speedily in his lectures he began to justify the hopes of those who had selected him for the work. Their expectations must have been exorbitant indeed if the quality of his performance, as known to later generations of students, failed to satisfy them.

Probably every surviving listener to Dr. Knight's lectures remembers them as models of terse and lucid statement, at once full and exact, delivered with forcible and unhesitating elocution, the matter and manner of the whole carrying the impression of perfect mastery of the subject. Yet, be it recorded for the encouragement of diffident merit, the young professor in his early years used to be so oppressed with a distrust of his own powers, that he sometimes wandered away into the fields at the lecture-hour, for actual fear of facing his class. He resolutely subdued this diffidence and learned to regard it as unreasonable.

Many years after, when his successor in the chair of surgery, called abruptly from the rough work of an army surgeon in the field, was writhing with a sense of his unfitness for the new duty, the retiring veteran reassured his junior with: "Don't you think you know more about surgery than those young asses?"—a comforting suggestion, drawn doubtless from his own early experiences.

There were other qualities beside those already mentioned which went to make Dr. Knight the admirable teacher he was. An earnest devotion to

the business in hand, which kept him from even a momentary wandering; a sagacious sense of the needs of his audience, which kept him from over-refining and from aiming above their heads, these were combined with certain enviable physical gifts; a manly and graceful figure, erect and agile even in old age; a strikingly handsome face, whose habitual expression was that of gentle dignity and intelligent sympathy; and a voice so clear, musical and pleasantly penetrative, that it needed not to be of great volume to seize and hold the willing attention of every hearer.

How charmingly orderly he was! Said a clear-headed pupil-critic, "He begins at the beginning, goes straight to the end, and [oh joy, oh wonder!] stops when he has finished."

Dr. Knight held the Chair of Anatomy and Physiology until 1838, when he was transferred to that of Surgery, which had been vacated by the death of Dr. Thomas Hubbard. He continued however, during his life, annually to deliver to the senior academical class a course of lectures on anatomy and physiology. The judicious skill with which these topics were adapted to the needs of a non-medical audience, was attested by the good order and willing attentiveness which reigned in the amphitheatre, albeit filled with listeners who had not yet reached "years that bring the philosophic mind," and apt to find hilarity rather than solemnity in their first view of the human skeleton.

Nothing remains to testify to the extraordinary effectiveness of Dr. Knight as a lecturer except the recollections of those who heard him. His few printed productions give no suggestion of that fine combination of personal forces that carried his unwritten instructions into the minds of his pupils.

From the death of his predecessor, Dr. Thomas Hubbard, in 1838, until the close of his own life, Dr. Knight was unquestionably the leading surgeon in Connecticut. Conscientious, forbearing, conservative, perhaps in all that time he never did an unnecessary or premature operation. His was the wisdom always to know what should *not* be done; his the religious caution to lay only hands of healing upon the body—the sacred ark of man's life. To him the difficult and "brilliant" surgical operation was of small merit if it did not heal his patient, or if it mutilated what might have been spared. How noble his appearance as he stood ready for some serious operation! Long years of familiarity with wounds and suffering had not dulled compassion. The slight change of color as he grasped the knife; the gentle compression of the lips; the instinctive gathering and tension of the muscles; the quickened glow of the eye; his whole demeanor, showed that no man more than he, felt "that death everywhere surrounded his knife," nor more endeavored "to convey all his knowledge to its point."

It was, perhaps, his habitual aversion to the use of the knife, where it could be avoided, that put him among the earliest who attempted the cure of aneurisms by compression. He was the first surgeon who ever cured this disease by the mild and simple means of manual pressure alone. This he did in 1848, having relays of assistants from among his

* Jonathan Knight, son of Jonathan and Anne Fitch Knight, born in Norwalk, Conn. September 4, 1787. Died in New Haven August 28, 1854.

pupils, who relieved each other at short intervals, until, *tulo, cito, jucunde*, in forty hours, the formidable blood-sac had ceased its throbbing and whizzing, and shrunk into a quiet, harmless lump.

Dr. Knight was twice President of the American Medical Association, the unprecedented honor of a second election being due to the admirable way in which he at its first meeting guided that somewhat unwieldy body on its way. His successes in this matter seem to have been the outcome of his natural lucidity, for he disclaimed any but an ordinary familiarity with parliamentary rules.

There were some slight archaisms of speech and dress of which Dr. Knight was one of the last upholders in this neighborhood. His pronunciation of the *u* in unaccented syllables was according to the best standard of a hundred years ago, and its late survival in his fluent speech was far from displeasing to the critical ear. He never appeared to the public eye save in a dress-coat and with a faultless white cravat of a pattern no longer seen upon earth except in certain portraits which are become a part of history. A phrenologist, one of the early professors of that imitation-science, who was trying his skill on Dr. Knight's "organs," said with oracular solemnity, "You are a conservative, with great reverence for the past." "Yes, yes," responded the subject, "do you tell that by the shape of my head or by the tie of my cravat?" The charlatan's guess was true, as far as it went. Dr. Knight's love of tracing a truth back to its original discoverer nicely balanced his contempt for the humbugs which during his long life he saw rise, flourish and decline.

The first accession to the original Faculty of the Medical College was in 1829, when Dr. Thomas Hubbard,* of Pomfret, was called to take the Chair of Surgery, vacated by the death of Nathan Smith.

Dr. Hubbard was then fifty-three years of age. He was of wide repute as a hard-working, successful practitioner of medicine and surgery in the rural community in which he lived. There is reason to believe that he found his labors in his new field of duty to be of the hardest. It was inevitable that comparisons should be drawn between the renowned surgeon just lost to the college and any successor in the same place. Dr. Hubbard was undergoing a late transplantation; he was new to the work of teaching; he had enjoyed smaller advantages of study than any of his colleagues. Yet such was the energetic industry that he applied to his new relations, that during the nine years of his professorship he discharged its duties creditably and satisfactorily. There was a flavor of rusticity in his speech and manner, but he was unaffected, simple, abounding in practical good sense.

The profession and the community at large felt when he died that they had lost a strong and useful man.

In the same year in which Dr. Hubbard joined the Faculty, Professor Eli Ives was transferred to the Chair of Theory and Practice of Medicine, and

the duties of his previous department of Materia Medica and Botany were assigned to Dr. William Tully,* as Professor of Materia Medica and Therapeutics.

Dr. Tully was not a stranger in New Haven. He had taken the academical course in Yale College, and was graduated there in 1806. Subsequently he received a considerable part of his tuition in medicine here from Dr. Eli Ives, and here, in 1810, after the usual examination, he was licensed by the Connecticut Medical Society to practice. Still later, in 1816, the degree of M. D. was conferred upon him, *causa honoris*, by Yale College.

He returned now to New Haven with an established reputation as a medical author and instructor. In the then brief list of American medical writers his name was conspicuous as co-author, with Dr. Thomas Miner, of Middletown, of "Essays on Fevers and Other Medical Subjects," 1823, a notable work, which in its day provoked not a little discussion and some hostility. A very full, learned and elaborate "Prize Essay on Sanguinaria Canadensis," 1828, was also Dr. Tully's work. "It may be pronounced one of the most important contributions to our vegetable indigenous Materia Medica which has yet been offered to the public." (Dr. Bronson, Biographical Sketch, 1861.)

For the five years immediately preceding his appointment here, Dr. Tully was one of the professors in the then new and thriving, but now extinct, medical college at Castleton, Vt. His career as a practitioner, up to the time of his call to Castleton, had been remarkably diversified. From 1811 to 1824 he lived and pursued his calling in five different towns in Connecticut. His duties in the college at Castleton requiring his presence there for only a fraction of the year, he spent the other months in Albany, where he was the partner in practice of the distinguished Dr. Alden March. Probably the atmosphere of a large town was more congenial to him than that of the more rural communities in which he had previously lived, for he prospered in his practice more in Albany than ever before. Still he was not long to remain there, for in 1829 came the call to New Haven, necessitating the abandonment of his Albany residence. He continued, however, for nine years longer to hold his Castleton professorship, the lecture term there coming at such a time of the year as not to interfere with his college duties at New Haven.

Dr. Tully in his mental organization and habits of thought was essentially scholastic. He was happier in his study with his cherished books, and at his lecture-desk with his carefully written and voluminous manuscript, where he maintained a magisterial pomp of manner, than he was in listening to the querulous whine of an invalid, or in assuming a conciliatory show of respect for the therapeutic views of some ancient dame whose fluency of speech did not outrun the copiousness of her misinformation; "*medicina anilis*" he scorn-

* Thomas Hubbard, born in Smithfield, R. I., 1776. Died in New Haven June 18, 1838.

* William Tully, only child of William and Eunice Tully. Born at Saybrook Point, Conn., February 18, 1785. Died in Springfield, Mass., February 28, 1859.

fully called such prattle. At that time the clinical thermometer was not in use, that beneficent saver of time and temper, which the physician of to-day places between the lips of a garrulous patient on entering the room, leaving it there as an efficient gag, until, having finished his observations, written his prescription, and given his directions, he is ready to make his escape. When the progress of science supplies an equally mild and certain conversational stopper applicable to bystanding relatives, friends and volunteer nurses, the path of the physician will become roseate and his temper angelic.

With Dr. Tully, study was pursued not as a means but as an end. Books were not tools of his work so much as objects of his affection or animosity; and words, if polysyllabic enough, were things to be loved for their own sakes. That drug which in the common speech is opium, he delighted to call, less concisely, "*succus inspissatus papaveris somniferi*."

His recipes sometimes seemed intended not so much to guide the average apothecary as to leave him groveling in the mire of ignorance while they satisfied their author's yearning for an ideal nomenclature. "There isn't any such medicine," indignantly exclaimed a compounder of drugs as he puzzled over the unfamiliar botanical name of a common herb in one of these prescriptions, "and if there was it wouldn't do to take it."

When the vernacular failed, in Dr. Tully's judgment, to meet the need of the occasion, he was ready, in speech or in writing, to enrich it from his stores of Greek or Latin. "Adenagic," "euphrenic," "parabysma," "prægumenal," "and procatactic;" these satisfy every demand of the philologist, and are admirable words—or would have been so if people had only agreed to give them breath and keep them alive.

The Greek lexicon in some hands becomes the most obvious and least laborious of all means of enlarging the domains of science.

Despite the verbal obstacles with which their pathway was beset, the more earnest and intelligent of Dr. Tully's pupils found him a captivating teacher. If his learning was ostentatious it was nevertheless genuine and great, and ready at his call. All his opinions took rank in his mind as irrefragable truths and were announced by him with unstinted positiveness. He was a man after his own heart. This gave a quality to his lectures which did not fail to commend them to weary souls searching for certainty in the most inexact and shifting of the sciences. His conversation shared the same characteristic to such an extent as to make it a doubtful joy to one who objected to having his notions of medical matters or his Latin quantities corrected according to the Tullian standard.

"Hyoscy'amus, sir;" "Hama'melis, if you please;" "The word is Ec'zema." In such wise would he deal justice upon some common offenders against the claims of the antepenult.

Dr. Tully was by far the most prolific medical writer ever numbered among the physicians of New Haven. He was a frequent contributor to medical periodicals. His principal work was his "Materia

Medica; or, Pharmacology and Therapeutics," published in 1858. The first volume only was finished, for life is short; yet it contained 1534 pages octavo, and was introductory to the treatise of individual articles, which was to fill an indefinite number of successive volumes, for art is long.

The book often shows its author at his best in its copious learning, its clear definitions, its incisive criticisms. It exhibits, too, some of his less admirable characteristics, a whimsical petulance, an inexorable verbosity. He bemoans the perversity of those medical students who "knew the appearance of Ol. Pyrolæ, but they had no knowledge that this substance is a true saline Æther, the Spirhylate or Oxyspirhylate of Protoxyd of Methygen, existing naturally in the plant Gaultheria procumbens." Nerveless weaklings, to rest content in the poverty of a druggist's label, and abbreviated at that, when a beautiful name of thirteen syllables, embodying pages of organic chemistry, stood ready to fill their mouths!

There is a touch of simple pathos in the old man's preface, where he speaks of his advanced age, the cares of his family, the scanty emoluments of his profession, and his experience that the medical schools in New England "diminish rather than increase the income of the instructors." "I have wasted my time sixteen years in one institution and fourteen in another." It is painful to record that this versatile and accurate scholar, this bold and industrious investigator, drew to the end of his life in disappointment and unsuccess. It is one thing to know the science of medicine; it is another to understand the art of medicine; it is still another to thrive in the trade of medicine.

Dr. Tully resigned his professorship in Yale College in 1841. In 1851 he removed to Springfield, Mass., where he spent the remainder of his days occupied somewhat in medical practice and somewhat in authorship.

During the whole of Dr. Smith's professorship, and the first year of Dr. Hubbard's, to lecture upon obstetrics was a part of the duty of the Professor of Surgery. In 1830 a separate chair was devoted to this branch, and Dr. Timothy Phelps Beers* was called to fill it. Dr. Beers is

* Timothy Phelps Beers, son of Deacon Nathan and Mary Beers. Born in New Haven December 25, 1780. Died in New Haven September 22, 1858. The family of Deacon Beers showed, among its other members, a curious proclivity to connect itself in various ways with the medical profession. His second son, John, died young, while pursuing medical studies. His third son, Isaac, was for many years, and until his death, an apothecary in New Haven. The three daughters of Deacon Beers all married physicians: the eldest, Maria, m. Eli Ives (*infra*); Abigail, the second, m. John Tittsworth (M.D. Yale College, 1815), who practiced medicine in New Haven and afterwards removed to New Jersey; the youngest, Eliza, m. Charles Hooker (see subsequent memoir). In the next generation the only son of Dr. Beers, T. P. Beers, Jr. (M.D. Yale College, 1847), practiced medicine here and in California; died 1860. Two sons of Isaac, John P. and William I., were for a long time apothecaries here. In the Ives branch, of the three sons of Eli and Maria (Beers) Ives, the first, Nathan Beers (*vide supra*), became a leading practitioner of medicine here for many years; the second, Levi (M.D. Yale College, 1838), has long been at the high tide of activity and public esteem; while the third, Charles Linneus, died as a student of medicine. Their only sister, Maria, m. Henry A. Tomlinson (M.D. Yale College, 1832), who practiced medicine here until his death, 1840. In a still later generation, the only son of Dr. N. B. Ives was Charles Linneus Ives (see subsequent memoir); the only son of Dr. Levi Ives is Robert Shoemaker Ives (M.D. Yale College, 1866), who is now in active practice here; the only son of Dr. Henry A. Tomlinson is Charles Tomlinson (M.D. Yale College, 1862).

still affectionately remembered by many surviving friends and patients as a perfect type of the "family doctor," kindly, cheerful, steady and skillful, devoted to his patients, and implicitly trusted and beloved by them. Nature had molded him in her generous mood, and had not stinted the vital juices in his composition. Had his fitness for his professorship been submitted, as certain questions used to be in the Courts, to a jury of martrons, there would have been no delay in a verdict in his favor. During the whole of his long and industrious medical life he had special repute and acceptance in that branch of practice which he taught in the college, and a considerable portion of our citizens who are between seventy-three and twenty-seven years of age, and "town-born," attained that enviable position under his kindly auspices.

His good qualities shone less conspicuously in the lecture-room than at the bedside. There was no doubt about the soundness and good sense of his teachings, but he was painfully diffident where no man had better right to be confident, and his hearers, borrowing a metaphor from the useful art which he professed, were apt to regard his lectures as illustrations of difficult and protracted delivery.

Nevertheless, as even medical students are not proof against the charm of temperament, the good, amiable doctor was beloved and trusted by his pupils as he was by his patients. That he was not without some gift of imagination, sundry excavations, made at his expense, in the neighboring hills of Orange, alleged copper mines, still remain to testify. Dr. Beers probably embarked in this venture some time before a valuable truth had been formulated in the statement, "There is just enough of every kind of mineral in Connecticut to ruin any man who undertakes to mine for it."

When, in 1838, Dr. Knight was transferred to the chair of Surgery, Dr. Charles Hooker* succeeded him as Professor of Anatomy and Physiology.

The new professor during his fifteen years of medical life had already distinguished himself as a man of untiring industry and energy, and of a capacity for investigation and independent thought which often led him out of the beaten tracks of routine into paths of enlightened experiment. He was an uncommonly useful man in various ways to the profession and to the public. He had "the courage of his opinions" and his confident *dicta*, outspoken without reserve on all occasions, provoked inquiry. If they did not compel conviction, at least they often generated a wholesome antagonism. It was hard to be dull or uninterested in the face of his vivacity.

Some of his peculiar methods of treatment, involving the use of very large doses of powerful drugs to meet great exigencies, were considered extravagant at the time, but have since received the sanction of many eminent practitioners.

As examples may be mentioned his dram doses

of calomel in Asiatic cholera (as long ago as its first invasion of America in 1832, when he seems to have had remarkable success), his half ounce doses of tincture of digitalis in *delirium tremens*, and his free administration of quinine in continued fevers before that practice became common. He was among the earliest cultivators of the diagnostic arts of auscultation and percussion, and assiduously sought to improve them and extend their application, using the stethoscope with an implicit confidence in its revelations that sometimes elicited critical sniffs from older and less enthusiastic doctors, who regarded that instrument as "*inutile lignum*."

Dr. Hooker's mental alertness found expression in a somewhat tumultuous speech, a mixture of hesitation and precipitancy. His lectures, consequently, were not always easy to listen to. There was an odd, jerky, fitting unexpectedness in his movements which used to remind bystanders of some of the more agile rodents, and which gave a startling effect to his surgical operations.

Beside his industrious studies of certain subjects upon which he felt that more light needed to be shed (the mechanism of the sounds of the heart, and the proper system of dietetics in health and in sickness, may be mentioned as two which specially engaged his powers of investigation), he devoted himself to the every-day and every-night duties of his calling with an enthusiasm that never flagged through forty years of incessant work.

No summons mocked by chill delay,
No petty gain disdained by pride.

No man whom New Haven has known, better deserved the honorable title of "physician of the poor," and his hold upon the affections of that class was touchingly exhibited at the public services at his funeral. An emperor might have looked with envy at the tearful concourse that crowded around the coffin of their dead benefactor.

The list of doctors who have taught the people of New Haven to regard their profession as one of philanthropy rather than of money-making is not a short one. It was lengthened by Dr. Hooker. The very modest estate which, after so many years of incessant toil, he left to his heirs, had certainly not been diminished by any extravagance in his way of living. Even the indulgence in fast and showy horse-flesh, which is so often the solitary luxury of doctors of moderate means, was a weakness to which he rose superior. The somewhat ungainly, though useful, brutes which, acquiring something of the temperament of their master, drew his buggy with a sort of fidgety gambol, and which he was apt to regard as endowed with uncommon sagacity and fidelity, were to some of his medical brethren objects of contumelious criticism. Witness the following dialogue:

Scene. "Apothecaries Hall," in those days a frequent rendezvous for the medical fraternity in leisure moments.
Time. Just after the parade of a menagerie having a led rhinoceros for one of its features.

DR. HOOKER.—"I expected the formidable beast to frighten all the horses on the street, but my Dolly went by him fearlessly."

DR. K.—"I dare say, but how did the rhinoceros stand it?"

* Charles Hooker, son of William and Hannah Hooker. Born in Berlin, Conn., March 22, 1793. Died in New Haven March 19, 1863.

In 1852, the chair of *Materia Medica*, which had been most ably filled for ten years by Professor Henry Bronson, became vacant by his resignation, to the regret of all friends of the college. Dr. Worthington Hooker,* of Norwich, was invited to join the Faculty. It was arranged that he should become Professor of the Theory and Practice of Medicine, Dr. Eli Ives exchanging that place for his old Professorship of *Materia Medica*, which he held at the foundation of the college. Dr. Worthington Hooker was a remote kinsman of Dr. Charles Hooker, both having as their earliest American ancestor the Rev. Thomas Hooker, the pastor and leader of the first settlers of Hartford. For twenty-three years Dr. Worthington Hooker had been engaged in the practice of medicine in Norwich. He stood well as a man of general culture, and an enlightened and successful physician, and had beside won a peculiar celebrity as an essayist. The titles of some of his productions, "*Physician and Patient*," 12mo, pp. 422; "*Lessons from the History of Medical Delusions*," 8vo, pp. 105, indicate that his ventures in this direction were less scientific than literary. While he was an undergraduate in Yale College, indeed, he became known as an easy and correct writer, and he maintained and increased this reputation in after life. The gift of a fluent pen is rare enough in the medical profession to make its possessor conspicuous, and to entail upon him some odd jobs, reports, addresses, biographical sketches and the like, that the generality of doctors will shirk. Dr. Hooker seemed to enjoy this sort of occupation. The gentle current of his thought and the easy pace of his pen involved no great attention of cerebral cells nor much manual fatigue. He found his writing become the source of "praise and pudding." Between 1853 and 1865 he produced a series of elementary text-books in various departments of natural science, human physiology, natural history, chemistry, natural philosophy, mineralogy, geology, etc., which attained a merited popularity for their simple and attractive presentation to the youthful mind of the topics treated, and which brought their author a handsome income. He was also an abundant contributor of articles of a scientific, or semi-scientific, character to the periodical press. The editors of the literary and so-called religious weeklies and monthlies came to know him as one upon whom they could rely to furnish matter of that sort in an intelligible and attractive form at short notice. It is commonly the case that this kind of work is done in the shabbiest way, out of the abundance of ignorance, and from a motive as lofty as that which inspires the advertisements of patent medicines in the neighboring columns. It is high praise to say that Dr. Hooker's productions of this sort did not discredit him or the profession to which he belonged.

It is probable that his strictly professional work after his removal to New Haven was never so large or so remunerative as it had been in Norwich.

He might perhaps have felt a sense of disappointment at the change, had not the leisure which it gave him been occupied with these not onerous literary pursuits which in their turn yielded him a substantial solace for the diminution of his fees.

The vacancy left by the unexpected death of Dr. Worthington Hooker was filled by the appointment of Dr. Charles Linneus Ives* as Professor of Theory and Practice of Medicine.

Dr. Ives' advantages of birth and education were great. For three generations before him his ancestor on the paternal side had formed an unbroken line of high authority among the physicians of New Haven. In Yale College, in the professional schools of Philadelphia, and in the great hospitals of New York, he had had the best opportunities America could offer to prepare him for his life's work. During this period of his pupilage, as throughout his life, it was characteristic of him that whatever his hand found to do, he did it with his might. There was a bright alacrity in his way of work and living always, and if natural zest ever failed to attract him, an inexorable sense of duty always stood ready to supply motive power.

He was a devoutly religious man, with an intense feeling of responsibility for himself and for other people, by which, rather than by considerations of expediency or comfort, he was actuated. He had a curiously unhesitating way of attacking situations which men are apt to fight shy of as being knotty and unproductive, or involving troublesome collisions.

Dr. Ives was in his thirty-eighth year when he took this new duty of teaching upon him. He had been for some thirteen years in practice in his native city, and had gained a large share of the respect and confidence of his professional fellows, as well as that more common popular favor which makes itself visible in the length of a doctor's visiting list.

To his intercourse with his pupils, accordingly, he brought a considerable wealth of observation and experience, as well as that native enthusiasm which was one of his most striking traits. It is a trait which greatly endears a teacher to his pupils, an elder to his juniors. Sharp statements, if not of fact, at least of opinion, with no trimming of qualifications; apt to stick fast in the memory, easy to jot down in the note-book—these are the delight of the learner, especially in medicine, where as yet there are too many regions in which of necessity he wanders darkling.

That agnosticism in therapeutics, which was somewhat fashionable for a while not long since, and which its apostles seemed to regard with complacency as a mark of intellectual superiority, has never prevailed in New Haven. Dr. Ives at least was free from it—it was foreign to his nature to be lacking in positive convictions on any subject to which he turned his serious attention.

Satisfactory as his relations in the college were to

* Worthington Hooker, son of John and Sarah (Dwight) Hooker, Born in Springfield, Mass., March 2, 1809. Died in New Haven November 6, 1867.

* Charles Linneus Ives, son of Nathan Beers and Sarah (Badger) Ives. Born in New Haven June 22, 1831. Died in Burlington, N. J., March 21, 1879.

his colleagues and to his pupils, it was often painfully obvious that his eager and generous spirit "o'er informed its tenement of clay." Ever since his youth he had striven resolutely against falling into an acknowledged state of invalidism. His ill-health led him to resign his professorship in 1873, after five years of occupancy.

On the same account he shortly afterward removed from New Haven and withdrew from medical practice. He accepted, however, the offered professorship of Diseases of the Nervous System in the University Medical College of New York, and went to Europe to make special study of that subject. Owing to the continued failure of his health, he was never able to enter upon the duties of that appointment.

Dr. Ives found a congenial occupation during the latter years of his life in the production of a book, "The Bible Doctrine of the Soul," embodying the results of some theological study and speculation to which he was long addicted. His taste for this sort of mental occupation might perhaps be referred back to his sound Puritan ancestry, though the outcome of it as exhibited in his book would scarcely have satisfied the orthodoxy of a century earlier.

As early as May 8, 1826, at a meeting of the New Haven Medical Association, held at the house of Dr. John Skinner, formal action was taken in regard to "the hospital." A committee of six members of the association was appointed to solicit subscriptions for the projected institution, and certain resolutions descriptive of it and providing for its organization were voted upon.

It was especially declared at the outset that "the hospital shall be a charitable institution, and no physician or surgeon shall receive any compensation for his services."

It is probable that already, before this meeting, a petition for a charter for this hospital had been presented to the Legislature, for, on the 26th of the same month, "An Act to Establish a State Hospital" was passed by that body. In it were named as corporators, ten well-known gentlemen, all but one of them being members of the Connecticut Medical Society, four of them being of the Faculty of the Medical College as well. When, nearly a year later, these corporators first met for the purpose of organizing, they elected a board of twelve directors, of whom only one was not a member of the Connecticut Medical Society. Still later, in the next year, an application to the Legislature for a grant of money in behalf of this hospital having proved futile, the public were urgently appealed to for help. Here, too, the initiative was in the medical fraternity. Four of the Faculty of the Medical College headed the subscription list, three of them giving each \$500, and the fourth, who had just become a resident of New Haven, and been added to the Faculty, giving \$120. In the entire list of subscriptions from all over the State of Connecticut, there was but one other of \$500.

It was a day of small things; money came in

the scantiest dribblets, and during the more than four years which elapsed before the hopes of the enterprising and persevering projectors began to be materialized in stone and mortar, there must have been some times when they felt themselves weighed upon with the heaviness of discouragement.

The criticism was freely offered that the undertaking was quite unwarranted by any present need of New Haven or of Connecticut, and indeed something of a prophetic spirit was required to animate the promoters to such an extensive discounting of the future. There are always some advantages, however, in being in advance of the times in such a business. The chief of these advantages is obvious to-day in the noble and well-situated tract of land upon which the hospital stands, and which the founders of this institution bought for a sum which now seems incredibly small. If the acquisition of a site had been delayed many years, it is probable that the hospital would have been given either less ample breathing room or a less central position.

Somewhat countervailing this advantage was the fact that the science and art of hospital building was then undeveloped. It was a time when architecture fondly supposed itself to be Grecian, and the merits of any considerable building were largely determined by the extent of portico that it could offer to the admiring gaze of the public. Commonly the portico, however massive in dimensions, was so airily constructed of pine boards as to give little trouble to subsequent generations; but the majestic Doric structure *in antis* which prefaces the entrance to the New Haven Hospital was built of the same solid masonry as the walls of the building which it was intended to adorn, so that, in spite of all objurgations directed against it as an obstructor of air and light, it still remains, like Teneriffe or Atlas, unremoved.

The original hospital building, including the portico, cost something less than \$13,000. Inconsiderable as this sum now appears, the capacity of the building was so greatly in excess of all demands upon it for many years, as almost to justify the caviling of those who had found convenient excuses for not lending a helping hand at the outset. The directors gained a small revenue by renting some of the rooms for the storage of household furniture. In January, 1843, they were glad to rent the upper story of the south wing to Dr. James Gates Percival. This remarkable man established his abode there, fortifying his castle against intrusion in a sort of Robinson Crusoe fashion, and for some eight years continued there unmolested in his favorite pursuits, the study of languages and geology, and the production of copious and fluent rythmical compositions which were by many confidently believed to be in the nature of immortal verse. Some of these may still be read by those curious in such matters in the "Poetical Works of J. G. Percival," or scattered here and there through certain "Poets of Connecticut," "Poets of America," and the like compilations.

The demand of the community slowly grew up

to the supply of the hospital, so that in 1851 the directors requested the owners of furniture stored in the hospital to remove it, as it was occupying rooms needed for patients; and in the same year, and for the same reason, a committee was appointed "to secure the removal of Dr. Percival." The wording of the record would seem to indicate that his departure was not without a degree of reluctance,

The parting Genius was with sighing sent.

Few hospitals, it may be confidently asserted, can claim the distinction of having kept a poet in the upper story in a state of siege for eight years.

It is not intended to give here even a brief account of the changes and vicissitudes in the history of the hospital to the present day; suffice it to say that its career has been one of pretty continuous growth and improvement.

The great enlargement of the hospital in 1873 attracted attention to the importance of the institution as a factor in society. The establishment in connection with it, about the same time, of the Connecticut Training School for Nurses, bringing in a radical and most necessary improvement in its care of the sick, has won for it of late years a large measure of the popular interest and favor which was long withheld from it, so that it is now generally recognized as one of the most deserving, as well as indispensable, of the local charities.

It is true of most hospitals, however richly endowed with funds they may be, that the services gratuitously rendered them by their surgeons and physicians, if reckoned at the ordinary market rates, are, from that point of view merely, a greater gift than all money donations. This rule applies

with peculiar force to the New Haven Hospital, which in its early life never felt the stimulus of any large individual bounty, but which was originally the child, and for many chill and anxious years the nursing of the medical fraternity almost exclusively.

There is a peculiar pleasure, too, in saying that among the many generous gifts of money to the hospital of late, some of the most munificent come from a physician whose good-will to the institution may be due partly to his own service on its medical staff in his more active days, and partly to the devoted fidelity in the same cause of his lamented son, Dr. Stephen Henry Bronson,

Whose virtues Death mistook for years,

and whose untimely removal in the midst of his labors must be counted one of the heaviest personal losses ever suffered by the medical profession in New Haven.

During the few years of the younger Dr. Bronson's service in the hospital he learned to value the institution justly for the opportunities it afforded him for that orderly and systematic investigation which was the pleasure of his life, and he loved it for the beneficent work in the relief of suffering it enabled him to do. Throughout a large part of his short but useful and honorable career, and up to the very day of his sudden demise, much of his time and energy was spent in and for the hospital.

In the esteem of those who knew him best, his name, shadowed though it is with the pathos of unfulfilled hopes, stands fitly and gracefully at the close of this brief record of the departed worthies of the medical profession in New Haven.

LIST OF PHYSICIANS AND SURGEONS.

Some of the best known physicians of New Haven not professing any peculiar or exclusive method of practice are:

- *Ailing, Willis G. 188 Orange street.
 - *Ayres, W. O. 38 High street.
 - *Bacon, Francis. 32 High street.
 - *Beckwith, F. E. 130 Church street.
 - *Bellona, Frederick. 126 Court street.
 - Billingham, Walter A. 13 Kimberly avenue.
 - *Bishop, E. Huggins. 215 Church street.
 - *Bishop, Timothy H. 215 Church street.
 - *Bissell, Evelyn L. 8 Orange street.
 - *Bradley, William L. 203 Crown street.
- Estab. at New Haven, Conn., June, 1865. Grad. Yale Coll. B.A. 1860; M.D. 1864. In 1863 served in U. S. A. as Acting Medical Cadet and Acting Asst. Surg. at McKern's Mansion Hospital, Baltimore, Md.; 1865-77 Demonstrator of Anatomy Med. Dept. of Yale; 1871-81 Attending Phys. and Surg. N. H. Hospital. Has also filled the following official positions: Phys. to N. H. Dispensary; Sec. and Vice-Pres. N. H. Med. Association; Director and member Prudential Committee N. H. Hospital; Member Executive Committee Conn. Training School for Nurses, and its Examiner for Graduation. Has published a number of papers on medical and surgical subjects.
- *Bronson, Henry. 1198 Chapel street.
 - *Carmalt, William H. 87 Elm street.
 - *Carrington, Henry A. 1169 Chapel street.

- *Chapman, S. H. 193 Church street.
- Crane, Robert. 213 Orange street.
- *Creed, C. V. K. 107 Orchard street.
- *Cremin, M. A. 129 Olive street.
- *Daggett, David L. 60 Wall street.
- Daggett, William G. 22 College street.
- De Forest, L. S. 24 College street.
- *De Forest, William B. 259 Orange street.
- Dibble, Charles. 139 Elm street.
- *Dibble, Frederick L. 121 Elm street.
- Doherty, James Joseph Stanford, 7 and 9 Sylvan ave. Estab. Meriden, Conn., April, 1874. Visiting Physician New Haven County Prison, 1878-80; Registrar of Vital Statistics, 1877-78, 1880-85, resigning the position October, 1885.
- *Doutteil, Henry. 22 Broad street.
- *Downs, C. Manville. 208 Wooster street.
- Dwight, Edward S. 2 Orange street.
- *Eliot, Gustavus. 163 Orange street.
- Estab. 157 Orange street, New Haven, Feb. 13, 1882. Grad. Y. C. 1877; from Coll. of Phys. and Surg., New York, 1880; M.A. Yale Coll. 1882; Attending Phys. to the New Haven Dispensary. Contributor to various medical journals.
- *Farnam, George B. 37 Hillhouse avenue.
- *Fitch, Clarence L. 155 Wooster street.
- Grad. Dart. Med. Coll., 1882.
- *Fleischner, Henry. 928 Grand avenue.
- *Foster, John P. C. 109 College street.
- *Gilbert, Luther M. 54 Olive street.
- *Gilbert, Samuel D. 134 Grand avenue.

- *Hawkes, William Whitney . . . 35 High street.
Y. Coll. B.A. and M.D.; House Physician and Surgeon Conn. Gen. Hospital 1881-82; then a partner with Dr. C. W. Gaylord, in Branford, till January 1, 1884, when he located in N. H.
- *Hotchkiss, W. H. . . . 137 Church street.
- *Hubbard, Stephen Grosvenor . . 23 College street.
A.M., M.D.; grad. Dart. Coll. 1843; member City and State Medical Societies; British Medical Association; Edinburgh Obstetrical Society; Boston Gynecological Society; American Medical Association; and for sixteen years Professor of Obstetrics and Diseases of Women and Children in Yale College.
- *Ives, Levi . . . 339 Temple street.
- *Ives, Robert S. . . . 347 Temple street.
- *Jewett, J. Waldo . . . Tontine Hotel.
- *Judson, Walter . . . 199 York street.
Settled since 1871 in New Haven, Conn. Born in Bristol, Conn., May 1, 1840; fitted for college at Williston Seminary, E. Hampton, Mass.; grad. Y. C. 1864; grad. Coll. Phys. and Surg., N. Y., 1870; *interne* in Bellevue Hospital, New York, 1870-71; is Consulting Phys. at the State Hospital.
- *Lambert, Benjamin Lott . . . 258 Portsea street.
Estab. in N. H. 1883. Son of Denison D. Lambert, a real estate broker of New Haven, who died in 1871; was born and reared in New Haven, Conn.
- *Leavenworth, D. C. . . . 75 Howe street.
- *Leighton, Alton Winslow . . . 117 Elm street.
Estab. April, 1880. Author "Sanitary Training in the Public Schools" in *New Englander* for March, 1885, and other sanitary articles; member of Council of Section of Public and International Hygiene of Ninth International Medical Congress, to convene at Washington in 1887; employed by many of the profession of the State to paint views in water colors and oils of operations, pathological appearances, etc., requiring technical interpretation; in charge of clinic for diseases of women at New Haven Dispensary for three years; member Committee on Public Hygiene N. H. County Med. Soc., 1884; first in State to operate and report operation for ovarian cystoma, accomplished with the most modern antiseptic precautions, including the following specially distinctive points: catgut pedicle ligatures, catgut abdominal sutures, mercuric bichloride sterilizing solution, perfect union of abdominal incision under a permanent dressing. See Proceedings of Conn. Medical Society, 1885.
- *Lewis, B. S. . . . 1093 Chapel street.
- *Lindsley, C. A. . . . 15 Elm street.
- *Lindsley, C. Purdy . . . 15 Elm street.
- *Lines, J. F. . . . 818 Chapel street.
- *Luby, John F. . . . 667 Grand street.
Estab. 1882. Ph.B. Yale Coll. 1876; M.D. Coll. of Phys. and Surg., New York, 1878; served fifteen months in St. Mary's Hospital, Brooklyn, N. Y., and nineteen months in St. Vincent's Hospital, New York.
- *Mailhouse, Max . . . 151 Meadow street.
- *Nicoll, John . . . 11 College street.
Estab. in N. H. 1854.
- *O'Connor, Matthew C. . . . 625 Grand avenue.
- *Osborn, O. T. . . . 111 York street.
- Oulman, Alphonso . . . 104 Olive street.
- *Park, Charles Edwin . . . 132 Olive street.
Estab. June 31, 1881. Member and Secty. New Haven County Medical Society; Attending Physician to New Haven Dispensary.
- *Pierpont, Henry . . . 264 York street.
Estab. at Naugatuck, Conn., 1854-60; in N. H. 1861.
- Reilly, James M. J. . . . 337 Cedar street.
Grad. Yale Med. School 1878; attended lectures at Coll. of Phys. and Surg., N. Y., 1878-9; commenced practice in N. H. in the spring of 1879.
- *Roberts, Edward K. . . . 244 Grand avenue.
- *Ruickoldt, Arthur . . . 71 Olive street.
- *Russell, Thomas H. . . . 137 Elm street.
Now Professor of Therapeutics and Materia Medica

in Yale Medical Department, and Surgeon to Connecticut State Hospital; grad. Yale Scientific Department, Ph.D., and from Yale Medical Department M.D.; is a member of the City, County and State Medical Associations.

- *Sanford, Leonard J. . . . 216 Crown street.
- Sears, James W. . . . 24 Prince street.
- *Seaver, Jay W. . . . 233 York street.
- *Smith, Herbert E. . . . 29 Beers street.
- Smith, Marvin . . . 7 Pearl street.
Estab. Northampton, Mass., 1883; rem. to N. H. 1884.
- Sprenger, William . . . 50 George street.
- *Stetson, James E. . . . 106 High street.
- *Thacher, James K. . . . 206 Crown street.
- *Thomson, William H. . . . 121 Grand avenue.
- *Wheeler, Frank Henry . . . 188 Crown street.
Grad. Y. Coll. 1880; Yale Med. Dept. 1882; at present is Assistant in Pathology at Yale Med. School.
- White, Caryl S. . . . 48 College street.
- *White, F. O. . . . 514 Howard avenue.
- *White, Moses C. . . . 48 College street.
- Whiting, William J. . . . 18 Ashman street.
- *Whittemore, Frank H. . . . 148 Orange street.
- *Williston, Samuel W. . . . 92 York square place.
- *Winchell, Alvord E. . . . 6 Pearl street.
- *Wright, Frank W. . . . 24 Pearl street.

Of the above named, those marked with a star are members of the Connecticut Medical Society.

HOMEOPATHY AND ITS HISTORY IN NEW HAVEN.

By Paul C. Skiff, M.D.

In writing even a condensed history of the homœopathic system of practice of medicine in New Haven, it seems necessary, to a full understanding of the subject, to refer briefly to its origin and the circumstances under which it was developed, and to define briefly what homœopathy is.

Dr. Samuel Hahnemann, a German scholar, of acknowledged ability as a chemist, a linguist, a practitioner of medicine, and an extensive writer upon medical subjects, while engaged in translating medical works of various authors, and more especially Cullen's *Materia Medica*, into the German language, was forcibly impressed with the contradictory theories prevailing in regard to disease, and the varied specific pathological action ascribed to remedies in its treatment and cure. No two authors agreed as to the nature or treatment of diseases, and each ascribed different remedial action to the same remedy, in its application to diseased tissue.

The same diversity of opinion existed in the minds of the general practitioner.

In his minute analytical chemical experiments, Dr. Hahnemann saw that one element combined with another either neutralized its action, or such combination formed a new agent, differing in its action from either of the separate elements. Hence his mind was impressed with the absurdity of the custom of the general practitioner in mixing several remedies as ingredients in the same prescription for the purpose of meeting the several indications called for by manifest symptoms.

The system of combining several remedies indiscriminately in the same prescription, from observation and experimental knowledge he pronounced to be unscientific, a matter of guess-work, and without any possible chance on the part of the pre-

scriber to know what chemical agent he has made in these several combined elements; or to know, or even to guess at, what their effects shall be upon the disturbed forces of health.

The only rational system of prescribing for the sick he pronounced to be, first, to know the effect which the remedy prescribed has upon the system in a state of health; and to gain a full knowledge of this, it is necessary to have had its effects proved by having been administered to various persons in health and under various circumstances, and the results compared and noted; and inasmuch as a multiple remedy could not be proven in this way with accuracy, a single remedy only, thus proven, should be given at a time.

Thoroughly inspired with the soundness of this belief, he commenced testing the action of remedies upon himself, and making a full and minute record of their effects upon the system in general, and upon each particular organ and its functions.

During the progress of his experiments, he ever kept in mind the thought that there might be found a law in the action of remedies upon the system in health by which to be governed in their administration in disease.

This law revealed itself to his mind in an impressive manner. While experimenting with preparations of cinchona and noting its drug action upon himself, he observed that there were present, while under the influence of this drug, all of the manifest symptoms of the intermittent type of fever for which it was so universally recommended and used to cure. This led him into a broader field of research, to ascertain the therapeutic action of specific remedies of acknowledged repute in curing specific diseases.

He was rewarded in this investigation by ascertaining that every specific remedy of accepted merit in the cure of any specific disease, produced in the system, when administered to it in a state of health, the identical morbid condition for which it was given as a cure.

By the comparative provings of different remedies upon himself and others, and thus obtaining the correct drug-action of each individual remedy, and applying them to morbid symptoms corresponding to those mirrored out by the drug effects of a given remedy upon the system in a state of health, and noting the results, he established in his own mind the fact that the law of similars in the application of remedies to disease was the only known law by which the physician could be governed in selecting his medication for the sick.

These, in brief, are the circumstances under which the homœopathic system of practice of medicine was made known and given to the world.

But he soon ascertained that in administering remedies to the sick, upon the law of similars of sufficient strength to produce drug action, he universally obtained an aggravation of the symptoms; hence he found that curative results were obtained from smaller doses.

He also ascertained by experiment, that curative action was imparted to remedies by a division and subdivision of their particles.

Homœopathy, in brief, means, as propounded by its founder, that no remedy should be given to the sick that has not been fully proven upon persons in health; that the division and subdivision of the particles of a remedy increases its curative action; that the curative action of a remedy does not require it to be given in sufficient quantity to produce its manifest drug symptoms; that the only known law to guide the practitioner in selecting his remedy is the law of similarity of the drug symptoms obtained in a condition of health to the symptoms found in a condition of disease.

It has seemed necessary to give this preliminary explanation and qualification of homœopathy, because of the apparent ignorance, even at this late date, of what its claims are, and in consequence of a prevailing prejudice against it—the prevailing idea being that homœopathy means, simply, infinitesimal doses; whereas it gives to the prescriber all the latitude he desires as to the potency of his remedy; observation and comparative experience being the judge as to the curative quantity.

Mechanical and external appliances have nothing to do with medication; these are ever allowable as aids and helpers.

It ever and only proclaims that if the Hahnemannian law of similars is not a law to be followed as a guide in the treatment of disease, there is no law. The practice of medicine is not a science, but rather a system of individual experimentation and guessing.

In writing the history of the birth and progress of homœopathy in New Haven, we virtually write its birth and progress in this country, so far as it relates to time, the obstacles to its growth, and the prejudices of the so-called regular medical profession against it.

Probably no creed of Church, State or Medicine in its early history ever received the ostracism of its opponents that homœopathy did during the first few years of its progress in New Haven.

The ban not only fell upon the practitioner himself, but with equal vindictiveness upon his patrons. Church welcome and fellowship was denied to the practitioner and his family; society did not court him. He was frequently requested to make his calls in the night, or on foot, because of what the allopathic neighbors might say. When by mistake, or from some other cause, he hitched his horse in front of a house, other than that of his patient, he was requested to remove it.

A prominent physician belonging to the faculty of Yale, in a public medical meeting, when in discussing professional courtesy, said he would not under any circumstances notice or in any way recognize a homœopathic physician; nor would he allow a member of his family to associate with those who patronized him.

Another prominent physician, in his inaugural address on his appointment to a chair in the medical department of Yale, said that it was an insult to the medical profession for clergymen, or men occupying any prominent position in the Church or society, in any way to give countenance to the

system of quackery designated by the name of homœopathy. And he would stake his professional reputation upon the assertion, that within five years after he had settled in New Haven he would so influence public sentiment against it, that no physician of that practice would be tolerated in the community.

The State Medical Society had caused a law to be passed by the Legislature, whereby the medical services of a homœopathic physician could not be called legal service; and hence he could not legally collect fees for the same.

Such were some of the outward manifestations of the bitterness of feeling on the part of the medical profession prevailing against homœopathy in its early days in New Haven. And all of this forsooth, because homœopathy had stepped forth and proclaimed that in the chaos of the medical profession it had discovered a simple law by which the practitioner could be guided in selecting his remedies for the sick.

Dr. Charles H. Skiff was the first physician who introduced the practice of homœopathy into New Haven. He was born in Spencertown, Columbia County, N. Y., May 12, 1808. He received his medical education at the Berkshire Medical School of Williamstown, Mass., graduating September 5, 1832. He immediately commenced the practice of medicine in his native town, where he remained in full practice for about six years, when he was stricken down with a severe lingering illness, during which, in the treatment of his case, his attention was directed to the homœopathic law of cure; and believing that his life was saved by the use of remedies applied through this law, he most enthusiastically adopted it as his guide for the future in the treatment of disease.

In the year 1842, having fully recovered from his sickness, he moved from his native town to Albany, N. Y., to practice medicine upon his newly adopted theory. He remained in Albany one year, when, through the urgent solicitations of the Rev. Dr. Croswell, who was then in the zenith of his popularity as a preacher and pastor over Trinity Church, in 1843 he moved from Albany, and on the day on which Samuel Hahnemann, the propounder of the new medical faith, died in Paris, he opened an office in New Haven, where he remained in active practice, with the exception of two years, until his death, December 11, 1875. His practice was at first confined mostly to chronic cases, and those which the regular practice had failed to cure; but his success in treating these cases was such, that he soon gained the confidence of his patrons and was called to treat all classes of disease, even those of the most acute and alarming type; and his success in treating cases of this nature was such, that when the Rev. Dr. Croswell was expostulated with by the prominent allopathic physicians for defending and recommending this infinitesimal practice to his flock, his answer was "Gentlemen: If Dr. Skiff, in his system of practice gives no medicine, but, as you claim, it is a mere system of faith, I advise you to throw your physic to the dogs and adopt it; for under my

observation a far greater number of patients under his treatment recover, and recover more speedily under the same circumstances than under your treatment. And if it is faith that cures, your medicine is an evil, which should be discarded."

He was a close student of symptomatology and the pathological action of remedies, and his prescriptions in frequent instances were marvelous in their curative results, so that, in consequence of his acknowledged success, he had gained the deepest enmity of the prominent allopathic practitioners and they were only hoping for an epidemic of a malignant form to appear which would bring this phantom to a test and bury it in its own inefficiency.

That hope was soon realized, in the advent of an epidemic of dysentery of the most malignant type, spreading through the city and places adjacent to New Haven. But its results in putting homœopathy to a test were saddening to their ardent hopes, for the cures under homœopathic treatment during this epidemic were four to one in its favor.

This was, of all other diseases, the one to be desired by homœopathy to prove its merits.

The system of bloodletting, stimulants and opiates had proved a fatality.

The mild law of similars, put to the severest test, proved a success.

In the year 1849, Dr. E. T. Foot, of Jamestown, N. Y., a man prominent there as a jurist as well as a physician, espoused the cause of homœopathy, and moved to New Haven and associated himself with Dr. Skiff in practice, the copartnership lasting two years, when he opened an office by himself.

In the year 1853, Dr. Charles Foot, a son of Dr. E. T. Foot, a graduate of Yale and the Medical University of New York, associated himself with his father in practice.

The same year, Dr. J. Lester Keep, a prominent allopathic physician of Fair Haven, became a pronounced homœopath, and instead of his practice diminishing, as predicted by his friends in consequence of the change, his over-taxed system soon broke down under his accumulated practice.

In the year 1859, Dr. Paul C. Skiff, a cousin of Dr. Charles H. Skiff, a graduate of Yale, and a post-graduate of the Jefferson Medical School of Philadelphia, took Dr. Charles Skiff's office, he having moved to Brooklyn, N. Y. Dr. Charles, after remaining in Brooklyn two years, returned again to New Haven.

In the early days of homœopathy, when its literature was limited, the physicians met at each other's offices frequently, by appointment, and gave to each other their experience in the treatment of cases and the action of individual remedies, and thus established each other in their faith.

Homœopathy did not, as predicted, fail to meet the expectations of its friends, but rather continued to establish itself more and more in the confidence of the public. One after another has been added to the ranks of its practitioners in New Haven, until they now number, in 1886, about twenty-five, all in successful practice.

Public opinion has long since placed the two schools of medicine upon the same platform, so far as legislation and equal rights are concerned.

Some years since, the Legislature of the State, voted to appropriate from its treasury, towards erecting and endowing a homœopathic hospital in New Haven, a sum equal to that which should be raised by private subscription or municipal appropriation, but the physicians have all been too busily occupied in their profession to take advantage of the generous offer.

The former professional prejudices have nearly all passed away, and the physicians of the two schools meet on friendly terms. This is evident by the fact, that at the last stated medical meeting of the Allopathic Society, it was voted to invite the homœopathic physicians to unite with them, in securing the enactment of a law for the suppression of quackery in the State.

Thus in medicine, as well as in all other matters, the world is moving on towards the truth.

HOMŒOPATHIC PHYSICIANS PRACTICING IN NEW HAVEN.

C. B. Adams, M.D.	175 Grand avenue.
Wm. D. Anderson, M.D.	150 Temple street.
Benjamin H. Cheney, M.D.	45 Elm street.
Studied at Amb. Coll. Pursued study of Medicine at Coll. Phys. and Surgs., N. Y. City, and grad. at Univ. of Louisiana, New Orleans. Served as Assist. Surg. in the Army about three years, and afterward as Exam. Surg. in Provost-Marshal's Bureau until close of War. Practiced in Chicago, and located in New Haven in 1872.	
Mariette Cowles, M.D. (Mrs.)	212 Wooster street.
C. A. Dorman, M.D.	541 Howard street.
Edwin O. M. Hall, M.D.	South Quinnipiac.
Adelaide Lambert, M.D. (Miss)	138 St. John street.
A. A. Lee, M.D. (Mrs.)	1157 Chapel street.
Isaac S. Miller, M.D.	818 Chapel street.
Established, N. Y. City thirty years ago. Rem. to Hartford, Conn. in 1870; practiced there until three years ago, when he removed to New Haven.	
W. H. H. Murray, M.D. (Mrs.)	189 Church street.
Charles Rawling, M.D.	346 Howard street.
William W. Rodman, M.D.	1081 Chapel street.
William H. Sage, M.D.	42 College street.
Paul C. Skiff, M.D.	664 Chapel street.
Walter C. Skiff, M.D.	664 Chapel street.

Charles W. Vishno, M.D.	Grand and N. Quinnipiac.
E. J. Walker, M.D.	1136 Chapel street.

HISTORY OF THE PRACTICE OF MEDICINE IN NEW HAVEN BY PHYSICIANS OF THE ECLECTIC SCHOOL.

By George Andrews, M.D.

The first of the Eclectic School of physicians to locate in New Haven was Dr. BENNETT W. SPERRY, who commenced the practice of medicine in this city about the year 1834.

Naturally a man of good abilities, he applied himself diligently to the practice of his profession, meeting with strong opposition on every hand, and,

in spite of ill-health, which curtailed his efforts in his later years, he achieved great success.

Dr. Sperry was a firm believer in the reform movement, and called to order the first Reformed Medical Convention held in the State in 1836.

Besides the office of President, he held many other important positions in connection with the Reformed Medical Society, all of which he filled with honor, and was a respected and useful citizen until he succumbed, in 1841, to the disease against which he had fought for several years.

Dr. SELDEN SPRAGUE, who studied medicine with Dr. Sperry, opened an office for himself in 1841 upon the death of Dr. Sperry, and was the next physician of the Eclectic School of note in New Haven. Dr. Sprague was a genial, kind and companionable man, attracting to himself many and strong friends; at the same time he was a bold practitioner, and never failed to employ the most heroic treatment known to medical science if he felt that the welfare of the patient required it. After twenty-seven years, in the zenith of his glory and success, he passed away, having ever been an ornament to a noble profession.

Among other eclectic physicians were ISAAC J. SPERRY, brother of Dr. B. W. Sperry, who became secretary of the first medical society formed, and was the editor of the first medical journal published under the patronage of this society. He also became president of the society, and was a man of great determination and will. Dr. RICHARDSON was also associated with Dr. Sperry for a short time. Dr. H. R. BURR and Dr. CHAMBERLAIN were also in successful practice in the city. Dr. H. I. BRADLEY, still actively engaged in practice, and who was compelled to retire in consequence of failing health for some years, was one of the most successful of the Eclectic School of practice.

The next physician of the Eclectic School to locate in New Haven was Dr. GEORGE ANDREWS, the first graduate of an eclectic medical college to practice medicine in this city. Graduating at the Worcester (Mass.) Medical Institute in 1850, he has been in practice from that time until the present, with the exception of a few years in which ill-health compelled him to seek employment demanding labor and exposure. Consequently he was engaged in the regular drug business until he regained his health, since which time he has continued the practice of his profession with marked success. Dr. Andrews was President of the Connecticut Eclectic Medical Association in 1885-86, also a member of the National Eclectic Medical Association.

DRS. GILES N. LANGDON and JAMES H. ROBINSON were in successful practice for many years, making a large number of friends from their genial ways and warm-hearted sympathy for their patients. Dr. J. H. Robinson, by mistake, March 5, 1881, took a fatal dose of gelsemium, which terminated his life in a few hours. Dr. EBENEZER ROBINSON and Dr. WILLIAMS have been also located in this city.

One of the most successful eclectic physicians is Dr. M. F. LINQUIST, who for seventeen years has enjoyed one of the largest and most lucrative prac-

W. A. G.

Levi Ives

tices in New Haven. He was born at Gottenburg, Sweden, in 1825; is a graduate of the Medical University at Brussels, Belgium. Emigrated to the United States 1848; and graduated at New York Eclectic College. Established himself at New Haven March, 1869. Has been President of the State Association, Vice-President of the National

Association, and has filled for years other positions with much credit.

Dr. J. H. HUTCHINSON was quite recently located in this city. He is a graduate of the Bennett College, of Chicago, Ill. Dr. J. W. CUMMINGS, formerly of Worcester, Mass., is also located in practice here.

BIOGRAPHIES OF PROMINENT PHYSICIANS OF NEW HAVEN.

ELI IVES, M.D.

William Ives was one of the original settlers at Quinnipiac, and his descendants have made the name prominent in the town's history.

Besides the distinction which has always attached itself in New Haven to the "town-born," the family of Dr. Eli Ives has possessed for more than a century a professional skill and fame which may now be fairly called hereditary. For four consecutive generations the son has succeeded the father in the successful practice of medicine. The second in the series was the subject of this memoir, Eli Ives, who was born at New Haven February 7, 1779, the son of Dr. Levi Ives and of Lydia (Auger) Ives. The father was a physician of rare qualifications and wide practice. He served as a surgeon in the Continental Army, was with General Montgomery at Quebec, and died in New Haven in 1826, full of years and honors.

The son was of a studious, yet resolute nature. He prepared for Yale College, partly through his own exertions and partly under the tuition of Rev. A. R. Robbins, of Norfolk, Conn. He graduated in 1799, a class-mate of Professors J. L. Kingley and Moses Stuart. For two years he was Rector of the Hopkins Grammar School. Declining the offer of a tutorship at Yale, he applied himself at once to preparation for his profession, and studied the theory and practice of medicine with his father and with Dr. Eneas Munson, a noted physician and citizen, and a man of unusual attainments in botany and chemistry. Dr. Ives also attended the lectures of Drs. Rush and Wooster in Philadelphia. In 1801 he began to practice in New Haven, and achieved success from the outset. He was influential in founding the Yale Medical School. That institution was organized in 1813 with a staff of five instructors. Dr. Ives was the Associate Professor of *Materia Medica* and Botany, and he performed all the duties of that department for sixteen years. He devoted much time and persevering labor to the establishment of a Botanical Garden, which stood on the ground now occupied by the Sheffield Buildings.

In 1829 he was transferred to the Department of the Theory and Practice of Medicine, in which position he remained until 1852, when he resigned on account of age and infirmity. During the thirty-nine years of his connection with the Medical School, about 1,500 students received instruction from him. He was interested in scientific agriculture and horticulture; was President of the Hor-

ticultural and Pomological Societies; and was an active promoter of the Sheffield Scientific School.

He sought after truth in all its forms, and recognized the common bond which connects all sciences and arts. In token of his thorough and accurate knowledge, he was the recipient of many diplomas and degrees from associations at home and abroad, but with characteristic modesty he refused to make use of such titles. His memory was tenacious, and afforded him a wide knowledge of *materia medica* and of scientific literature. He was distinguished for his clear insight and bold treatment of difficult cases. In his use of remedies he was independent.

Upright and honorable in his profession, he befriended his younger brethren and aided to introduce improvements in medical science. Prominent in the formation of the New Haven Medical Association, he was an active friend of the State Medical Society, and in his old age was President of the National Medical Society.

He lived a Christian life and was ever zealous in furthering the work of the Church. In September, 1808, he joined himself in communion with the North Congregational Church. Humane and catholic in his sympathies, he entered heartily into the anti-slavery movement, and was a consistent friend of the total abstinence reform.

September 17, 1805, he married Maria, daughter of Dr. Nathan and Mary (Phelps) Beers. Five children were born to them, of whom only two survived their father. His death occurred on October 8, 1861.

LEVI IVES, M.D.

Much that has been said of the father, Dr. Eli Ives, is also true, with changed names, of the son, Dr. Levi Ives. He was born in New Haven on the 13th of July, 1816. His mother, Maria Beers, belonged to a prominent and patriotic New Haven family. Her father, Nathan Beers, saw seven years of service in the Revolutionary Army, so that both of Dr. Ives' grandfathers aided their country to gain its independence. As an adjutant, Mr. Beers had charge of Major André on the night before that ill-fated officer's execution. During the hours of that night Major André drew a pen-portrait of himself which he gave to Mr. Beers. It is now deposited in the Yale Art Gallery.

Levi Ives studied at the Hopkins Grammar School, and took a partial course of instruction at Yale. In 1834, he commenced the study of medicine under the guidance of his father, and after-

wards continued his investigations in connection with the Yale Medical School, from which he graduated in February, 1838. After a year and a half spent in observation and the acquisition of experience at Bellevue Hospital, he joined his father in the practice of medicine at New Haven.

The high hereditary fame of his family suffered no detriment at his hands. He made obstetrical cases a specialty, and soon obtained an immense practice. His undoubted skill, quick judgment, and cheery genial disposition, combined to secure for him then, as now, not only many patients, but also hosts of friends.

At the zenith of his reputation as a specialist, he decided to discontinue his exclusive devotion to one particular branch of his science. He widened the range of his vocation, and entered upon the larger field of the general practice of medicine. Success still waited upon him. The reputation which his father and grandfather had gained, he has fully sustained.

He is Consulting Physician and Surgeon to the Connecticut State Hospital; a member of the New Haven Medical Association, in which he has been President; he is also a member of the Connecticut Medical Association, and of the American Medical Association, to which he has frequently been accredited as a delegate. For many years he has been included among the members of the Connecticut Academy of Arts and Sciences.

In June, 1841, he was joined in marriage with Miss Caroline Shoemaker, daughter of Elijah Shoemaker, of Wyoming Valley, Pa. The grandfather of this lady, Elijah Shoemaker by name, was one of the victims of the memorable Wyoming massacre. The only child of this marriage is Robert Shoemaker Ives, who was born in April, 1842. He graduated from Yale College in 1864, and now, like his grandfather, bears the titles of A. M. and M. D. He observes and continues the traditions of his family by establishing himself in New Haven, near his honored father, in the practice of medicine.

DAVID A. TYLER, M.D.

The life of a physician is usually far removed from the light of public notoriety. He who chooses the practice of medicine, chooses to earn his reputation in the quiet domestic circle, and not in the vast and clamorous whirl of public life. Only the sick and unfortunate to whom he ministers can best understand his patient watchfulness, his self-denials, and his calm persistence in the face of disheartening dangers. When such a dispenser of good passes away, it becomes both a pleasure and a duty to the living to recount the story of his beneficent life. Such a pleasing debt New Haven owes to the memory of the late Dr. David Atwater Tyler.

He was born in Northford, in the town of North Branford, Conn., November 10, 1818. His father, Augustus Tyler, was a farmer in comfortable circumstances. But financial troubles came upon the family, entailing the loss of both property and home; and when the only son, David, was but five years

old, the father died, leaving a widow and two children to struggle alone for a shelter and a livelihood. The mother won the hard battle by dint of persevering effort, aided by a cheerful courage, but she too died when her son had reached the age of seventeen years. By means of his own exertions he was enabled to acquire an education, and at the well-known Bacon Academy in Colchester, of which the late Rev. Myron N. Morris was the principal, he was fitted to enter the Sophomore Class in Yale College. Coming to New Haven he obtained employment in the printing-office of the *Register*, but by the threatened failure of his health he was led to think more seriously than before of adopting the study of medicine. At this critical period he sought the advice of the noted Dr. Eli Ives. In accordance with Dr. Ives' recommendations, he abandoned his original plan of entering Yale, and began, instead, the study of medicine in the office of Dr. Nathan B. Ives, of New Haven. In 1844 he received the degree of M. D. from the Yale Medical College, and on the 14th of February of that year he opened an office on Wooster street.

This step marks the beginning of a rapidly increasing practice, which was conducted from the same locality through a period of almost forty years. Dr. Tyler studied botany with Dr. Eli Ives in the latter's famous "Botanical Garden," and became a skillful botanist, especially proficient in the composition of vegetable remedies. Like other physicians of that day, he combined the arts of doctor and apothecary, and conducted a drug store in connection with his office.

Soon after he embarked in the practice of his profession, he married Miss Elizabeth Maltby, of Northford, who died in 1868. Of his three children, his two sons died before him, one at the age of eleven and the other at the age of thirty-five. His only daughter survived him, and is now the wife of the Rev. S. J. Bryant, of West Haven.

Nearly the whole of Dr. Tyler's mature life was spent in contest with sickness, not only among others, but also in his own constitution. When, at thirty years of age, he stood at the entrance of what promised to be a career of unalloyed usefulness, he suddenly passed within the shadow of an incurable disease, the dread consumption. He was seized with hemorrhages, and for a short time retired to Northford. But he determined not to succumb, returned to New Haven, resumed his labors, and for thirty-five years maintained a constant battle with his insidious foe. It was perhaps partly the result of his personal experiences that he was particularly successful in the treatment of consumptives. He acquired fame at an early date by his skill in treating the cholera when that complaint became epidemic in New Haven (1849). He always conducted a general family practice, yet if, before the day of specialties, Dr. Tyler could be said to have any specialty, he excelled in the cure of ailments of the throat and lungs.

In the fall of 1883, seriously failing health obliged him to discontinue regular work, although it was for some time difficult to sever the professional connections that had existed between himself and

H. A. Tyler.

Evelyn L. Bissac, Major

Leonard J. Sanford.

his patients. After a prolonged illness he died of chronic consumption at his recently completed residence in West Haven, Conn., March 26, 1885, in his sixty-seventh year.

Dr. Tyler's ancestors were long and favorably known in this region. The Tylers are an old Branford family, while his grandmother was an Atwater, of New Haven. He was a man of sound judgment and quiet habits. In diagnosis he was remarkably shrewd, and might be called a doctor by intuition, so naturally and easily did the physician's mood rest upon him. Above all he was blessed with a cheerful, even-tempered disposition, which in itself seemed to bring healing to the sick. He always won the affection of children, and knew how to stay young while growing old. His sympathies and emotions were quick and vigorous, but were balanced by firm self-control. His relations with his fellow-men and with his professional brethren were those of mutual respect and confidence, and in the various medical associations to which he belonged, he was elevated from time to time to positions of honor. No one knew him to lose his temper, while many felt the warmth of his affectionate words and deeds. The poor and needy with whom he came in contact experienced his quiet, unselfish benevolence.

Dr. Tyler lived a brave and useful life. He received the temporal reward which he well deserved, and he left his labor carrying with him the esteem and affection of the community in which he had lived.

L. J. SANFORD, M.D.

The City of New Haven esteems Dr. Leonard J. Sanford as one of its own children, who has brought honor upon himself and upon his native place by his scientific attainments and by his professional success. He has but lately passed the half-century, having been born in New Haven on the 8th of November, 1833.

He obtained his preliminary education in the schools of New Haven, and then decided to prepare himself for the practice of medicine. He studied at the Yale Medical College, and afterwards at the Jefferson Medical College in Philadelphia. At the latter institution he received the degree of Doctor of Medicine in March, 1854. Since that time he has been a resident of New Haven, and actively engaged in the manifold duties of his calling.

Dr. Sanford's professional abilities merited and obtained a wide and honorable recognition. He is a member of the American Medical Association, of the American Academy of Medicine, and of various local associations for medical and scientific purposes. To medical literature he has contributed a number of pamphlets on anatomical and physiological topics. In 1858, Yale College conferred upon him the Honorary Degree of A.M. Five years later he was elected Professor of Anatomy and of Physiology in the Yale Medical College, and the chair of Anatomy he still retains, giving annual courses of lectures. For many years he has been

lecturer on Physiology and Hygiene in both the Academical and Theological Departments of Yale.

In April, 1866, Dr. Sanford married Miss Anne M., daughter of the late William Cutler, Esq., of New Haven, Conn. Their family consists of three children.

Dr. Sanford's eminence in his vocation is the result not only of assiduous application, but also of many admirable qualities of head and heart. His individuality is strongly marked, and his judgments are formed not only with moderation, but with independence.

An upright, judicious man, he is prudent and far-seeing as a physician. Those who seek aid from his skill have cause to remember also his geniality and kindness.

EVELYN L. BISSELL, M.D.

General Evelyn L. Bissell was born in Litchfield, Conn., September 10, 1836, the son of Major Lyman Bissell, U. S. A., of Litchfield, and Theresa Maria Skeeles, of Durham, N. Y.

He developed an early taste for military studies, and entered the military school of General W. H. Russell, in New Haven. Abandoning a cherished plan of going to West Point, he applied himself to the study of medicine, and graduated from the Yale Medical School in 1860. He filled that year the position of surgeon on a Liverpool steamship.

Upon the opening of the Civil War, he joined the army as Second Assistant Surgeon of the Fifth Connecticut Regiment of Volunteers, and during the first campaign participated in the retreat of General Banks before General Stonewall Jackson through the Shenandoah Valley. He was captured at the battle of Winchester, May 25, 1862, and was confined at Winchester. His captors, doubting from his youth that he was a surgeon, set him to operate upon their own wounded, when he soon convinced them of his surgical character. He was there one of seven surgeons who signed the first cartel by which medical officers were recognized as non-combatants. Being released on parole in July, 1862, he reported to General Banks, and was ordered back to his regiment.

He returned under protest, believing that if recaptured he would be shot. At the battle of Cedar Mountain, August 9, 1862, he was again taken prisoner while attending the wounded on the field. Being recognized by the Confederates, and his explanations deemed unsatisfactory, he was sent with the Federal wounded to Richmond and placed in solitary confinement in a tobacco warehouse opposite Castle Thunder, and was then transferred to the infamous Libby Prison. He was subjected there to great annoyance, and, much more, was at the risk of being shot for the apparent violation of his parole, and one morning saw seven prisoners shot by the rebel authority. On the 20th of November he was released unconditionally, upon a requisition from the War Department at Washington, a special commission having been appointed for such cases by Secretary of War Stanton. It afterward happened, by a

singular retribution of events, that Surgeon Bissell's father, Major Lyman Bissell, of the regular army, presided, after the war, at the court-martial before which Turner, the keeper of Libby Prison, was tried.

Upon arriving at Fortress Monroe, Surgeon Bissell reported to General Dix, who assigned him to the hospital ship *Euterpe*, which was about to take the Federal sick and wounded to New York. He was referred to the Secretary of War for further instructions, and was ordered by him to join his regiment at Frederick City. Thereupon he took part in the battles of Chancellorsville, Gettysburg, and Kelly's Ford.

In the engagement near Chancellorsville, Dr. Bissell distinguished himself by bravery on the field. It is related in the record of the battle, at the Adjutant-General's office at Hartford, "during the entire engagement the attention of all was particularly attracted by the daring displayed by Dr. E. L. Bissell, Assistant Surgeon, who in his efforts to see and attend to the wants of all the wounded of the regiment, frequently exposed himself to the most imminent peril. In this engagement, May 3, 1863, Captain George Benton, Company F, being killed, was carried from the field by Dr. Bissell under the terrible fire from the enemy."

Joining the Army of the Cumberland, Dr. Bissell had charge of the field hospital, in which there were three thousand cots. He was in the fights at Wahatchie, Resaca, Pumpkin Vine Creek, Dallas, Casville and Kenesaw Mountain. He attracted the attention there of the brave General Hooker, for his bravery while removing two hundred wounded men from the field in face of a concealed rebel battery. He was then specially detailed to remain at headquarters upon the medical staff of General Hooker. He was afterwards likewise specially detailed to be the surgeon's staff of General George H. Thomas and remained with him eight months.

Upon the movement of General Sherman's army southward to Georgia, Surgeon Bissell remained at Nashville till the close of the war.

He then settled in New Haven and entered upon the peaceful practice of his profession. He was appointed by Colonel Basserman, July 9, 1868, Surgeon of the Second Connecticut Regiment and was retained in the position by Colonel Bradley and again reappointed by Colonel Smith, remaining in the office until his departure to Peru.

In 1872 he was called by the Peruvian Government to take charge of men engaged on the public works of the City of Lima. It was a responsible position over a large body of men, and, though lucrative, was full of hardship. Returning to New Haven in 1875, Dr. Bissell resumed his profession as physician and surgeon, in which he had a large practice. He was reappointed Surgeon of the Second Regiment by Colonel Smith, who, after a year's interval, had then recently reassumed command. Upon Colonel Smith's advancing to the grade of Brigadier-General, Major Bissell was continued in office by his successor, Colonel Graham, and so remained until January 3, 1883, when he

was made Surgeon-General upon the staff of General Waller, for 1883 and 1884. Upon the promotion of Colonel Leavenworth to the colonelcy of the Second Regiment, he tendered the post of Surgeon to General Bissell, which, for the third time, he accepted and still retains.

At the Centennial encampment at Philadelphia, in 1876, Dr. Bissell was appointed acting Brigade Surgeon, and has served in this position at the State encampments under General Stephen R. Smith.

He has been for many years, and is still, Examining Surgeon for the Pension Department of the Government; a Registrar of Vital Statistics of the Town of New Haven; a Police Commissioner of the city; and a member of the Board of Health. He is a member of the Grand Army of the Republic and of the military order of the Loyal Legion of the United States.

Dr. Bissell married Sarah M., daughter of Hezekiah Noyes, of Woodbury, Conn., who died July 19, 1883, leaving one daughter, Beatta W.

These are the outlines of an onerous, busy and eminently useful life through an eventful epoch. Throughout it, Dr. Bissell has shown, in a rare degree, qualities of manliness, fidelity and patriotism, and he has won the admiration and regard of fellow-officers and associates who testify to his zeal, faithfulness and self-sacrifice in the discharge of duty.

ALVERD E. WINCHELL, M.D.

The family name of Winchell is found under various forms in America, Wales, England and Germany. It is probably of early Saxon or Yutish origin, and was known in the time of Hengist and Horsa, in 449. The derivation of the name has been learnedly worked out with interesting historical detail by Professor Alexander Winchell, of Michigan University, who published, in 1869, a genealogy of the family. This shows the name to be identified in America with the early settlement of Windsor, Conn., in 1638, in the person of Robert Winchell, who was first at Dorchester in 1635, and appears to have emigrated from one of the lower Saxon shires of England.

The name also runs out into German and sub-branches, adding much to the interest and zest of the genealogical pursuit.

Members of the family have carried the name into all departments of activity, and it is found during the American Revolution scattered in many directions, and so works its way down, widely identified with the early history of New England.

Alverd E. Winchell was born in Egremont, Berkshire County, Mass., June 21, 1831. He is a member of the branch of the Winchell family, accurately traced through eight generations to its origin in the South of England. His early education was pursued in the Academy at Great Barrington, an adjoining town, where he prepared for college.

He entered the Wesleyan University, Middletown, Conn., in 1853, and graduated in 1857, ranking among the first men of his class. He also received, in 1860, the degree of A.M.

Alfred E. Nicholls M.D.

During three years he was engaged in the profession of teaching. On the invitation of Professor Alexander Winchell, State Geologist of Michigan, he became principal of the Owasso Union Seminary in that State. Notwithstanding his marked success in that position, and the most urgent solicitations of the officers of that institution, he returned East to pursue the study of medicine, for which profession he had always felt a marked predilection.

He entered the office of Dr. Clarkson T. Collins, of Great Barrington, a gentleman of acknowledged ability and distinguished in his profession, through whose kindness he subsequently became acquainted with Drs. Alfred C. Post and the venerable Valentine Mott, of New York City. The encouragement and approbation bestowed by these distinguished men was most valuable, and always gratefully remembered. He attended medical lectures at the College of Physicians and Surgeons in New York, from which he graduated in 1865.

At the conclusion of his medical course, which was supplemented by valuable clinical observations in Bellevue, New York, and other hospitals of the city, he settled in New Haven, Conn., where he has since been engaged in the practice of his profession.

Although having a special preference for surgery, in which he has performed several difficult and delicate operations, he has devoted himself to general practice, and has acquired reputation as a superior obstetrician.

He is a member of the State Medical Society, in which he has served as Fellow; also of the New Haven County and the New Haven Medical Societies, serving in the latter as President for a term of years.

He has taken a lively interest in all questions of sanitation, his attention having been specially directed to the subject from observations taken during a series of visits to different sections of the South immediately following the close of the Civil War.

These investigations, and later continuous study of the same subject, became of practical advantage on his accession to the Board of Health of the City of New Haven, to which office he was appointed in 1879, and reappointed in 1882 and 1885, and of which he is still an active member.

February 9, 1860, he married Helen E. Hinman, daughter of Captain Charles Hinman, of Southbury, Conn. She died in February, 1863. In October, 1865, he married Mary Mitchell, daughter of Elizur Mitchell, Esq., of South Britain, Conn., who died in April, 1874. His present wife, Catherine Worthington Shepard, whom he married October, 19, 1876, is a daughter of the late Rev. Samuel N. Shepard, pastor for thirty-three years of the Congregational Church in Madison, Conn. He has had three children, of whom one only is living.

EDWIN AVERY PARK, M.D.,

was born in Preston, New London County, Conn., January 27, 1817. He was the son of Benjamin Franklin Park and Hannah Avery, his wife.

His father was a farmer and merchant in Preston, his native town, where he lived and died upon the family homestead of many generations. He was the son of Elisha Park, who was the son of Rev. Paul Park, a minister of the Gospel in his native town, Preston, preaching in the same church and society for over fifty years, while at the same time he paid tithes or taxes for the support of the standing or legal order of salaried ministers.

The Rev. Paul Park was the son of Hezekiah Park, who was the son of Robert Park, who was the son of Thomas Park, who was the son of Sir Robert Park, who, with his wife and three sons, came from England in 1630 and settled in Boston, Mass., the first of the name that emigrated to this country.

Their English ancestors, since the conquest, resided in Lancashire. The late Baron Park, of England, descended from the same line. The ancestral name was always written with an *e*, Parke, until within a few generations.

Dr. Park, the subject of this sketch, spent his early life upon his father's farm, working there during the summer and attending the district schools during the winter.

When sixteen years of age he commenced teaching school in the winter and taught in Westerly and other places for a number of seasons, and also attended the Wilbraham Academy. At the age of twenty-one or twenty-two he turned his attention to the systematic study of medicine in the City of Norwich, under the tuition of Rufus Mathewson, M.D. He pursued this several years, taking a course of lectures in the New York Medical College and a subsequent course in New Haven, where he graduated from the Yale Medical School in 1846.

He at once opened an office and began the practice of his profession in New Haven. Dr. Park had so far largely worked his own way, being of forceful character, resolute and energetic, and he now devoted himself with enthusiasm to his new and arduous calling.

In disposition kind and sympathetic, a man of strong physique, he carried to the bedside of the sick his own hope and cheer, and was admirably adapted to the always responsible and often delicate duties of a physician. He attained an extensive practice and was held in affectionate confidence by the large circle of his patients and friends.

Dr. Park during the war was Surgeon of the Enrolling Board, and associated with Colonel Dexter R. Wright. In that position he performed valuable and efficient work in connection with the enlistment of Connecticut quotas for the army.

A man of liberal and active mind, well informed, ready, but not rash, in opinion, he won the respect of his medical associates, and was esteemed equally in professional and social circles.

He was a man of Christian faith, and though prevented by professional duty from being a regular, he was an occasional attendant at the Union Congregational Church.

He was a member for many years of the New Haven Medical Association. The resolutions of

this society, passed upon his decease, testify to his high standing as "a physician in large practice for more than thirty years in this city, whose genial nature and gifts in his attendance upon the sick, in the many emergencies of such service, have endeared his memory to a large portion of our citizens."

"The late Edwin A. Park, M.D., by his long and untiring fidelity to his professional duties, both to his patients and to his medical brethren, laid a lasting foundation for the respect with which he was held while in life, and for the affection which bound him so warmly to the homes and hearts of those to whom he ministered."

Dr. Park, in 1853, married Hester Ann, daughter of Charles J. Allen, of New Haven. They had five children, of whom two sons and two daughters now survive, Catherine B., Hester M., Franklin A., and Dr. Charles E.

Of the brothers of Dr. Park, three remain, Chief-Justice Park, of the Supreme Court of Connecticut; Albert Park, an attorney of Norwich; and Ralph H. Park, now of Boston, late principal of the Wooster School of New Haven.

Dr. Park died January 17, 1879.

PAUL C. SKIFF, M.D.

Among the many men of mark whom Litchfield County has contributed to New Haven, is one of the city's most popular and eminent medical practitioners, Dr. Paul Cheeseborough Skiff.

In 1761, Nathan Skiff journeyed from Tolland County into the wilds of Western Connecticut. In what is now the town of Kent, and on the western side of the Housatonic River, he purchased a large tract of land, including a mountain, which was named Skiff Mountain, and there the pioneer erected his log house with only the Scatacook Indians as his neighbors. After five years Nathan Skiff moved from his log hut into a new frame house which he had built, and into whose chimney he had inserted a large square stone bearing the date, "1766."

When Nathan Skiff rested from his labors, house and land descended to his son, Nathan Skiff, 2d; from him to his youngest son, Luther Skiff; again to the latter's youngest son, Samuel Skiff, who sold it, in 1875, to his brother, the subject of this sketch.

Farm and homestead have therefore been occupied by the same family for about one hundred and twenty-five years. In this venerable house, on the 4th of October, 1828, Paul C. Skiff was born.

His mother was Hannah Comstock, daughter of Peter Comstock, of Kent, and Hannah Platt, of Plattsburg, N. Y., Dr. Skiff's boyhood was spent in working upon the ancestral farm, and in profiting by such educational facilities as the town afforded.

When he was fifteen years of age, his mother's sister, Mrs. Roderick Bissell, a most estimable lady, living on the Western Reserve in the town of Austinburg, Ohio, invited him to come and live with her, and attend school at the neighboring Grand River Institute. Eagerly desiring a liberal

education, he determined, in spite of many hindrances, to profit, if possible, by the offer. With his worldly goods in a small trunk, and with sixty dollars in his pocket, money given him by his Grandmother Comstock, he set forth alone for what was then the Far West, promising to paddle his own skiff, and to ask for no help from any source. That promise he has well kept, having never asked or received financial aid from any one since that time, paying the entire expenses of his educational course by his own labor, besides contributing largely to help others.

However, it was difficult for the lad of fifteen years to break away from his home and friends, and, had it not been for the ridicule of his brothers, his fortitude might have failed before he bought his ticket for Albany.

The ride to Albany afforded him his first experience with the steam-cars. In that city he was so frightened by the numerous signs to "Beware of pickpockets" that he dared not enter either car or boat, and meditated a return home; but in the waiting-room of the Erie Canal Packet Boat Line he became acquainted with some kindly persons who took charge of him as far as Buffalo. The voyage along the canal lasted nine days, and cost \$5 for fare and board. The boat in which he took passage across Lake Erie from Buffalo for Ashtabula Harbor was overtaken by a terrible storm, and drifted about for four days in continual danger of sinking, so that by the time the boy reached his destination he was rich in experience. At Austinburg, for about four and a half years he combined school tasks with outside work, having decided to prepare for the ministry. During the last two years he roomed with John Brown, Jr., and frequently saw John Brown, Sr., who lived not far away. Mr. Skiff was intending to enter the sophomore year at Hudson College with his class, but he was suddenly called home by the illness of his eldest brother. He became manager of the farm, taught school awhile, and then, resolving once more to enter the larger world, he began the study of medicine, and graduated at the Yale Medical College in 1856. Afterwards he spent nearly two years at the Jefferson Medical College in Philadelphia, under those eminent instructors, Professors Mutter, Pancoast, Meigs and Dunglison. Returning to New Haven in 1859 he began the practice of medicine, and has resided in this city since that time.

Dr. Skiff had been educated in the tenets of the old school of medicine, but even during his stay in Philadelphia his attention had been called to new theories. After a careful and conscientious study of homœopathy, he concluded that it was an advance upon the elder medical system, and he embraced its principles. For this development he was indebted to the suggestions of Dr. Herring, of Philadelphia, and largely to the influence of his cousin, Dr. Charles Skiff, the earliest homœopathic doctor in New Haven, and the second in the State.

In the course of Dr. Skiff's first year of practice here (1859), he noticed one morning sitting opposite to him at breakfast at the hotel where he

Richard A. Smith

William D. Anderson.

was boarding, two men whose faces seemed familiar. Finally he said to the younger of the twain, "Isn't your name John Brown, Jr.?" At this apparently simple question the young man trembled like a leaf, and ejaculated, "What if it is?" After a little parleying, Dr. Skiff broke the tension by saying, "Don't you remember Paul Skiff?" The strain upon the young Brown had been so great, for he supposed his interlocutor to be a spy, or worse, that he burst into tears. Then he introduced his father, who was with him, to Dr. Skiff, and told him that they had been to Springfield trading in wool. The fact was that they had just been to Tariffville, Conn., to order pikes for their projected invasion of Virginia. The younger Brown showed his former schoolmate the frightful gashes made in his right arm when he was put in a chain-gang by the pro-slavery ruffians, and dragged by horses over the prairie.

Dr. Skiff's success in his profession was speedy. From the first year of practice to the present time he has been one of the busiest of men. His varied experiences have given him an acquaintance with all sorts and conditions of men. His skill in the healing art has been supported by prompt judgment, admirable foresight, unflagging good temper, and by an independent attitude towards all theories of practice. He has contributed to various medical journals, and was one of the founders of the State Homœopathic Society.

In June, 1875, he married Miss Emma McGregor Ely, of Brooklyn, N. Y., whose great-grandfather on her father's side was the Rev. Dr. Daniel Ely, of Lyme, Conn., and whose maternal great-grandfather was the Rev. Dr. Thomas Punderson, of New Haven. They have one child, Pauline, born in May, 1880.

W. D. ANDERSON, M.D.

Among the Scotch-Irish settlers who planted the town of Londonderry, New Hampshire, in 1719, were the ancestors of William Dexter Anderson. His mother, who belonged to the family of Atwood, of English descent, was a native of what is now the neighboring town of Bedford. He was born in 1840, in the town of Derry, which had formerly been a part of Londonderry. While he was still in his boyhood, his father engaged in mercantile pursuits, and was in business in Boston until the time of the great conflagration of 1872.

Dr. Anderson obtained his early education in the schools of Nashua, N. H., and, after he had attained the age of ten years, in the Boston Public Schools. In the English High School of the latter city he spent one year in study, and afterwards prepared for college at a private institution in Newton, Mass. He entered Yale College in 1858, and graduated in 1862. Among his class-mates were Rev. E. B. Coe, D.D.; the late Dr. George M. Beard; Dr. P. H. Bosworth; Ex-Governor D. H. Chamberlain; Henry Holt, of New York; Franklin McVeagh, of Chicago; and other well-known men.

Dr. Anderson subsequently received from Yale the degrees of A.M. and of M.D., graduating from the Yale Medical College in January, 1865.

He entered immediately upon professional life in New Haven. For three years he remained a practitioner of the old school, but in 1868 he adopted the principles of homœopathy, and has practiced ever since in that branch of the theory of medicine. In 1871 he succeeded to the office and professional good-will of the late Dr. C. C. Foote, at 150 Temple street, and still remains at that address.

Dr. Anderson was for seven years a member of the United States Board of Examining Surgeons for Pensions. For several years he has held the position of State Medical Examiner in the Order of the Knights of Honor and also in the Royal Arcanum. He has served two years in the presidency of the Connecticut Homœopathic Medical Society.

Dr. Anderson has never confined himself to any specialty, but has engaged in general practice. Neither has he been confined by narrow professional limits, but has felt free to follow the dictates of independent judgment and of experience, adapting modes of treatment to individual cases. To diligence, fidelity and skill he owes his high professional rank. The esteem of his many friends is no less due to his unfailing urbanity, courtesy, and strict sense of honor.

He has rare gifts as a musician, and New Haven musical circles suffered loss when professional duties withdrew him from a public musical career.

CLIFFORD B. ADAMS, M.D.,

was born in Suffield, January 8, 1850, the son of Chester A. Adams and Catherine Woodworth. The father was a native of Becket, Mass., the mother, of Suffield.

He was sent to the district school, as is usual with country lads, and later entered the Connecticut Literary Institution of Suffield, at that time under the charge of Principal Pratt. He took a full course, and graduated in 1866. His education was won by his own industry, his father dying when he was sixteen years of age and leaving him the mainstay of the family. He then entered, as medical student, the office of Dr. R. H. Chaffee, at Hartford, and from there, continuing his medical course, went to study with Professor Henry Noah Martyn, of Philadelphia, and graduated at the Hahnemann Medical College of Philadelphia, March 1, 1872. He afterward received a special diploma from the Hahnemann Medical Institute of Pennsylvania, also special diplomas for the post-graduate courses in the diseases of women and children and in surgical anatomy.

His first practice, after finishing his preparatory course and leaving the hospital, was at Tariffville, Simsbury, Conn. Early in 1875, Dr. Adams, seeking a larger field, removed to New Haven, where he soon commanded a large and extensive practice.

While often treating cases in surgery, he has made a specialty of diseases of the lungs and has been very successful in cases of obstetrics.

Dr. Adams, while constantly occupied with

general practice in his own locality, is frequently called to the towns around, and is appealed to in extreme cases and in councils for consultation.

He married, in October, 1872, Georgia M., daughter of Thomas M. Sheridan, of Enfield. They have four children, Burdett S., Clara B., Matie L., and Ethel.

Dr. Adams is a member of the Homœopathic Medical Society of Connecticut, of which he has been an officer for some years.

He is also a director of the Connecticut Humane Society. This society, organized in 1882, began active operations January 1, 1883, under the presidency of Rodney Dennis, Esq., of Hartford.

Dr. Adams was the first man in this part of the State to interest himself actively in this most benevolent movement. In this connection he has become widely known and recognized in the State as a zealous and efficient officer in cases demanding the authoritative exercise of human mercy and kindness. In his official capacity, acting for the society, he has visited during these years scores of towns, and has relieved numerous cases of suffering humanity, also hundreds of animals maltreated and abused, and has given warnings and instituted prosecutions in many other instances. This service, voluntary and gratuitous, has been rendered amidst the arduous duties of a busy medical practice, and only a man of rare resolution, of peculiarly temperate habits and strong physical capacity, could perform and sustain such arduous labors.

Through the activity of Dr. Adams, a general examination and reconstruction of the pauper system of the State has been made, and from this already the attention of the Legislature has been aroused, and the condition of the poor has been relieved through laws enacted for their protection.

Dr. Adams has vigorously opposed the "farming out" system of poor relief, and he has urged in behalf of the insane a merciful care and treatment from the towns in which they reside. The attention of the Governor has also been called to this important subject, and a widespread and general interest has thus been awakened throughout the State.

The purpose of the Humane Society, as stated in their charter, is "to promote humanity and kindness, and to prevent cruelty to both man and the lower animals, and generally to encourage justice and humanity and to discourage injustice and inhumanity."

Dr. Adams' report for the ensuing year shows an increased list of cases relieved of hardship, suffering and cruelty, and by his personal courage and zeal some remarkable instances of inhumanity have been discovered, and, so far as possible, remedied.

In addition to these public activities, Dr. Adams has been largely interested in oyster culture, and has entered into various other business enterprises, requiring their own outlay of means and methods.

He thus fills up the measure of an uncommonly active and useful life.

CHAPTER XV.

THE PRACTICE OF DENTISTRY.

Compiled under the direction of Dr. JOSEPH H. SMITH, Member Am. Dental Association.

DENTISTRY was first practiced in New Haven by dentists residing in New York and making occasional excursions to this city. In the last decade of the eighteenth century, a Dr. Skinner advertises himself at intervals of two or three years as "Surgeon-Dentist and Oculist from New York." "He performs every operation incident to the teeth and gums. He substitutes artificial teeth, from a single tooth to a complete set, in such a manner as cannot be distinguished by close inspection from those of the natural growth."

In the first decade of the present century, J. B. Porter's name appears instead of that of Dr. Skinner. In 1804 he has taken a room opposite the Church in Church street. In 1805 he announces that "he expects to make New Haven his general place of residence, and in future shall advertise when out rather than when in town." In 1806, Dr. Bradley, Dentist, from New York, offers his services to the people of New Haven.

Even when a dentist made New Haven "his general place of residence," he could not depend upon it at this early period of its growth for his entire support, but, as is evident from Dr. Porter's advertisement, he must sometimes make professional

excursions to other cities and towns. It is not known that any dentist was continuously resident in this city till 1828, when Zerah Hawley advertises that he performs all operations in dentistry in the neatest and most approved manner at his office in Orange street, two doors north of the New Haven Bank. Dr. Hawley continued to reside in New Haven many years, but was obliged to supplement the income from his profession with the rewards of other industries. He had the reputation of being an energetic rather than a gentle operator.

Monsieur F. L. Morel, Surgeon-Dentist, from Paris, came to New Haven about a year after Dr. Hawley had established himself. At first he came for a transient visit. His advertisement is headed, *Natura vitia arte reparata*. His sympathy, neatness and skill brought him many patients, and after a second visit he made New Haven his residence. During his first season he operated at the Tontine. When he came the second time for a longer stay, he found an office over a milliner's shop in Chapel street. When he announced his intention to establish himself here permanently, he took an office in the second story of the building at the corner of Chapel and Orange streets, since known as the

C. B. Adams

Townsend Savings Bank, the entrance being on Orange street. Afterward his operating-rooms were at his residence, a few doors further south on the same street. He spent about twenty years in New Haven, but returned in his old age to his native country.

Dr. John J. Stone established himself as a dentist in New Haven about the same time as Monsieur Morel, and resided here several years.

Dr. J. B. Wheat was also one of the early dentists. Becoming the owner of a house, he had one element of permanency which his predecessors had lacked. His residence was in Chapel street, in the house next west of the Center Church Chapel.

Later was Dr. Mallett, whose office was in the Shipman House, two doors west of the residence of Dr. Wheat. He afterwards removed to West Chapel street, where he occupied successively two houses, first one on the south side of the street, and afterward one on the north side of the street.

William G. Munson, having learned the trade of a brassfounder with Nehemiah Bradley, turned away from that art to the practice of dentistry. He had for many years an office in Argyle street. As a recreation he sometimes painted landscapes. The view of the Green as it was in 1799, which hangs upon the walls of the Historical Society, was one of the productions of this amateur artist.

In the Directory of 1848 the list of dentists has lengthened to the following:

Cowles, E. B.,	Miller, Edward B.,
Croft, E. C.,	Morel, Louis F.,
Crosby, C. O.,	Munson, W. G.,
Mallett, Samuel,	Thompson, William M.,
	Wheat, Jerome B.

In 1861, the following persons were operators in dentistry in New Haven:

Crosby, C. O.,	Munson, W. G.,
Dibble, J. A.,	Riggs, J. D.,
Ely, C. L.,	Reed, J. H.,
Gunn, N. S.,	Smith, Augustus B.,
Hall, Fayette,	Smith, J. H.,
Mallett, Samuel,	Stevens, Henry J.,
Metcalf, John T.,	Strong, Elias,
Morel, Louis F.,	Wheat, Jerome B.

For comparison with this list we give that of 1870:

Fuller, Austin B.,	Reed, John H.,
Hall, Fayette,	Stearns, George O.,
Gaylord, Edward S.,	Smith, Joseph H.,
Gladwin, W. W.,	Smith, A. B.,
Mallett, Samuel,	Stevens, Henry J.,
Munson, W. G.,	Strong, A. E.,
Riggs, Joseph D.,	Strong, Elias,
	Woolworth, Isaac.

The dentists operating in the city in 1886 are:

Bascom, Horace S.,	Nettleton, George Edward,
Brinkman, M. R.,	Peterson, George F.,
Brothers, Fred. J.,	Reed, John H.,
Bushnell, John H.,	Rice, Arthur M.,
Church, D. L.,	Riggs, Joseph D.,
Davis, W. S.,	Ross, J. B.,
Devereaux, A. J.,	Smith, A. B.,
Fuller, Austin B.,	Smith, Joseph H.,
Gaylord, Edward S.,	Stearns, George O.,
Gidney, George H.,	Stevens, Henry J.,
Hall, Fayette,	Stiles, I. W.,
Horton, W. S.,	Stone, F. C.,
Jones, Mrs. E. R.,	Strong, Elias,
Metcalf, William H.,	Swift, Frank C.,
Minor, W. H.,	Welch, J. F.

The art of the dentist has made great progress in New Haven as well as elsewhere since the end of the last century. The advertisement of the operator who came to our city on occasional visits from New York about ninety years ago makes large promises, but it is not credible that he could make "a complete set in such a manner as cannot be distinguished by close inspection from those of the natural growth." The progress in the art has been made by the ingenuity of successive operators, each of whom availed himself of the ingenuity of his predecessors.

It is said that a dwarf if seated on a giant's shoulders can see further than the giant. So a dentist of the present day, even if not eminent for natural abilities, ought to be able to do better work than the most gifted man who wrought in the first half of the century. It is believed that the dentists of New Haven are not behind those of any other city in the knowledge of the improvements which have been made in their art, and that New Haven has contributed its full share to the work of improvement.

The principal operations of the dentist are extracting, filling, and making artificial dentures.

The oldest inhabitant, and some persons not quite so old, can remember the turnkey with which teeth were wrenched out of the jaw as the root of a tree is forced out of the ground by the stump-extractor on a Western farm, or as logs at a saw-mill are rolled on to the ways by means of a cant-hook. Then came into use the sharp-ended forceps, which first cut the gums and then so seized the tooth by its neck that the operator had it in his power. The next step in progress was in the use of anæsthetics, and though the suggestion of this method of relieving patients from fear and pain was first made by Dr. Wells, of Hartford, in 1844, the application of the method to the extraction of teeth in large numbers was made in New Haven in 1863.

It happened in this wise. Mr. G. Q. Colton had been for many years a traveling lecturer, and, among other experiments illustrative of chemistry, had exhibited to his audiences the effects of nitrous oxide gas. When in Hartford, in 1844, he had administered the gas to Dr. Horace Wells, a surgeon-dentist, and a practitioner in Hartford. Other persons besides Dr. Wells submitted themselves to the experiment, and among them one who, in his antics while under the effects of the gas, severely injured his shins. When he recovered his consciousness, Dr. Wells inquired of him if he had felt any pain from his collisions with the benches, when the man assured him that he had felt no pain and was unaware of any injury. Dr. Wells immediately turned to a friend sitting by, and expressed a belief that a person would, by inhaling the gas, become so insensible that his teeth might be extracted without pain. The next day he tested his hypothesis by taking the gas in the office of a brother dentist, Dr. J. M. Riggs, who removed a large molar from the mouth of Dr. Wells, the patient exclaiming on coming back to consciousness. "A new era

in tooth-pulling! It did not hurt me more than the prick of a pin."

But for eighteen years this discovery was of little practical benefit. Dr. Wells continued to make experiments in the use of anæsthetics, and conceiving that possibly chloroform or chloric ether might be preferable to nitrous oxide gas, experimented with these substances upon himself till, his brain being fatally injured, he lost his reason and his life. Meanwhile the truth remained that nitrous oxide gas was a safe anæsthetic. As such it was, in 1863, brought to the public attention. The same G. Q. Colton, whose exhibition of the effects of the gas had suggested to Dr. Wells its use in dentistry, was eighteen years afterward lecturing in New Haven. He was not a dentist or a surgeon, but a traveling lecturer on chemistry, who for a score of years had amused the public with exhibitions of the effects of this gas upon those in the audience who were willing to take it. No ill effects had ever followed its administration. It happened that Dr. Joseph H. Smith, a dentist in New Haven, had a lady patient in a very delicate state of health, to whom he was unwilling to administer the vapor of ether. He applied to Mr. Colton for information in respect to the availability of the nitrous oxide, and the response being favorable, engaged him to bring some gas to his operating-room and administer it. Mr. Colton did so, and while the patient was under the influence of the gas, and before she was aware that anything had been done, Dr. Smith extracted seven teeth. She came to her consciousness exclaiming, "They are out! God bless Mr. Colton."

An arrangement was immediately made by which Mr. Colton attended daily at Dr. Smith's office to administer the gas, and public notice being given of the arrangement, crowds came to have their defective teeth drawn without pain. During the month of June not less than 1,785 teeth were extracted by Dr. Smith for subjects under the influence of nitrous oxide gas administered by Mr. Colton. The schedule which Dr. Smith kept, and afterwards affirmed under oath to be true, exhibits the following figures:

Date.	No. of Teeth.	Date	No. of Teeth.
June 1.....	20	June 15.....	77
" 2.....	50	" 16.....	85
" 3.....	17	" 17.....	40
" 4.....	34	" 18.....	87
" 5.....	87	" 19.....	14
" 6.....	34	" 22.....	38
" 8.....	145	" 23.....	86
" 9.....	127	" 24.....	91
" 10.....	57	" 25.....	104
" 11.....	134	" 26.....	107
" 12.....	99	" 29.....	62
" 13.....	98	" 30.....	92
Total	1,785		

Early in July, Dr. Smith and Mr. Colton went together to New York, and there established an anæsthetic institution, called the Colton Dental Association, for the painless extraction of teeth. From that time to the present day nitrous oxide gas has been used by dentists as an anæsthetic.

When cocaine, the new anæsthetic was first used in dentistry, great expectations were formed

of its usefulness. But subsequent experience has caused our best operators to abstain either entirely, or almost entirely, from the use of cocaine, and to confine themselves to the use of older and safer anæsthetics.

Gold was the material first used in filling cavities in teeth, and though many substitutes have been proposed, it still holds the first rank. There are many methods of preparing gold for the dentist, but the improvements which have been made in preparing it belong to the art of the gold-beater rather than to the art of the dentist, and we pass on to the process of filling a tooth. The dentists of the olden time, having first cleaned the cavity, pushed the gold into it by hand. Afterward the mallet was used, and the blow was found to be much more efficient than the push. Dentists of the old school shuddered at the sight of a mallet, and one of them being present at a dental clinic in Boston, called out to the new school operator: "Take a sledge-hammer." But about a year later the operator at the clinic being on a tour through the Western States, called on his conservative brother in St. Louis and found him using a mallet. Mallets are of different kinds: there is the hand mallet, the automatic mallet, and the electric mallet. Some dentists prefer one and some another kind; but all these have been used by New Haven dentists.

By means of the mallet, teeth are not only filled, but built up. In the early period of dental work, patients were unwilling to have the gold visible; but at the present time some of our best-looking and most honored citizens cannot smile upon a friend without displaying a considerable wealth of the precious metal. Others wear molar crowns of the same material, but less exposed to public view.

The Jarves Gallery in the Yale School of the Fine Arts, containing one hundred and twenty paintings dating from the eleventh to the seventeenth centuries, illustrates by object-lessons the history of painting during that period, as a collection of artificial dentures made in successive years from the infancy of dentistry to its present condition would illustrate the history of that art. There is no such collection of artificial dentures; but from descriptions of single specimens it is evident that mechanical dentistry has never been content with its achievements, but has made continual progress. A dentist of the olden time, after premising that his professional engagements were covered with a veil of secrecy, and that he had many a time sneaked by the back way into a back chamber to prepare and insert two or three teeth for a young lady, says: "We first, by measurement, fitted a block of the right curve to fill the space to be supplied with teeth, and then with a camel's hair pencil dipped in rouge mixed with alcohol, painted the gum and pressed the block on to receive the red impression; then carved, scraped, gouged and dug; painted, and tried again; and so on until the best possible fit was secured. We then proceeded to carve out the teeth. It was rude-looking, but it filled the bill. We sawed every root

and pivoted to it, sometimes fitting six teeth to two roots. If the roots were gone, we tied the blocks in with silk thread or gold wire."

The blocks of which he speaks were carved out of ivory; but a vacancy of one tooth was more frequently filled with a tooth which had previously been in the mouth of another human being or of an animal.

"Following the carved work came the old French Bellah teeth. They were mounted on gold plate with a dowel pin soldered to the plate, and this soldered to the platina clamps baked in the tooth. They were opaque; a muddy hue; no life-like shade. Still they did not look bad in the mouth of an aged person. Then came the Stockton pivot teeth. They were a great improvement in their life-like appearance. We struck up a plate, soldered the gold pins to it and attached the teeth with hickory plugs; immersed them in water twelve hours or more, and then, with a great deal of anxiety, removed the plate and examined to see how many had burst by the swelling of the wood. We always directed our patients to keep them wet. If the patient was ill and by carelessness the teeth were suffered to get dry and tumble off, they were brought back to be again put on where they belonged.

"Next came the single gum-teeth of Stockton with platina pins baked in the teeth. When Stockton first manufactured his single plain and his single gum teeth with platina pins, to be backed with gold and soldered to the plate, he kept it a secret. He had a large stock of pivot teeth on hand. He sent out peddlers in every direction, put the price down to ten cents each, for Mr. Stockton was 'going to change his business.' In about one month other agents came around with the improved teeth. We were all sold; had to abandon the old pivot teeth and use the new."

The next step of progress in the manufacture of artificial dentures was the block gum. A cast is taken of the mouth with wax; a negative of the waxen cast is produced in plaster, into which metal is run so as to produce a fac-simile of the mouth in metal. A platina plate is then swaged to fit this metallic counterpart of the mouth. Of course it fits also the mouth itself, and, if the work is a success, it fits so closely that it will remain in place by atmospheric pressure. To this plate the teeth, having been backed with platina by the manufacturer, are soldered with a solder of fine gold. The

interstices are then filled with a paste composed of aluminium, feldspar and quartz, and the paste is built up into the shape of the gum, which in a young and healthy mouth surrounds the roots and necks of the teeth. The piece, thus brought into the desired shape, is then put into the oven and baked. On cooling it shows cracks or fissures, which necessitate another baking after the seams have been filled. A third baking, after the block has been washed with a mixture containing a large proportion of feldspar and quartz and a smaller proportion of clay, gives it a vitrified surface like the enamel of the natural teeth. This kind of denture is doubtless superior to all others; but the difficulty of making it is commensurate with the excellence of its quality, and very few dentists are disposed to set up a furnace and bake porcelain dentures when there is so much probability that the extreme heat to which the work must be exposed will shrink, warp, crack or bulge the porcelain and make it worthless.

It is wisest, and perhaps it is in the end most economical, "to get the best;" but many are obliged by the want of present means to be content with cheaper work. Such have their choice of gutta percha, rubber, and celluloid; and of these substances may be made, by skillful dentists, good and useful dentures.

The laws of Connecticut put no obstacle in the way of any person who wishes to become an operator in dentistry. He needs no diploma, he subjects himself to no examination. Of course an occupation which is open to all cannot be regarded as a learned profession. Individual dentists have made such attainments in general knowledge, in oral anatomy, and in dental surgery, as would justify a college in conferring upon them an honorary degree; but the practice of dentistry does not of itself indicate unusual intelligence either general or special. There is in New Haven no guild of dentists organized for the certification of its members and the implied disavowal of responsibility for all operators who have not joined the association. One of the duties which dentists in Connecticut who are conscious of merit owe to themselves, is to organize a guild for mutual certification, and another duty is to procure, if possible, legislation which will confine the practice of operative dentistry to persons who have been examined and certified by some competent authority.

CHAPTER XVI.

THE HARBOR AND WHARVES.

BY CHARLES HERVEY TOWNSHEND.

THE spacious Harbor of New Haven, one of the most picturesque on the New England coast, is situated at the confluence of the Quinnipiac, Mill and West Rivers, with its entrance about midway in an indenture of the coast, described between Stratford Point westwardly and Sachem's Head eastwardly, distant one from the other twenty nautical miles, and is about thirty-nine miles to the westward of the Race, and fifty miles to the eastward of Fort Schuyler on Throg's Neck, the former being the eastern and the latter the western entrance to Long Island Sound.

Previous to 1614, this harbor was occasionally visited by vessels belonging to European nations, while on their voyages of exploration or of trade with the Indians, and soon after this date we find it claimed by both the English and the Dutch. The former claimed by right of Cabot's discovery and the latter by purchase, in 1633, from the Indians, and also by the explorations of Captain Adrian Block, a Dutch navigator in the employ of the East India Company of Holland, who sailed along this coast in 1614, locating and naming several important headlands, islands and bays, and giving their position on a chart sketched by him during this voyage of exploration.

One of the most prominent objects in the foreground on approaching our harbor, is the new light-house on the west end of the east breakwater now in course of construction over the southwest ledge to Quixes Rock, the latter being marked with an iron spindle surmounted with a cask, and the ledge having at its west end an eight-sided iron light-house with a mansard roof painted red, and a lantern rising from its center. The whole fabric of the light-house is supported by an iron tubular foundation secured by heavy irons to the ledge. It shows a fixed light of the fourth order, which, from a height of fifty-seven feet above sea level, is visible thirteen nautical miles in clear weather. The geographical position of this light-house is in latitude $41^{\circ} 14' 02''$ north and longitude $72^{\circ} 54' 45''$ west. It bears from Falkner's Island light-house W. by N. $\frac{3}{4}$ N., ten and three quarter miles, and from Horton's Point light-house N.W. by W. $\frac{1}{4}$ W., nearly twenty-three miles distant. From the light-house the Old Field Point bears S.W. $\frac{1}{4}$ S., nearly eighteen miles; the Middle Ground S.W. $\frac{3}{4}$ W., thirteen miles; the Eaton Neck S.W. $\frac{1}{4}$ W., a little over twenty-seven miles; and Stratford Point W. by S. $\frac{3}{4}$ S., nearly ten miles. A bell on the light-house is struck by machinery at intervals of fifteen seconds during thick weather; but in the writer's opinion this should be supplemented by a steam fog trumpet to be heard at least five miles in calm weather, and by a life-saving station at the old light-house.

One statute mile N.N.E. $\frac{3}{4}$ E. from this light-house, is the old discontinued stone light-house on

the eastern point of entrance to the harbor, called Five-mile Point or Morris Point. Built in 1840, this handsome structure of stone, painted white, with its black lantern elevated 90 feet above sea level, is a picturesque landmark, dear to the New Haveners, and should never be taken down as it answers many valuable purposes. It is a guide by day to vessels in the offing; a station for triangulation; and, in case of accident to the breakwater light-house, it can be restored, at short notice, to its ancient function.

This old light-house is also, at this date, doing valuable service as a United States Signal Station, giving timely notice to the fleets of sail and steam vessels that navigate Long Island Sound, of the approach of dangerous storms from land or sea. As viewed from the City of New Haven it stands out alone, and to the writer is a *beau ideal* of a light-house. As viewed from off shore, it seems to stand, with the keeper's house and the Grove House, a summer hotel, both painted white, in a clump of scrub trees with a grove of taller trees behind it. The point on which it stands is faced from its rocky base seaward to tide level with bare rocks, forming at this east entrance to our harbor the outer horn of the crescent-shaped Morris Cove; while Fort Hale, named for the patriot martyr, stands on a ledge of similar rocks, one and a half miles further north, as if to complete the beautiful symmetry of the cove.

The shore within this outer horn of the crescent is faced with a conglomerate granite, and is beautifully wooded quite up to the portals of the ancient stone mansion of the Morris family. Here the town records of East Haven were kept for sixty years, and from this house were taken, in the dead of night, Captain Amos Morris and his son, by a raiding gang of Tories from Huntington, L. I., and carried to New York to be confined in the Jersey prison ship.

Nearly opposite the residence, and built soon after 1670, on the spot where the original grantee first landed, is the old wharf, the site of ancient salt works. It is built of heavy boulders of the same kind of stone as is the mansion-house, and we have been told that they were put in place by giant Indians, who came from the east end of Long Island to assist Thomas Morris in this undertaking. At this wharf is shown, by the descendants of its builder, dry land, where vessels in early times were moored afloat, giving evidence of the evaporation of the water in our harbor during these two hundred years. From Morris Wharf northward, the shore changes from bare rocks to a beautifully faced sandy beach, topped with a grassy mound, and continuing the crescent for nearly a mile—an unbroken beach to the abrupt basaltic bluff known as the Palisades, distant from Fort Hale, on the

north horn of the crescent, one-fourth of a mile; and above this pebbly beach, reddened by surf, which has rolled unobstructed for more than thirty miles, are green meadows and the beautifully wooded heights of Raynham, surmounted by the higher slopes of the historic Beacon Hill.

From Fort Hale to the King's Island, a rocky formation, and a part of the Government property, on which a brick house, now standing, was built during the War of 1812, in place of the wooden quarters which had been twice burned by the enemy in the Revolutionary War, the shore trends northwardly, turfed with beach grasses, and paved below high-water mark, by the action of the sea, with small black cobble-stones on both sides of a creek, which forms part of the East Moat, and allows an overflow to the meadows, much to their detriment, during the spring tides.

Beyond this island a sandy beach and diked embankment protects the shores of the bridged creek,

the shore across the east causeway of Tomlinson's Bridge to Stable Point, passing a few rods north of the causeway a solitary locust scaffold post, the only one now left of several which were standing here when the barque Panthea was launched in 1820, built and owned by Jehiel and Samuel Forbes.

From Stable Point northward we cross the Little River, so called, which is but a marsh, to the wharf of the E. S. Wheeler Company's works. Then, on the new bridge over the Quinnipiac, we cross that river to Grape-vine Point, to the wharf where the Hoyt Brothers Company ship immense quantities of oysters to Europe and all parts of our own country.

This wharf, owned by C. S. Maltby, built in 1855 on the site of the old Gesner Ship-yard, and that at the Bigelow Boiler Works, built in 1883, are the only wharves on Grape-vine Point, save a few piles which make a landing at the boat-house of the

Conscript Camp (Grape-vine Point).

which has its outlet near the building and wharves of the Townsend Brothers' Shell-fish Culture. These are the only wharves in use at this date on the east shore between Tomlinson's Bridge and the light-house, save a remnant of the ancient Morris Wharf, built two hundred years ago. There have been, however, several pile wharves built in Morris Cove which have been destroyed by the bore of the teredo and the action of gales on an enormous body of ice, which carries everything attached to it seaward.

The shores of the marsh, from Fort Hale through the Raynham District to Crane's Bar and Sagamore Creek, is faced with fine sand and sedge banks; while the salt meadows, extending backward a short distance, meet the gently sloping grass land dotted with ornamental trees of rich and variegated foliage, behind which is the before mentioned Beacon Hill.

From Sagamore Creek we leave the salt meadows, and follow the alternating sand and sedge of

Yale navy, formerly the site of the Post and Griswold Ship-yards after their removal from Ferry Point, and the two sewers at Poplar street and James street. During the latter part of the War of the Rebellion, Grape-vine Point was the scene of great military activity. Here was Camp Terry, one of four conscript camps established in different parts of the State. Temporary buildings were erected for barracks. There were frequent arrivals of squads of recruits from towns whose quota was not full, and there were constant drills.

The Quinnipiac and the Mill Rivers above the Chapel street Bridge have had all their wharves built since 1820, and as this property has frequently changed owners, we will not follow it further north than the Chapel street Bridge. Between it and the west end of Tomlinson's Bridge are the timber booms of the New Haven Steam Saw-mill, and a valuable frontage owned by the Messrs. Fitch, which adjoins the west causeway to Tomlin-

son's Bridge at the Old Ferry Point or foot of Bridge street, where are the wharves of the Consolidated Railroad Company.

The western boundary of the entrance to New Haven Harbor is called Oyster River Point. It lies $W. \frac{3}{4} S.$ from Five Mile Point and is distant from it about three and a quarter miles. This point is low and grassy at its southern extremity, but further north the land rises with a gentle slope to a wooded crest about forty feet high.

All along the western shores of this harbor is to be seen highly cultivated land studded with houses, and at Savin Rock are many elegant summer residences. These seaside resorts seem to extend quite back to the flourishing borough of West Haven, a part of the town of Orange, and separated from the City of New Haven by West River.

From Oyster River Point, the land back from the shore is high, undulating and partly wooded, but mostly cleared near the beach. The Savin Rock Bluff is about forty feet above sea level, with steep faces topped with trees and grassy summits. The land lies low near it and it is not perceived from the approaches to the harbor, as the high lands above show with such prominence. About two hundred yards to the southward of Savin Rock Bluff is a ledge, bare at low water and known as Savin Rock Ledge, and here empties the Cove Creek. The shore extends from Savin Rock about $E. by N.$ for about a mile, and the beach is composed of hard sand, with a flat which dries at low water quite up to Sandy Point, which has now a jetty in course of construction by the Government, to be completed in the form of a letter L, intended to utilize the tidal scour across the Pardee Bar and deepen the channel by means known in hydraulics and successfully used on the Mississippi, the Rhine, and the Clyde.

From Sandy Point, extending northwardly about one mile, is the beach, the whole length of which one hundred years ago was a dry sand spit, overgrown with beach grass and bushes; on which men now living inform the writer that they have picked berries, and driven in a wagon, at high water, to the parallel of Oyster Point, where stood a small house for the storage of tools used in the repair of vessels.

Sandy Point, which is not visible from the mouth of the harbor, and is noticed only when one passes abreast of it, is a long, narrow point of bare sand with a few clumps of wire grass upon it. At low water the bare sand may be seen extending in an easterly direction three-fourths of a mile parallel with the shore. On the southerly extremity of this point stands a watch-house to protect the oyster beds in the vicinity; and another on piles, both painted white, is at the northern extremity of the beach, on a sand-spit which also dries at low water. Behind Sandy Point the western shore of the harbor makes about $N.N.W.$ for nearly a mile to the mouth of West River, which runs through a salt marsh, and is the boundary between the town of Orange and the City of New Haven.

The east point of this river is the southern ex-

trimity of the City of New Haven, and is known as Oyster Point or City Point.

It took its name of Oyster Point from an immense deposit of oyster shells found there, giving evidence of its having once been the site of an Indian village. The shore northward from it for three-quarters of a mile to West Creek, now drained into the sewer under Commerce street, was originally a bluff-faced plateau, twenty feet high in some places, with a strip of land of easy grade between the bluff and the water. Mount Pleasant, at whose base the West Creek flowed into the harbor, was once the seat of earthworks thrown up during the Revolutionary War. The West Creek was crossed at its outlet by the Trowbridge Dike, its sluice being located at the north side of Lego's store, now standing.

The West Creek was used in early times for navigation nearly up to the corner of York and George streets, and vessels of considerable size unloaded their cargoes at College street, as has been shown by the discovery of a ship's skeleton in the rear of the old Wooster House. The course of the brook which fed this creek may now be traced by the gully in the garden of Mr. D. W. Buckingham in Chapel street, and even further on toward the corner of Howe and Elm streets. Just above the sluice, at its mouth, was a minor branch of this creek, penetrating westward through the ravine in which now runs the Derby Railroad. On the shore of the main branch, in a line parallel with George street, were numerous tanneries. At the outlet of the creek into the harbor, and on its eastern bank, was the Greenough Ship-yard, facing a small cove in the harbor, which was in part occupied with lumber booms for the floatage of spars, logs and other lumber needed in the construction and repair of vessels.

The shore between the East and West Creeks seems to have been open to the public until the town sold water lots, and granted the right to wharf off. The site for Long Wharf was granted November 23, 1663, to Mr. Samuel Bache, fifty or sixty feet out on the flats, and called a dock or wharf. The flag-staff in Custom-house square stands very near the land-ward boundary of the grant. Mr. Jonathan Atwater next owned the land thus granted to Mr. Bache. In June, 1682, Mr. Thomas Trowbridge received a grant of land "by the waterside" for a warehouse and wharf, twenty-two feet wide, thirty feet from high-water mark upward, and two or three rods out on the flat. This wharf was at the foot of Fleet street, extending eastward. It joined Mr. Bache's grant, and from these two grants, all since granted to Union or Long Wharf take their start from the shore.

Long Wharf has been one of the important institutions of New Haven, and the writer refers all who are interested in its history to a most interesting and valuable paper printed in the first volume of the New Haven Colony Historical Society's Collections, written by Thomas R. Trowbridge, a descendant of the before mentioned grantee.

This wharf, of only a few hundred feet in length, was the only one used by the general public

previous to the War of the Revolution. There was, however, a pier built of wood and stone on the west side of the channel of the harbor, of measurement about eighty feet square, where vessels could lie afloat at all stages of the tide. In 1772 an effort was made, by means of a lottery, to raise funds to connect the pier with the wharf; but the war coming on, nothing was accomplished until about 1810, when, as Mr. Trowbridge informs us, 1,500 feet of the wharf was built by William Lamson, who quarried the stone at East Rock, and by means of scows put it in place. According to the same authority, the wharf and pier measure 3,480 feet. I am informed by Captain Lyman Osborn, now in his 95th year, that he well remembers the filling of this structure with mud, taken from the flats when the tide was out, and dumped between the walls at high water.

The pier, which is shown in President Stiles' map of our harbor, was of great utility to the commercial interests of the port, as the largest vessels of that day could remain moored to it at all stages of the tide. It was made use of by the invading foe on the 5th of July, 1779, who took possession of it with a flotilla, and established upon it a battery to cannonade the town.

The length of the harbor, measured from Grapevine Point to the new light-house along the center of the channel, which takes nearly a north and south direction, is about four nautical miles, and its width at high water, from Fort Hale to Sandy Point, is about one nautical mile. The bottom is composed of mud and ooze with a growth of seaweed, except on Crane's Black Rock Bar, and the Beach, which is dry at low tide, leaving in the channel from the Pardee Bar to the wharves an average depth of fourteen feet, except in Deep Hole, off the head of the Beach, where there is a depth of twenty feet at low water. On each side of the channel are the flats, which commence on the west side below Sandy Point, and on the east side at Fort Hale. These have been sold by the towns to be used for the cultivation of oysters.

The before-mentioned wharves seem to be the only wharf grants before the Revolution, except two or three small wharves or landing places owned by the Peck and Atwater families, and a large landing place at the foot of Meadow street, prepared for some Jewish merchants of Newport, R.I., who were expected to remove to New Haven. This expectation not being fulfilled, Messrs. Prescott & Sherman bought the valuable property, and here transacted a large foreign and domestic business.

About 1848, the New York and New Haven Railroad acquired a right of way across Long Wharf, through property owned by Prescott & Sherman and H. & L. Hotchkiss, and across the flats from Long Wharf to Mount Pleasant on the West Shore, and, building their road across the flats, inclosed a large area with an embankment six feet above high water, allowing the ingress and egress of the tides by a sluice. This inclosed area has lately been filled in, and a part of it occupied with the new passenger station and the machine-shop and wharves of the Consolidated Railroad.

The harbor front between the East Creek and Ferry Point is elevated above sea level from twenty to thirty feet, and has always been known as the Bank or Bankside—a name which may have been suggested by the Bankside at Southwark, London Bridge, whence some of the first planters of New Haven came. In length it is about three-fourths of a mile; faces the harbor southward, and a plateau called the Oyster-shell Field northward.

I am informed by the Hon. James E. English, that within his own remembrance most of the improvements on this side of the harbor have been made. From his report and the records of the Proprietors' Committee, I am led to the belief that the only wharf on this water front (the Bank) previous to 1700 was the town ship-yard at the foot of Olive street, deeded by the town in 1871 (Benjamin Beecher and James E. English, then Selectmen) to the city for the use of the Fire Department. The Water street Engine-house now marks the site. The wharf, ship-yard and spar dock were public property, and the frontage was used to stow timber, heave down or haul out vessels for repairs. Here also were the timber-booms, used as late as 1849 by Daniel Collins, spar-maker. It is said that nearly all of our vessels were built at this ship-yard before William Greenough came from Boston and located on the east bank of the West Creek. Next west of the Engine-house, on the site of the New Haven and Northampton Railroad office, and directly opposite the Benedict Arnold House, was granted a wharf site by the Selectmen to Hezekiah Sabin, 160 feet into the harbor down the Bank. The said Sabin was to build a wharf, and allow all vessels to land fish, salt and wood at said wharf free of all charge. This property was in 1869 sold to the New Haven and Northampton Railroad Company by Governor English, who employed the Hon. Henry White to furnish from the record the names of all the proprietors from the first grantee, and when he sold it to the railroad he surrendered the abstract of deeds.

There was a small landing-place at the Pottery, next east of the ship-yard; and about 1790, Isaac Tomlinson and others built the Tomlinson Wharves on both sides of Brewery street, now occupied by the Messrs. Benedict, Messrs. English & Holt, and the DeForest & Hotchkiss Company. When the Farmington Canal, which was constructed for transportation to and from tide waters to the interior, required a terminal basin, the angle in the flats between Tomlinson's Wharf and Long Wharf was inclosed by building the Basin Wharf, now a continuation of Brewery street, having near its east and west extremities two sluices with tide-gates, which allowed canal boats and barges to pass in and out. There was also a sluice cut through Tomlinson's Wharf, and a tide mill erected thereon by Mr. Shaw of the West Indies, a son-in-law of Captain Elnathan Attwater, who, in company with Captain George Rowland, operated this mill till Captain Rowland built a mill on the canal at Lock No. 1, between Cherry and Chapel streets.

On the Brewery street wharves, cargoes of great value were received from and discharged into ware-

houses built over slips, constructed for the reception of molasses for the neighboring distilleries. These wharves have been made historic by the embarkation here on the 19th of November, 1822, of the first reinforcement of missionaries to the Sandwich Islands, who sailed in the ship *Thames*, of New Haven, Captain Clasby.*

This water front has now been, nearly all of it, filled in by the New Haven and Northampton Railroad Company, organized under the laws of Massachusetts and Connecticut, with the right to utilize the abandoned bed of the Farmington Canal, a scheme conceived by Messrs. Joseph E. Sheffield and Henry Farnam, assisted by their attorney, Professor Isaac H. Townsend, who incorporated into the charter the right to wharf off to the channel. Availing themselves of this right, the company constructed a wharf in 1858, which is a most valuable property, as a draft of twenty-two feet has been taken from it to sea by a large ocean steamer chartered by the Winchester Arms Company.

About 1800, the Proprietors' Committee granted to Isaac Tomlinson, Kneeland and Isaac Townsend, and other proprietors on the Bank, six rods, from high-water mark, of the flat into the harbor, they to build a straight sea wall from Brewery street to Ferry Point; change the roadway along the shore upon the bank, so forming Water street; and to keep said street in repair.

Near the foot of Hamilton street was a small ravine, over which was built a stone bridge. This ravine had been used before the Revolutionary War by General Wooster to convey his cargoes taken from vessels in the harbor, across the fields in scows, to his storehouse near the corner of Wooster and Chestnut streets. In this ravine was Mr. Bradley's ship-yard and next east of it was a small wharf belonging to and in front of the residence of Captain Daniel Green. Here Captain Green landed and stored several very valuable China and India cargoes, including that brought by the *Neptune*—the richest of all cargoes ever brought into New Haven.

Next east of Green's Wharf, on the site now occupied by the Sargent Manufacturing Company, ran the sea wall in front of the residence of the late Kneeland Townsend to Wallace street. Between Wallace and East streets the whole water front along the sea wall was laid out in pleasure grounds belonging to and in front of the Pavilion Hotel, built for the accommodation of travelers to and from New Haven on the steamboats *Fulton* and *United States*. These boats changed their landing place from Long Wharf to a new wharf, built along the channel south of Tomlinson's bridge and approached over the west causeway. This was the first, and continued to be, the only wharf connected with Tomlinson's Bridge until about 1840, when the *Belle Dock* was built to accommodate the steamer *Belle*. A few years earlier, Colonel Moseley built a wharf between *Belle Dock* and the *Pavilion Gardens*, which he sold to Abraham Heaton. This is still known as *Heaton's Wharf*.

Having thus noticed the wharves around the har-

bor, it only remains to describe the improvements of the harbor which are in contemplation and have been commenced.

The commercial importance of this port has long been known, and its ability to collect and pay into the treasury of the Government large sums of money is proved by the records of the Custom House, it being the seventh in a column of seaports arranged according to the amount paid into the treasury of the United States for duties on imports.

The harbor affords safe refuge from all gales between E.S.E. around northward to W.S.W., and when the great national works are completed which have been ordered by the United States Government, it will afford safe refuge during gales from all directions.

The latest harbor chart, issued in 1878 by the United States Coast and Geodetic Survey, gives at the entrance to the port, at low water, on the parallel of the new light-house, twenty-four feet draft—four feet more than on the bar at *Sandy Hook*—which gradually shoals in the channel to nineteen feet on the parallel of the old light-house, one statute mile distant, and to thirteen feet over the *Pardee Bar* on the way to the city wharves; and as the mean rise of tide is from six to seven feet, and is often increased by spring tide and conditions of wind to eight feet and even ten feet, vessels of twenty-two feet draft may usually reach the docks without detention.

A scheme for improving and deepening this harbor to twenty feet at mean low water, which will give twenty-six feet, or more at high water, to the wharves, is being slowly carried out by the United States Government. It is expected that when these improvements are completed, the harbor will admit, at high water, vessels of the largest draft. As the bottom of the channel is composed of soft silt, its dredging will require, as compared with other harbors, not a great outlay. The favorable position of this harbor has been long since recognized. It lies midway of *Long Island Sound* at the head of an indenture into the coast of Connecticut, which describes an arc of more than 200 degrees, and has an area seaward of several miles of good anchorage, and a sufficient depth of water for the largest vessels. The harbor having by reason of its geographical position and natural capabilities, valuable advantages as a mart of commerce, a scheme was conceived, and first publicly advocated in the year 1870, to improve it by inclosing from *Long Island Sound*, at the entrance of the harbor, an area several times the capacity of the harbor as it now is, by means of breakwaters, as has been done at *Cherbourg*, France, and *Plymouth*, England, and so form a spacious roadstead or lower harbor as a port of refuge fit to accommodate the enormous amount of tonnage that passes through the Sound, which by estimate now carries more value to and from the port of New York than passes over *Sandy Hook Bar*.

The scheme having been advocated by its early friends on every suitable occasion in the meetings

* See Chapter on Commerce.

of the New Haven Chamber of Commerce, took the shape, in the latter part of 1873, of a petition to Congress. This petition signed not only by committees from the New Haven city government, the Chamber of Commerce and the Harbor Commissioners, but by a large number of citizens interested in commercial pursuits, from Maine to Georgia, was placed in the hands of the representative in Congress of the district which includes New Haven, the Hon. Stephen W. Kellogg, to secure this improvement for the benefit of foreign and domestic commerce in general, and in particular of that which has its home in New Haven. It was claimed that the geographical position of this district, bordering upon Long Island Sound, and actually paying large custom duties into the Treasury of the United States, gave ample claim for support to the effort thus made. Mr. Kellogg ably advocated the petition, and secured for it a reference to the Committee on Rivers and Harbors, who made a favorable report and recommended an appropriation of \$100,000 to locate and commence the construction of a breakwater on Long Island Sound.

For some reason, however, not satisfactorily explained, this recommendation was crossed off from the River and Harbor Bill, and nothing more was done in advocacy of this improvement till the year 1879. Then the Hon. Hobart B. Bigelow, since Governor of Connecticut, was elected Mayor of the city, and through his efforts, seconded by those of the Hon. N. D. Sperry, the Hon. Cyrus Northrop, the Hon. Henry G. Lewis, Thomas R. Trowbridge, Esq., Charles Hervey Townshend, and other progressive citizens, this measure was revived, and by the joint action of the City Government, the Harbor Commissioners, and the Chamber of Commerce, a committee was appointed to ask the immediate action of the Government on this scheme, favorably and honorably recommended, but so long kept in abeyance to the great injury of commerce. This committee, consisting of the Hon. Hobart B. Bigelow, then Mayor; Messrs. George M. Harmon and William Fuller, on the part of the Board of Aldermen; Messrs. M. Frank Tyler and George R. Cooley, on the part of the Board of Common Council; and Messrs. N. D. Sperry, Henry G. Lewis and Charles Hervey Townshend, on the part of the Chamber of Commerce, proceeded at once to Washington, in accordance with an arrangement made by the Hon. James Phelps, then the representative of this district in Congress, to whom great credit is due for his zeal in forwarding efforts for this and other measures of national importance. By his arrangement the delegation appeared before the Committees of Congress on Commerce and on Rivers and Harbors, who were so thoroughly convinced of the importance of a harbor of refuge in Long Island Sound, that they made another report favorable to the prayer of the petitioners and recommended an appropriation of \$30,000 to defray the expenses of a board of engineers, who should proceed to Long Island Sound and, after investigation, locate a proper site for such artificial harbor and commence its construction.

The favorable reports of these committees being approved by both Houses of Congress, a bill was passed directing the Secretary of War to order the Chief of Engineers of the United States Army to call a board of competent engineers to proceed to Long Island for the purpose stated. The board entrusted with this work consisted of Generals Tower, Newton, Abbott, and Colonel Barlow, the officer in charge of this district. It is said to have comprised engineering ability equal to any in the world.

These officers at once proceeded to make the preliminary examinations, and, after much study of the subject, unanimously recommended that two breakwaters be built in Long Island Sound, off the lower bay at New Haven, as the indenture here in the coast of Connecticut seemed best suited for the general benefit. It was recommended that the east breakwater should commence at the light-house on southwest ledge, which lies in mid-channel, thereby utilizing this ledge, which is about sixteen hundred feet in length and has less than six feet of water at its shoalest point at extreme low tide, and extend to Quixes Rock, now marked with an iron spindle. The west breakwater is to commence near Luddington's Rock, which lies southward two and three-quarter miles from Sandy Point, and run westwardly; protecting the anchorage in the lower harbor and Morris Cove from heavy southwest gales; relieving the upper harbor from vessels seeking refuge; and leaving the channel clear by day and night for vessels and steamers to reach the docks.

When these breakwaters are completed, it is expected that the east and west tides in the Sound will be so concentrated that the scour, assisted by the ebb tide out of the harbor and the accumulated water from the rivers, will act as a driving force to carry seaward an enormous quantity of mud which otherwise would deposit in the harbor an accumulating sediment.

The following estimates were made by the Board of Engineers.

For the East Breakwater from the New Light-house to Quixes Ledge:

Length.....	1,100 yards.
Average height.....	32 feet
Cross section.....	299 yards.
Cost, 328,900 cubic yards, at \$2 per yard.....	\$657,800.

For the West Breakwater:

Length.....	1,400 yards.
Average height.....	38 feet.

It has however been more recently proposed to increase the length of the west breakwater three-fold, in order to include a greater area and thus form a more spacious roadstead. The cost of the west breakwater according to this later plan would amount to about \$1,500,000.

Space will not permit of inserting in full the report made by the Board of Engineers. We only copy a few words which they say in conclusion.

"If the question be simply to provide safe refuge for coastwise vessels drawing not more than twelve feet of water, during the prevailing storms on the

Sound, as the anchorage in the vicinity of Fort Hale is covered against all gales from the east and southeast, the only protection required is from southwest gales, which can be secured by building a dike, similar to that proposed by Major Barlow, on the west side of the channel.

"Prominent citizens of New Haven are of the opinion that the light-house breakwater is the more important of the two, and that it should be built first. The opinion is doubtless correct, if the comparative frequency and severity of easterly storms be alone considered; but if an easterly storm be followed by one from the southwest or west-southwest, the anchorage under the east breakwater would be rendered dangerous, owing to the indifferent holding ground and to the presence of ledges of rock and a rocky shore leeward. Hence the Board are of the opinion that, after the completion of a certain portion of the easterly breakwater, the westerly one should be promptly commenced."

This report was signed by Z. B. Tower, Colonel of Engineers and Brevet Major-General U. S. A.; John Newton, Colonel of Engineers and Brevet Major-General U. S. A.; Henry L. Abbott, Major of Engineers and Brevet Brigadier-General U. S. A. After the breakwater had been commenced, the site was inspected by Brigadier-General Wright, Chief of Engineers U. S. A., who remarked that the work should have been commenced fifty years ago.

In making their selection the Board took into consideration the benefits which might be attained, both of a local and of a national character; not only the commercial advantages to be reaped, but the value of a port of refuge as a rendezvous for deep draft vessels, ocean steamers and iron-clad ships in time of peace or war; and also the value of the breakwater as a site for iron-clad forts for the defense of New Haven, as a large, wealthy city and an important terminus of transportation.

Not only were these important matters considered, but also the report of the United States Signal Officer as to prevailing winds, and the Coast and Geodetic Survey Tidal Reports were carefully investigated.

It was shown that not alone would this section of the country be benefited, but that in a port of refuge off a large city like New Haven, ships wind-bound and in distress that pay annually tonnage, custom duties, and other taxes to the United States Government, could obtain supplies better than at a port where commercial facilities were inferior, even if the harbor were equally commodious. Again, it was shown that the position of New Haven being so near the eastern entrance of the Sound, the numerous steamers leaving New York would have refuge further on in their eastward course than in the harbor of Huntington and Cow Bay, and could start out, whether bound coastwise or abroad, even in threatening weather, with all confidence, having such a port of refuge easily approached from all directions by the use of the lead in snowstorms and fog, and being, while in snug harbor, in an advantageous position for the first favorable shift of wind.

This harbor of refuge, though of great value to the nation as soon as the two breakwaters are completed, will be increasingly important with the progress of time. A century hence the shores of the Sound will be lined with cities, whose aggregate population will reach into the millions, and the great City of New York will have passed across the County of Westchester to occupy a long water-front on East River above Hell Gate and on the Sound.

THE TOWNSEND FAMILY.

GENEALOGICAL AND BIOGRAPHICAL.

Of mixed Saxon and Norman origin, the Townsend, or Townshend, families of England and America trace their descent from a family of great antiquity in County Norfolk, England. In his "Peerage of England," Collins puts Walter Atte Townshende, son of Sir Lodovic de Townshende, a Norman nobleman who flourished soon after the conquest, at the head of the family. It seems that this Sir Lodovic de Townshende married Elizabeth de Hauteville, daughter of Sir Thomas de Hauteville, and sole heiress of the Manors of Raynham. She was of the family of de Hauteville, or Haville, then a most important one socially and politically. "They were," says Collins, "of Norman extraction, and, settling in the county of Norfolk, became possessed of a considerable property, said to have been granted them by William the Conqueror, a portion of which, by this marriage, came to the Townshend family."

It is not in consonance with our purpose to record the tracing of the genealogy of this family in its various branches, so ably accomplished by Mr. Charles Hervey Townshend, and so well known to readers of New England history and genealogy through his interesting book, "The Townshend Family of Lynn in Old and New England, Genealogical and Biographical. New Haven, Conn., Revised fourth edition, 1884," but the following quotation relative to the orthography of this ancient family name * will be found of no slight interest.

"The first part, de and Atte, seems to have been dropped during the fourteenth century, and from this time down to the dawn of Puritanism, as many as twelve different ways of spelling the name have been found. Thus: Tounsend, Tounneyshende, Townshende, Towenshende, etc. About A.D. 1500, we learn it became fashionable to cut down still more; so Townshende was abridged by dropping the *e* in the first and the *h* and the *e* in the last syllables, which abridged form seems at this time to have been generally adopted by the different branches of the family. But soon after the year 1580, the chief family at Raynham, finding that this mode gave a wrong signification to their name, as

* Blondel mentions the Manor of Townesend, Raynham, Norfolk. Norfolk charters of the eleventh and twelfth centuries spell the name Ad-Caput-Ville, de Hauteville, de Haville, Ad-Exitum-Ville, Atte-Townes-hend, Atte-Townes-head. The learned Dr. Jessup, of Christ College, Cambridge, England, informs us that as early as the twelfth century there lived in a house of some pretensions at Rougham, Norfolk, on the King's highway leading from Rougham to Raynham, a family bearing these names.

they were the land-holders, stadt- or town-holders of that section of the country, again used the *h* in the last syllable, considering it more correct. Burke says, in his 'Landed Gentry' that, 'previous to the ennobling of the Norfolk family we find the name as frequently spelt without the *h* as with; and, according to Blomfield, the orthography of the old Townshend monuments at Raynham is similar. Spelling however in those days was not considered a matter of much importance, and it seems not improbable that Townshend is the more correct, hend being derived from *hand* (Saxon, *henden*), or the Latin word *hendre*, only used in composition, *to take, to hold, to occupy*." With these and other authorities in favor of either of the accepted modes of spelling, according to personal taste different members of the family spell the name with and without the intermediate *h*, in illustration of which it may be remarked that Captain Charles Hervey Townshend adheres to the more formal orthography, which includes the *h*, while Professor Isaac Henry Townsend adopted, and Hon. James M. Townsend and other members of the family prefer, the more simple and direct orthography which excludes it.

The New Haven Townsends of the present day trace their descent in direct line from Sir Robert Townshend, of Ludlow, County Shropshire, England, second son of Sir Roger Townshend, of Raynham, Norfolk, by his wife, Anne de Brewse; their male progenitors having been Thomas Townshend, Esq. (1), eldest son and heir of Sir Robert; Henry (2); Thomas (3); Samuel (4); Isaac (5); Jeremiah (6); Isaac (7); Isaac (8); and William Kneeland (9), Isaac Henry and George Atwater, sons of the Isaac last mentioned. Different representatives of the family in America have in successive generations been celebrated as statesmen, officers in our army and navy, in the pulpit, at the Bar and in medicine, and prominent in business and commercial circles. From the beginning of its history, the family has taken high social rank both in England and America. In the active promotion of the public weal, both in peace and war, it has ever been conspicuous on both sides of the Atlantic. A few briefly stated facts concerning some of the heads of families of the later generations will be found interesting.

THOMAS TOWNESHEND, or TOWNSHEND (3), the original settler at Lynn, Massachusetts Colony, we find first mentioned in the Boston records, when he was made a Freeman, March 4, 1638, and in the old family record, now extant, he is called "Mr.," a title given only to those of known respectability. March 14, 1639, he was made a Freeman at Saugus, or Lynn, when the General Court granted in that year lands to the Rt. Hon. Robert, the Lord Brooke, who was expected with Cromwell, Hampden, Pym and others over to settle in New England; and the same year Thomas Townshend was allotted fifty acres at Lynn, and, being a desirable man, was allowed ten acres more (sixty acres altogether); and he also purchased other lands (sixty acres) formerly in the tenure of Mr. Edmund Needham, of Lynn, of Edward Hut-

chinson.* He is called in the records "husbandman," being a proprietor and one who leased the lands he had bought to the farmer who paid rent. The records also show that he owned other lands at Lynn and Rumney's Marsh. His residence was in his town lot of seven acres—one of the best sites in Lynn—located on the southeast corner of Franklyn and Mill streets (now Boston street) and just across the commons from his friend and pastor, the Rev. Samuel Whiting's,† and next his kinsmen, the Mansfields. The Lynn and Salem records give evidence of his having been a gentleman of good intelligence, ability and education, he having served as a jurymen‡ "Att Salem More of the 20th Quarterly Court y^e 30th 1st Month, 1641," and it is interesting to note that among those of this Court present were John Endicott, Deputy Governor; John Humphry, Esq., Deputy Major-General; Mr. Emanuel Downing, Mr. William Hathorne, Mr. Edward Holliock, and other members, whose names associated with his sufficiently testify to his social and intellectual rank, as do also his well-drawn deeds of gift to his children and his beautiful autograph written in the Court or Norman style, and still to be seen in the office of the Secretary of State, Boston, Mass.¶ Mr. Townshend was a Liberal in sentiment, and did not agree with many of his Salem and Lynn Puritanical neighbors in their extreme measures in regard to Mrs. Anne Hutchinson, and, with the Rev. Samuel Whiting, was opposed to persecution. He died at Lynn December 22, 1677, aged eighty-three, and his wife Mary, February 22, 1692, and both were buried in the old burying ground. The paternal home at Lynn was sold by his grandson, Andrew (son of his son, Andrew Townshend) to Deacon Daniel Mansfield, July 8, 1703. Mr. Thomas Townshend left sons, Thomas, Samuel, John and Andrew, and *perhaps* Robert, who was of Portsmouth, and also daughters.

SAMUEL (4), the second son and ancestor of the "Raynham" family, married Abigail, daughter of Samuel Davies who kept the inn at Winesemet, in the famous old Maverick House, built about 1623 or 1624. He followed the vocation of a husbandman at Rumney's Marsh, Boston (or as the family record states, "Winesemet"), where he owned lands and leased Governor Richard Bellingham's farm. He was made Freeman in 1683, having joined the Second Church, Boston, September 18, 1681. He was often appointed to serve the public as constable, town surveyor, administrator and guardian, and was a useful and industrious citizen whose efforts were repaid with gain, as the inventory of his estate, settled by his heirs July 22, 1708, proves. He died at Winesemet, aged sixty-six, and his stone at Rumney's Marsh (now Revere)

* This Edward Hutchinson was of the family of the famous Anne Hutchinson who were banished to Rhode Island, leaving Boston March 28, 1639.

† His near neighbor and friend, the Rev. Samuel Whiting, had been domestic chaplain to Sir Nathaniel Bacon and Sir Roger Townshend in County Norfolk, England.

‡ His name is here, on the official records, written Townshende, and in other records the same.

¶ See "Townshend Family of Lynn in Old and New England," 1884, fourth edition.

bears date December 21, 1704. His widow died January 2, 1733, and was buried in Copp's Hill burying-ground, Boston.

ISAAC (5) was born at Rumney's Marsh, or Chelsea, Mass., and settled in Boston, where he bought lands on Winter street, in 1716. He was married July 7, 1703, to Anne Ranger, and was killed at a fire in Boston, January 16, 1717.

JEREMIAH (6) was born in Boston, and was baptized in Old South Church November 18, 1711. With his family and brother, Ebenezer, he settled in New Haven, May 20, 1739, and "bought lands the year before (March 10, 1738) of Mindwell Jones, in the Governor's Quarter, for £16; also buys, December 10, 1739, of Ebenezer Mix, one-half of house and lot, with acre, more or less, on the corner of the Green and Market place. He again buys, April 6, 1742, the other half for \$260. Also house and land of Elizabeth Perkins. His first wife was Hannah, daughter of John Kneeland, or Cleland, of Boston, Mass., a member of the Old South Church April 16, 1722; married April 16, 1734, by the Rev. Thomas Prince. She died in New Haven January 15, 1788, aged sixty-nine. Mr. Townshend left a record of his family, together with a tradition, which has been proved correct by evidence collected from English and colonial records, and supported by numerous facts and circumstances. His change of residence to New Haven was through the suggestion of his friend, Mr. William Greenough, a shipwright of New Haven, who was from Boston. * * * Mr. Townshend died at New Haven, January 6, 1803, and was buried in the old churchyard in the rear of the first church on the Green, next his two wives, and the foundation of the west wall of the present edifice was laid across their graves, and their monuments are preserved in the crypt."

ISAAC (7) was born in Boston and came, a child, to New Haven with his parents. Commenced business in New Haven, but moved to Stratford, Conn., about 1763, where he owned property and most of his children were born. In 1783 he removed to New Haven, where he lived on Crown street, near Orange (where James M. Townsend built, in 1883, one hundred years after), the remainder of his life. His wife was Elizabeth, daughter of Jacob and Abigail (Butler) Hitchcock, of Springfield, Mass., connected by marriage to Sir John Davie, of Crediton, County Devon, and cousin to Major-General David Wooster, killed near Ridgefield, Conn., May 2, 1777, in a battle with the British forces under Governor Tryon, while on their return from Danbury. Her sister Abigail, widow of John Brown, married Captain Ezekiel Hayes, great grandfather of Rutherford Burchard Hayes, ex-President of the United States.

ISAAC (8) was born in Stratford, Conn., February 4, 1765. In 1781, at the age of sixteen years, he joined Colonel Meigs' Regiment (Connecticut) and served until the close of the War for Independence. He engaged in mercantile business in New Haven in 1788, "and was largely interested as a merchant by land and sea, having branch houses in Charleston and Cheraw, S. C., and an agency

in New York" and another in London, the latter under the supervision of his brother, Kneeland Townsend. He was interested in real estate in Connecticut, Virginia, Vermont and Ohio, owning, with his brothers, the town of Townsend, in Huron County, in the latter State. During the War of 1812-14, with his son, Isaac Henry Townsend (later Professor of Law in Yale College), while *en route* from New York to New Haven on the packet sloop Susan, he was taken prisoner by a British armed vessel, conveyed to Plum Island and there detained on board the English ship Pomone, Captain Carterat commanding, until ransomed. He retired from business soon after, having amassed an ample fortune, and his various interests passed into the management of his sons. He married Rhoda, daughter of David and Elizabeth (Bassett) Atwater, April 11, 1795, and died in New Haven November 5, 1841. They had eight children, of whom William Kneeland (9) born in New Haven June 3, 1796, was the eldest, Isaac Henry the fifth, and George Atwater the seventh in order of nativity. Isaac Atwater died in childhood. Charles Henry died in 1803 at the age of two years. The other three were daughters, of whom Elizabeth married Isaac Beers, and now living, 1886; Emily Augusta married Hon. David Sanford, of Newtown, Conn.

WILLIAM KNEELAND married Eliza Ann, eldest daughter of Hervey and Nancy (Bradley) Mulford, December 3, 1820. He was educated at the Hopkins Grammar School and began business life as a merchant. He was a Director of the New Haven Bank, president of several corporations and associations, a Lieutenant of the Second Company of the Governor's Horse Guards of the State of Connecticut, a Justice of the Peace and representative for the town of East Haven to the State assembly. On account of ill health he retired from business about 1830 and made his residence at "Bay Ridge," Raynham, then in East Haven, but since 1881 in New Haven. This property, which he had bought of his father and uncle some years before, was a part of the original grant by New Haven Colony to William Tuttle, the maternal ancestor of his wife. Here he passed the balance of his life in devotion to scientific agriculture, dying, after a brief illness, September 23, 1849, at the age of fifty-three years. The lineage of his wife "has been traced back to many of the first settlers of the New England colonies, among them Captain Lyon Gardner, the first patentee and Lord of the Manor of Gardiner's Island, who came over as an engineer in the employ of the Earl of Warwick, the Lords Say and Seal and Brooke, and *en route* stopped at Boston, where he laid out the fortification on Fort Hill, and the season following located and built Saybrook Fort, which he so valiantly defended against the Pequot Indians, and where his daughter Mary was born, who married Jeremiah Conklin, from whom descended Mrs. Townsend's father, Hervey Mulford, Esq., a graduate of Yale College, Class of 1794, and a merchant." Mrs. Townsend was born in New Haven November

J. H. Townsend

26, 1798, and died at Raynham, the family residence on Townsend avenue, January 3, 1881, having lived to see her children grow up to fill honored and prominent places, and her grandchildren rising to places of credit. William Kneeland Townsend was a devoted Christian gentleman, honored and trusted in all the relations of life, his virtues many, and his public services valuable to his fellow-men. Of his wife it has been truly said that "she was a lady of refinement and education, and that she lived esteemed, honored, beloved and admired by all who knew her, bearing her part equally perfect as a Christian and a gentlewoman. * * * Though highly accomplished, she was a domestic wife, the fondest of mothers, a most sincere and devoted friend, and kindly, generous and charitable towards all."

The children of William Kneeland and Eliza Ann (Mulford) Townsend were William Isaac, James Mulford, George Henry, Frederick Atwater, Robert Raikes, Charles Hervey, Timothy Beers, Edward Howard, and Eliza Mulford, named in the sequence of birth.

William Isaac Townsend, formerly one of New York's energetic and enterprising merchants, retired, and has lived in London, England, during the past twenty-five years. A biographical sketch of James Mulford is published in this work. George Henry has always resided at the homestead at Raynham, Townsend avenue, and since early manhood has been engaged in active business, proving himself a thorough-going and successful man of affairs. He has for many years been a member of the Harbor Commission, and was one of the pioneers in the cultivation of oysters in Long Island Sound, and one of the first to cut and ship ice from Saltonstall Lake. His fellow citizens have many times desired and offered to honor him with offices of different kinds, which he has always declined, having no taste for politics and official life. Frederick Atwater, who was Major of the Second Connecticut Regiment, was a successful merchant, but retired from business on account of impaired health. He is genial and popular with a wide circle of acquaintances. Robert Raikes was one of the early pioneers in California (1849), and while there contracted a fever from the effects of which he died after his return to New Haven. Charles Hervey is represented by a biographical sketch in this volume. Timothy Beers (see Tuttle Book) was born November 21, 1835. He graduated from the Yale Medical School in 1858 as a physician and surgeon, and soon entered upon the practice of his profession. He was appointed by the State authority, with Dr. Rockwood, to visit the Connecticut troops after the battle of Fredericksburg, and during the war he rendered efficient service as a surgeon in Knight's Hospital. In 1867 he was selected by a council of physicians in New Haven, on account of his great surgical skill, and his carefulness and rapidity in operating, to perform the Cæsarian operation. This was one of the first successful operations of this character in this country, probably the first in New England. There had been only a few crowned with success

in the whole of Europe. It therefore attracted wide attention, and Dr. Dibble, whose patient the woman was, gave the technical details in the *Medical Record* for March 2, 1868. He was offered and declined the professorship of surgery in Yale College. He has seldom engaged in the practice of his profession for several years, his health having been poor, owing to overwork and a partial sunstroke. Edward Howard is the successful manager of large business operations. He received the commission of Major, and was attached to the staff of Major-General Russell. Eliza Mulford married Charles Augustus Lindsley, and lives in New York.

HON. ISAAC H. TOWNSEND,

Professor of Law, Yale College.

Isaac Henry Townsend was born in New Haven April 25, 1803, a son of Isaac and Rhoda Townsend, and died January 11, 1847. Mr. Townsend was one of the finest scholars of his day, and a gentleman in the best sense of the word. He held many positions of honor and trust, but invariably refused political offices, many of which were offered him. He was a Director in the New Haven and Northampton Canal and Railroad Company, and with his colleagues, Messrs. Joseph E. Sheffield and Henry Farnam, organized the scheme to utilize the abandoned bed of the Farmington Canal. To Mr. Townsend is also due the credit of procuring the valuable charter under which this improvement was carried forward. He was a Director in the New Haven Bank, a Justice of the Peace, a Member of the Common Council of the City of New Haven, and represented New Haven in the Legislature of the State of Connecticut. An address, delivered at his funeral, January 14, 1847, by Rev. Samuel W. S. Dutton, Pastor of the North Church in New Haven, attracted such attention, that the following request for its publication was made:

"TO THE REV. MR. DUTTON.

"REV. AND DEAR SIR,—We shall esteem it a favor if you will consent to the publication of your address at the funeral of our friend, Professor Isaac H. Townsend.

"DAVID DAGGETT,

"WILLIAM L. STORRS,

"THEODORE D. WOOLSEY."

This request was accompanied by the following communication:

"TO THE REV. S. W. S. DUTTON.

"DEAR SIR,—At a meeting of the members of the Yale Law School, it was unanimously resolved that a committee of three be appointed to present the sincere thanks of the School to the Rev. Mr. Dutton, for his appropriate and excellent address on the life and character of their late instructor, Professor Townsend, and to request a copy of the same for the press. We therefore, in behalf of the School, have the honor to transmit their resolution,

and hope you will find it convenient to comply with the request.

"With great regard,

"Your obedient servants,

"J. F. JACKSON,

"FRANKLIN H. CLACK,

"DEXTER R. WRIGHT,

"Committee."

Rev. Mr. Dutton complied with this request, and from a pamphlet copy of the above-mentioned address, we are enabled to extract the following biographical notice of Professor Townsend:

"The occasion is one of mournful interest. A man who occupied a large and growing place in the esteem of a wide circle of friends and of the community—a man in whom unusual confidence was reposed, and to whom many important trusts have been committed—a man who held a high post of instruction and usefulness, for which he was well fitted by natural endowments, and by a long course of laborious and thorough study—has been suddenly stricken down, and his lifeless body, clothed for the grave, lies before us. The occasion is one of unusual sorrow. We meet to mourn, not over one who is carried to his tomb in a full age, as a shock of corn cometh in its season, but to mourn, with a less tranquil and bitterer sorrow, over usefulness cut down in its prime; over a good citizen fallen in the midst of beneficent toils; over a strong pillar prematurely broken. We mourn, not over one whose sun has traversed the arch of the heavens with its light, and found an expected setting in the western horizon, but over one whose sun, just attaining its meridian and beginning to shine with full radiance, has dropped from the zenith. We mourn with the sorrow, not only of bereavement, but of disappointment—the sorrow, not only of sundered affections, but of broken plans, and blighted promises, and withered hopes. It will be an indulgence to our sorrow, and accordant with a custom founded in propriety, to take a brief survey of the history of our deceased friend, and to draw such lessons of consolation and wisdom as we may from his life and death.

* * * * *

"The affluence of Mr. Townsend's father, who was an opulent merchant, gave him all desirable advantages for improvement; while parental prudence and fidelity afforded neither facilities nor temptations to extravagance or inordinate indulgence, or indolent expectation and dependence. And, what is more important, his parents set him an example of devoted piety, and faithfully instructed his young mind in lessons of Christian truth and virtue. He received his classical preparation for college in the Hopkins Grammar School of this city, under the instruction of Mr. Joel Jones, now Judge Jones, of Philadelphia. There his thirst for knowledge, his active and thorough mind, and his docility, manliness, and uniform propriety of conduct, rendered him an object of special interest and hope and affection to his excellent teacher, and gave indication of future eminence in learning. He entered Yale College in 1818. There he was dis-

tinguished for his punctual and regular performance of all college duties (never having missed a single college exercise during the whole four years); for reverential regard for his teachers; for uniform correctness of deportment; and for accurate and thorough scholarship. He graduated in 1822, with the second honor of his class.

"Immediately upon his graduation, he commenced in the Law School of this city, then under the care of the late Judge Hitchcock and of Seth P. Staples, Esq., the study of law, for which the natural bent and the exact and accurate culture of his mind peculiarly fitted him. He pursued his studies with devotion and success, and in due time was admitted to the Bar and commenced the practice of law in his native city. In 1834 he represented the town of New Haven in the Legislature of Connecticut, though he greatly preferred the practice, and especially the quiet studies, of his profession. But his natural straightforwardness and simplicity were so much offended with the crookedness and policy and contentions and unpleasant excitement of political life, that he finally resolved never to enter it, and never to accept any political office except that of Justice of the Peace, so that he might sign his own writs. In 1835 he visited Europe, and spent about a year there, for the purpose of that enlightenment and culture which observation of other countries and their institutions would afford. There he carefully observed whatever would contribute to his instruction and improvement as a gentleman and scholar; but was particularly attentive to everything in the Legislative Assemblies and Courts of Justice, and legal usages of the various European countries, that would conduce to his excellence in his chosen profession. In 1842 he became connected with the Law School in this city as an instructor and lecturer—a sphere very congenial to his tastes, and one for which he was peculiarly fitted by his devotion to legal science; by his uncommon legal learning; and by his powers and habits of close discrimination, accurate analysis, clear statement, and profound insight into abstruse questions. In August, 1846, on the formal organization of the Law School as a department of Yale College, Mr. Townsend was elected by the Corporation, Professor of Law in Yale College.

* * * * *

"Of Professor Townsend's mind, the leading qualities were love of knowledge, or of the exact truth, perspicacity or penetration, activity, clearness, discrimination, accuracy and order. The first of these, his love of knowledge, prompted and directed all the others, and made him a very studious and devoted scholar. His mind was active, indisposed to inertness, always busy in thought, and, from earliest boyhood, more fond of books than of sports. He sometimes spoke slowly, or, rather, answered deliberately; not, however, because his mind was not active, but because it was exact. He was unwilling to say anything till he could say the right thing. His mind was discriminating; distinguishing clearly things that differed, and marking all differences, sometimes indeed with unnecessary minuteness. His mind was accurate. He was very

exact. He was satisfied with nothing in his own mental operations, or in matters with which he was concerned, that was not just right; and so fond was he of this precision, that he occasionally carried it into matters where it was not strictly necessary, and thus became sometimes almost punctilious. He had, strongly developed, the faculty of order. Everything that he did, he did systematically. He had a place for everything and everything in its place, not only in his office and in his chamber, but in his mind and in all his mental developments. Possessing these intellectual qualities, and having, until recently, uniform and uncommon health, he of course became a thorough and learned lawyer. It is not too much to say that in legal learning he was unsurpassed, if he was equaled, by any man of his age in his native State.

"Whenever Mr. Townsend appeared in Court, he manifested the acute and solid and strong intellectual qualities, rather than the showy, the ready, and the versatile. His cases were always thoroughly prepared. He was always discriminating, profound, clear, pertinent, and exact. His argument was thorough; so much so as often to exhaust the subject. As an instance of this, it may be stated that the late Judge Hitchcock, justly celebrated for his acuteness and thoroughness, being associated with Mr. Townsend in an important case, rose, after his colleague had concluded, and, instead of following him according to previous arrangement, declared the subject exhausted and declined all further argument as unnecessary and useless. Being better acquainted, however, with books than with men, Mr. Townsend excelled more in dealing with questions of law than with questions of fact; and, though he presented his cases fully, clearly, and strongly to the jury, he yet excelled more in applying the principles of the law than in that power of touching the various secret springs of feeling and action which belong to those who are eminently acquainted with social life and with human nature.

"Mr. Townsend's integrity in all matters of business, and indeed in all his pecuniary dealings with mankind, was inflexible, and may be pronounced complete. There is no man who can or will say that he even violated an engagement, or ever intentionally wronged any human being. His mind being, as has been observed, remarkably truth-loving and true in its operations, he was extremely careful and conscientiously exact in the transaction of all business, either for himself or for others. He would have everything right; and felt that he could not move a whit forward till he saw that all was right. This strict integrity and rigid fidelity, together with his legal learning and his accuracy in its practical application, secured for him great confidence, so that no man of his age in his profession in this State has had more important legal trusts committed to him. Indeed, so much of this responsible business has been placed by the confidence of others in his hands, that, uniting with his preference for it, and for the duties of instruction, it has of late years withdrawn him almost wholly from practice in the Courts. After what has been said of Mr. Townsend's legal acquisitions, of his intel-

lectual habits and faculties, particularly his perspicacity, discrimination and clearness, it is unnecessary to say more than that he was eminently fitted for the office of Professor and Teacher of Legal Science, and had before him, therein, bright prospects of usefulness and honor.

"Respecting Mr. Townsend's moral character, his integrity and fidelity—prime moral qualities—they have already been sufficiently noticed. From a child he was uncommonly correct in all his deportment, and during that period of life when almost all boys are thoughtless and wayward, he scarcely ever needed punishment or reproof from parents or teachers. In his natural disposition, and by culture, he was amiable, inoffensive and generous. He never manifested impurity of thought or speech. He never had any taste for the rude tricks or rough sports of boys, but preferred quiet study. So, when he was a member of college, he was studious, docile, reverent to teachers, and exceedingly regular and punctual, as has been already observed, in the performance of his college duties. These same qualities had thus properly modified development in manhood. In his social intercourse, while he was rarely communicative of his own feelings, he was affable and courteous. Though disposed to retire, especially of late years, to a limited social sphere, he had strong social affections. And while all acquainted with him knew him to be kind and careful of the happiness of others, none but his relatives and intimate friends knew fully the warmth of his heart and the uncommon ardor and tenacity and fidelity of his friendship.

"Possessed of an ample inheritance, to which he had materially added by his success in his profession, he was public spirited and liberal. His benevolence was manifest in attentive kindness to relatives and friends, and not to them only, but to objects of charity and of public improvement. He had a filial affection and reverence for the noble literary institution which was his Alma Mater, and of which he died an officer, that was indicated not by words only, but at various times by deeds. Being himself fond of the English classics, and appreciating the importance of writing well our own language, he gave, a few years since, \$1,000 to Yale College, directing the appropriation of the annual interest for the encouragement, by premiums, of English composition in the Senior Class. These prizes are now annually awarded, and are called 'the Townsend Premiums for English Composition.' He was free from guile, and peaceful in his disposition, and shrunk from all pursuits and spheres where his simplicity needed to be exchanged for policy, and where he would be liable to witness violent feeling, and hear rough, insinuating, and abusive language. He was himself remarkably careful, in his speech, of the feelings and characters of others. It may almost be said that he spoke evil of no man, except, indeed, when duty demanded of him decided reprobation. Nor was this quality limited to his language. He was candid and charitable in his thoughts and judgments, hoping all things and thinking no evil. It

seemed to be also his principle and desire to be useful, in his profession and life, to his fellow men. Utility—real utility—was prominent in his thoughts and in his speech.

* * * * *

"From about the time of his illness, fifteen or eighteen months since, expressions of his religious feelings have been made, with considerable freedom, to those who, as he judged, had a right to know them. He has repeatedly declared to them not only his conviction of the great truths of the Gospel, but that he loved those truths and regarded them practically, and felt prepared to meet God whenever he should call him, by cordial compliance with the conditions of his salvation. Speaking to his elder brother, the late William K. Townsend, of his affliction and of the doubtful prospect of his recovery, he said that he had no desire to outlive his usefulness. If he could not be useful, he would rather die and be with his father and mother. He was 'the son of parents passed into the skies;' and entertaining their faith, and following in some degree their example, he desired to be united with them in their inheritance of the promises."

HON. JAMES M. TOWNSEND.

[In the preparation of this biographical sketch, the well-known works on the "History and Genealogy of the Tuttle Family," "The Townshend Family," the "History of the New Haven Grays," McCarthy's "History of Petroleum," the files of the New Haven press, copies of newspapers published in New York and elsewhere, and numerous written documents, have been consulted. The sketch and its accompanying portrait are published in compliance with the following request:

"NEW HAVEN, CONN.,
August 26, 1885.

"MESSRS. W. W. MUNSELL & Co.,

Publishers History of New Haven, Conn.

"GENTLEMEN,—Understanding you are to publish biographical sketches and portraits of some of our prominent citizens in the history you are about to publish, we think it would be proper for some of the members of the New Haven Grays to have a place in your valuable work. Looking to that end, we, the undersigned veterans and members of the New Haven Grays, would suggest that among that number you will include ex-Captain James M. Townsend, who has been one of our most esteemed members for more than two-score years, and one of the company's best commanders.

"A. C. HENDRICKS, Chief of Fire Department of New Haven.

"WILBUR F. DAY, President National New Haven Bank.

"FRANK D. SLOAT, ex-Comptroller of the State of Connecticut, ex-Captain New Haven Grays, and Supreme Dictator Knights of Honor.

"E. E. BRADLEY, ex-Captain of the Grays, ex-General Commander Militia, and ex-State Senator.

"BENJAMIN R. ENGLISH, Postmaster, New Haven.

"LEONARD S. HOTCHKISS, Cashier National New Haven County Bank.

"J. C. BRADLEY, Cashier Merchants' National Bank.

"GEORGE S. ARNOLD, ex-Captain New Haven Grays.

"FRANK T. LEE, present Captain New Haven Grays.

"WILLIAM A. WRIGHT, Attorney at Law.

"LEONARD BOSTWICK.

"T. PARSONS DICKERMAN, Teller Merchants' National Bank.

"E. A. GESSNER, ex-Captain New Haven Grays.

"A. L. DILLENBECK.

"BENJAMIN J. STONE.

"L. A. DICKINSON, ex-Adjutant-General of the State of Connecticut, and ex-Postmaster of Hartford, Conn." And others.]

Hon. James Mulford Townsend, second son of William Kneeland Townsend, was born in New Haven January 20, 1825, and is seventh in descent from Thomas Townsend, or Townshend, who settled at Lynn, Mass., in 1683.* When his school days were over he began active life as a clerk for the firm of Hook & Townsend, importers of cloths, New York, one of the partners being a brother of his father's. Returning to New Haven he was engaged for three years in the clothing trade as a member of the firm of Knewals, Hull & Townsend, subsequently Townsend & Maltby. Retiring from mercantile life, he engaged in banking, becoming Secretary and Treasurer, and subsequently President, of the City Savings Bank, serving as such until the affairs of the concern were wound up in consequence of the repeal of the act of the Legislature under which it had been organized.

In their report to the Legislature, in 1859, the Bank Commissioners stated that the institution had been a well managed and useful one, and recommended its continuance under a special charter, and in 1860 the Legislature chartered the Townsend City Savings Bank, an account of which will be found in the department of this work devoted to New Haven's financial interests. At a later date he was chosen a Director of the Quinpiac Bank, and for sixteen years he was a Director of the New Haven Bank, in which corporation his father, grandfather and great-grandfather had been directors. The prominence of his connection with corporations and public enterprises other than banks, is shown by the fact that he has served, or is serving, as a Director in and Vice-President of the Shore Line Railway; a Director of the New Haven and Derby Railroad; a Director in and Treasurer of the Gettysburg Railroad, Pennsylvania; a Director in the New Haven Clock Company; and at different times has been identified with other interests of like importance. The bestowal upon him of these positions is at once evidence of his personal popularity and the high esteem in which he has always been held by the business community. He is also a Life Director both in the New Haven Hospital management and the New Haven Historical Society.

From his youth Mr. Townsend has taken a hearty interest in military affairs. In 1841, at the age of sixteen years, the records of that time-honored organization show that he became a member of the New Haven Grays. In 1848 he was elected captain, and his resignation, on account of ill health, was accepted by General King. Says Lucke's "History of the New Haven Grays:" "In a letter expressing high personal regard and warm commendation and appreciation of Captain Townsend's services in the Grays, the warmest and best wishes of the company were expressed to the retiring commander, and a beautiful letter of thanks and testimonial of regard was spread upon the records." One of the most familiar adornments of the armory is a portrait of Captain Townsend

* See the genealogical and biographical sketch of the Townsend family and the biographical sketches of Isaac Henry Townsend and Charles Hervey Townshend in this work.

Sam. Townsend

as he appeared at that time. From that date to this he has been one of the most devoted and helpful of the many influential friends of the Grays. When the company went to the front to enter upon its three months' campaign during the rebellion, all members of the organization who were unable to procure articles of necessity or convenience not included in the Government supplies, were supplied by Mr. Townsend out of his private purse, his first thought being for the comfort of members of his old command.

After the Grays had seen some six weeks' service in Virginia, Mr. Townsend visited them to look after their welfare and ascertain if he could still further serve them. Before returning to New Haven he purchased one hundred new quarter-dollars and gave one to each member of the company. The recipients had one side of the coin made smooth and inscribed thereon the date and a brief records of the presentation of the souvenir. Many wore them as medals or kept them as pocket-pieces to the day of death, and those still living, when they meet the giver, remind him of the occasion by displaying their treasured mementoes. Upon the expiration of their three months' service, many of the Grays desired to re-enlist for three years, but as it was impossible to do so and retain the uniform which had distinguished them from other military organizations and had given them their company name, the army regulations demanding the wearing of the Government uniform, a new organization was decided upon. A deputation sent by those interested called upon Mr. Townsend and requested his permission to apply to the new company the title of the "Townsend Rifles." This company was re-enlisted in August, 1861, under command of Captain Edwin S. Hitchcock, who had been with the Grays in their three months' service, as Company G, attached to the 7th Regiment Connecticut Volunteers. It was designated as above by Mr. Townsend's permission, most of its members being New Haven men who had come to regard him as "the friend and father of the boys in blue" from his native city.*

Captain Hitchcock was killed at Seassionville, S. C., June 14, 1862. The company served continuously, and with great credit, from the date of muster (September 7, 1861) to the close of the war, participating in no less than eighteen engagements. On the departure of the Townsend Rifles from New Haven, they were presented with a flag by Mr. Townsend, which was born proudly through the war. It was the first Union flag raised in Georgia after the rebellion began, and floated from the light-house on Tybee Island (see *New Haven Palladium* May 8, 1862), and was in the van at more than one victory. It has been carefully preserved, and can be seen in the rooms of the New

Haven Historical Society, where it was deposited on its return to New Haven. The company was partially equipped at Mr. Townsend's private expense, and during its entire service he looked carefully after its welfare, receiving, boxing and forwarding monthly, free of cost to senders or receivers, such supplies and delicacies as the friends and families of the boys at the front wished to send them, together with his own contributions to their comfort.

His oversight of, and care for, destitute families of members of the company were as praiseworthy as they were unostentatious. When volunteering began to lag, to aid the filling of the quota of troops from his home town (East Haven), he offered five dollars to each East Havener who enlisted, and on muster day visited each regiment, and paid such volunteers according to promise. "When the 7th Regiment was discharged and paid off, after its return to New Haven," says the *Connecticut War Record*, "the members of the Townsend Rifles, including twenty who were discharged, and ten or eleven in the Knight Hospital suffering from wounds, were invited by their friend and patron, Hon. James M. Townsend, to partake of a collation provided for them at the New Haven House by his munificence. The boys, with hearts full of cheer and gratitude, enjoyed themselves as only veterans can. At the conclusion of the bountiful collation, the boys drank the health of their noble and steadfast friend with a sincerity and heartiness of emotion which proved their high appreciation of his indefatigable and judicious exertions for their welfare and that of their families. With evident feelings of mingled tenderness and pride, such as every noble man must feel under such circumstances, Mr. Townsend responded." It is to be regretted that the limits of this article do not permit the reproduction of Mr. Townsend's eloquent and patriotic address, which is printed in full in the *Connecticut War Record*. It was greeted with hearty cheers. The soldiers then separated "to go to their homes, which Mr. Townsend had done so much for three long and fateful years to render comfortable and happy, and each paused and grasped the hand of their liberal patron with that deep and fervent gratitude which is best expressed by quivering lips and moistened eyes." To give more public expression to this sincere thankfulness, the veterans published the following card:

In behalf of the members of the Townsend Rifles, Company G, 7th Connecticut Volunteers, whose term of service has just expired, we tender our thanks to our worthy friend and patron, James M. Townsend, for the many favors bestowed on us, the fatherly care he has kept over our families during our absence, his kindly greeting on our return home, and the never-to-be-forgotten repast provided for us ere we separated to wend our way to our homes. We shall ever remember him with pride and the name we bore; his many acts of kindness; and the kind welcome he gave us on our return.

Very respectfully,

TOWNSEND RIFLES, CO. G, 7TH C. V.

L. E. PECK,

E. J. BORDEN,

A. DOWNS,

Committee.

*"This company was named the 'Townsend Rifles' after James M. Townsend, who was indeed a father (as he was called by the boys) to the company and to those they left behind them, sending to the front large boxes filled with whatever their friends wished to send. Thus the boys received many things that were not furnished by the quartermaster or commissary."—Extract from letter of L. E. Peck, now in the employ of the New Haven Post-office, at the time mentioned a member of the Townsend Rifles.

Such is Mr. Townsend's war record. It is one to be proud of; one of which his descendants for generations must be proud.

It may be noted that Mr. Townsend had been reared in the faith of an old line Whig. Until the beginning of hostilities he had counseled peace. When the inevitable war was precipitated by the attack on Fort Sumter, he became an advocate of the forcible suppression of the rebellion, and, from that day on until peace was assured, he was "for war" with his whole soul, devoting to the salvation of the Union his thought, his energy, and his fortune.

The political honors which he has accepted or refused have been so many as to render him a conspicuous figure in New Haven history. He has served as Justice of the Peace, a member of the Common Council, and member of the Board of Education of the City of New Haven. He was Secretary of the Whig Convention at Baltimore which nominated Millard Fillmore for the Presidency, and has been many times a delegate to State, Congressional and National Conventions. He has been repeatedly offered the nomination for representative to the Connecticut Legislature from the town of East Haven, where a nomination was equivalent to an election. While absent from the State, he was nominated by the Republicans as a Union candidate for State Senator. His success was enthusiastically predicted, and the prediction was verified. Referring to his nomination, the *New Haven Palladium*, in the spring of 1864, said editorially:

The Union voters of the Sixth District have an able and popular candidate for the State Senate in James M. Townsend, of East Haven, and one whom they can and ought to elect on the first Monday of April. He is a son of the late William K. Townsend, of East Haven, formerly so well known to the farmers of New Haven County, and is himself well and favorably known in this city. Mr. Townsend is not in any sense of the word a politician, but his acts in sustaining most liberally, from his own means, every good work for the cause of the Union; the bounties paid by himself to all the volunteers from his native town in the 15th and 27th Regiments; the raising of the "Townsend Rifles" of the 7th Regiment, a company which he still looks after with all a father's care; his efforts to fill the quota of East Haven at all times; and his unwavering and unquestioning support of the administration in all its efforts to put down the rebellion, are a sufficient guarantee that will secure his election, we trust, without a doubt.

Mr. Townsend's election, and the reason which impelled him to consent to be a candidate, were thus commented upon in the *New Haven Palladium* of April 7, 1864.

One of the most gratifying results of the election is the election of James M. Townsend, the Union candidate, for Senator in the Sixth District. In no sense a party man, he consented to the use of his name for the senatorship, thinking he could thereby render some service to his country. He had liberally aided the soldiers to go to the front, and if he could aid them by his voice and vote at home, he was desirous of so doing. How well the people of the district appreciated his motives in this respect is shown by his handsome majority of three hundred in a district carried last year by the Democrats.

He was renominated for this office by his party the following year, but declined the nomination. At a time when the Whigs were in the majority, he was offered by the chairman of the Whig State

Committee the nomination to the office of State Treasurer, but declined. He was subsequently offered by the Republican State Committee the nomination for Lieutenant-Governor on the ticket with Hon. Marshall Jewell, but again declined. Hon. Morris Tyler, of New Haven, was nominated and was for two years Lieutenant-Governor while Mr. Jewell was Governor. At that time the *Meriden Recorder* thus referred to him.

The *New Haven Courier* truly says that among all the names thus far suggested for Lieutenant-Governor, no man is so deserving and popular as Mr. James M. Townsend, of that city. Meriden will go for Mr. Townsend with a might and a will, and we trust that he will receive the nomination.

In 1872, Mr. Townsend was urged to stand as a candidate for the governorship, but refused the nomination, as he would not consent to have his name used to the prejudice of another who was a dear friend. The following editorial notice is clipped from the *New Haven Journal and Courier* of December 20, 1872.

The name of Hon. James M. Townsend has been urged by many as a candidate for the gubernatorial chair at the coming election. He is a man highly popular in his town, popular in New Haven, and esteemed throughout this senatorial district, to which he was elected to the Senate by three hundred majority, though the district had previously been Democratic; and he was one hundred ahead in his own town. And as the friend and patron of the soldiers, particularly the "Townsend Rifles," he holds an honored place in the community. He has been named for other honors, but has almost invariably declined. We understand, however, that Mr. Townsend would not consent to prejudice the nomination of so able and honored a standard-bearer as the Hon. Henry B. Harrison, and his friends will acquiesce in this, his wish upon the subject, and hold him in their affections the closer.

Mr. Townsend was a warm personal friend of Governor W. A. Buckingham, who advised with him confidentially as to men and their elevation to office. During the war, Governor Buckingham appointed him to responsible executive positions, and when Colonel William Fitch resigned that office, the Governor appointed Mr. Townsend Paymaster-General of the State of Connecticut, an honor which Mr. Townsend, on account of having so much other business, declined.

While a member of the Senate, Mr. Townsend received a personal request from Lieutenant-Governor Averill to accept the chairmanship of the Military Committee, with which he complied, and he soon introduced the first bill formulating the military law of the State of Connecticut. This bill was drafted by Hon. H. B. Harrison, with the aid of Mr. Townsend, and in its amended form is now the military law of the commonwealth. It has since been adopted by other States, and is pronounced by eminent military men the wisest and most effective State military law extant. These briefly stated facts serve to show in what esteem and confidence Mr. Townsend is held by his fellow citizens, not alone in New Haven, but throughout the State.

Yale College, an object of so much just pride to the public-spirited citizens of New Haven, has ever been a special object of interest to Mr. Townsend. This interest would seem to be inherited, as Mr. Townsend's father, uncle and grandfather were deeply concerned for the welfare of the institution,

often giving substantial aid, and contributed largely at the time when a fund of one hundred thousand dollars was raised for the College. His uncle, Professor Isaac H. Townsend, of the Yale Law School, founded the Townsend prize in the Academical Department, and Mr. Townsend established the Townsend fund, with an annual income of one hundred dollars, to be given to that student of the Yale Law School who should, on graduation, deliver in the best manner the best written English oration. No further comment is required to establish for Mr. Townsend a reputation as the friend of education. His prominent identification with the New Haven Board of Education has been elsewhere referred to. The public appreciation of his efforts in behalf of popular enlightenment was shown about five years ago, when nearly all of the residents of the school district embracing the school-house on Townsend avenue, signed a petition, which was duly presented to Mr. Townsend, requesting permission to name the school, Townsend Public School, in his honor. This personal compliment, flattering as it must have been, Mr. Townsend declined.

Thoroughly conversant with all those practical topics which interest those who keep in the van of the world's progress, Mr. Townsend is also possessed of an intimate knowledge of those finer and more purely artistic subjects, a familiarity with which distinguishes the man of liberal thought from the ordinary man of affairs. To extensive reading he has added long and careful observation, aided by no small amount of travel. All important parts of our own country are familiar to him, and, in 1844, when he was quite a young man, a trip to Spain, Gibraltar and up the Mediterranean, furnished him material for a series of letters published at that time under a *nom de plume* in the *New Haven Courier*, which attracted much attention, and were extensively copied into other newspapers.

A man of ideas himself, he has ever been quick to recognize the value of an idea born in the brain of another, and to the development of practical ideas, in the form of invention and discovery, which have promised to prove of utility to the world, he has devoted much labor and capital. It was in this line that Mr. Townsend made an achievement which will be potent in perpetuating his name when it shall have taken its place in history. The discovery of petroleum in paying quantities, in Venango County, Pa., in 1859, is chiefly due to Mr. Townsend. On this subject we quote from the *Venango Spectator*, published in the very heart of the famous "Oil Country."

Hon. James M. Townsend was the man who sent E. L. Drake to Titusville, not with a free commission, but under special direction to do what he did do—bore for oil. If Drake had failed, the loss of the adventure would have been lost to Mr. Townsend. * * * Drake was in fact his foreman, and it is no more than right that Mr. Townsend should have, at least, a full share of the honor of a pioneer in developing the great product which has revolutionized the world.

These facts are borne out by McCarthy's "History of Petroleum," and by every other recognized authority on the subject.

The Pennsylvania Rock Oil Company, the first petroleum company in the United States, in which Mr. Townsend was one of the heaviest stockholders, was organized in New Haven in 1854. In the spring of 1855, Professor Silliman, of Yale College, was employed to make an analysis of the oil. His report called public attention to the value of petroleum, and led to the reorganization of the company, largely through Mr. Townsend's influence. The new company was known as the Seneca Oil Company of New Haven, Conn. In 1857, Captain Charles Hervey Townshend, Mr. James M. Townsend's brother, at that time in command of the packet ship *Bavaria*, sailing between New York and Havre, took a small bottle of crude petroleum with him—probably the first American specimen ever taken to Europe—and had it analyzed by an eminent French chemist who reported: "If that oil can be gathered in quantity enough, its illuminating and lubricating qualities are such that for those purposes it will revolutionize the world." It was in the following December that a man whom Mr. Townsend had known as a conductor on the New Haven Railroad came to him broken in health, having been a sufferer from malarial fever, in consequence of which affliction he had been obliged to leave his position on the railroad. To this man Mr. Townsend proposed a mission to the wilds of Oil Creek to ascertain if anything could be made out of the land and leases of the Rock Oil Company, guaranteeing him a salary of \$1,000 per annum, and furnishing him \$1,000 cash as a working capital to begin operations. This man was E. L. Drake. On the 29th of August, 1859, after many struggles and impediments, the then village of Titusville was electrified by the dwellers along the creek rushing into the town screaming to every one they met: "The Yankee has struck oil!" That strike, made after a year and a half of patient waiting, during which Mr. Townsend had been many times besought by the other stockholders to recall Drake and stop the expense of his at best doubtful investigations, was the real beginning of the oil business, an industry that has added millions upon millions to the world's wealth, made millionaires of paupers and paupers of millionaires, and extended its ramifications to every quarter of the globe. This achievement should place Mr. Townsend's name with those of America's greatest discoverers.

In "The Descendants of William and Elizabeth Tuttle," we read: "It is said that Humboldt left a sum of money to procure a medal to be given to the discoverer of petroleum or rock oil. Mr. Townsend has been requested by eminent oil men in Pennsylvania to put in his claim, but, so far has not done so and the medal is not awarded." Referring to this great interest, a distinguished gentleman of Philadelphia wrote to Mr. Townsend: "The State of Pennsylvania ought to erect a bronze monument to your memory on account of the immense wealth brought to the State through your perseverance, energy and enterprise in providing the means for developing the petroleum business." At a later period the erection of such a monument at Titus-

ville was proposed, to commemorate that vast production and export which has brought great sums of money into the United States, has been an important factor in turning the balance of trade in our favor, and in relieving the country, in some measure, from the gravest of the financial embarrassments brought about by the civil war, enabling a resumption of specie payments and a settled financial policy. Mr. Townsend's enterprise has been beneficial not only to the entire country, but to the civilized world at large.

So great has been the public confidence in Mr. Townsend's financial and executive ability, that since early manhood he has been called upon for advice and counsel in intricate business questions as well as to act as administrator and executor in the distribution of extensive estates. A reference to only one such transaction, copied from the *New Haven Palladium*, of April 7, 1864, will serve as an example:

The estate of the late Captain David Lines, a native of Woodbridge, this State, is now in course of settlement in New York. Captain Lines, it will be remembered, disappeared suddenly while on a visit to Niagara Falls in the summer of 1862. He had gone there for his health and is supposed to have fallen from the rocks and to have been carried over the falls. He had been for thirty years a popular commander of vessels and steamships out of New York, and had accumulated a property of \$500,000, all so well invested that the estate, we are informed, has gained \$100,000 since his death. James M. Townsend, Esq., of this city, has been busily engaged for the past week with the administrator, Mr. John A. Stewart, of the United States Trust Company, New York, in the settlement. The property goes to two heirs, Mr. John M. Lines, of Woodbridge, the only son of a brother of Captain Lines, and Mrs. Anna Sperry, wife of Mr. Elihu Sperry, of this city.

Mr. Townsend was married September 1, 1847, to Maria Theresa, daughter of Epaphras and Sarah (Hall) Clark, of Middletown, Conn., where she was born October 10, 1828, and died at her home on Townsend avenue, New Haven, April 13, 1884. They had two sons, William Kneeland, and James Mulford Townsend, Jr., of whom the history of the Tuttle and Townsend families gives the following account:

"William Kneeland, attorney and counselor at law, New Haven, Conn., born June 12, 1848; was graduated from Yale College (Academic Department), 1871, with high honors. He then took an extended tour to Europe, and on his return entered the Yale Law School, 1872, taking both the Jewell and Civil Law composition prizes, and graduated, 1874, second in his class, with degree of LL.B. On his return from a second European trip he began the practice of law in New Haven, and entered the graduate class of the Law School in 1876, taking the degree of M. L. in 1878, and of D. C. L. in 1880. In 1879-80 he was a member of the Court of Common Council, New Haven, and in 1880 was elected Alderman from the First Ward for the term of two years. In 1881 Dr. Townsend published a law book entitled 'The New Connecticut Civil Officer,' which has been adopted as a text-book in Yale College Law School; and in June, 1881, he was appointed (and is now) Professor of Pleading in Yale College, and a member of the firm of Townsend & Watrous, attorneys at law, New Haven.

He married, July 1, 1874, Mary Leavenworth, eldest daughter of Winston J. and Mary (Leavenworth) Trowbridge, of New Haven, Conn. She was born in Barbadoes, West Indies, May 6, 1851, where her father was American Consul, and a resident merchant and partner of the house of Henry Trowbridge's Sons, of New Haven, Conn."

They had children: Winston Trowbridge, born June 10, 1878; Mary Leavenworth, born December 6, 1879; and George Henry, born July 22, 1884.

"James Mulford, Jr., attorney and counselor at law, New York City, was born August 26, 1852, graduated at the Hopkins Grammar School in 1869, and, after traveling in Europe, entered Yale College in 1870 and graduated in 1874 with an oration, and was chosen one of the Commencement speakers. He took, besides other honors, both the Junior and Senior 'Townsend prizes;' was one of the editors of the *College Courant*; ranked first in his class in English composition; and received the De Forest prize (gold medal), then the highest collegiate honor at Yale, being 'awarded to that scholar of the Senior Class who shall write and pronounce an English oration in the best manner.' On completion of his studies at Yale he again visited Europe, and on his return studied law in the office of Chittenden & Hubbard, and at the same time was a member of Columbia Law School in New York, from which he graduated in 1876, and in the same year became a member of the law firm of Chittenden & Hubbard, and upon the retirement of Mr. Hubbard became, and is now, a member of the new firm of Chittenden, Townsend & Chittenden."

Mr. Townsend was married November 15, 1882, in Lexington, Va., to Miss Harriet Campbell, daughter of Professor John L. Campbell, LL.D., Professor of Geology and Chemistry in Washington and Lee University of Lexington. They have one child, born October 3, 1884, named Harriet Bailey Campbell.

The following notice of the death of Mrs. James M. Townsend appeared in the *New York Observer*, May 22, 1884:

TOWNSEND.—At her home, New Haven, Conn., April 13, 1884, Maria Theresa, daughter of the late Epaphras Clark, of Middletown, Conn., and wife of James M. Townsend.

Mrs. Townsend leaves two sons—Professor William K. Townsend, of the Yale Law School, and James M. Townsend, Jr., engaged in practice of law in New York City. Her funeral was attended by Rev. Dr. Newman Smyth and Rev. Burdett Hart. The former read passages of Scripture and offered prayer in affectionate sympathy with the bereaved family; the latter followed with an address peculiarly appropriate to the sad occasion. The pall-bearers were Professor Timothy Dwight, Professor Cyrus Northrop and Henry C. Kingsley, of Yale College, and Hon. Henry B. Harrison, Wilbur F. Day and Henry D. White.

The death of this lovely Christian woman has caused the most poignant sorrow, not only among her kindred, but among a large number of people who admired and loved her for her amiability and her fine traits of character, and those to whom in sorrow and trouble she has been a ministering angel of comfort. Mrs. Townsend was a most estimable lady, of rare beauty of disposition, bright, spirited, hopeful, of much innate refinement and artistic taste, and of a rarely sweet and sensitive nature. Though surrounded by every advantage which can be found in external circumstances, she was most thoughtfully considerate of others, always active in good works, a most devoted wife and

Chas Henry Townsend

mother, and in the words of Rev. Mr. Hart at her funeral, "Though life held out much to live for, she gave to the sorrowing friends a beautiful lesson of trust and resignation. Her end was peace, and reflected luster on the power of the Christian faith over the tomb."

CAPT. CHARLES HERVEY TOWNSHEND

was born at Raynham, in East Haven (now New Haven), November 26, 1833, and is the seventh in descent from Thomas Townsend, or Townshend, who settled at the Lynn Colony of Massachusetts Bay in 1638. He was educated at private schools in New Haven and in Farmington, Conn., with a view of taking (if so inclined) a collegiate course at Yale College, but having a nautical turn of mind, he began during his last school vacation to prepare himself for his chosen profession by making several coasting voyages in sloops and schooners at an age when most boys in comfortable circumstances are still clinging to their home amusements.

When about fifteen years old he made his first sea voyage on the *Hyperion*, a bark of 219 tons, built for Timothy Dwight, of New Haven, and launched at the Quinnipiac ship-yard in the year 1848. He sailed from New York on his first sea voyage the 19th of April, 1849, for Trinidad, West Indies, returning home *via* St. Croix and St. Thomas to Baltimore. After two more voyages on the same vessel—one to the West Indies, and one to the Mediterranean—young Townshend shipped as ordinary seaman under Captain E. G. Tinker on the *Margaret Evans*, of 1,200 tons burthen, one of the original line of New York and London Packet Ships, and made one voyage; then changed to the *Southampton*, 1,500 tons, of the same line. This was then the largest and finest ship in the trade. In her he made several voyages as able seaman, and the last two as third mate. When appointed to this position he was not quite eighteen years old.

After studying navigation a few months at New Haven under the tuition of Mr. Stiles French, he returned to New York and joined the *Helvetia*, 1,200 tons, Captain B. F. Marsh, of Whitlock's New York and Havre Union Line of Packet Ships, and in her made four voyages, the first two as third mate, and the last two as second mate. He then changed to the *Germania*, 1,500 tons, Captain D. H. Wood, of the same line, and made several voyages to Havre as first officer. In connection with one of these, Mr. Townshend's journal relates a terrible incident. The return trip from Havre in February and March, 1856, was very boisterous, with tremendous gales and hurricanes. Several icebergs were sighted, and one night the ship ran into an immense field of ice, getting clear about daylight. On the 28th of February a boat, with a signal of distress flying, and a man sitting in the stern, was seen ahead, the ship at the time being under doubled-reefed topsails, and bowing into a tremendous head sea. Mr. Townshend lowered a boat from his ship, and with four men pulled for the castaway through a sea so rough that when in its trough the *Germania's* sky-sail poles were out of sight. On drawing near to the drifting boat she

was found to be two-thirds full of water, and on the bottom lay four dead bodies, two men and two women, frozen stiff. When the boats had approached within a few yards of each other the man showed signs of life, and crawled on his hands and knees to the bow, and, when near enough, tumbled head-foremost into the stern sheets of the *Germania's* boat, and, after giving his name and a few particulars, sunk into a stupor, and in this state was hoisted on board the ship. He was restored with difficulty. This man was Thomas W. Nye, of Fair Haven, Mass., and he is still living to tell his "story of the sea," how on the evening of the 19th of February, nine days before he was picked up, the ship John Rutledge, of Howland & Frothingham's Line of New York and Liverpool Packet Ships, and bound from Liverpool to New York with immigrants, passengers and cargo, was caught in an immense ice-field and went down, carrying with her several hundred passengers. Five boats put off from the wreck, including Nye's, which had thirteen on board. Twelve of these died, and the bodies of eight were thrown overboard by Nye himself. He had not strength left to remove the others.

Early in the year 1857, Captain Townshend took command of the New York and Havre packet ship *Bavaria*. In about eight years he had worked up through every grade, from the lowest to the highest, in the merchant service, and in that highest grade stood among the first. He was now in his twenty-third year. He made two voyages in command of the *Bavaria*, and then went back to his old ship, the *Germania*, as captain; in which he made thirteen voyages, all to Havre, excepting one to James River, Va., and Havre, one to Mobile and Havre, another to New Orleans and Havre, and one from New York to San Francisco, Puget Sound, Queenstown, London, Cardiff in Wales, and thence to New York, during which voyage he escaped capture by Confederate privateers twice off the South American coast, this last voyage covering a period of two years. He then returned in the *Germania* to the New York and Havre route (the Civil War being ended), and while still in command of that vessel was invited to take command of the United States mail steamer *Fulton*, of 3,500 tons, by a unanimous vote of the Board of Directors, which he accepted early in the year 1867, and after making numerous successful voyages in this service, changed to the command of the American Steamship Company's steamer *Ontario*, of some 5,000 tons burthen.

While in command of the latter ship during the Franco-Prussian War, 1870-71, he took her into Havre *via* Cowes, England (having cleared his ship at the latter port for Antwerp to save detention), which port he sailed for from New York, under sealed orders, laden with fire-arms, ammunition and equipments, of which the French Government was sorely in need. The value of this cargo was two and a half million of dollars. The timely arrival of the *Ontario*, the Prussian advance guard having reached at the moment of her arrival a point four miles from Havre, saved this important port from

capture, and an estimated loss of at least fifty millions of dollars. This achievement created great enthusiasm and delight in France, notably in Paris and Havre, where Captain Townshend was fêted and made the object of unlimited courtesies and attention, and his name proposed for an award of a decoration of the Legion of Honor.

One of the most noteworthy of first things in the history of American commerce is the first export of American petroleum. This was in 1858, when Captain Townshend carried a specimen of the oil from the Seneca Oil Company's Well, in which he was interested, at Titusville, Pa., which was given him by his brother, James M. Townsend, to Paris for analysis and brought back the report of the French chemist.

There is probably no position of responsibility known among men requiring for its successful discharge so wide a range of practical knowledge as that of the captain of a ship. There is certainly none so full of exigencies, demanding courage, quick perception, fertile invention of expedients, and prompt and resolute action. It is also the most dangerous of callings. Captain Townshend has filled this position many years, crossing the Atlantic Ocean more than one hundred times without any serious mishap to himself, and, a most grateful and comforting reflection to him, without losing a single life; but accredited to him having laded on several occasions more souls than he sailed with from his last port of departure. Nor has he lost a dollar's worth of property intrusted to his care. He has enjoyed the full gratitude of his passengers; the confidence and esteem of his employers; and the good-will, he believes, of every one.

He has long been interested in oyster culture. For several years previous to 1860, and while in the Havre trade, he personally watched the experiments of MM. De Coste and De Broca, the latter a Commissioner to this country in 1859, at the instance of Napoleon III, to examine our shell-fish culture. While here, the guest of the Messrs. Townsends, he suggested utilizing shells, tiles and twigs of trees to be used for a stool for spat, when ripe, to adhere to. Captain De Broca at this time gave Captain Townshend engravings, now in his possession, to prove the system was then (1859) in successful operation on the coast of France.

Captain Townshend has devoted a great deal of time and money to an experimental study of the subject, noting in a journal an account of his method and result. This journal is largely transcribed in the Tenth Census of the United States Section X (Monograph B), in "A Report on the Oyster Industry of the United States," by Ernest Ingersol, who introduces it as follows:

"In no way probably could I better illustrate the slow experiment and expensive trial by which the more intelligent of the New Haven planters have succeeded so far as they have done, than by giving an abstract of a diary kept for several years by one of the most energetic of these experimenters, Captain Charles H. Townshend. I am able to avail myself of it through his consent and

the kindness of Professor A. E. Verrill, of Yale College, to whom it had been intrusted for scientific use. Captain Townshend lives at Raynham, on the east side of the harbor, where his brother, Mr. George H. Townsend, still continues the business on a large scale. He was in command of packet ships and ocean steamers of the New York and Havre Lines for many years, and took special pains when in Europe to study the methods of oyster culture in vogue on the French coast, and was able to apply many hints there obtained to his plantations on this side, though he found so great a difference of circumstances and natural history between French and American oysters, that his transatlantic experience was of less use than he expected it to be."

The first memorandum in this interesting book informs us, under the date of 1867, that the author "commenced to stock the ditch at Fort Hale, adjoining his own property, and of which he has charge, with native oysters of two years' growth, in September and October of 1867, for the purpose of experiment." The abstract which follows fills several quarto pages of the report.

Among the most important and valuable of the services rendered to his native place by Captain Townshend, we note, from the files of a daily paper, his suggestions for a cornice road along the cliffs of East Rock, and locating the soldiers' and sailors' monument there was his conception; also those in connection with the improvements of its harbor and the resurvey of Block Island Sound, Long Island Sound, and the East River to Hell Gate, where several dangerous reefs have been located (on a chart now in course of construction by the U. S. Coast and Geodetic Survey), one of which, lying in the fairway of ships bound to New Haven and long known to the local pilot, now bears his name.

His long experience in maritime affairs (twenty-five years), his familiarity with various European and American ports, and his training and habits of close and intelligent observation, qualify him preeminently to understand its facilities, needs and possibilities.

He originated, about the year 1870, the idea of a port of refuge off the lower quay at New Haven, by inclosing by means of two breakwaters, similar to Cherbourg, France, and Plymouth, England, which scheme met the approbation of commercial men and of Congress, and in 1879 this great national work for the benefit of foreign and domestic commerce was surveyed and located by United States Government Engineers and is now in course of construction, and when completed will cost several millions of dollars and cover an area of about four times the space of New Haven Harbor, and be easy of ingress and egress from all directions in tempestuous weather. For this, and the improvement of the harbor, about \$250,000 have been appropriated.

The immediate benefit of these works, great as they are, but directly foreshadow far greater things when Long Island Sound shall become the pathway of European commerce to the port of New York, which city must, according to Captain Towns-

hend's idea, spread in the near future across Westchester County and face it.

Captain Townshend is a member of the Harbor Commission, a Director of the New Haven Colony Historical Society and Chamber of Commerce, and of several other corporations, and has interests in banking, manufacture and commerce. A life so full of active employment would seem to leave but scanty leisure, opportunity or disposition for scholarly pursuits, yet he has accomplished so much, especially in the line of antiquarian and genealogical work, as to awaken surprise that he has not succumbed to its subtle fascinations.

In 1879 he published, by request of prominent citizens, "A Centennial History of the British Invasion of New Haven." He is the author of several commercial and historical pamphlets, of numerous able articles in the *New England Historical and Genealogical Register* and the local papers of the neighborhood, and has compiled, and published at his own expense, four editions of "The Townshend Family, of Lynn, in Old and New England." He has traced his own ancestry in many of its lines back to the first settlement of New England, and is directly descended from several of the Mayflower pilgrims, viz., John Howland, who married Elizabeth, daughter of John Tilly, and his wife, Elizabeth, who, tradition says, was a daughter of Mr. John Carver, who was chosen Governor of the Plymouth Colony on board the Mayflower in Cape Cod Harbor, November 11, 1620.

From his ancestral chart, not yet completed, we note his descent from the following original New England settlers: Thomas Townsend, or Townshend, Samuel Davies, Edmund Ranger, John

Kneeland, Luke Hitchcock, Henry Burt, Simon Lobdell, Robert Walker, Moses Wheeler, Stephen Butler, William Eustice, David Atwater, Thomas Sayers, William Bradley, John Bocket, John Russell, Edward Grannis, John Wakefield, William Bassett, — Oldham, Christopher Todd, Michael Middlebrook, Rev. John Rayner, Anthony Thompson, Thomas Harrison, Thomas Powell, Richard Mansfield, Henry Glover, William Mulford, Jeremiah Conklyn, Lion Gardner, Rev. Abraham Piereson, Edward Petty, Captain John Gorham, Francis Bell, Richard Miles, Joseph Alsop, William Preston, William Punchard, Richard Waters, Francis Brown, — Edwards, Rev. Peter Bulkley, Rev. John Jones, Isaac Bradley, Rev. Roger Prichard, Jacob Robinson, Mathias Hitchcock, Thomas Merrick, Rev. Daniel Brewer, Ralph Hemingway, John Hewes, John Cooper, Robert Talmage, Thomas Nash, Thomas Yale, Captain Nathaniel Turner, Thomas Morris, Governor James Bishop, Captain George Lamberton, William Tuttle, Thomas Morris, John Sanford, John Payne.

Captain Townshend was married on the 26th of April, 1871, to Mary Anne, daughter of Henry and Elizabeth Daggett (Prescott) Hotchkiss, and has two sons, Henry Hotchkiss Townshend, born in New Haven September 30, 1874, and Raynham Townshend, born in New Haven July 10, 1878. Mrs. Townshend is descended from Samuel Hotchkiss, John Prescott, David Atwater, William Bassett, Rev. Francis Higginson, Rev. John Higginson, Rev. Henry Whitfield, William and Anne Hutchinson; the exile from Mass Bay Colony, 1638, Elder George Minot, Thomas Savage, John Hoare, — Lane, Capt. Timothy Wheeler, — Blakesley.

CHAPTER XVII.

THE CUSTOM HOUSE.

IN 1681, Governor Leete received a letter from the King, commanding him to take effectual care for the due observance of the laws relating to the trade of the plantations, and announcing the appointment of Edward Randolph as Collector of Customs for New England. With the royal epistle came one from the Commissioners of the Customs, giving particular instructions for the enforcement of these Acts of Parliament, and accompanied with blank forms such as were used in the custom houses at home. The Governor's reply to the Commissioners is too racy to be abridged, and we give it entire.

MUCH HONORED :

HARTFORD, January 24, 1680.

Yours of May 24, 1680, came to our hand January following, with the inclosed from his Majesty, with the statutes, box of seals, and book of rates. The contents whereof were of so much satisfaction unto us, viz., to be informed and directed how we might serve his Majesty, preventive to frauds in customs and duties, that being part of our allegiance and duty incumbent, unto which we apprehend ourselves sufficiently impowered by his Majesty's gracious

charter granted to this colony. And we have the greater happiness by your early care thus to suggest to us, before we arrived at any capacity so to defraud: for though we may not boast of our own goodness, yet penury hath hitherto obstructed; for after above forty years, sweating and toil in this wilderness to enlarge his Majesty's dominions at our own costs and adventure, we have neither had leisure or ability to launch out in any considerable trade at sea, having only a few small vessels to carry our corn, hogs and horses unto our neighbors of York and Boston to exchange for some clothes and utensils wherewithal to work and subdue this country; likewise some of those commodities are carried to the Barbados and those islands, to bring in some sugar and rum to refresh the spirits of such as labor in the extreme heat and cold, so to serve his Majesty's enlargement of dominions and get a poor living to themselves meanwhile; the substance whereof we suppose Mr. Randolph can inform, who having lately taken an interview of our parts and colony; unto whom we have showed civility according to our capacity, and offered any furtherance in so good a design to prevent fraud toward our Sovereign in trade and navigation. We have also appointed Customers or Collectors in our several counties, to take special care that these Acts of Navigation and Trade be duly observed and kept, and have commissioned them accordingly. They are the most aptest persons we could pitch upon for that affair. This work is

yet novel and unknown to them through want of experience in such occasions; but we have no cause to doubt of their fidelity and care in the due observance of the work and trust reposed in them; and we shall be ready to grant Mr. Randolph such necessary aid and assistance as shall be requisite, if he also shall see cause to take any cognisance of these affairs in our colony. If yourselves, or any Lords of the Privy Council or Treasury, will concern themselves to further our light in this or any thing proper to our loyalty, we shall thankfully accept the same and do our duty therein, praying always for the long life and happy reign of his Majesty, and the welfare of yourselves and all Protestant professors, as our own, who are your Honor's very humble servants,

WILLIAM LEETE, *Gouv.*

JOHN TALCOT.

JOHN ALLYN.

These for the Honorable the Commissioners of his Majesty's Customs at the Custom House in London, Present.

About six months earlier, Governor Leete had written to the Lords of the Privy Council, in reply to certain questions which they had propounded as a committee on trade and plantations. In reply to one of their queries he had given a complete report of all the shipping in Connecticut, viz.:

In Stamford, 1 pinck of 80 tons and 1 sloop of 10 ton.

In Stratford, 1 sloop, 12 tons.

In Milford, 1 pinck, 80 tons; 1 bark, 12 tons; 1 ketch, 50 tons.

In New Haven, 1 pinck, 60 tons; 1 sloop, 30 tons; 1 ketch, 24 tons; 1 sloop, 12 tons; and 1 sloop, 8 tons.

In Branford, 1 bark, 30 tons.

In Kenilworth, 2 sloops, one 18 tons and one 14 tons.

In Saybrook, 2 small sloops.

In Middletown, 1 ship, 70 tons.

In Hartford, 1 ship, 90 tons.

In Lyme, 1 ketch, 70 tons.

In New London, 2 ships, one 70 tons and one 90 tons; 3 ketches, about 50 tons apiece; and 2 sloops, 15 tons apiece.

In Stonington, 1 sloop, 10 tons.

In reply to another query he had reported: "We take no duties of goods exported out of our government; nor of any goods imported, except on wine and liquors, which is inconsiderable and improved toward the maintenance of free schools."

It would seem therefore, that previous to 1680 the colony of Connecticut had been left to itself in respect to duties on imports, and that then the home government began to be interested in the collection of duties on imports. From that time till 1766 there was but one Custom House, and that was in New London.

As might be expected, there was some friction between the Collectors, whose commissions came from the other side of the sea, and the colonial authorities. The General Court enacted that New London, Saybrook, Guilford, New Haven, Milford, Stratford, Fairfield and Stamford should be held, deemed, and adjudged to be lawful ports, "at every of which aforesaid ports an office shall be held and kept for the entering and clearing of all ships and other vessels trading to or from this colony, to be called and known by the name of the Naval Office." A tariff was established regulat-
